COMPARISON of the Trade of 1838 with 1839.

YEARS.	Imports.	Exports.	TOTAL.	Excess of Value of Imports over Exports.	Customs Duties.
	roubles.	roubles.	roubles.	roubles.	roubles.
1838	188,437,479	137,525,838	325,963,317	50,911,641	52,470,750
1839	202,170,959	172,018,290	334,189,249	70,152,669	52,681,497

The Trade of 1839, also, compared with that of 1838, gives the following result—the rouble at 11*d.* sterling:

		£
Imports	Increase in 1839	624,868
Exports	Decrease ,,	252,430
Total trade	Increase ,,	377,022
Excess of imports over exports	,,	881,880
Customs revenue	Increase ,,	9,659

The chief articles of import are gold and silver, cotton twist, raw cotton, coffee, raw sugar, spices, manufactures of silk, wool, cotton, and flax, wine and apothecaries' drugs. There was a very great increase this year in the importation of cotton twist and raw sugar, and indeed in almost all the above articles, as compared with 1838.

The principal articles of export consist of hemp, flax, potashes, tallow, leather, unwrought iron, copper, bristles, cordage and cables, linen, and grain.

Arrivals and Departures at the Port of St. Petersburg in 1841 and 1842.

CUSTOMS REVENUE, 1842.

	£
From Imports	2,653,551
From Exports	176,170
	2,829,721

The foregoing abstract of the total foreign trade of St. Petersburg, during the year 1842, gives the following results as compared with that of 1841:

Imports	Increase	£ 732,724
Exports	Decrease	652,910
Total trade	Increase	79,814
Customs revenue	..	474,535
Excess of imports over exports	..	£1,385,634

The same abstract shows,

"1. That there has been an improvement in the importation of some articles of British manufacture, and particularly of *cotton twist*.

"2. That there has been a great falling off in the consignments of Russian produce to the United Kingdom.

"3. That there has been an extraordinary decrease in the tonnage of British vessels employed in the trade.

"*The Tariff.*—By an imperial ukase of the 2d—14th—December last, a few modifications have been authorized in the Russian tariff, but so trifling in their nature and extent as to render special notice unnecessary.

"The only change from which British trade is likely to derive any benefit, regards the exportation of *bones* for agricultural purposes.

"*Restrictions on Foreign Merchants.*—No change whatever has taken place in the restrictions imposed on foreign merchants—although the only argument against their abolition, advanced by the department of foreign trade, is the inexpediency of touching, under present circumstances, the constitution of the mercantile guilds.

"However, by the recent concession to shipmasters in respect of customs entries *outwards*, more especially adverted to hereafter, the monopolizing privileges of these guilds have received a severe check, and there is every reason to believe, that this circumstance will, ere long, compel a revision of the guild laws.

"In anticipation of this probable change, the following demands might be put forth, with a view to placing British commercial men on an equal footing with the native merchants: namely—

"1. That foreign merchants should be received into the 1st and 2d guilds with the same rights and privileges as the native merchants—and without being compelled to take a temporary oath of allegiance.

"2. That foreign merchants being exempted from certain *civil services* to which the native trader is subject—the former should pay an additional *special rate* of 20 per cent on the amount of *guild taxes*, to be applied to the remuneration of native substitutes.

"Having on divers occasions submitted in detail my humble opinion on this highly important question, I need now only repeat my firm conviction that its favourable solution would materially improve our trade with this country, and bring it within the reach of *small*

capitalists who could traffic personally in the interior of the empire—from which profitable occupation they are at present virtually excluded, to the unquestionable disadvantage of the commercial interests of both nations.

" *Custom-house Laws.*—Some concessions have recently been made with reference to the vexatious regulations of the custom-house; namely—

" 1. Shipmasters have been admitted to make entries in their own name, of the cargoes of their vessels *outward*, which formerly could only be done through the medium of a resident merchant of the 1st guild, to whom a commission had to be paid.

" Besides the advantage which it affords to the shipping interest, this concession must lead to other indirect results highly beneficial to the export trade generally, though confessedly unfavourable to the 1st guild merchants, whose personal profits arising from 'commission,' will necessarily be reduced proportionably with the facilities gained by minor competitors.

" 2. Merchants or consignees have been authorized to rectify, by notice to the custom-house, errors or omissions in *bills of lading*, before the arrival of the vessels that carry the goods.

" This is a mitigation of the former rigour of the law, and in so far acceptable. But the *radical evil* remains; namely, the making a *fiscal document* of the bill of lading, instead of considering it as a simple receipt of the shipmaster, and proof of the ownership of the goods. So long as this regulation prevails, there will always be ample room for levying heavy pecuniary penalties, nor are the opportunities likely to be neglected by customs officers, to whose personal use a large share of the fines is appropriated by law.

" *The Warehousing System.*—An experiment has at length been sanctioned in regard to the bonding system; and by an imperial ukase of the 8th—20th—instant, the ports of St. Petersburg (including its shipping station at Cronstadt), Riga, and Archangel, have been declared warehousing ports for three consecutive years, commencing from the 1st of May, 1843.

" The term for the exportation of foreign bonded goods, free from any customs duty, is limited to eight months; but this limitation may be considered as merely nominal, because the minister of finance will scarcely refuse his sanction to an extension of time having for its ultimate object the clearing of the goods for consumption, and the payment of the import duties, which would be lost to the Russian treasury were the exportation enforced according to the strict letter of the law.

" *The Brack.*—From circumstances which have lately transpired, it would appear that the department of foreign trade is not favourable to the maintenance of the Brack law, while, on the other hand, it is strenuously insisted upon by a few influential foreign merchants, who apprehend that the removal of this obstacle would induce the native traders to engage personally in foreign commerce, instead of limiting themselves as most of them now do, to transactions on the spot, with resident foreign factors.

" It is generally believed that a special representation from the British government would effect the abolition of this vicious system, by which the hemp and flax trade in particular are greatly harassed and obstructed.

" *Charges on Shipping.*—In the present depressed state of the British shipping interest, the port and other charges on vessels demand an attentive examination, to which I propose devoting part of the ensuing navigation season, during which it is my intention to be present at Cronstadt (the shipping station of this port), in order to watch in person the working of the new warehousing law, and the carrying out of the provisions of the recent treaty of commerce and navigation."—*St. Petersburg, January* 31, 1843.

The following extracts from the circular of the house of Thomson, Bonar, and Company, a firm which has existed in that city since the foundation of St. Petersburg, gives a mercantile record of the export trade, which may be usefully introduced in this work.

" *Bristles.*—The shipments from the wharf in the present year have varied little in amount from those of 1841; but in consequence of about 3000 poods having been detained in the river by the ice, there is a decrease of some importance in the export from Cronstadt.

The following are the comparative quantities loaded off from the wharf in the two last seasons; Okatka, poods 6656 in 1842 against 5734 in 1841, first sorts 22,159 against 19,830, Suchoy 11,739 against 13,717, and second sorts 15,943 against 17,781; in all, poods 56,467 loaded off in 1842 against 57,062 in 1841. The supplies of the higher descriptions having been abundant, prices of them gave way to the extent of about 5 ro. per pood in the course of the past season, but the lower descriptions were steadily maintained, and in constant demand throughout.

"*Deals.*—The demand for Great Britain was checked in the early part of the season by the alteration in the timber duties, and for some months our export was confined to the continental ports. To these, however, an unusually large quantity was shipped, and prices were in consequence steadily maintained at 11½ to 12 for red wood, and 7½ to 7½ for white wood. About the beginning of October, shipments to Great Britain again commenced, and continued on an extensive scale to the end of the season, but from the cause above mentioned, our total export is much smaller than for many years past; being 107,168 doz. to Great Britain, and 33,536 doz. to foreign countries in this year, against 205,319 doz. and 8090 doz. in 1841, and 186,594 doz. and 8518 doz. to each in 1840. No contracts appear to have been yet entered into for next year.—12 ro. are demanded by Gromoff, for red wood, but 11 is the highest price yet offered him. Deals in less estimation might be bought at 11 ro. White wood at 7 ro.

"*Iron.*—The quantity remaining on the spot at the close of the navigation and expected early in spring, is as follows: TAD poods 61,000, CCND poods 100,000, KB poods 11,260, PSI poods 177,176, Gurieff's poods 154,714, in all poods 504,150. Prices have scarcely varied throughout the season from our annexed quotations. The total export, it will be observed, is about 60,000 poods short of that of last year, which arises from the great decrease in the shipments to the United States, as both Great Britain and the continental ports have taken more than in 1841. No new contracts are yet reported.

"*Copper.*—The shipments of this article have amounted to poods 103,108, against poods 120,305 in 1841, and there remain on the spot for sale, 8000 poods of N. N. Demidoff's for which 32½ are demanded, 6000 poods Pashkoff's held at ro. 34, and 6500 poods Jacovleff's, Laval's, &c., held at ro. 33. In the course of next season about 100,000 poods more private copper are expected down, of which about 40,000 have already been sold on contract at 32½ with ro. 7 down for Pashkoff's, and 31½ with 10 down for Demidoff's and Laval's. Crown copper, there is none for sale.

"*Grain.*—The business done in grain this season was confined to a few thousand chetwerts of wheat that were brought down early in it and taken for shipment to Great Britain, after which all demand ceased.

"*Flax.*—The quantity brought down by the dealers in the course of the past season amounted to 305,000 poods, and there wintered from previous years about 328,000 poods, so that the aggregate of our supply for 1842 was 633,000 poods, the buyers confining themselves exclusively to the wintering flax, and avoiding contracts for new, as the reports of its quality were, generally speaking, unfavourable; and Ardamatsky, whose flax justly stands highest in repute, alone succeeded in effecting sales of about a couple of hundred tons at 95 and 85. The shipments from the wharf extended in all to 13,775 poods 12-bds., 398,204 poods 9-bds., and 123,558 poods 6-bds., making poods 535,537—but of which about 10,000 poods are detained in the river by the ice—against 304,000 poods in 1841, and there remain over on the spot,

			Total	27,910 poods.		40,650 poods.	14,800 poods.

"*Hemp.*—The quantity of this article brought down was 1,190,000 poods, which added to the 340,000 remaining over from 1841, formed a total supply of 1,530,000 poods. Small as is this quantity, it nevertheless exceeded the demand for exportation, only 1,295,635 poods, comprising poods 588,085 clean, 331,618 outshot, and 375,952 half-clean, having

been loaded off from the wharfs in the course of the season. The proportion exported to foreign countries has been somewhat larger than usual; but the principal market, Great Britain, has this year taken only 734,000 poods in all, being 280,000 poods less than the greatly diminished export of last season, and 550,000 poods less than in 1840. The numerous expenses to which the dealers bringing down this article are subjected by the regulations attending its preparation for export, operate as the principal check to supplies; while by the increase to the cost of the article, consequent upon these expenses, they exercise an equally prejudicial influence on the export of it.

"*Hides.*—Our shipments of Kips, Kazan, and Ukraine, in the course of the past season have consisted of 3050 9-lbs., 192,898 10-lbs., 111,680 11-lbs., 20,400 12-lbs., 13,791 13 to 17-lbs., 16,595 18 to 23-lbs., and 1150 31 to 34-lbs., making in all 389,564 kips, and have consequently been in advance of those of the preceding years. Of calfskins, on the other hand, the quantity shipped has only amounted to 21,015.

"*Linseed.*—Our shipments of this article from the wharfs amount to tchetverts 282,609, but in consequence of the detention in the ice of many of the lighters last laden, 276,628 are all that have left Cronstadt, against 368,294 in 1841.

		1841.		1842.
Hull	chetwerts	77,473		79,407
London	"	35,355		25,851
Newcastle	"	9,749		7,460
Liverpool	"	15,655		15,357

"*Tallow.*—The quantity of this article that passed the brack, was 106,699 casks of yellow candle, 3802 casks of white, and 2854 of soap, in all 113,355 casks, of which circ. 111,000 casks have been exported (the remainder being stopped by the ice). The decrease in the export of 1842, when compared with that of 1841, is 24,000 casks, with 1840, 28,000 casks, and with 1839, 40,000 casks. On contract for next year, about 6000 casks are supposed to have been already bought at 118 to 119 for Ukraine deliverable in June and July, 110 for Siberia, and 113 to 115 for common, deliverable in all August, with all the money down, and with only ro. 10 hand money, at 125 for June, and 123 for August delivery. The supply of next season is expected to be very large, advices from all parts of the empire concurring in reporting a great abundance of this article, and we are led to infer from them that the quantity for shipment may amount to from 160,000 to 170,000 casks, including that which remained over, provided the winter communication in the interior become good.

"*Imports.*—At the opening of the navigation, an unusual degree of activity prevailed in almost every branch of this trade, and large quantities of most articles were despatched to the markets and fairs of the interior. The business since done at the principal fairs, however, did not realize the expectations that had been formed of them. This was more particularly the case as regards the Nishney fair, and those immediately succeeding it, and the reaction on our markets of this untoward state of the inland trade has been sensibly felt.

"*Cochineal.*—The stock on the spot is estimated at about 350 barrels, and does not exceed that of last year at the same period.

"*Indigo.*—We estimate the quantity in importers' hands at about 2300 chests, or from 500 to 600 chests more than our stock at this period last year. The demand for Rostoff generally takes place about the opening of the year.

"*Lead.*—Our supply of this article is large, but the stock on hand, estimated at 125,000 poods, does not exceed what the consumption can take off, provided our winter communication be good.

"*Olive Oil.*—Of our supply of this article, nearly two-thirds were bought by the dealers in the course of the summer months, the sales between May and September, inclusive, having attained to the large amount of 200,000 poods. The stock on the 1st instant was 95,000 against 37,000 poods in 1841, and consisted of 77,000 Gallipoli, 7500 poods Genoa, 3500 poods Seville, Palermo 2000 poods, Malaga 2000 poods, Messina 2000 poods, and Boston 1000 poods. Ro. 27 for Gallipoli, and ro. 26 for all other descriptions are our quotations.

"*Sugar.*—Our importation of this article falls considerably below that of last year, but yet it has somewhat exceeded 1,500,000 poods. It has consisted principally of Havanna,

comprising only 48,000 poods of other sorts. Compared with that of the annual consumption, the amount of our importation appears extremely moderate, indeed insufficient, as, in the twelve months that have preceded the present date, upwards of 1,500,000 poods have been consumed. The redundancy of the importation of 1841, however, supplies every deficiency, and our present stock is estimated at fully 900,000 poods, or adequate to our wants up to the end of June next. We now quote white Havannas at 27 to 28¼, but hope soon to be able to advise some improvement in this article.

"*Exchanges* have during the latter part of the season kept steady, at a little below par, and without having experienced any important fluctuations.

PRICES at St. Petersburg, the 8th—20th—December, 1842, at the Exchange of 37¼*d.* per silver rouble.

CHAPTER XIV.

TRADE AND NAVIGATION OF RUSSIAN PORTS IN THE BALTIC, EXCLUSIVE OF RIGA.

THE Russian trade in the Baltic is chiefly carried on from St. Petersburg and Riga. Other ports have, however, for a long period shared a considerable commerce.

The coasts of *Finland*, especially the south coast, is flanked by rocky islets,—the climate is foggy, and the trade is of little comparative importance. The principal ports are, Wiburg, Abo, and Fredericksham; and formerly, Tornea.

FREDERICKSHAM.—Before the annexation of Finland to Russia, the river Kymene formed the boundary betwixt the latter and Sweden. Fredericksham was soon made a fortified town, although only a small village when taken from the Swedes by the Russians. It has an inconsiderable trade chiefly in timber and deals.

WIBURG, on the gulf of Finland, is the capital of the province of that name and a fortified town. It lies about twelve miles from the sea, from whence the navigation is intricate. At the town there are from 10 to 12 feet depth of water, and large ships must moor about nine miles below.

Its principal trade is in the exportation of deals, battens, and wood; and its imports are salt herrings, &c.

Its negotiations and money transactions are done at St. Petersburg: its weights and measures are regulated by those of the capital in all commercial concerns.

The following statement exhibits its trade and navigation during the last five years of the 18th, and the first four of the present century, compared with its present trade and navigation.

STATE OF EXPORTS AND IMPORTS, &c.

Years.	Exports. Roubles.	Imports. Roubles.	Ships arrived.	Of which English.

NARVA is situated upon the river Narova, about 9 miles from its mouth, which falls into a bay in the gulf of Finland, where a bar is formed by a sand-bank. Large ships anchor in the roads to load and unload by means of lighters. Small vessels, drawing about 7 feet water, may load near the town; in the road-stead is tolerable anchorage, except when the wind is northerly.

This place was one of the Hanse Towns, and was that by which a part of their trade was carried on to Novgorod. There is a waterfall a little above the town, in the centre of which are sawmills for cutting deals and battens. The timber is floated down the river, and not taken out of the water until it comes under the saws.

The obstacles thrown in the way of the interior trade, by the cataract in the Narova river at the city, and likewise by the bar below it, were always unfavourable to its commerce. It enjoyed, however, a considerable share of trade until the building of St. Petersburg; but no sooner was the foundation of that city laid (from whence it is about 105 miles), than it lost nearly all its former commercial importance.

At present its principal imports are salt, herrings, sugar, coffee, tobacco, and other articles of trifling importance, for its own consumption, and for its limited interior trade.

Its principal exports are now confined chiefly to deals, battens, and balks, and a little flax and hemp.

Its money negotiations are all transacted at St. Petersburg.

The following table will show the amount of the trade from 1789 to 1804, compared with its present trade.

Years.	Ships.	Imports. Roubles.	Exports. Roubles.	Years.	Ships.	Imports. Roubles.	Exports. Roubles.
1789 ...	— ...	421,872 ...	421,872	1797 ...	107 ..	121,016 ...	526,284

Reval (in Russian Kolivan), is said to have been founded in the year 1219, and is situated upon the south shore of the gulf of Finland, about 260 miles west of St. Petersburg. It is strongly fortified.

This city was once the emporium of the Hanseatic League for the trade to Novgorod, but it was removed in 1558 to Narva. Its harbour ranks amongst the best in the gulf, and was greatly improved in 1820. It has a government

dockyard for laying up ships of war. There is a sufficient depth of water near the town for the largest ships, which may work into the roads with almost any wind. Reval, too, has this advantage over most of the Baltic ports; that, when they are choked up with floating ice, or fast altogether by it, its harbour is not so soon frozen, on account of having no fresh-water river falling into it, and having a sufficient depth of water. From these advantages, at the close of the year, vessels, with cargoes intended for St. Petersburg, have put into Reval; and, when the winter sets in, they have had their merchandize conveyed by sledges at a reasonable rate to St. Petersburg, Moscow, or other places.

The trade of the port has greatly diminished. In the year 1790 the amount of the duties on imports amounted nearly to 4,000,000 roubles. In the year 1792 about 200 ships arrived, chiefly loaded with merchandize for the interior, as very few procured freights: the principal exports have usually been barley, oats, flax, tow, distilled spirits, &c. The imports are coffee, sugar, tobacco, spices, and wine, salt, cheese, lead, tools, dyestuffs, &c. The restrictions issued in 1793, and the tariff of 1797, greatly diminished the import trade.

As Reval has no interior navigable communication, grain is chiefly brought to market by sledges in winter, and by ordinary land-carriage in summer. The grain shipped from this place is chiefly sent to Sweden and Denmark for food, and to Holland for the distilleries. Very little grain, from its inferior quality, has at any period been shipped to Great Britain.

There is a wool fair held here. (See fairs and Riga hereafter.)

The road, or anchorage, at this place has deep water; but the most commodious harbour is the Baltic Port, situated about 35 miles west of Reval, where ships sometimes resort for shelter; and it is capable of being made one of the best ports for men-of-war in the Baltic. It has for some time been resorted to for sea-bathing. It has warm-baths, a theatre, and casinos.

At Reval many of the old customs prevail; but their monies, weights, and measures, may be considered the same as at St. Petersburg,—where, or at Riga, they must have their bills negotiated, and from either or both places receive their money. There are several manufactures still carried on at Reval, chiefly cannons, earthenware, glass, woollen stockings, starch, pins, &c.

The amount of the Imports and Exports in the following years were,

Of 70 vessels of all nations, which arrived in 1842, there were only 7 British, which were loaded with salt, coals, &c., and 4 which departed loaded with flax, tallow, &c., and 2 with ballast.

ARENSBURG.—The capital of the island of Oesel, which is comprised within the government of Reval. The trade of this place is chiefly carried on to Lubec, Sweden, and Holland, in small vessels, of which from 20 to 30 arrive annually; they anchor at about 5 miles from the town, at a place called the Kettle; their cargoes are loaded and unloaded by smallcraft or prams, to and from the town.

The trade of this island is chiefly in grain, producing annually for exportation 1000 to 1400 lasts of rye and barley (principally the former), and some little wheat. The quality of the rye is reckoned nearly equal to that shipped from Riga, and the barley superior.

It has long been the custom in this island for the farmers to pay their rents on the 1st of March; at which time there is a general settlement made of all their accounts, for paying mortgages, bonds, promissory notes, and interest. To meet their respective engagements at this period, their produce is all sold, either for ready money, or to be paid for on that day throughout the islands,—at least by those whose necessities make it expedient.

Of what little hemp or flax is bought, the payments, either the whole or part, are made in December and January, though sometimes on the 1st of March. The negotiation of their bills and money transactions are chiefly done at Riga, and Pernau.

PERNAU is situated in the government of Riga, on an arm in the north-east of the gulf of Livonia; the town stands upon the river Pernava, near where it

falls into the bay. Vessels drawing not more than 6 feet water can come up to the city; but those of a larger size must anchor in the roads, from one to two miles below the town, and have their cargoes loaded or unloaded by smallcraft.

The produce exported from Pernau is chiefly brought from the interior on sledges, and consists principally of grain; which, as well as the hemp and flax, and other articles, are not, in their qualities, reckoned equal to those from Riga or St. Petersburg.

This port formerly had a considerable import trade, but the severe regulations of 1797 and of 1799 put nearly an end to it.

Account of Goods imported at Pernau, 1804.

WINDAU stands at the mouth of the river of that name, which runs through Courland, but is not navigable for any other purpose than that of floating timber down, in the export of which its trade chiefly consists. In the two following years the trade of this port stood thus:

Years.	Ships arrived.	Imports. Roubles.	Exports. Roubles.	Customs. Roubles.
1796	69	104,628	642,471	25,346
1797	53	92,774	299,993	22,143

In 1839 there arrived 68 ships, importing goods to the value of 3868*l.* only, and the same number carried away goods to the value of 35,000*l.* Of the ships 2 only were British. In 1840, out of 86 ships there were 10 British.

LIEBAU has no interior communication, by navigable rivers or canals. It is, however, the principal place of trade in Courland. Vessels drawing from 10 to 12 feet, English measure, can at all times pass the bar at the mouth of the harbour. Heavy gales of south-west wind sometimes accumulate the sand on it, which is again taken away by the current from the springs in the lake and the rivulet which runs into it.

The harbour of Liebau, though it may now be called a lagoon, was formerly an arm of the sea. In the year 1680 its formation was begun by sinking prams filled with stones; an annual revenue was raised to complete this work by the then dukes of Courland, sometimes amounting to near 40,000 dollars, but afterwards it was chiefly applied to other purposes, leaving but sufficient to keep the harbour in repair.

Vessels which cannot enter the harbour anchor in the roads, 1 to 2 English miles below it, where they are loaded or unloaded by lighters; but they are much exposed to the winds.

Ship-building is carried on with some activity at Liebau.

The Navigation and Trade of Liebau during the year 1796, when it became possessed by Russia, and for 1797 and 1803, are stated as follow:

Years.	Ships.	Imports. Roubles.	Exports. Roubles.	Customs. Roubles.
1796	267	958,681	2,231,420	159,388

"The commerce with Great Britain has been tolerably animated during the year (1841), and although only few English vessels visited this port, a great number of cargoes have been shipped for the United Kingdom in Russian vessels.

"Trade generally has been more animated this year than last; 6 vessels of 1200 tons have been built here, and 3 of 800 tons are on the stocks.

"All manufactures are carried on with the greatest zeal; in Russia, however, a long time must elapse before they attain to English perfection, particularly in regard to quality. The stocks of salt (particularly Portuguese), and of herrings, are more than sufficient for the winter.

"Of the 13 British arrivals in 1842, 6 vessels were in ballast, 4 had coals, and 3 coals, millstones, and machinery.

"Of the 13 departures, 2 vessels were loaded with flax, 4 with flax and codilla, 1 with flax, codilla, calfskins, and oats; 2 with crushing linseed; 1 with linseed, flax, codilla, and hides; 1 with flax, codilla, and bristles; 1 with codilla, bones, timber, and deals; and 1 with animal bones."—*Consular Report.*

TRADE OF RIGA.

Riga is said to have been founded early in the 12th century. In the year 1198 it is noticed in history as a place of importance. In 1200 the Bremeners are stated to have planted themselves in Livonia, and in order to secure their power, erected mounds, or fortifications, around Riga, which they named the new city: from which time it increased in power and wealth, kept the *Pagans* in awe, and exerted great influence in civilizing them. In 1498 the arch-prefect, proconsuls, and consuls, of Riga, negotiated with great solemnity a treaty with King Henry VII. of England.

In 1704 no less than 359 ships were loaded and despatched from Riga. In the year 1710, in consequence of the war, only 15 ships arrived at Riga.

Vessels even of a small size can go no higher than 4 or 5 miles above the town.

In spring by the melting of the snow, and in autumn by the fall of the rains, barks, or rafts of masts, and timber descend with the current of the Dwina, or Düna, and bring down at the same time grain, hemp, flax, and other produce. Boats then return back to Witepsky, loaded with salt and other articles. Flax is also brought from the interior in winter on sledges.

The articles of export at Riga consist chiefly of corn, hemp, flax, wool, linseed, masts, &c., the qualities of which have been always held in higher estimation than from any other quarter of the Baltic. This may arise from the greater attention originally paid to the Brack at Riga than at any other port in Russia.

The hemp and flax, when brought down, on passing the Brack, are sorted. The hemp as Rein, or clean, Drujana, Outshot, Drujana Polish Pass, Pass, Drujana Codilla, and Codilla, which comes chiefly from Lithuania, Courland, and Russia.

Flax is assorted under the following names:

Rakitzer is a general name here for the finer sorts of flax, and probably derived from Rakischeka, a district in Lithuania, from whence all the fine flax used to come.

Drujana Rakitzer, which comes from the district of Drujana.

Tiesenhauren Rakitzer takes its name from a family which formerly brought down the best flax, and is now picked from that which comes from the duchy of Lithuania.

Marienburg Clean, or Crown, comes from a remote part of Livonia, and from the estates Marienburg and Marjenhausen.

Marienburg Cutt is the outcast of the above in bracking.

Badstub Paternoster is the outcast of Lithuania and Rakitzer.

Drujana Cutt is the refuse of Drujana Rakitzer.

Eisten Three Bands is the refuse of Drujana Cutt.

Hoffs Three Band is the best Livonian Three Bands, both grow in Livonia.

The Crown or best kinds remain in their original binding, of about 25 lbs. each bundle; but that cast-out is bound over again in bundles of about 10 lbs. each; and, when packed for shipping, made up in bales of about a quarter of a ton.

The linseed from Riga has generally been of superior kind, especially as sowing seed. It chiefly comes from Livonia, Courland, and Lithuania, in autumn, before the shipping season closes, being the growth of the same year: what remains behind is called Over Sowing Linseed, expressive of its laying over the winter, and is not sold as sowing seed, but for crushing. Drujana linseed comes from the district of that name, and is only used for extracting oil, as are the supplies from Polotski, Witepsky, and the adjacent interior provinces of Russia. It is illegal and punishable to sell any article that has not passed the *Brack*.

The grain and most other articles shipped from Riga is the produce of White Russia, the Ukraine, Poland, Courland, Livonia, Esthonia, Smolensk, Minsk, Mohilev, Vitepzk, and Lithuania; masts were formerly brought from these countries to Riga; the forests of these countries being exhausted of late years, masts have chiefly been brought, since 1805, from Volhynia; but are now scarce, and have for the last thirty-five years been brought by water communication as far as from Austrian Galicia, and are now brought, at great expense, from the banks of, and up, the Dnieper, and by canal to the Düna, and thence down to Riga. They are often two years on the way from the forest where cut, to Riga.

The city of Riga stands upon the eastern bank of the Düna, about 10 English miles from its mouth. Like most of the rivers falling into the Baltic, it has a bar, varying according to seasons and circumstances, from 12 to 15 feet water. Vessels not drawing more than from 8 to 9 feet water, may in general load at the city. The anchorage in the road is good, but exposed and attended with danger. There are, however, lighters of different sorts, covered over when conveying merchandize to and from the town to the ships which load either in the roads, or at the Boldero harbour, near the mouth of the river.

NUMBER of Ships which have arrived at Riga at different periods in the Eighteenth Century, and for the Years 1800 to 1819 inclusive.

1793	81,923	787,844			

* From that time, by sea only; no account has been given of what came by land.

MONIES, WEIGHTS, AND MEASURES.

THE monies are legally those of the empire; but Riga rix-dollars, value about 3*s.* 1½*d.*, are still current.

The weights for heavy goods are, shippounds, lispounds, and pounds, whereof 20 lbs. is a lispound, and 20 lispounds a shippound. The weight at Riga is calculated about 9 per cent lighter than the English weight. The lesser weight is 32 loth to a pound. 6 one-sixth ship lbs. are about a ton, or 2466 lbs. Riga make, at 9 per cent, 2262 lbs. English.

45 lbs. Riga give 46 lbs. Russian.	38 lbs. Riga give 35 lbs. English.
13 lbs. „ 11 lbs. Amsterdam.	22 lbs. „ 19 lbs. Hamburg.

The measures for grain are, wheat and barley, 48 loops,* or loofs, to a last, equal to about 11¼ quarters Winchester measure. Of rye 45 loops, of oats 60 loops are reckoned to a last. Of salt, the measure is larger, and goes by lasts and barrels, of which latter, 18 are to a last, and about 2½ tons Liverpool white salt produce here a last.

2 Riga ells = 1 yard English; 13 Riga ells = 10 Russian arshines; 5 Riga ells = 4 Brabant ells; 34 Riga ells = 27 Amsterdam ells; 35 Riga ells = 27 Flemish ells in Amsterdam; 23 Riga ells = 22 Hamburg ells; 12 Riga feet = 11 feet English.

The customs regulations, clearances, &c., are the same as at St. Petersburg. Pilots are always taken on board in the Gulf, by vessels bound for Riga, and no ballast is allowed to be discharged, except at Poderague, the particular place for that purpose.

The businesses of the *stauen* who stow ships' cargoes, and of the *brackers* who inspect merchants, are carried on by persons specially appointed for both purposes.

* A loof is reckoned = 1⅛ Winchester bushels.

TOTAL in Quantity of the principal Articles exported from Riga to all Places, in the following Years.

The ships and tonnage of Portuguese vessels are not given—but the value of exports to Portugal for 1839 is stated at 57,913*l.*

The exports have exceeded in value, this year, as compared with the last year, 479,403*l.*

Hemp and corn have been the chief articles in which the increase has occurred. The *export* of flax has fallen off this year as compared with 1838, from 7322 tons, to the United Kingdom.

The *imports*, according to the custom-house valuation, are 644,040 roubles, B.N., less this year than in 1838.

The principal articles of *export* to the United Kingdom from Riga are hemp, flax, tallow, hides, corn, linseed, deals, and timber.

The chief *imports* consist of raw sugar, herrings, salt, coals, wines and porter, and colonial produce. A railway is in contemplation from the Niemen to Liebau.

Trade of Riga during the Year 1840.

Total	1195	172,916	8308	871,405	1189	172,040	8195	£2,107,282

The value of cargoes inwards and outwards can only be stated in gross. The return made by the Imperial Custom-house at Riga being solely the amount of importations to and from each country, without any reference to the amount of the trade carried on by the particular vessels of each foreign country.

The gross amount stated, can be relied on as correct—any subdivision for each nation would only be uncertain, as it would not be based upon any ascertained calculation.

The value of the exports in 1840 were less than in 1839 by 840,181*l.*, of which Great Britain's share was 258,000*l.*, and that of Holland 333,000*l.*

Return of the British Navigation at the Port of Riga during the Year ending 31st of December, 1841.

FAIR AND TRADE OF RIGA IN 1841 AND 1842.

Extract of a Statement, dated Riga, August 6-18, 1841.—"It appears that the better condition of the wool of this season, tended more to command high prices than the small supply; the quantity brought to market during the present fair not exceeding 6000 to 7000 poods (120,000 to 140,000 lbs. British): whereas, in 1840, it amounted to 9000 poods (180,000 lbs.); many of the Lithuanian sheep proprietors, dissatisfied at the prices which they obtained in Riga, last season, preferred disposing of their present produce to purchasers on the spot, to forwarding it to Riga.

"Among the best parcels of wool exhibited, was that from 'Tricatiu,' an estate situated in Livonia, which was purchased by the nobles for the purpose of improving the breed of sheep. No Esthonian wool was brought to Riga; the produce of that province having been sent to the fair at Reval, which took place a few days previously to that of Riga. In quality it is not so good as that of Livonia and Courland; it is however from

Lithuania that the inferior kinds of wool are sent to market, both as regards staple and indifferent cleansing.

"The small competition which existed among the few buyers, chiefly manufacturers, and who had already purchased part of their stock at Reval, forced holders to reduce their limits as to prices. The pood (=20 lbs. British) of inferior wool sold for 33 roubles silver (5*l.* 10*s.* sterling); fine and good, from 28 to 26 roubles silver (4*l.* 13*s* to 3*l.* 10*s.* sterling); middling, 21 to 16 roubles silver (3*l.* 10*s.* to 2*l.* 13*s.* 4*d.*); and ordinary, from 15 to 12 roubles silver (2*l.* 10*s.* to 2*l.*). In 1840 the prices were, for fine, 25 to 30 roubles silver (4*l.* 3*s.* 4*d.* to 5*l.* sterling), per pood; 18 to 22 roubles silver (3*l.* to 3*l.* 13*s.* 4*d.*) for middling; and from 15 to 16 roubles silver (2*l.* 10*s.* to 2*l.* 13*s.* 4*d.*) for ordinary. Nearly the whole of the superfine wool exhibited this season, came from the beforementioned estate of 'Tricatiu.' Of the 6000 to 7000 poods brought to Riga, about 2000 poods (40,000 lbs.) remained unsold, which the holders intend shipping to England. About 500 poods (10,000 lbs.) were purchased for account of foreign merchants, and the remainder by domestic manufacturers, who commonly mix Russian wool with that which they receive from Dresden, Breslau, and Königsberg, as they find that although Russian wool is of equal fineness and condition as the foreign article, yet the staple is not of sufficient strength to resist the acids of some of the dyes made use of, and which affects it more than German wool.

"At the fair at Reval there was 4261 poods (185,220 lbs.) of wool; 4032 poods of Esthonian, and only 229 poods from Livonia:—3990 poods (79,800 lbs.) were sold for 88,611 roubles silver (1476*l.* 8*s.* 10*d.* sterling), which will give an average of about 22 roubles silver (3*l.* 13*s.* 4*d.*) the pood or 20 lbs. The prices were from 1 to 3 roubles silver higher than those of 1840. Superfine was sold at from 26 roubles silver (4*l.* 6*s.* 8*d.*) to 36 roubles silver (6*l.*) the pood. The whole of these purchases were for Messrs. Hohrman, Ungern, Sternberg, and Schramm, proprietors of cloth manufactories in these provinces. These sales were made on a credit of from 8 to 14 months, which it is supposed will in future induce holders of wool to prefer sending their stock to Riga.

"The only three foreign merchants present at the fair at Reval, made no purchases. Although the wool at Reval was superior to that of last year, yet it still presented a manifest inferiority to that from Courland and Livonia. This is now attributed to the lime water in Esthonia, as the present season has been peculiarly favourable for wool."

Extract of a Statement, dated Riga, January 25, 1842.—"The navigation of the past season, which has been of unusually long duration from the openness of the weather, finally closed on the 19th of December. The number of vessels arrived is 1220, of which 380 were British;—sailed, 1249, of which 404 were British.

"The value of goods exported to the end of November, old style, is 13,902,932 roubles (or 2,317,155*l.* 6*s.* 8*d.*) compared to 12,609,831 roubles (or 2,101,605*l.* 3*s.* 4*d.*) during the same period in 1840. The proportion to the United Kingdom is 8,350,525 roubles (or 1,391,754*l.* 3*s.* 4*d.*) in 1841, compared to 7,737,563 roubles (or 1,288,593*l.* 16*s.* 8*d.*) same period in 1840. Flax and linseed both for sowing and crushing, have principally contributed to this small excess in 1841.

"In corn and hemp there has been a falling off compared to 1840.

"Of flax there have been shipped 159,132 shippounds (26,522 tons), besides 6020 shippounds (1100¾ tons) of codilla, compared to 139,442 shippounds (23,240 tons) of flax, and 6810 shippounds (1118 tons) of codilla, exported in 1840.

"Of flax exported to the United Kingdom, the quantity in 1841 amounted to 141,382 shippounds (22,563 tons), and of codilla 5091 shippounds (848 tons); compared to 125,325 shippounds (20,889 tons) of flax, and 5828 shippounds (971 tons) of codilla, exported in 1840. The contracts for the delivery of flax on or before the 31st of March next, commenced about the middle of December last, at the following ready money prices:

Silver Roubles.			Per Ton, Free on Board. £ *s.* *d.*
29	per shippound,	for P. T. R., equal at present exchange .	34 16 6
31	"	Superior ditto	36 17 8
25	"	D. C.	30 11 11
21	"	R.	25 19 0

"On which terms about 1000 tons have been purchased. The want of sledge-roads now keep back supplies which later will become more plentiful, and probably prevent any advance in price, although the rates above stated are but barely remunerated to the growers, more especially as grain is now so high in price."

"The crop of flax has been abundant, the quality various, but the preparation of the raw flax has been much facilitated by the unusual mildness of the winter, which, together with the circumstance that none of it has been buried under the snow, is materially in favour of its average quality.

"The French spinners have imported largely in 1841. The quantity being upwards of 7000 shippounds (1167 tons), compared to only 600 shippounds (100 tons) in 1840. France has consequently taken in 1841, nearly 2000 shippounds more than Spain and Portugal together.

"The flax to France were chiefly of the finest sorts, that to Spain chiefly white P. T. R.

"*Hemp.*—There have been exported in 1841, 96,955 shippounds (16,159 tons), and codilla 10,110 shippounds, (1685 tons); and in 1840, hemp, 110,578 shippounds (18,429 tons), and codilla, 13,198 shippounds (2,199 tons).

"Of these, hemp, 64,170 shippounds (10,861 tons), and codilla 2,177 shippounds (362 tons), were shipped to the United Kingdom in 1841.

"In 1840, were shipped to the United Kingdom, hemp, 59,547 shippounds (9924 tons) and codilla, 4,607 shippounds (768 tons).

"Next to Great Britain, Sweden and Norway have taken the largest quantity.

"The reports on the subject of the new crops are more favourable than were expected last autumn.

"*Crushing Linseed.*—The exportation of this article shows an excess of rather less than 189,158 barrels compared to that of 1840. There have been shipped in 1841, 356,134 barrels against 166,976 in 1840. Of these 65,600 barrels went to the United Kingdom, compared to 58,629 in 1840.

"The greatest importers were Holland which took 129,698 barrels; Belgium rather less. Then comes Great Britain.

"*Sowing Linseed.*—The exportation considerably exceeded that of the preceding year, especially to the United Kingdom. There have been shipped to all countries, 158,914 barrels compared to 127,642 in 1840. Of these, 43,625 barrels compared to 27,576 in 1840, were shipped in 1841 to the United Kingdom, principally to Ireland.

"*Hempseed.*—An article of comparatively little importance to the United Kingdom, although the exportation to Holland and Belgium in 1841 was very extensive.

"The quantity shipped to Great Britain in 1840 was 916 barrels; in 1841, 2257. The excess of the total exportations in 1841, compared to 1840, was 73,283 barrels. Corn (there has been no wheat exported), of barley only 865 lasts (9803 quarters) compared to 3792 lasts in 1840. Oats 478 lasts compared to 3736; rye, 1324 compared to 1173.

"The proportion to the United Kingdom was—

	Wheat.	Barley.	Oats.
1841	438 lasts (4964 qrs.) ...	180 lasts (2040 qrs.) ...	473 lasts (5,360 qrs.)
1840	———	... 277 ditto (3135 qrs.) ...	3736 ditto (52,304 qrs.)

"There is no probability of an increase in the exportation either to the United Kingdom, or anywhere else during 1842. The trifling stock of grain on the spot is confined to rye, which is the only description of grain in which any contracts have taken place for spring delivery by the markets. These contracts, to the extent of above 400 lasts (4000 qrs.), have been made for account of Friedland, Sweden, and Norway, and partly with a view to St. Petersburg, which took a great deal of rye from this port during the shipping season, not included in the amount of exports. There are no transactions on the Riga exchange in any other kinds of grain. Owing to the unfavourable result of the wheat crop in the provinces that supply Riga, it will barely suffice for home consumption. Spring corn has turned out well; but rye is the species of grain principally cultivated throughout the empire.

"*Tallow.*—Exported in 1840, 1568 shippounds (261 tons); 1841, 85 shippounds (14¼ tons).

"Great Britain has taken none in 1841, while in 1840 she took 161 tons.

"The St. Petersburg markets, by the greater advantages which it affords the tallow dealers of the interior, has monopolized the supply of this article.

"*Horse Hides and Kips.*—The exportation is annually decreasing. There have been shipped during 1841, 20,963 hides, against 48,052 hides in 1840. Of which 13,940 pieces went to Great Britain, compared to 33,339 pieces in 1840. The extension which the manufacture of these articles has acquired in the interior, and the circumstances that the orders from abroad are at too low limits (compared to prices in the markets of the interior), prevents Riga from now receiving the same supplies as formerly.

"*Wool.*—Riga receives its supplies from the province of Livonia, and from Courland and Lithuania, at the time of the annual fair in July; but the produce as yet does not suffice for the demands of the woollen manufacturers of these provinces; and there is besides a want of proper assortment to meet a foreign demand.

"However, in these were shipped in 1841, 39¼ tons; and in 1840, 53 tons.

"*Wood Goods.*—There were more deals and less timber and spars shipped to Great Britain in 1841, say 171,441 deals in 1841; in 1840, 136,502; square fir timber, 15,888 in 1841; 17,431 in 1840: round logs, 1768 in 1841; 3141 in 1840: spars, 330 in 1841; 576 in 1840: wainscot logs, only 2412 pieces in 1841, and 4920 in 1840.

"Freights were 40*s.* per ton for clean hemp and flax to the east coast of England until after July, but advanced later in the season to 45*s.*, and closed at 47*s.* Other goods in proportion, and 5 per cent additional to London, Leith, and Hull.

"The freight for sowing linseed to Ireland, 5*s.* 3*d.* to 5*s.* 6*d.* per barrel."

NAVIGATION of Riga during the Year 1842.

WOOL FAIR OF JUNE, 1842.

"THE whole of the stock was purchased on the first day at an advance of 5 silver roubles (16*s.* 8*d.*) per pood of 36 lbs. English ordinary wool was much in demand.

"The total amount of wool offered at the late fair may be estimated at 6000 poods (180,000 lbs. British), which, compared with the amount in 1841, will show a falling off in the present year, of about 1000 poods (30,000 lbs. British.) It is to be observed, however, that a large quantity of wool which was expected to arrive in Riga from Livonia and Courland, provinces which furnish the best, had been previously disposed of to local manufacturers, and on speculation for the British market:—also that Lithuania, from which province the inferior quality of wool is chiefly obtained, sent none to Riga this season. The high prices of grain have likewise determined many farmers to reduce considerably their stock of sheep.

"During the late fair the wool was found to have been better cleansed; but the very unsatisfactory way in which it was prepared and packed, caused some sales at lower prices than the quality of the wool appeared to warrant.

"The wool from the model farm at Trikaten has fully supported its previous well-merited reputation, and produced much higher prices than any other.

"Fine wool was sold for 23 to 27 silver roubles (3*l.* 16*s.* 8*d.* to 4*l.* 10*s.*) per pood of 30 lbs. British; middling quality 18 to 22 silver roubles (2*l.* 6*s.* 8*d.* to 2*l.* 16*s.* 8*d.*) per pood. A few bales of remarkably fine staple sold as high as 35 roubles 70 copecs silver (5*l.* 19*s.*) per pood.

Extracted from a Report for the Year 1842, *dated January* 17, 1843.—"The value of merchandize exported in 1842, compared to 2,327,596*l.*, in 1841, making an increase of 290,677*l.* during the late year. The proportion of the United Kingdom is 1,527,710*l.* compared to 1,400,029*l.* in 1841, being an increase of 127,681*l.* during the year 1842, thus showing that the exports to the United Kingdom amounted to more than one-half of the whole. Unusual caution was observed by the merchants in the early part of the season in making purchases, but the number of vessels in port, low rates of freight, and reasonable prices of the chief articles of Russian produce, induced purchasers to enter the market freely. The advices from England had, latterly, become more encouraging. France also imported double the amount of Russian produce during the year 1842, as compared with 1841. Of flax alone there were shipped to France, exclusive of codilla, 2428 tons against 1183 tons in 1841.

"*Flax.*—There have been shipped 29,171 tons, and 824 tons of codilla, compared to 26,544 tons of flax, and 1003 tons of codilla in 1841. Of the above, the exportation to the United Kingdom was,

"In 1842, 23,566 tons of flax, and 706 tons of codilla. In 1841, 22,948 tons of flax, and 826 tons of codilla. Increase of flax in 1842, 618 tons; decrease of codilla 120 tons. This excess of flax to Great Britain satisfactorily proves that the high import duty on British yarns in France has not depressed this branch of British manufacture. The exportation of flax to Spain is on the decline, being only 500 tons, 170 tons less than in 1841. Portugal, however, took about 767 tons, nearly double what she took in 1841. The flax still on hand is of the new growth, the quality of which, especially the Livonian, is generally approved. The last prices for fresh flax were,

"*Parthiegut*, or superior P. T. R., 35*l.* 2*s.* 6*d.*; D. C., 31*l.* 10*s.*; R. T., 26*l.* 17*s.* 6*d.*; crown M., 36*l.* 2*s.* 8*d.*; superior H., 31*l.* 11*s.*; H., 33*l.* 10*s.* 5*d.*

"The future condition of the flax market will chiefly depend on the accounts received from the British manufacturing districts: should these be discouraging, Riga prices must decline; but any improvement would undoubtedly have the contrary effect in a much greater degree, as the above stated prices are based on the unfavourable state of trade and manufactures, and also leaving but little profit to the grower.

"*Hemp.*—There have been exported, in 1842, 17,644 tons of hemp, and 2165 tons of codilla. In 1841, 16,224 tons of hemp, and 1685 tons of codilla, showing an increase in 1842 of 1420 tons of hemp, and 480 tons of codilla. Of these were shipped to the United Kingdom, in 1842, 9758 tons of hemp, and 1099 tons of codilla. In 1841,

10,471 tons of hemp, and 355 tons of codilla. Deficiency of hemp in 1842, 713 tons, and excess of codilla 746 tons with reference to the United Kingdom, notwithstanding the shipment of 600 tons of hemp on account of a British government contract. The United States government which had taken no hemp in 1841, took 578 tons last year. The Swedish government received nearly 400 tons, and about 1241 tons went to France, being 917 tons more than in 1841. The last prices of hemp were as follows:—R. H. 27*l.* 14*s.*, O. H. 26*l.* 5*s.*, P. H. 25*l.* 8*s.* per ton, free on board. It may be well to mention that the hemp shipped for the British navy contract, in many instances, with a view to superior quality, cost 48*s.*, and even 100*s.* per ton more than the common R. H. as above quoted.

"*Sowing Linseed.*—There have been shipped to all countries 172,291 barrels, compared to 160.754 barrels in 1841. The proportion to the United Kingdom (principally Ireland) was 48,629 barrels compared to 43,625 barrels in 1841. Next in importance was the exportation to Belgium 41,905 barrels; Prussia 26,423 barrels; Lubec 19,537 barrels, and France 16,168 barrels. The quality was good, but the supply, latterly, not free from the mixture of hay-seed, and which has been too generally the case with the late year's crops of linseed. The last quotation of price was 20*s.* 5*d.* to 21*s.* 3*d.* per barrel, exclusive of bags.

"*Hempseed.*—The total exportation in 1842 was 164,331, compared to 139,747 barrels in 1841. Only 3665 barrels went to the United Kingdom. compared to 2257 barrels in 1841. Belgium took 128,849 barrels; Holland 22,238 barrels; France 9507 barrels. The quantity shipped to the United Kingdom, trifling as it is, has augmented during the last three years, but the demand for the countries above named is so considerable that this article forms an important branch of the Riga trade.

"*Corn.*—There has been no foreign demand to animate the corn trade, nor would the result of the harvest in 1841, and the smallness of the stocks here, and in the interior, have permitted any considerable exportation. There has, however, been a slight increase this year, the shipments amounting in 1842, 2852 quarters wheat, 36,818 quarters rye, 15,889 quarters barley, 20,886 quarters oats; in 1841, 13,514 quarters rye, 7943 quarters barley, 13,243 quarters oats. Of the wheat 2777 quarters, the whole of the oats (20,886 quarters), and of barley 2779 quarters went to the United Kingdom. There has been no rye shipped to Great Britain either in 1842 or 1841. In 1841 spring wheat alone was an average crop, but was required for home consumption. In 1842 the harvest was generally good. The wheat in Courland has proved particularly fine, and averages in weight 63 lbs. British per imperial bushel. The prices of grain in Riga are at present quite nominal.

"*Tallow.*—This branch of Riga trade, at all times inconsiderable, has for the last two years been quite at a stand, the demand for Great Britain being so exclusively directed to the St. Petersburg market. Riga is not unfavourably situated for the supply of this article from the interior; and the earlier opening of this navigation, and arrival here of the barks from the interior, than at St. Petersburg would give the importation of tallow from Riga, if properly encouraged, a great advantage.

"*Kips, Horse-hides, and Calfskins.*—Of late there has been a yearly decrease in the exportation of every description of hides and skins, domestic prices having too much augmented in consequence of the increased demand for the purposes of the Russian manufactories, and to check the foreign demand. The exportation was in 1842, 17,717 kips, and horse-hides, and 30,614 calfskins, compared to, in 1841, 20,963 kips, and horse-hides, and 67,995 calfskins. Of which to Great Britain, in 1842, 4770 kips, and horse-hides, and 6180 calfskins, compared to, in 1841, 13,940 kips, and horse-hides, and 8480 calfskins.

"*Wool.*—The exportation in 1842 only amounted to 41,216 lbs. British, compared to 116,656lbs. in 1841, and no part of it went to the United Kingdom. The quantity brought to the annual Wool Market of Riga, in July, was about the same as in 1841. More than three-fourths of this supply was purchased for the interior woollen factories. It will be some time before the supply of wool will be much more than sufficient for the home consumption. There is a great improvement going on in the breed of sheep, and in the washing and sorting of the wool.

"*Wood.*—The exportation to the United Kingdom was, in 1842, 2343 wainscot logs, 198 half-logs, 2516 staves, 116,422 deals, 17,134 square timber, 1705 round timber, 439

spars and bowsprits. In 1841, 2412 wainscot logs, 73 half-logs, 980 staves, 171,441 deals, 15,888 square timber, 1768 round timber, 392 spars and bowsprits. The total exportation was for 1842, 2950 wainscot logs, 242 half-logs, 373,561 staves, 313,834 deals, 79,999 square timber, 4220 round timber, 1619 spars and bowsprits. 1841, 3206 wainscot logs, 121 half-logs, 200,160 staves, 318,677 deals, 67,388 square timber, 3407 round timber, 1947 spars and bowsprits. The quality of timber denominated 'Crown Fir Timber' has, since the last two or three years become very scarce, so that the greatest part of the Riga exports consists of the second quality, or what is called 'Verschiffungs' Brack Timber.' There is no essential difference in the quality of crown timber and timber of the second quality, except that the latter has more knots than the former.

"*Salt.*—Of salt about 20,000 tons were imported in 1842; 6250 tons of fine Liverpool, and 1620 tons of Rock salt. The quantity of salt in Riga at the present time is estimated at about 30,500 tons, of which about 12,500 tons will be sold during the winter; therefore not less than 18,000 tons will probably remain over.

"*Freights.*—There was throughout the business season of 1842 more ships than goods, so that although freights were from the first very moderate, yet a further reduction took place towards the close of my season. This bore very severely on the British shipping interest, as, from the present Russian tariff, vessels are unable to bring cargoes to Riga, and are compelled to arrive in ballast, thus relying on the homeward freight solely for remuneration. The ruling rate of freights in 1842, I regret to state, afforded but little profit to shipowners, and in many instances they have unfortunately encountered heavy losses.

"Exchange in London has varied very little in the course of 1842. It opened at 38⅛*d.* per silver rouble, and fell to 37¾*d.* in the autumn.

"The only articles of importation that come to Riga market, and of which prices can be correctly stated, are salt and Norwegian herrings. The sugar imported was almost entirely for the refiners. Coffee and other colonial produce for account of the grocers and retail traders."

CHAPTER XV.

RUSSIAN TRADE AND NAVIGATION ON THE BLACK SEA AND SEA OF AZOF.

THE importance of the trade of the Black Sea, will be understood by the extensive inland navigation, and rich and varied productions of the extensive regions through which the Danube and its great tributaries, the Dniester, the Bug, Dnieper, Don, and several lesser rivers flow into this second Mediterranean.

The extreme length of the Black Sea, or Euxine, is about 700 geographical miles; extreme breadth nearly 360 geographical miles. The Sea of Azof, connected by the narrow strait of Kertch or Yeni-Kalé, and the great outlet and inlet for these seas, and the great rivers falling into them, being the deep straits of the Bosphorus and Dardanelles. Although its shores have numerous places of shelter, it is less indented than most seas, the gulf of Perekop after the Sea of Azof, and the inlet of Kherson being the only arms of consequence, exclusive of rivers and the Bosphorus branching from the Black Sea. This sea is deep, and scarcely any rocks or shoals off or along its shores. Its navigation was formerly considered dangerous. This opinion was founded altogether upon ignorance,

and it is to be regretted that we have no regular scientific survey of its coasts. Those who have for some years past navigated it, consider its navigation quite as safe and free of dangers as the broad parts of the Mediterranean.

TRADE OF ODESSA.

Odessa is situated on a bay formed by the Black Sea, thirty miles distant from the mouth of the Dniester, and sixty from that of the river Dnieper, called by the Turks, when in their possession, Koadjabeg,* and, so late as 1792, its shores were a waste plain; and Odessa was no more than a wretched village, inhabited by Mahomedan Tartars. It is a secure and convenient bay, with a great depth of water. It is seldom closed by the frost, which accommodation first attracted the attention of the Russian government after it came into their possession.

Catherine II. founded Odessa early in 1792, in accordance with a plan drawn up in 1790 by Ribas and General Valant. Its progress was opposed by the merchants of Kherson, although they received some countenance from the Emperor Paul. In 1795 a few houses only were built, and it had then very little regular trade. In the autumn of that year its regular traffic commenced; 35 small vessels arrived, 30 sailed, and the customs revenue amounted only to 4360 silver roubles. In 1796, 87 vessels arrived, and 63 sailed. During the following three years its progress was so rapid, that in 1799 it contained the following buildings, constructed chiefly of a soft easily-worked stone: viz.—5 churches, 1 chapel, 1 synagogue, 506 houses of stone, 233 earth pits (*semlankie*), 591 huts, 111 cellars with passages to streets, 36 warehouses, 3 brick-kilns, 4 lime-kilns, 6 windmills, 18 wells in houses, 12 public wells, 13 fountains, 6 distilleries, 5 breweries, 5 soap manufactories: the population increased to 4873 inhabitants.

Great activity was then exercised in the construction of moles, lazarettoes, and public buildings; large sums of money were granted by Alexander for that purpose. The two moles are each extended to 315 fathoms, and are raised seven feet and a half above the surface of the sea. The port formed by them will shelter 200 ships. The port has good anchorage, the bottom being fine sand and gravel. The depth of water within the port is sufficient to admit the largest ships of war.

The Dniester has been rendered navigable, and by it the produce of Galicia comes down to the Black Sea and Odessa.

In the year 1803 there arrived at Odessa, before the 1st of November, 502 ships, of which 472 sailed with cargoes; viz., 96 Russian, 6 English, 18 French, 4 Spanish, 5 Neapolitan, 278 Imperialist, 56 Turkish, 21 Ragusean, and 18 Ionian Islands.

In November, 1804, the population amounted to 15,000 inhabitants, and above 2000 houses were in a habitable state, and numerous other buildings were erected.

* Or Gadschibeg.

After the first French revolution, the government was intrusted to the Duke de Richelieu, to whose care and services, Odessa, the surrounding country, and the Crimea owe much of their existing prosperity. The following ukase was issued, March 5, 1804:

"It is well known how much *we*, for the benefit of the state, wish to bring forward the commerce of Odessa. Experience shows how its flourishing state answers *our* expectation; and, for the sake of still further extending the same, we most graciously order,

§ 1. "That from the date hereof, there shall be established in the town of Odessa, an entrepôt for five years.

§ 2. "The goods warehoused in the entrepôt, may remain in the warehouse or magazine, one year and a half from the date they were warehoused.

§ 3. "From the beginning of the opening of the navigation the ensuing year, all the articles of import that arrive by sea at Odessa, and whose importation is not prohibited by the present existing tariff, may be stored in this entrepôt, under the following regulations, &c. &c." (which extend to 27 articles).

"As the transito trade is beneficial in all its parts to the empire, it has long had the attention of government. With the general tariff of the year 1782, was published, at the same time, a transito regulation, for such goods as passed through Riga to Poland, Lithuania, and Courland, and with the tariff now in force, even the rules and regulations are mentioned, for the guidance of the Russian merchants who carry foreign goods through Russia; but as neither the place, nor the roads have been named, through which the transito trade was permitted to be carried on, this regulation had not the desired effect. As experience now shows how the trade of Odessa is increasing from the privileges granted to the place; we think proper, for the still further encouragement of its commerce, to establish the transito trade on the following principles, and command,

§ 1. "All Russian and foreign merchants, who have the knowledge of carrying on trade *en gros* (or wholesale), to foreign countries, shall have liberty to carry all goods, (those excepted which are prohibited by the tariff), that shall arrive by sea, or other Russian towns, at Odessa, as transito goods, to Moldavia, Walachia, the states of the Emperor of Germany, and Prussia. It shall likewise be permitted to import goods into Odessa from the abovementioned countries for re-exportation.

§ 2. "In those places, where, according to the tenour of the present regulation, the transito trade is permitted, the commanders of the provinces are to inspect the roads, and make their report of the same to the minister of commerce.

§ 3. "Those goods that are carried as transito from Odessa to Moldavia, are only to pass through the custom-houses of Dubossar and Mohileff; those that go to the states of the Emperor of Germany must pass through the custom-house of Radzivil, and those that are destined for Prussia, must pass through the custom of Krinky."

"UKASE TO THE DIRECTING SENATE.

"The emperor orders the port of Sebastipol to be the principal port for men-of-war, and that the custom-house there shall totally finish its business, within six months after the date of this ukase, and then be broken up; after the expiration of that time, merchantmen are prohibited from entering into the harbour of Sebastipol, except they are driven in there by storm, or by other misfortune, or for the sake of being repaired; but not to trade, or carry on any commerce. As soon as the danger is over, and the repairs are finished, they must not remain any longer in port. "(Signed) ALEXANDER."

At an early period, a considerable trade was carried on with various parts of the Black Sea, by the Venetians and Genoese, who were driven out of it by the Turks, even before the discovery of the Cape of Good Hope; previous to which, the trade with India was carried on, in part, by the Caspian and this sea. After its coming into the possession of Turkey, its natural advantages were totally neglected, and the miserable traffic carried on by them was of very unimportant

value. Peter the Great soon appreciated the advantages to be derived to his empire, by acquiring the navigation of this sea, and although in 1711, he was obliged to surrender the country, yet he did not lose sight of one day acquiring possession, and the free navigation of the Black Sea into the Mediterranean. This object was, however, accomplished by Catherine II. Below is a table of the imports and exports, with a few historical observations, tending to exhibit the whole at one view.

TABULAR View of the Russian Trade to and from the Black Sea, and the Sea of Azof, from 1756 to 1802.

Yrs.	Imports.	Exports.	REMARKS.
	roubles.	roubles.	
1756	.....	.....	A trading company was established this year at Temernikow.
1758	52,077	34,914	This is the first year of their trade from that place.
1759	61,603	37,848	
1760	85,085	42,283	
1761	116,069	52,631	
1762	128,906	41,315	In this year the trading company of Temernikow was dissolved.
1763	59,652	43,369	
1764	44,020	59,097	The exports exceed the imports.
1768	.....	.....	The war broke out between Russia and Turkey, which totally interrupted the trade.
1774	.....	.....	This year the peace was concluded, by which Russia obtained a complete navigation of the Black Sea; and by the Dardanelles into the Mediterranean, and had the Sea of Azof ceded to her.
1776	87,148	369,823	Beginning of the trade at Taganrog.
1777	83,246	242,118	
1778	.....	.....	A suspension to the trade, in consequence of a dispute between Russia and the Porte, relative to the independence of the Crimea, but which was settled the 21st of March, 1779.
1779	90,645	161,690	
1780	105,471	130,187	Five Russian-built vessels manned with Russian seamen, passed through the Dardanelles.
1783	.....	.....	The conquest of the Crimea made by Russia.
1784	.....	.....	A pacification concluded between Russia and the Porte.
1785	448,970	735,117	The Austrians for the first time commence a trade on this sea.
1786	517,238	519,811	
1787	.....	.....	War broke out between Russia and Turkey.
1791	.....	.....	Peace concluded at Jassy, by which Russia secured her present possessions.
1793	665,711	1,295,563	
1794	977,513	1,265,682	
1795	544,498	930,434	
1796	438,166	919,296	
1797	778,759	1,929,198	
1802	2,054,789	2,986,096	

TRADE of the principal Ports in the Black Sea, and the Sea of Azof, from 1793 till 1797, both inclusive.

Russian vessels engaged in 1802 in the coasting trade and in the fisheries in the Black Sea. 38 Russian vessels for transport, 822 lastage, and 266 smallcraft that go to sea. 6 Turkish vessels, 147 lastage.

The numbers employed in the fisheries are not stated.

During the seven years from 1805 to 1812, the trade of Russia on the Black Sea, and the navigation between the latter and the Mediterranean, although at times carried on with rather important activity, were, as far as returns of trade and navigation, altogether uncertain. When an open trade could not be carried on, the contrabandists, by various routes, supplied at high prices, it is true, the wants of the surrounding countries, at least, according to their ability to pay for the commodities which they respectively used, and which they did not possess among themselves.

Odessa, and the Russian establishments on the Black Sea, continued, however, to extend, and the number of inhabitants to increase.

In 1814 the population of Odessa amounted to nearly 35,000 inhabitants,

and in 1840 estimated at 70,000. Kohl says, in 1838 only 50,000 to 60,000. It has numerous public institutions, and although its situation has been repudiated, and although good water is only to be procured at some distance, it would have, it is now believed, been difficult to have found elsewhere in the Black Sea so convenient a port with deep water, for communication, at the same time, with the interior and with the sea. From the latter, the view of white houses, cliffs, and town of Odessa, resembles the view of Brighton from the sea. The latter, however, wanting the port and shipping.

In 1834 M. de Hagemeister, who was long previously in the employment of the Russian government, was directed by the governor of *Little Russia*, to proceed in collecting information and to draw up a report on the trade and navigation of the Black Sea, the Sea of Azof, to the Danube. M. de Hagemeister appears to have fulfilled his instructions with great care, and his tables are clearly arranged; from these, as well as from the text of his report, we have extracted and translated the most useful information we possess up to the year 1834. Since that period Mr. Yeames, the British consul at Odessa, has supplied us with detailed statements of the trade of that port, and of the general commerce of Little Russia.

SUMMARY VIEW OF THE TRADE OF THE BLACK SEA AND THE SEA OF AZOF.—Extracted and translated from M. de Hagemeister's report, drawn up for the Russian government.

"It may be said, that about half a century back the Black Sea was not known commercially in Europe; nor was its geographical position correctly described. The Turks excluded all foreign vessels. The treaty of *Kainardy*, in the year 1774, opened the navigation of the Black Sea to the Russians, who have since made themselves masters of the whole of the northern coast. By keeping the command of the Bosphorus, however, in their own hands, the Turks retained the power of opposing its entrance to whomsoever they pleased, notwithstanding the treaties which extended its navigation to several nations.

"In 1778 the Russian government chose for a military and commercial port, Kherson, (situated at the mouth of the Dnieper), on account of the great facility its situation afforded for the transport of wood necessary to the construction of ships of war. The unhealthy situation however of Kherson, the inconveniences of its port, which is only navigable during seven months of the year, and which does not admit ships drawing more than six feet of water, has always rendered its commerce expensive and tedious.

"The subsequent conquest of the Polish provinces by Russia, rendered necessary the opening of an eastern port, and the government accordingly, after the peace of Yassy, in 1792, fixed its attention upon the Tartar village *Kadijbei*, well known to have a good roadstead for ships. And thus Odessa came into existence.

"The good choice of this port was felt in the very first years of its creation. In 1795 the value of the imports and exports did not exceed 68,000 roubles. In 1796 they amounted to 172,000 roubles; and in 1797, to 208,000 roubles.

"The imports and exports at Kherson, Nicolaieff, and Ochsakoff, which in 1793 had been valued at 147,000 roubles for Kherson, 106,000 roubles for Nicolaieff, and 453,000 roubles for Ochsakoff, diminished, in 1797, to 35,000 roubles for Kherson, 37,000 roubles for Nicolaieff, and 72,000 roubles for Ochsakoff; and finally, the intercourse of those three places with foreigners ceased altogether; the whole of the trade passing from them to Odessa.

"The advantages derived from the situation of Taganrog, at the extremity of the Sea

of Azof, were also discovered, which from its advanced civilization, and from being near the centre of Little Russia, gave it great importance, especially as a place for importations

"The imports and exports of Taganrog, for the five years 1798 to 1802 inclusive, were as follow: viz.—

Years.	Imports.	Exports.
1798	400,000	800,000
1799	500,000	1,149,000
1800	2,090,000	1,800,000
1801	1,600,000	1,416,000
1802	866,000	839,000

"The ports of the Crimea, particularly Theodosia, confined their trade to the mere exchange of the produce of their peninsular, for the articles necessary for the consumption of its inhabitants, and did not therefore keep up any intercourse whatever with Turkey.

"The whole of the Crimea was declared free by the Empress Catherine, and had no custom houses until Paul established them. Between the years 1800 and 1822, the trade of Theodosia increased rapidly; but the value of the imports has in general exceeded that of the exports; as will appear from the following table: viz.—

Years.	Imports.	Exports.
1800	37,141	23,688
1803	273,241	161,929
1806	86,783	58,754
1809	121,417	121,058
1812	449,671	686,033
1817	3,592,782	4,047,586
1819	3,998,895	2,662,992

"The ukase of the 1st of May, 1803, reduced the customs duties to 2·5 per cent, *ad valorem*, on imports into all the ports of the Black Sea, and the order of the 5th of March, 1804, granted to Odessa, a bonding warehouse for five years, which term was prolonged until the establishment of a regular free port.

"The same privilege was extended to Taganrog by the ukase of the 3d of March, 1806; the merchants thereby obtained the advantage of being allowed to deposit their goods in bond, for the term of a year and a half without payment of duty. It was not until the year 1801, that the English, French, Dutch, and Prussians, obtained permission to enter the Bosphorus, and, in 1803, 530 ships entered the port of Odessa, the population of which at that time amounted to 8000 inhabitants. 600,000 chetwerts of corn, valued at 5 silver roubles the chetwert, were exported in that year. The exports in 1804 amounted to 538,000 chetwerts, valued at 6 roubles 16 copecs (silver). This epoch was very favourable to the trade of Odessa. The French revolution had annihilated the commerce not only of France but also of Italy; which caused all traffic to pass from the Levant to Trieste. Agriculture and industry were in those countries forsaken; the hands of the people were required for war. The importation of foreign grain necessarily augmented, and no markets for purchase were cheaper than those of the Black Sea. But when Trieste fell into the hands of the French, the Levant trade lost this last outlet, and directed its course by land, crossing either Turkey in order to reach Austria or Russia by the way of Brody or Odessa.

"The war which broke out in 1806 between Russia and the Porte, arrested for some time the direction of even trade; but during the truce which followed the peace of Tilsit, it assumed new vigour. The recommencement of hostilities with Turkey, and the French invasion, paralyzed anew the commerce of the Black Sea until the general peace.

"The Turkish pavilion was then borne by all Greek vessels, which at that time animated the Archipelago, and which entered the Black Sea in great numbers. The English also began to frequent the Black Sea soon after the peace, but more on account of merchants settled in the Mediterranean than for those of Great Britain.

"The sum total of imports into the Black Sea has always been inferior to that of the exports; although they have always depended one upon the other.

"There has been a very marked increase of trade within the last five years (1829 to 1834), in all the ports of this sea, and at the Sea of Azof; but this increase has not advanced equally in all the ports. At Odessa, imports have increased sixfold during the last 20 years, whilst the exports have only increased fourfold. The imports have advanced steadily; the exports have undergone great variations; for the former consist of articles which in the actual state of society are indispensable to Russia, and which cannot be replaced by any product of the country: whilst the latter consists in articles which the country produces; so that the quantity which Russia exports depends upon the quantity grown, particularly as concerns corn. Except in times of war the maximum of the quantity of grain exported has never surpassed 2¼ times the minimum of the general exports, but the prices have varied from 7 to 45 roubles per chetwert. Other articles have varied less, their sale being more certain. Iron and copper (for example) arriving by the Don at Taganrog, have ranked first, after the various kinds of grain in the list of exports from the Black Sea. Furs have contributed a very considerable portion of the trade of Odessa, and their value had formerly risen to upwards of 500,000 roubles; that of metals exported has been as high as 1,200,000 roubles; whilst during the last few years there have been exported of these articles to the value of only the half of that sum.

"The export of furs in 1830 has only been one-twentieth of the above value; and in 1832 not more than one-tenth. Many articles exported by the Black Sea, have been re-transhipped to the ports of the Baltic, which route can furnish them cheaper; but the commerce of the Black Sea has been indemnified for this loss of trade by a considerable number of products which are brought from the southern and western provinces of of Russia, such as wool, wax, cordage, flax, linseed, hempseed, and different seeds fit for the manufacture of oil. According to the custom-house entries the value of these articles exported (with the exception of cordage), which in 1815 amounted at Odessa to the value of 250,000 roubles, rose in 1832 to more than five millions, and in 1833 and 1834 they formed the chief value of the export trade. One may look forward with certainty to the period when corn will not be considered as one of the principal export articles, for until now, the demand for other articles has always been greater than the quantity at the time on the spot.

"The impulse given to the commerce of the Black Sea, by the port of Odessa, ought to have reanimated also the other ports. One can only account for the almost stationary commerce of Taganrog, by the want of enterprise in the spirit of its inhabitants; for in proportion as the quantities of corn and skins which were exported had augmented, the export of other articles, such as iron, butter, and cordage, considerably diminished. On the other hand, the merchants of Odessa strive to attract buyers, by the easy way in which they enforce payment. It is only of late that foreign merchants established at Taganrog have formed permanent connexions beyond the Archipelago; formerly mercantile business was carried on through houses at Constantinople; the Taganrog merchants being principally Greeks. The corn trade at Marioupol (also carried on by Greeks) was paralyzed by the Greek revolution, and did not revive until the peace of Adrianople.

"As there cannot be any thing stationary in the world, and what does not advance generally retrogrades, the commerce of Theodosia must be looked upon as dying away. For although this port is opposite to Anatolia, from whence it receives the merchandize suitable to the taste of the Crimean Tartars, its trade has failed on account of the poverty of the inhabitants. Its commerce with Turkey was carried on by barter, and the exports have always been strictly regulated by the imports. In all the ports of the Sea of Azof and the Eastern Crimea, the export of the products of Siberia has in general diminished, and the advantages which Odessa offered has attracted more attention than Theodosia, as a market for iron and copper, which was not saleable at Taganrog. The less deserted port of Kosloff has accumulated greater capital. The export trade from it has always been greater, with the exception of the article of iron, than that from Theodosia in the extent of its import trade. The ports of Bessarabia, Ismailoff, and Reni, have lost much of their importance since 1830, when the sanitary cordon was transferred from the Dniester to the Pruth; and since the extension of the Russian European tariff, in 1824, to the eastern confines of Bessarabia, where, until then, the only duty paid was 3 per cent.

"As soon as the general peace of 1814 allowed the Black Sea trade, previously confined by the war to the seas of the Levant, to extend itself westward, the successive bad crops of 1816 and 1817 in Europe, augmented the demand for corn to such an extent, that the surplus corn of Russia could scarcely supply the demand. Prices rose at Odessa as high as 45 roubles per chetwert, and corn arrived thither from 600 versts' distance. This extraordinary price naturally influenced the price of all other articles. A journeyman received from 3 to 4 roubles per day. For the use of a cart drawn by two oxen, 8 roubles were paid; and for one drawn by one horse, 10 roubles. The price of all kinds of provisions rose in the same proportions.

"At the close of the year 1817, although the markets of Europe were fully supplied, the sudden impulse given to trade could not be as suddenly abandoned. The merchants of Odessa, therefore, instead of supplying corn ordered by those of foreign countries, exported corn on their own account, the consequences of which were ruinous. Prices in 1818 fell suddenly at Odessa down to 20 roubles the chetwert, and during the next year, to 13 roubles per chetwert. The consequent losses paralyzed all speculations in corn, and from that time the exports have chiefly been made on account of Genoese and Greek merchants, and by the masters of vessels belonging to the Archipelago and the Ionian Islands, for the sole purpose of procuring freights at very moderate profits, to the shipping which had been built in consequence of the demand for the corn trade in 1816 and 1817.

"Odessa was, *de facto*, made a *porto franco* (in 1819),* and the transit trade revived, in some degree, the trade of Odessa; while the decline in the corn trade was followed by other branches of commerce coming into operation. The decline in the price of corn having reacted in creating a greater demand for other articles, and although the number of ships which arrived in 1820 was less than the year before, the value of the merchandize exported was notwithstanding greater, although the bulk was much less.

"The disastrous consequences which followed the revolution in Italy, and the insurrection of the Greeks, which provoked the rigorous measures of the Porte, destroyed all security to navigation; and, during the year 1822, the trade of Odessa was greatly injured. The amount of capital employed by the merchants of Odessa, which in 1821 had risen to 10,760,000 roubles, fell in 1822 to 7,190,000 roubles; in 1823 they were reduced to 5,804,000 roubles, and in 1824, to only 4,668,000 roubles. From that period, however, and up to 1832, the trade of the port, and the capital employed have successively improved.

In the other ports of the Black Sea and at Taganrog, commerce had never been in such a flourishing state as during the years immediately preceding the Greek revolution. The great activity in the commerce of corn seemed also to have animated other branches, and importations had never been so great as in 1819 and 1820; but the more these ports were connected with Greece and Turkey, the more did they suffer by the war which broke out. The active trade of the port *Eupatoria* ceased altogether; so that, instead of 180 ships which sailed from it in 1817, there departed in 1824 only 21, and in 1825 but 8. Theodosia, which in 1817 had exported to the value of 4,000,000 roubles, exported in 1825 only to the value of 100,000 roubles. Taganrog, which, on the contrary, had less connexion with Greece and Italy, sustained itself, and its losses were small.

"The Porte closed, in 1822, the Bosphorus against all Genoese ships, of which more than 300 returned from Constantinople in ballast. The price of corn fell in 1823 so much that a great many farmers, in Little Russia and the interior, turned their cornfields into pasture-lands. The Porte extended the decree of interdiction to Neapolitan vessels; the lading of corn, &c., by Swedish and Danish vessels, was also stopped at Constantinople. The Spanish, as well as the Greeks and the Turks, were arrested in their trade on account of the war; so that English and Austrian vessels only were allowed to pass through the Bosphorus to and from the Black Sea. The number of Russian vessels employed in the Black Sea increased, in the year 1824, in consequence of Sardinian and other ships placing them-

* The privileges of a free port, accorded to Odessa by the ukase of the 16th of August, 1817, were not put into execution until the 15th of August, 1819. All merchandizes except brandy were allowed to enter the town without paying duty. The exports into the interior to be made only through the two barriers established in the line of the Porto-franco, and by paying the duties imposed through the whole empire.

selves under the Russian flag. In general the high price of freights, caused by the employment which the Sultan and Pacha of Egypt gave to all neutral vessels, and which, for a chetwert of corn, equalled its price, on the spot (10 roubles), would have probably diminished the arrival of vessels in the Black Sea, if there had not been in the Mediterranean ports an apprehension of a bad harvest during the spring; which caused an increased demand for corn at Odessa and Taganrog; demands, which although, for the greater part, afterwards countermanded, caused an increase in the navigation of those ports.

Notwithstanding the bad harvest, the exportation in 1825 was a third greater than during the preceding year, not only in grain, but in tallow and wool. This last article of export was unimportant from the ports of the Black Sea until the year 1825.

"In the course of the year 1826 the activity of the port of Odessa varied considerably, owing to the influence of the season. These circumstances influenced the sale of corn, the price of which had held up in the beginning of the year from 12 to 14 roubles per chetwert. In July the suspension of navigation by contrary winds, and the corn in store, greatly accumulated by the last harvest, advanced the rent of warehouses to an extraordinary rate. The price of corn fell accordingly to $5\frac{1}{2}$ roubles. At the end of the year the price rose from 13 to 15 roubles, and even as high as 18 roubles. All other articles experienced the same decrease in price, in consequence of the great failures which happened this year all over Europe, and which shook commercial credit all over the world. Although the quantity of merchandize exported was as great as in the preceding year, yet its total value was diminished by 5,000,000 roubles.

"The year 1827 began under the most brilliant prospects: a great number of vessels arrived in the summer; the warehouses of Odessa, emptied by the exportations of the year before, did not contain a sufficient quantity of corn to lade them, which caused a rise in the price from 11 to 16 roubles. But when, in the months of April and May, the corn from the interior arrived, the price fell from 14 to 8 roubles. Notwithstanding this, the demand was so great, that the corn bought on the spot was embarked immediately. The events in Turkey suspended commerce altogether before the close of this year; but still there was exported in the course of this year more than 1,600,000 chetwerts of corn from the Black Sea, and from the Sea of Azof 1,200,000 chetwerts through Odessa, and there would have been probably expedited nearly 200,000 chetwerts more, if the war between the Ottoman Porte and Russia had not taken place. The trade in articles which could only be exported in the autumn, such as tallow, skins, &c. &c., was attended with considerable loss in 1828, and the whole trade was reduced in 1829 to *one-fourth* what it would have been had there been no interruption to it by the recent war.

"The merchants of Odessa endeavoured to repair their losses by establishing relations with the coast of Turkey, which had become the theatre of war, and supplying them with provisions for the army. Nearly 300 Austrian vessels and 400 Genoese, formerly employed in the Black Sea trade, were, in consequence of the war between Turkey and Russia, lying unemployed at Trieste and Genoa; and more than 100 English ships were at the same time obliged to abandon the Black Sea. While the price of corn at this time in the Russian Baltic ports was as high as 32 roubles, the same might have been purchased at Odessa for 12 roubles; and 10 and 11 roubles was paid in the Baltic for the tallow which at Odessa might have been purchased at from 7 to 8 roubles. During the war more than 500 vessels, destined for the Black Sea, were sent back at Constantinople: others, which arrived with cargoes, were stopped and subjected to extraordinary duties and exactions. Other misfortunes befel the south of Russia during these years: clouds of grasshoppers devastated the fields and meadows for the seven years 1822—1829. On the 20th of July, 1829, the plague broke out at Odessa, and continued, although without causing great ravages, until the following year. The only compensation which the Turkish war offered to navigation, had reference to such vessels (Russian and others) as were at that time in the Black Sea. The Russian government employed them as transports for the use of the army. The coasting trade in consequence increased, so that the number of vessels employed in this species of navigation had a beneficial influence on the future. The peace concluded between Russia and the Porte in September, 1829, *opened, for ever*, the passage of the Bosphorus to all flags, and secured to Russia the future commerce of the Black Sea. The same year there entered the port of Odessa a great many foreign vessels

which could not depart until the following year, thus increasing the number of ships which left in 1830, to 956; although 860 vessels had only entered in the course of that year. The ports of the Crimea profited also at the same time by the opening of the Bosphorus; but the advanced season did not allow any vessels to enter the Sea of Azof.

"The merchandize accumulated in the storehouses having found an outlet, the value of the exports of all the ports of the Black Sea, and of the Sea of Azof, rose to above 50,000,000 of roubles. The price of soft corn, which in the beginning of the year had only been 15 roubles at Odessa, rose in the autumn to 24 roubles; and the quantity of corn exported amounted to 2,000,000 chetwerts, or 400,000 chetwerts greater than in 1827. This price of 24 roubles continued until the spring, and fell successively in the course of the year 1831 to the low price of 16 roubles. In 1832 it even fell to 14 and 15 roubles. In 1831 the war with Poland diminished greatly the quantity brought to Odessa from the interior; but the hopes which the year 1832 had brought with it were frustrated by the famine of 1833, and by nearly a failure in the harvest of 1834. The stagnation of the corn trade was, however, counterbalanced by the progress of other branches of industry; and in proportion as the relations between Odessa and England revived, the commerce of Odessa with the ports in the Mediterranean, was reduced to the single article of skins."

AKERMAN, is situated near the Black Sea, on the lagoon, or liman of the Dnieper. It has a population of from 10,000 to 12,000. The trade is of no great importance, owing to the difficulties of navigating the Dnieper; although that river brings down grain, wood, &c., from Galicia, Podolia, and Bessarabia.

The liman yields a large quantity of salt, the export of which is considerable: it is said to produce 7,000,000 poods annually; but thisquantity depends on the season. Vessels drawing more than seven feet water cannot ascend to Akerman.

KILIA, in Bessarabia, is only a port for small vessels, in consequence of the Kilian branch of the Danube having but a few feet depth of water over the bar.

KHERSON, on the Dnieper, was formerly a place of considerable trade. It has a dockyard cut out of the rocks, and the ships of war built there have been floated down over the bar by means of the machine called a camel.

ANAPA, in Circassia, claimed by Russia, is merely a roadstead, with a fortress, and inhabited by Circassians, Armenians, Russians, Greeks, Turks, Tartars, and Jews. It exports tallow, butter, grain, hides, skins, bees-wax, &c.

NICOLAYEF contains 15,000 inhabitants, is regularly built, and founded about 42 years ago; intended for a naval depot and admiralty, having its entrance without the bar of the Dnieper. *Bala Klava* was given by Catherine to a colony of Greeks. It has little trade, but a small well-sheltered harbour, deep enough for the largest ships.

SIMFERAPOL, the present capital of the Crimea, is modern and handsomely built, has many German families, who are carpenters, mechanics, tailors, saddlers, &c.

SEVASTAPOL has more than 10,000 resident inhabitants, 30,000 troops, and great activity at the fortifications, &c. Every thing looks new and handsome,

churches, houses, dockyards, 40,000 to 50,000 human beings always in activity at the fleet and docks. This long narrow deep bay has its docks, constructed of snow-white limestone, interspersed with granite; the bottom of the port is free of rocks. Merchant-ships are excluded from Sevastopol.

KERTCH, in the Crimea, is the quarantine station for the sea of Azof, has 9 to 11 feet water close to the shore, 14 feet in the harbour, and 6 miles below, 19 feet. Trades in corn, salt, hides, skins, &c.

"Since the opening of the commerce of the Black Sea, during the present century, the quantity and varieties of the exports have greatly increased.

"Whilst the countries surrounding this sea were under Turkish rule, the territories of the sultan alone drew their supplies from those localities, but in consequence of their now having passed under Russian government, the passage of the Bosphorus has been opened to all nations, and the vast plains of New Russia have become peopled as by enchantment; whilst those provinces which formerly belonged to Poland are now enabled to get rid of their abundant surplus through this new outlet.

"The states which principally imported foreign grain were England, France, Spain, Portugal, Sweden, Norway, and Turkey: they usually drew their supplies from North Germany and the Russian ports of the Baltic, the Two Sicilies, the United States of America, and the Barbary States.

"Of the total amount of exports from all countries in 1815, which equalled 15,000,000 chetwerts, two-thirds of that quantity were furnished by Poland and North Germany. In 1814 England imported corn to the value of 25,000,000 francs, and in 1818 this value rose to 100,000,000 francs, notwithstanding the restrictions imposed by the English corn laws of 1815.

"The ports of France and Spain may be equally viewed as closed against the admission of foreign grain, and the only countries which can be regarded as those from whence a constant and steady demand may be expected, are Italy, Turkey, Portugal, and occasionally the southern ports of France.

"The production of grain in the provinces of Moldavia and Walachia has recently developed itself to such an extent, that those states might now easily afford sufficient supplies for the Turkish empire, and the whole of the Archipelago.

"Upon an average of years the total quantity exported to the Mediterranean ports annually, may be considered as 900,000 chetwerts. Of this amount Marseilles took 200,000; Trieste, 75,000; Leghorn, 220,000; Genoa, 275,000; and Malta and the other ports of the Mediterranean, 150,000 chetwerts. Viewing the consumption of Turkey and the Archipelago at 500,000 chetwerts, the total amount would be 1,400,000 chetwerts, of which 1,000,000 chetwerts were furnished by Southern Russia.

"During ten years there have been exported from the Russian ports on the Black and Azof Seas, upwards of 10,000,000 chetwerts; of which 6,600,000 were shipped from Odessa, and 1,860,000 from Taganrog. Marioupol, becoming important since 1830, has exported in four years 600,000 chetwerts. See table of monies, weights, &c.

"The average price of soft wheat, has been as follows, for the undermentioned periods:

From 1814 to 1818	26 roubles	58 cops.	per chetwert.
„ 1819 „ 1824	20 „	32 „	„
„ 1825 „ 1829	12 „	5 „	„
„ 1830 „ 1832	17 „	35 „	„

"The highest price during the above period, was 45 roubles per chetwert in 1817, and the lowest 7 roubles per chetwert in 1829. In reckoning the expense of transport for a distance of 150 to 300 versts, at 2 or 3 roubles per chetwert, the average price of the last three years would not have afforded to the producer more than 13 or 14 roubles.

"Soft wheat is only raised in the southern part of Bessarabia, it is generally sold at Odessa. The better descriptions come from Podolia and Kiew. These two places may be viewed as the main support of the Odessa corn trade.

"The soft wheat of the Crimea is by many preferred to its hard wheat. In the districts bordering upon the Sea of Azof, the German colonies alone cultivate soft wheat; of which they annually sell upwards of 80,000 chetwerts. In the neighbourhood of Marioupol a third description of corn, called red wheat (*blé rouge*) is cultivated; it is sown in the spring, and its quality is between the hard and soft wheats.

"As regards foreign commerce, all other kinds of grain are of minor importance.

"Many hundred thousand chetwerts of rye flour are brought by the Don yearly from Voroneje to Rostow, both on account of the government as well as for individual speculation; but the latter supply is usually purchased by the Russian government for the service of the army, and forwarded to different districts. The naval establishments at Sevastopol and Nicolaieff, draw large supplies of rye from New Russia.

"Barley and oats are more generally consumed in the country. During the 10 years succeeding 1824, there were exported annually from all the ports of the Black and Azof Seas, 20,000 chetwerts of rye; 250,000 chetwerts of barley; and 150,000 chetwerts of oats. These quantities were generally sent either to Constantinople or to Trieste.

"In 1830, upwards of 2,000,000 chetwerts of corn were shipped from these ports, and during the 10 years ending 1833, with the exception of periods of war, there have been at least 600,000 chetwerts of grain exported annually from those ports. Odessa alone has furnished 13,233,000 chetwerts, between the years 1815 and 1830.

"The following are the quantities exported from the Port of Ismail during the three undermentioned years:

Years.	Hard Wheat.	Maize.	Barley.
1830	45,724	13,030	6,750 chetwerts.
1831	67,007	3,100	— "
1832	89,879	580	— "

"From 8 to 10 copecs are paid monthly at Odessa, per chetwert, as warehouse duties.

"The following were the prices paid in 1833 for the undermentioned descriptions of corn: viz.—

For	hard wheat of Moldavia, per kil.	(2 chetwerts)	150 piasters	41 roubles.
"	soft ditto	"	130 "	36 "
"	hard ditto of Walachia	" (3 chetwerts)	230 "	63 "
"	soft ditto mixed with rye	" "	165 to 170	47 "
"	ditto pure	" "	200 " 210	58 "
"	maize	" "	135 "	37 "
"	barley	" "	100 "	26½ "

"The charge for warehousing at Galatz and at Brailoff is from 10 to 15 paras per chetwert, and at Ismail from 10 to 15 copecs. The magazines on the Danube at Brailoff are capable of containing upwards of 200,000 chetwerts of corn; those at Ismail will hold 150,000 chetwerts; and those at Réni 60,000 chetwerts. These warehouses are, however, generally ill-built.

"*Flax and Hemp.*—Flax and hemp have been generally cultivated in southern Russia, and there has been a constant export of linseed to Trieste, amounting to upwards of 1,000,000 chetwerts. It was only however, in 1831 that an experiment was made at Odessa, by exporting 7 poods of flax and 30 poods of hemp to foreign parts. Since then this branch of trade has experienced a wonderful development. Some provinces in Southern and Central Russia, which formerly sent their produce to St. Petersburg, now find an outlet for it by the Dnieper into the Black Sea, and Kherson has become the great depot for these products as regards the trade of Southern Russia.

"In 1833 Southern Russia exported 18,400 poods of flax (of which quantity 17,000 poods went to Odessa), and 19,600 poods of hemp (entirely sent to Odessa).

"In 1834 the quantity of these two articles exported rose to 37,000 poods.

"*Linseed.*—The exportation of linseed from the Black Sea, which, in 1830 amounted to only 6000 chetwerts, rose in 1833 to 70,000 chetwerts, of which 65,000 went to Odessa.

"It is however doubtful whether the export of hemp from the Black Sea ports will compete with that from the Northern ports, which are more convenient for English com-

merce, and from whence the freight and other charges are so much lighter than from the latter; consequently the cultivation of these plants may not be so extensively adopted as may have been anticipated, although the flax produced on the southern shores of the Crimea is of excellent quality.

"Moldavia and Walachia also produce flax and hemp, and very considerable quantities are sent to Trieste and Marseilles by Constantinople.

"*Cordage.*—This is an article of considerable importance as regards the export trade. It has much increased at Taganrog, from whence in 1832 the value of exports amounted to 1,500,000 roubles. In ordinary years the value may be reckoned at from 500,000 to 1,000,000 roubles. Two-fifths of the cordage exported from Odessa are manufactured at that place, which draws its supplies of hemp from the government of Orel. The manufactories at Taganrog are furnished from the governments of Koursk and Kharkof.

"Although this article is obtained at a lower price than the cordage of Italy (that of Bologna) it is much inferior to the latter in quality, and the greater part of the Mediterranean shipping, consequently, seeks its supply of cordage in Italy.

"*Wood.*—The annual value of this branch of trade amounts to 2,000,000 roubles. It was formerly almost entirely carried on from the port of Riga; the produce of the Lithuanian forests being transported thither by the river Duna; but the rapid decrease of timber in those districts has obliged the various parties interested in this trade to seek fresh supplies in the more southern governments of Tchernigoff and Kieff. Hence necessity will ultimately place the timber trade in the hands of the inhabitants of Southern Russia. Instead of being obliged, as formerly, to transport their timber against the stream of the Dniester, and afterwards subject it to a very long land carriage, they now allow it to descend with the current of that river, which rapidly conveys it down to Kherson, where the greater portion arrives between the 15th of May and 1st of July.

"The masts and logs are usually constructed into rafts of about 100 pieces, which are navigated by about 4 or 5 men. The deals and planks are placed in large boats generally manned by from 15 to 16 persons. The expense of transport by water for large masts, is generally about 25 roubles for each piece. The open boats usually cost about 1200 roubles; those which are decked in, about double that sum: but as it is not possible to remount the river in them, on account of the numerous cataracts, they are usually sold at Kherson, for a few hundred roubles.

"The total value of the exports of wood from Kherson in 1833, was equal to 1,000,000 roubles, and in the following year several cargoes of timber were sent from hence to France and Spain. The timber brought from the above forests reaches Kherson at a price full 20 or 30 per cent lower than that at Riga: this is owing to the period of transport being only 6 months, whereas a time of 20 months is necessary to carry it to Riga.

"Large supplies of timber, both for the royal arsenals and for general purposes, are now obtained by speculators in this branch of commerce, at Kherson, and at the various places where the timber is cut.

"The extensive forests which cover the mountains of the Crimea furnish excellent timber to the dockyard at Sevastopol, as well as a great deal of good firewood.

"Odessa obtains some supplies from the northern parts of Bessarabia, but as the production of timber is daily becoming more limited in those districts, the merchants of Odessa are obliged to seek their main supply from Moldavia, in the vicinity of Kiatra, which neighbourhood is extremely well wooded, and exports largely to Constantinople. Large quantities of timber, for building, &c., are floated down the river Sereth as far as Galatz, from whence they are sent in the shape of coast rafts to Constantinople. In 1832 the value of this export trade amounted to upwards of 500,000 francs.

"The masts of Moldavia are inferior to those of Russia, but they are much sought at Constantinople on account of the lowness of the price at which they are there purchased.

"*Potash.*—The export trade in this article, once very great at Odessa, is now scarcely of any moment, owing to the substitution of other articles in lieu of potash, in chemical operations in France and England, both which countries formerly took large supplies from hence. This article comes chiefly from Podolia. In 1833, however, 14,600 poods, and in 1834, 16,910 poods were exported.

"*Wax.*—The wax of the Ukraine is reputed the best after that of Smyrna and the Archipelago. The wax of Walachia and Bessarabia is exceedingly good; it is sent overland to Trieste, and the merchants of Galatz and Brailoff make large purchases of it in Bulgaria.

"From 5000 to 10,000 poods of wax are annually exported from the ports of the Black Sea, of which from 1000 to 2000 poods are sent by Taganrog, and the rest by Odessa.

"*Salt.*—This is an article of great importance as regards the interior trade of Southern Russia. The salt lakes are found in Taurida, also in the Crimea, near Perekop, Theodosia, Koslow and Kertch, and in Bessarabia near Ackerman. The coasting trade of the Sea of Azof, is almost exclusively occupied in this branch of industry, carrying salt to the ports of Kertch, Rostow, and Marioupol, from whence it is sent into the interior of the country. In 1833, 1,038,069 poods of salt entered the ports of this sea.

"The quantity of salt annually exported from the lakes in the neighbourhood of Kertch, has risen from 1,500,000 to 2,000,000 poods. The lakes in the Crimea yielded in 1833 a total amount of 15,065,000 poods of salt, of which quantity 8,514,885 poods were sold during that year; 13,000 men were employed in the mines, and each pood of salt was delivered *au fisc* at about 4 copecs. The expenses do not amount to more than from 6 to 10 copecs per pood.

"In the same year, the salt lakes of Ackerman yielded 1,320,000 poods' weight to the government, and 2,227,048 poods to private individuals. The salt of Bessarabia is sold by government at 66, and that of the Crimea at 80 copecs per pood. The quantity destined for consumption in the peninsula pays 15 copecs per pood, whilst that sent abroad pays but 5 copecs.

"The mines of Moldavia and Walachia yield a considerable produce, and their revenue is farmed. At the spot 10 piasters (275 copecs) are paid for the 100 oegres of salt. At Galatz and Brailoff 25 piasters (7 roubles). Much is forwarded into Bulgaria, Servia, Austria, and also to Constantinople.

"*Iron and Copper.*—Copper and iron ores are found in the mines of Siberia, and are forwarded from thence either by the proprietors or the merchants of Ekaterinenburg, who purchase these ores at the mines. They are in the first instance transported by carriage to the river Tchousovaia, and they are thence brought down the Kama to Laïcheva, at which place that river joins the Wolga. The expense of conveyance to this spot, amounts to about 65 copecs per pood. From thence the ores are forwarded to various parts of the empire. The supply destined for the Black Sea is sent, by land carriage, from the Wolga to the Don, a distance of 60 versts.

"A great portion of iron ore is bought by the Don Cossacks, who either resell it at Taganrog, or forward it direct to Constantinople.

"The quantities of iron and copper brought to Rostow in the following years, were as follow:

	1831.	1832.	1833.
Iron in bars	78,021 poods.	184,950 poods.	24,340 poods.
„ wrought	155,326 „	271,553 „	215,368 „
Copper in pieces	17,000 „	24,999 „	5,400 „
„ in sheets			2,800 „

"During the foregoing period there were exported from the ports of the Black and Azof Seas 48,811 poods of copper, and 761,974 poods of iron, consequently one third of the iron, and one-eighth of the copper imported, were retained for home use.

"In 1814, Taganrog exported 1,175,000 poods of iron, but the usual annual amount exported from thence does not exceed from 150,000 to 200,000 poods.

"Odessa exports annually about 20,000 poods of iron, but in 1825, the quantity exported rose as high as 85,000 poods.

"Besides iron and copper, much gold and silver thread and wire, are sent from these ports to Turkey, such articles being in demand in the East, for the purposes of embroidery. The value of these exports may be placed at several hundred thousand roubles per annum.

"*Wool.*—From the earliest periods Italy and France have both drawn their supplies of ordinary wool from Southern Russia, and a considerable quantity has always been sent to Turkey and Anatolia.

"The largest establishments for the manufacture of merinoes are met with in the governments of Kherson, Ekaterinoslow, and in the north-western part of Taurida. The German colonies on the banks of the Molotchina, are able to furnish upwards of 20,000 poods of fine wool, at a price of about 30 roubles. In the vicinity of Taganrog there is but one establishment of importance. Although the breed of sheep in these parts is of a superior description, yet these manufactures have by no means arrived at a high state of perfection, and it is a general complaint that the wool is not sufficiently soft and elastic.

"During a long period, large establishments for washing wool have existed in the neighbourhood of Odessa, and latterly one of the most considerable of these houses has, at great expense, engaged well-skilled parties, natives of Prussia and Saxony, to superintend the preparation and washing of their wools.

"The quantity of wool exported annually from Taganrog formerly ranged between 1000 and 4000 poods. In 1831, however, it had nearly reached 20,000 poods, and in 1834, 37,389 poods were sent from this place. The wools exported from Theodosia and Eupatoria are for Turkish consumption.

"The wool of Southern Russia differs much in quality from that of Moldavia and Walachia. That exported from Taganrog comes either from the Caucasian districts, from the Don, or from the Cossack territory on the Black Sea, and, as regards its value, it may be placed in the order above mentioned.

"From the customs returns, it appears that the value of wool exported from Odessa in 1814 was about 3000 roubles; in 1832 it amounted to 1,000,000 paper roubles, and in 1834 to 3,265,106 paper roubles.

"During the ten years succeeding 1824, the total exports of wool from the ports of the Black and Azof Seas to foreign countries amounted to 570,000 poods, of which amount a little less than one-third was exported in 1833.

"*Tallow.*—This article forms one of the leading exports from Southern Russia, and the English appear to have been the first to discover the advantages which might result from this commerce. In 1814 the value of tallow exported from Odessa amounted to only 84,554 roubles; in 1834 it rose to upwards of 9,000,000, but taking into consideration the reduction of price that has occurred during that period (nearly equal to 50 per cent), we might have even anticipated an increased exportation.

"This trade affords great advantages both to the agricultural proprietors and even to the lower classes, all of whom employ oxen for the purpose of draught, the which after being no longer fit for the above employment, are sold at a great profit, for the sake of their fat. It may however be remarked, that an ox employed in field labour, would require six months fattening previous to its being sold for the above purpose. The price of cattle is extremely variable.

"At the present time the tallow trade of Southern Russia is almost entirely carried on at Odessa; the whole of the other ports, up to 1834, not having exported annually more than from 10,000 to 20,000 poods.

"Bessarabia, although possessing excellent cattle, exports but little tallow from the ports of Ismail and Réni, the greater portion being taken by Austria and for the Odessa market. The cattle of Bessarabia and Moldavia are larger and better bred than those of Walachia, from the fact of agricultural management being in so very backward a state in the latter province. Part of the cattle, especially the sheep, are sent for sale across the Danube into Bulgaria. Previous to 1828, the number of beasts in Walachia was reckoned at 150,000, and in Moldavia at 100,000. Those not sold are slaughtered. Much of it as suet, is sent to Constantinople, where it is used in the shape of butter.

"The tallow of Moldavia is more esteemed than that of Walachia.

"*Hides and Skins.*—This branch of trade has also its principal seat at Odessa, but very trifling quantities of hides or skins being exported from the other ports of these seas. The supply produced in the countries bordering on the Sea of Azof is constantly sent to St. Petersburg, whilst the merchants at Theodosia and Eupatoria purchase annually some millions of skins, &c., which are sent to Constantinople and into Anatolia.

"Austria purchases the greater number of these products from Moldavia and Walachia, and equally shares with Odessa those of Bessarabia.

"These hides are, however, generally ill-conditioned and badly prepared. No tanneries

exist in the principalities, and consequently the inhabitants obtain their supply of leather from Austria; that called morocco, comes chiefly from Bulgaria.

"*Butter, Salted Meat, and Candles,* may be mentioned as among the remaining commodities which form articles of exportation from these ports.

"*Productions of the Fisheries.*—Although the Black Sea abounds in fish of the most delicate kinds, caviare appears to be the only sort which is exported to foreign countries. The caviare exported from these ports finds a market at Astrakan, amongst the Armenians, or at Taganrog, where it is purchased by the Greeks. It is sent by the Wolga or the Don to Rostow, packed up in small casks, and from 30,000 to 40,000 poods are annually exported, chiefly from the port of Taganrog.

"There is a herring fishery at the mouths of the Danube, and on the southern coasts of the Crimea; but notwithstanding an abundance of fish, this branch of industry has yielded very small profits. The fish are badly cured, and find but a limited market in the interior of the country. Fresh herrings are sold at 30 roubles the thousand, and those which are cured at from 12 to 40 roubles." For the quantities of the foregoing articles exported, see the preceding and following tables.

MERCHANDIZE imported into the Port of Taganrog, from 1815 to 1833.

Total	1006	240,557	12,942	1,173,950	886	217,687	11,425	2,611,425*

* The total values are obtained from the custom-house, and may be supposed as generally underrated.

As heretofore no means are possessed to distinguish the value of imports under the several flags, and that of exports only, from some of the consulates.

To the custom-house estimate of the exports 10 per cent have been added for charges on shipments.

The principal exports to Great Britain in 1839 consist of wheat, 301,901 quarters; linseed, 101,300 quarters; tallow, 8695 casks; wool, 2,859,732 lbs.; honey, 50,472 lbs.; and staves, 28,289 pieces.

Of the 305 vessels which entered the port of Odessa, 244 came in in ballast. The rest brought coals and ballast.

NAVIGATION of Odessa in 1840.

* The total values are obtained from the custom-house, and may be considered as materially underrated.

As heretofore no means are found to distinguish the value of imports under the several flags; and that of exports only from some of the consulates.

In the custom-house estimate of the exports, 10 per cent are here added for the charges of shipment.

During this year, the following *articles* have been shipped to *Great Britain:*

Wheat, 176,860 quarters; linseed, 90,455 quarters; tallow, 16,019 casks, equal to 7842 tons; hemp, 118 tons; wool, 7199 bales, or 2,496,996 lbs.; bristles, 2840 lbs.; salted tongues and hams, 9252 lbs.; staves, 10,362 pieces.

The above returns are made up from the bills of lading exhibited in the consular office.

The above return was obtained from the custom-house.

Return of Duties levied at Odessa in 1841 and 1842.

Levied for the Imperial Treasury:

	1841.	1842.
On imports sent into the interior of the empire at $\frac{4}{5}$ of the general duties, according to the tariff	£90,437	108,952
For the 12 per cent additional duty	7,434	9,341
For ditto ditto on the $\frac{1}{5}$ duties on all imports entered for the town, &c. &c.	9,464	12,857
On foreign salt	16,103	
On exports	25,932	32,831
Dues for the Richelieu Lyceum	3,100	3,540
	£152,470	167,521

Levied for the Benefit of the Town: viz.—

	1841.	1842.
On all imports entered from abroad for the town at $\frac{1}{5}$ of the tariff duties	£76,300	79,769
Dues on grain exported	1,712	1,989
Port charges	1,946	2,060
Levied for lighthouses	689	663
Total	£233,117	252,002

The total amount of duties in 1840 was 254,126*l.*, according to official report from the custom-house.

Return of the extreme Prices of the principal Articles of Import and Export, and of the extreme Rates of Exchange and Freights at Odessa, in 1841 and 1842.

The foregoing is made up from the reports of sworn brokers.

The lowest prices of grain stated have not appeared in the consular weekly returns of prices, being, for parcels of quality and condition, unfit for exportation.

Extract from Consul Yeames's Reports for the Years 1841 and 1842.

"The import trade in particular is of a nature to afford little matter for remark, in consequence of its prohibitive system.

"The manufacturing districts are at too great a distance to draw their raw materials through this quarter; and foreign manufactured goods are considered to be mostly limited to the consumption of Odessa itself, which, by privilege, is relieved from the same prohibitions. There is, however, reason to suppose that a much larger amount goes into the country, and is brought from abroad to Odessa, than the value which appears upon the returns.

"Great numbers come from the neighbouring provinces to dress; and the town does in consequence abound in tailors and milliners. The tastes and extravagant habits of the Russian gentry are here freely indulged; and perhaps in no other place, relatively to its state of society, is so much expended in this way.

"The bulk of the manufactured goods consumed here is decidedly British, which have in a great measure driven away the French and German.

"As to Russian manufactures they may be said to be unknown here. The largest towns in the interior of the empire continue to be deficiently supplied, even with the home manufactures, and their inhabitants are obliged to look to the fairs for a periodical provision. These fairs are, therefore, very numerous, but their necessity shows the unadvanced state of national prosperity. I may here mention that the article of stockings is not yet in general use in the classes above the common, comprising the officers of the army who replace them by wrappers.

"The operations of the new tariff will not materially affect the trade of Odessa; as it will be subjected only to one-fifth of the additional duties.

"The export trade of Odessa, if not stationary, has been tending to decrease, not so much from the absence of demand as from a deficiency of production at a reasonable price.

"The price of wheat was kept up alone by the demand from England, though of the 518,607 quarters exported, only 115,098 quarters were shipped direct for British ports. The bulk of the wheat here is of inferior quality, and goes to Turkey and some of the Mediterranean ports.

"A large quantity of Austrian, Italian, and Greek shipping is exclusively employed in the corn trade of the Black Sea.

"The production of wheat in this country has not increased, notwithstanding the high prices that have ruled for several years exceeding what has been considered remunerating prices.

"The quantity of wheat at present on hand for shipment to England in the spring, is about 75,000 quarters; the cost of which on board will exceed 33*s.* per quarter.

"Oilseeds are becoming an important article of export from the Russian ports of the Black Sea; but the crops of 1841 and the preceding autumn having been very scanty, the export has fallen off considerably, and the greater part of it was last year diverted from England to France, where the failure of the olive crop has led to the use of linseed oil in the manufacture of soap by a new process.

"The quality of the Black Sea linseed is very fine, and fetches a higher price than that from the Baltic. The price here has been seldom (throughout the year) under 40*s.* per quarter. The rapeseed of this country is wild or self sown, and is, therefore, of very inferior quality.

"Tallow being mostly the produce of the southern provinces of Russia, a great part of its export would be through her southern ports, were it not for the large capital employed, which diverts it to the north. This course commenced before the Black Sea ports were opened, and long habit has confirmed it. Besides which the tallow markets of St. Petersburg and London are often made the field of gambling transactions, wherein buyers and sellers have no view to deliveries; an excitement is thus created tending still more to produce a disregard to the real interests of the trade itself.

"The *wool trade* in this country has been extremely depressed by the absence of de-

mand within and without the country. The production of the fine wools is not great, and its increase may have for a long time been checked by the present discouragement excited by the success of a few intelligent and thrifty foreigners who first engaged in this pursuit at an early period and under very favourable circumstances. The Russian landholders adopted extravagant notions on the subject, and formed establishments of Merino sheep on a very large scale, without considering the extraordinary means, which are at times indispensable for their support. As they were at first impatient for large profits, so now they are utterly disgusted with reverses, arising in part from their inability to meet unexpected expenses. The consequence has been that an immense number of Merino sheep were last year slaughtered for their skins and tallow. It is still a question if the production of the fine wools can be largely undertaken with safety and profit on the steppes of Russia, by reason of the summer drought and of the severe winters, both common to this climate. The difficulty and cost of making hay are extremely great in consequence of scanty herbage and of want of hands, whilst it frequently happens that the sheep are to be kept under shelter and fed during three or four months. Several such winters have been consecutive.

"The question of shipping required in the Black Sea for the trade with England, necessitated a combination, which, under present circumstances, is one of the principal obstacles to its progress and prosperity, causing such enormous variations in the rates of freight which took place last year, when they ranged from 35*s.* to 75*s.* per ton.

"The same uncertainty prejudices alike the British ship which comes seeking freight.

"The exchanges at Odessa are chiefly ruled by those at St. Petersburg, where bills on London, drawn here, are generally sent for negotiation, of which the proceeds are remitted back in transfers on the branch imperial bank.

"There are tellers of bills on the Exchange of this place, but operations have been considerably restricted since the stoppage of the smuggling trade formerly carried on from countries which gave rise then to a constant call for remittances. There are many very wealthy Greek merchants at Odessa, but in general the present state of credit is weak.

"It has been said that what is most wanted for the prosperity of this country are good roads and an improved navigation of the rivers, and a stimulus to their industry, by an improvement in the condition of the people. Of the latter benefit the people are entirely unconscious.

"The attempts made by the local governments at such improvements (at least in these parts, the most fertile of the empire) have always been failures, whether from the poverty of the finances, or a want of earnestness.

"It is notorious that every public work, in the shape of a bit of causeway or a bridge, is considered a nuisance, because it is sure to become a new or greater obstruction.

"I have stated, and I can with confidence again affirm, that at present no progress of improvement is visible in this country, and that its power of production is stationary, if it be not falling off."—*Odessa*, 1842.

The total values of imports and exports are obtained from the local custom-house, to that of the exports 10 per cent being here added for the charges of shipment.

Of the 174 arrivals, 40 had coals, 105 were in ballast, 23 had manufactures, 1 manufactures and sugar, 4 wine, and 1 coffee.

Of the 176 departures, 7 had wool and tallow, 6 wool and wheat, 6 wool, 2 wool and linseed, 110 wheat, 1 wheat and linseed, 1 wheat and bones, 2 seed and wheat, 2 wheat and peas, 3 linseed, 29 tallow, and 7 ballast.

"The import trade at Odessa in 1842, exceeded by a trifling amount that of the two preceding years, in consequence of the larger quantities of olive oil and refined sugar introduced. Of these articles, the first is almost wholly carried into the country even as far as Moscow; while the consumption of the latter is confined by the tariff to this town, though a part may no doubt be smuggled out of it. In wine there was a considerable falling off; and so there appears to have been likewise in manufactures; but on this head the official report may be distrusted, as precise information can hardly be obtained. The ships that carry out manufactured goods from British and other ports for Odessa, seldom bring them to their destination, the importers here preferring to have them transhipped in the Bosphorus, into the steamers which run between Constantinople and this place; in order to avail themselves of certain facilities accorded in favour of the steam navigation, for the custom-house entries, whereby some vexatious formalities are avoided.

"*A new item in the return, that of opium, for the value of* 25,000*l.*, *would have deserved more particular notice, were its future introduction not arrested by a duty, which has come into force since the beginning of the present year. This drug, imported from Smyrna, was sent to Moscow, destined for the caravans going to Kiakhta. The duty now imposed is* 40 *silver roubles per pood, equal to* 3*s.* 6*d. per pound English, which is considered as implying prohibition.*

"The quantity of wheat exported was 621,664 quarters; 200,592 quarters were for England, and the remainder chiefly for Genoa, Leghorn, Marseilles, and other ports of the Mediterranean. The purchases for British account had, in most part, been made late in the autumn of 1841, though the shipments were long delayed by reason of the suspended navigation in the winter: those for the Mediterranean were on the other hand made, in great part, after the cessation of demand for England, and when prices had receded from 30*s.* and 32*s.* to 22*s.* and 20*s.* per quarter. *The grain speculations were throughout unsuccessful, but those for England were nothing less than ruinous.* The commission merchants here were however not involved in the losses, for they were in time to detain the wheat, and by its resale to cover their unpaid drafts. In this manner many ships that came chartered, found no cargoes, and had to participate in the disasters that ensued: more than twenty vessels were thus circumstanced in one concern. It may be observed that the prices of wheat in this place are affected much more by a demand from England than from other countries, for the English agent goes into the market with orders in hand, which are to be hastily executed, more regard being had to time than to price, in consequence of the fluctuating duty in England; *whereas those* engaged in *the regular trade for the Mediterranean, purchase at leisure, and have even supplied the English purchasers from* their own stores, securing to themselves *an immediate profit.* A new feature in the grain trade of 1842 was the arrival here of about 5000 quarters of wheat from *Austrian Galicia*, which came down the Dniester as far as *Mayac*, and thence to Odessa overland. The duty on wheat brought into Russia over the land frontier is one rouble, paper money, per chetwert, which at the exchange of 22 roubles per pound sterling, is 1*s.* 3*d.* per quarter; but it is generally believed that this duty will be considerably augmented if such importations are continued to any large amount. The excess in the export of tallow was neither caused by a more active demand, nor by an increased power of production; for hitherto the supply has never come up to the demand, and at times, cattle and sheep are slaughtered in consequence of mere distress. In the present instance, the supply was facilitated by an accidental circumstance; the carriage of much tallow made in the neighbouring districts, and destined for the St. Petersburg market, having been prevented by the state of the roads in the late unusually mild winter, sales were therefore made to the

Odessa merchants, who hitherto have attempted in vain thus to extend their share in this trade, and who now hope that those transactions may lead henceforward to a partial diversion from its long-accustomed course. Notwithstanding that the exportation of wool has not fallen off, the owners of Merino sheep complain of extreme distress, arising from low prices and from several disadvantages natural to this country, under which it is difficult for these establishments to prosper. They have, however, been signally favoured by the mildness of the two last winters, during which their flocks were kept upon open pasture. A transaction too, which took place in October, seems to promise a new source of profit to them. A sale was made by Mr. Baguer, the owner of a fine flock in the vicinity of Kertch, of two thousand Merino sheep to the sultan. They were carried in five vessels to Constantinople, where they arrived in perfect condition, and gave great satisfaction. It is thought, that in Asia Minor are united the most necessary circumstances favourable to the production of fine wools; and if the example set by the sultan should open the way to such undertakings, the owners here will be enabled to dispose of their surplus stocks.

"The rates of freight fluctuated as usual in these ports, having ranged between 65*s.* to 35*s.* per ton, great losses were incurred by the chartered ships, which found no cargoes, and which after the expiration of their '*lay days*,' accepted low freights here, and had to claim the differences of their original charterers in England, in most cases bankrupts, by the failure of grain speculations. In general and in all its branches, the trade of these ports in 1842 was not prosperous, and I am sorry to add, that the prospects for the present one have not yet brightened."—*Odessa, March* 1, 1843.

The following is an account of the trade of the Sea of Azof for the years 1840, 1841, and 1842, drawn up by a mercantile house at Taganrog: viz.—

Iron	tons	2,890	tons	2,500	tons	3,446

The exportation of 1842 amounting in value to r. 10,643,000 assign; at the exchange of r. 21.60 per pound sterling, 492,731*l.* sterling.

Wheat.—The last harvest was much more abundant than that of the year 1841; and the quality of the hard in general is considered superior, though deficient in colour, the grain having in a certain degree suffered by wet weather during the harvest. The Marioupol soft wheat or ghirca was on the contrary, very deficient both in quantity and quality; and the shipments were very limited, of which none were directed to Great Britain. The prices which ruled during the year were from 17 to 19 roubles per chetwert, equal to 26*s.* 2*d.* to 28*s.* 8*d.* per quarter, free on board at Kertch. The same may be said of the soft wheat of the *Line*, of which only a few thousand chetwerts have as yet been brought to market, which were sold at r. 13.75, equal to 21*s.* 9*d.* per quarter, on board at Kertch. The shipment of hard wheat during the spring to Great Britain, consisted of purchases made in the autumn of 1841, which had been stored here for want of shipping. The quantity amounted to about 25,000 quarters, and cost, on an average, 32*s.* per quarter, free on board at Kertch. No other shipments to England were made later in the year. The disposable stock on the

spot at the end of year, amounted to about 24,000 quarters; but this has been diminished by the purchases of about 11,000 quarters by a Genoese house, at 15 to 16¼ roubles, equal to 24*s.* 6*d.* to 26*s.* 2*d.* per quarter, free on board at Kertch. At Rostoff there were left 8000 quarters, and at Marioupol and Berdiansk about 35,000 quarters more, making about 56,000 quarters disposable wheat at the end of the season.

Linseed.—The principal shipments were made during the autumn, for the Marseilles market, and amounted to about 30,000 quarters; the greater part being of the produce of the same year, and brought from the *Line* and immediate vicinity. Purchases were made at 25 to 26 roubles per chetwert, equal to 34*s.* 7*d.* to 35*s.* 9*d.* per quarter, free on board at Kertch. Prices fell at the close of the navigation to r. 24, equal to 33*s.* 6*d.* per quarter, free on board; and the inferior parcels to 30*s.* 6*d.*, of which the whole stock now existing may amount to 10,000 or 12,000 quarters. During the month of November, purchases on contract were made of linseed from the Upper Don, of an excellent quality, and free of foreign grain and dirt, for deliveries in May and June following in Rostoff, with half and three-quarters of the amount payable in advance at a price equal to about 33*s.* 6*d.* per quarter, on board at Kertch. The supplies from the Upper Don were, till last year, sent to the St. Petersburg market; but the dealers having now found many advantages in sending their seed down the river Don to Rostoff, it has opened a new channel to our trade, which is likely to become very important.

Wild Rapeseed.—The exportation has considerably fallen off, and in all probability will be still less during the present year, as the production appears to diminish greatly.

Wools.—The fine qualities have considerably increased, and they are likely to continue so. While the whole of the Merino wools were shipped to England, the greater part of the common or Donskoy was sent to Trieste, Leghorn, and Marseilles. The price of the fine wools ruled at about 1*s.* 3*d.*, and of the common from 4½*d.* to 4¾*d.* per lb., free on board at Kertch.

Tallow.—Some contracts have lately been made, for delivery during winter and early in spring, for about 400 casks sheep tallow, which will stand, free on board at Kertch, about 34*s.* per cwt. In our northern districts about 200,000 to 300,000 poods sheep tallow, could have been purchased so as to have stood, on board at Kertch, at 36*s.* As some of the largest tallow-melting establishments are in the neighbourhood of this place, it will become the interest of the sellers to dispose of their tallow for shipment here, rather than send it across the empire to the more distant market of St. Petersburg; and we feel convinced that if encouragement were given, by the receipt of orders for this article, it might become a most important branch of our trade, since there is already a disposition shown on the part of the Russians, to prefer our market.

The principal articles of importation, during the last and preceding year, were,

		1841.		1842.
Olive oil	gallons	81,500	gallons	106,700
Greek wines	,,	1,021,000	,,	993,400
Champagne	bottles	23,700	bottles	18,972
Porter	,,	16,600	,,	44,620

The number of vessels that arrived and returned with cargoes, during the year 1842, amounted to 342 sail, of which 14 were British.—*Taganrog, January* 27, 1843, O. S.

CHAPTER XVI.

RUSSIAN TRANSIT TRADE TO AND FROM THE BLACK SEA, AND TO AND FROM THE TRANS-CAUCASIAN PROVINCES.

SOUTHERN RUSSIA enjoyed, during the war, a transit trade of considerable importance from the Danubian Principalities, Austria, &c., through Brody and the frontier customs' station of Radzeviloff; or, when goods did not enter through the latter, by contraband from the entrepôt at Brody, in the same manner as the prohibitions and high duties as to importation into Russia, are now, and have long been, evaded most extensively and successfully, by the Jew of that town. The duties on transit by land into Russia were, by the ukase of the 5th of June, 1840, fixed at one-eighth of the import duties laid down in the general tariff; and on re-exportation, the remaining seven-eighths were exacted in order that the export *from* the empire might be carried into effect. This seven-eighths was, however, refunded, on the production of a certificate of the goods having been landed at the place named, on exportation.

The transit trade was at its height in 1808, after the battle of Tilsit, and during the armistice between the Porte and Russia, when its legal value rose to 10,787,320 silver roubles: exclusive of the large amount which entered clandestinely for home consumption. The legal transit trade has nearly ceased, but the illicit trade for home use into Russia, by these frontiers, has greatly augmented, and the legal import trade for Russian consumption has nearly disappeared, notwithstanding the numerous ukases and penalties to prevent contraband.

The only transit trade through the Russian ports on the Black Sea of consequence, was that in common with the direct export trade to the TRANS-CAUCASIAN PROVINCES. Several ukases were promulgated regulating this trade. Some giving encouragement in the way of placing upon the 1st class of merchants, all foreigners, and Russians, who would establish houses at Odessa for the purpose of carrying it on. Others loading the trade with such restrictions that the purchasers at the fairs of Leipzic sent their goods for the Black Sea and Prussia through Trieste in preference to Odessa. An ukase was issued in 1831 to regulate the Trans-Caucasian trade, in order chiefly to meet the views (according to Hagemeister), of the Russian manufacturers, who urged that foreign manufacturers enjoyed undue advantages on importing goods at Redout-Kalé. The provisions of this ukase are those which chiefly regulate, or rather entrammel the Trans-Caucasian trade, and which appears to have ruined the commerce of Redout-Kalé. It has with other ukases extended the Russian tariff, of

prohibitions and high duties in most respects, on every article imported into Mingrelia and Georgia, and has loaded, even the transit trade, with regulations which has driven it from Redout-Kalé to Trebisond: exclusive of which the expenses of landing goods at Redout-Kalé from the roads has been greater than at Trebisond. European merchandize landed at the former was carried by the following route to Persia, as stated by the British Consul at Odessa.

"The distance from Redout-Kalé to Kotais is about 80 miles, and the carriage thus far costs 50 copecs per pood. To Tiflis it is 238 miles, and the carriage for the whole distance costs from 3½ to 6 paper roubles per pood, according to the season of the year. The road from Tiflis to Tabriz leads by Mount Aksibjouk through the village of Djelaloglu; then by Mount Besobdal through the district of Abaranpol, passing near Etchmiadzin on to Erivan, distant 213 miles.—From Erivan to Nakchivan 100 miles, and from thence to Tabriz 108 miles more, the route leading across the Araxes at Julfa and through the Persian town of Marante, the whole distance between the two provincial capitals being 421 miles. The carriage of merchandize along this road is performed by packhorses, and the cost from Tiflis to Tabriz is one silver rouble per pood. But at Erivan and Nakchivan two silver roubles were exacted as a toll, and at Julfa 20 silver copecs more per pood for the passage of the river. At Marante and Tabriz goods pay a toll of 2 silver roubles per pood, besides an *ad valorem* duty of 2 per cent; and the more they advance into Persia, the more frequent are these exactions: but the Tiflis traders have hitherto not attempted to make deliveries further than at Tabriz. There is another route from Kotais by the fort of Bagdat to Akalchick, and from thence by Akhalkilaki and Gomer to Erivan, by which the distance between Redout-Kalé and Tabriz is only 235 miles, instead of 659, as by the way of Tiflis. It is said that merchandize may be sent to Tabriz by this shorter road, for 3 paper roubles per pood, but it is not equally safe in consequence of marauders from the Pashalic of Akalchick.

"Notwithstanding the enormous expenses incidental to the routes described, large profits have been realized both at Tiflis and Tabriz on the Leipzic purchases; at times, it is said, amounting to as much as 80 per cent, and generally to 30 and 40 per cent, an opinion confirmed by the eagerness with which these speculations were renewed. With time, and under circumstances more propitious, it may not, therefore, be too much to presume, that this trade might become very successful, extending its relations not only over a great part of the kingdom of Persia, but even to the more distant regions of central Asia, and thus accomplishing, though in a wider extent and through another channel, the bold schemes which ninety years ago were projected by British enterprise in the Caspian. Modes more economical than those hitherto pursued might doubtless be indicated, as well as increasing facilities obtained, by the improvement of the inland communications from Redout-Kalé. When impediments were put in the way of the transit through Brody, the Armenian merchants immediately directed their merchandize from Leipzic to Trieste, there to be shipped off; and it is more than probable, that had the ukase of 1821 been prolonged, we should at this time have seen these intelligent traders making extensive purchases in England."

M. Hagemeister states distinctly in his work on the Commerce of the Black Sea, that the ukase of 1831 ruined the trade of Russia through Redout-Kalé to Persia.

The 7th article of that ukase declares that "along the Trans-Caucasian coast on the Black Sea (from the mouth of the Kouban to the mouth of the Terek), the European tariff of Russia shall be observed in all its provisions with a few enumerated exceptions;" and by the 8th article the same Customs laws are established.

TABLE of Imports at Redout-Kalé from Odessa in each Year, from 1824 to 1831.

CHAPTER XVII.

INTERIOR NAVIGATION OF RUSSIA.

THE great rivers, and the canalization, of Russia, open an extensive water communication, during the summer, from the gulf of Finland and the gulf of Riga to the White Sea and to the Caspian,—and from the Caspian to the White Sea,—and also from the Black Sea to the Baltic, Caspian, and White Sea. (See the resources and products of the provinces through which these rivers flow, hereafter.)

Rivers which fall into the White Sea.—The principal river that falls into the White Sea is the Dwina, which receives this name on being joined by the Yuga and Sukhona, both which take their rise in the government of Vologda. The Yuga becomes navigable at Nekolsk: in spring, large barks laden with corn, go down it into the Dwina; but, in summer, this river is only navigable for boats. The Sukhona takes its rise from the lake of Kubenski, in the government of Vologda. The Vitchegda, a great river, flows into the Dwina from the east, and the Vaga from the west, and numerous other navigable streams fall into the Dwina in its course north to the sea. On the Dwina stands Archangel, by which the ancient commerce of Russia was carried on, and it is now, the same as for centuries back,—the principal river for the inland and foreign trade from the White Sea.

The *Dwina* is united from Vologda with the Neva and Baltic, by the Lubinski canal, the Biela lake and the Onega lake, &c. Its greatest affluent the Vitchegda flows in a navigable course from the foot of the Ural mountains and the government of Perm down through the centre of Vologda, and this branch is united on the east by the Severnoi to the Kama or great branch of the Wolga. The Dwina has several other navigable branches.

The *Onega* takes its rise near the north side of the lake Beilo, and falls into the lake of Vojé. On passing through this lake, the Onega bears the

name of Wid or Swid; and receives the name of Onega, on having passed through the lake Latcha. It carries down deals, &c. to the port of Onega.

The *Mezen* is another considerable stream which flows down from Vologda into the North Sea, between the town of Mezen, a place which carries on a coasting trade. The Patchora is another.

Several large rivers flow through Asiatic Russia into the North Sea: of these the *Obi* on the east of the Ural mountains, is one of the largest. It flows with its branches through a great part of Tartary and Siberia into the Arctic Sea. This river rises near the frontiers of China. Its great branches are the Tchim, Tobol, and Irtsk or Irtish: the latter rises in China, and flows through a vast, and in many parts, a fertile region, down to Omsk and Tobolsk, joins the Obi in latitude 61 deg. N., and falls into the gulf of Obi near the Arctic circle. There is a clear passage during a part of summer from this gulf along the coast to the White Sea, and the Obi abounds with fish. This river from where it receives the Irtish is broad and often impetuous in its course downwards, which is broken by ledges. Upwards in its course through more temperate latitudes its navigation and that of the Irtish, Tobol, and Tchim, extend convenient means of inland carriage over vast regions.

The *Yenesei* flows also out of China by the branch which bears its name and by another from China into the great lake Baikal, into and by the name of the *Angara*, through Siberia, receiving numerous large branches of which the Nijnei is the largest. It flows by a course of nearly 2500 miles into the Arctic Sea, into which it falls in latitude 70 deg. N. Numerous towns and villages arise along the banks of the Yenesei and its branches; among which are Irkoutsk on the Angara branch falling out of Lake Baikal about 30 miles below that lake. Population, including troops, about 15,000. Kraznojarsk, 500 miles on the western or Yenisei branch, 4000 to 5000 inhabitants. Menusinsk, Jeneiseisk, and Turankask; the latter within two degrees of the Arctic circle. The upper part of this great river and its branches, is of great commercial advantage to Siberian and Russian trade. (See Resources and Trade of *Siberia*, hereafter.)

The next great river is the *Lena*, which flows from the frontiers of China and falls into the Arctic Sea below the little station of Bulouk, in latitude 71 deg. 30 min. N., a distance following its sluggish and crooked course of about 2000 miles. This river is generally deep and safely navigable; but of little advantage below Yatutsk, the capital of eastern Siberia.

Rivers which fall into the Baltic Sea.—The *Kymmene* falls into the gulf of Finland, near Frederickstadt, taking its rise in Finland; the navigation of it is very tedious, though short.

The *Neva* runs out of the Ladoga lake, and falls into the gulf of Finland, below St. Petersburg, and is of the greatest consequence to Russia, both for the inland and foreign trade. The waters that run from the mountains of Finland

and Olonetz, gather into the Onega, Ilmen, and other lakes which discharge themselves into the Ladoga lake; and from the latter into the Neva, which divides itself into several branches at its mouth, running through the city of St. Petersburg.

The *Narova* falls into the gulf of Finland, about nine miles below the city of Narva, deriving its source from the Peipus lake, and the numerous streams falling into the latter.

The *Pernau*, which falls into the bay of Riga, by the town of Pernau, takes in its course the rivulets of Fellin and Fennern; and only becomes navigable thirty-five versts from its source.

The *Düna* or Southern-Dwina, has its source in the government of Tver, not far from that of the Wolga and Dnieper, falls into the bay of Riga, by the city of that name. This river takes its rise in the neighbourhood of the lake Seliger, in a bog, and is increased by many other rivers falling into it. There are some waterfalls in the Düna; one produced by a chalk-cliff, not far above Riga, goes straight across the river; the navigation of it is the most dangerous when the water is low, but the whole inland navigation of this river is about 620 miles long.

The Vistula or Weichsel flows out of Lithuania and through Poland into the Baltic. (See Dantzic.) The Memel flows out of Russia, and discharges above Memel, which see.

Rivers which fall into the Black Sea.—The *Dnieper* takes its rise in the government of Smolensk, not far from where the Wolga and Düna have their sources,—and passes south through the governments of Smolensk, White and Little Russia, Kieff, the Ukraine, and New Russia,—a length of 1500 versts, and at Otchakoff falls into the Black Sea. The Dnieper receives many rivers, which communicate with those falling into the Baltic. On this river, within the distance of 60 versts, there were 13 cataracts, or obstructions, in the centre of it; but those are now removing, and three have actually been removed. Above twelve governments have a communication, by water, with this river. On the east, the Dnieper receives the rivers Sojha, Desna, Sula, Psiol, Vorskla, Orel, Samara, and others, which pass through the governments of Little Russia, Koursk, and the Ukraine; on the west side the Beresina and the Pripetz; two considerable rivers, which communicate with the governments of Minsk, Lithuania, and Volhynia, and promote the communication with governments lying east and south; connecting them with the Vistula, which runs down to Dantzic, with the Njemen down to Memel, and with the Düna to Riga; that is to say, the Baltic and Black Seas, by three different branches.

The following is an official account of the navigation of the Dnieper, lately published at Odessa: (Translation.)

"Amongst the numerous and magnificent public works, as vast as they are useful, which have during the last fifteen years been commenced by Russia, few have more claim upon public consideration, than those (now partly completed) undertaken by that govern-

ment with the view to remove those obstacles which have heretofore rendered the navigation of the river Dnieper exceedingly dangerous.

"It is well known that this river takes its rise amidst the woody regions in the centre of the empire, and after traversing the vast forests abounding in the government of *Mohileff*, it waters the distantly situated *Steppes* of New Russia, previous to discharging itself into the Black Sea, between Otschakoff and Kinbourn below Kherson. The importance of the navigation of the Dnieper will necessarily be more felt from the moment when the vast and fertile plains bordering the Black Sea, shall be more thickly peopled. The inhabitants of the central portions of the empire, appear to have transported, by this channel, to the maritime cities of the south, all the products which may be wanting in the extensive regions of New Russia—more especially timber for building—iron, from the central and northern mines—linen, hemp, &c.

"Unfortunately, however, the navigation of this majestic river is most difficult. Rolling impetuously over its granite bed, the Dnieper forms, below Ekaterinosloff, to an extent of 77 versts those celebrated rapids so frequently alluded to in the history of Russia. They are 13 in number, and each apparently presents increased difficulties in passing them; this part of the river being everywhere encumbered with sandbanks and vast masses of detached rocks, amongst which the foaming waters, dashing in their rapid descent over these blocks of granite, find an outlet into the plains beneath.

"It is true that the Cossacks (*Zaporogiens*) do not fear to trust themselves in their frail barks amidst these dangerous rapids: they have in fact settled upon some of the islands placed in that vicinity, and have there found a more secure retreat, from its difficulty of access; but larger and heavily laden vessels, being less easily steered, can seldom venture amongst such dangers.

"These obstacles, which nature seems to have opposed to the navigation of the Dnieper, have necessarily attracted the attention of the government from the period in which the new cities, built on the shores of the Black Sea, grew into importance. As early as the reign of Catherine II. it was in contemplation to remedy these evils, and some hydraulic works were then executed with this intention towards the close of the last century. By clearing away some of the rocks, an attempt was made to clean out, if not the entire bed of the river, at least a sufficient portion of it, to allow the formation of a channel extensive enough to favour the navigation. However, it is only in the spring, when the shoals are to some extent covered with water, that vessels, laden, are unable, by the rapidity of the current, to pass over them: but at how much risk do they make the passage! In so level a country the wind frequently changes its quarter in the most sudden manner, and often in the midst of calm weather, it will commence blowing violently. Such storms (happening at a moment, when the vessel impelled by the force of the stream, will not answer the helm) are quite sufficient to drive vessels out of the only navigable channel, upon rocks which are every where found on both sides of it.

"Consequently, it has been deemed requisite to have recourse to other means in order to avoid these most dangerous rapids, and it was in this view, that a canal with locks (projected by General Devolant), was commenced in 1799 and finished in 1808. Its object being to facilitate, during the period of the low tides, the descent of the rapid, known by the name of "*Neuassitetsky*," the most dangerous of all.

"This undertaking, however, not sufficiently answering the end proposed, a project, conceived upon a most extensive scale, was at length made by the direction of the Engineer Corps, and it was resolved immediately to put their plans into operation in regard to one of these rapids, in order to test, by experience, the strength and solidity of the projected embankments.

"For this purpose choice was made of the rapids in the neighbourhood of the village of *Staro-Koïdaky*, and the works there were completed in the year 1837. In the midst of the river, whose width at this spot is about 200 *sagènes*, two dikes, running parallel to each other, have been constructed. These dikes run out over a space of 150 *sagènes*,—that is, from the upper part of the rapid to its lowest fall, enclosing within them a canal of about 15 *sagènes* broad. The bottom of this canal has been entirely freed from all the banks and shoals, with which it was formerly beset; the water falls rapidly, but always presents a smooth surface. The pilot is sure of not meeting with any obstacle in this channel, and he can

enter it with still greater confidence, as the large embankments on either side afford his vessel shelter from the wind. The tranquillity of the water in this canal forms a most striking contrast with the foam and breakers covering the surface of the river beyond the dikes, and occasioned by its dashing over the vast sandbanks, &c.

"One of these dykes, which is nearest to the right bank of the river, is entirely cased with huge blocks of granite; the other is built with stones, which have been placed upon each other quite in the rough state: a method of construction in itself much less expensive, and, as proved by experience, of much greater solidity and durability. Neither the constant action of the current, nor the breaking up of the ice (the effect of which is always much feared) has, as yet, in any way damaged this embankment, which is by no means of so elevated a construction as the opposite one. This defect in building the two dikes arose from motives of economy, it not being considered proper to encounter a too great expense in the execution of this project, more especially as it was viewed in some measure as a great experiment, and as one which in all probability might ultimately fail. Since then this dike has been much heightened, and two posts raised at the principal extremity of the embankments, mark out, from the distance, the spot at which the pilot may safely enter this canal.

"Such great success having attended this vast undertaking, other works of a similar nature, will be executed at various points of these rapids."

The *Bug* flows through the governments of Podolia, and New Russia, and falls into the Dnieper below its bar.

The *Dniester* takes its rise in Austrian Galicia, beyond the Russian dominions, and serves as a frontier dividing the governments of Podolia, Volhynia, and New Russia, from Turkish Bessarabia and Moldavia, and falls into the Black Sea, south of Ovidipol.

Rivers which fall into the Sea of Azof.—The *Don* is the only great navigable river that falls into the Sea of Azof. It takes its rise in the government of Tula, and on the borders of Riazan, passes the governments of Tula, Riazan, Tamboff, Voroneje, and the country inhabited by the Don Cossacks, and falls into the Sea of Azof, after a course of about 750 miles.

Rivers which fall into the Caspian Sea.—The *Wolga*, the most magnificent river in Europe, is the great artery which facilitates the eastern commerce of the empire, being navigable from nearly its source, in the government of Tver, near the Düna and the Dnieper, quite into the Caspian Sea, receiving, in its course, the following great rivers: the Selisharowka, Wasusa, Tverza, Mologa, Sheksna, Rotorost, Kostroma, Unja, Oka, Sura, Vetluga, Kama, Samara, Sarpa, &c. The Kama, its largest tributary, rises in Viatka and flows through rich countries almost 1000 miles before joining the Wolga. The Oka is the next great stream and traverses the provinces of Orel, Tula, Kaluga, Moscow, Riazan, Tamboff, Vladimir, and Nijnei-Novgorod.

Canals.—The first of these unites the rivers Dwina and the Wolga, by the Kubenski canal, in the government of Vologda, and the river Suchona, which falls into the Dwina.

The second, or the North Canal, by the rivers Vaga and Jamza, unites these and the Onega, Volosta, and Mosha; and likewise unites the Dwina and the Wolga.

Junction of the Baltic with the Caspian Sea.—A *canal* unites the Neva

with the Wolga, by the lake Ilmen and the canal of Vishney Volotshok; this celebrated canal connects the Caspian and Baltic Seas, in a navigation of 1450 miles; vessels laden at Astrakan ascend the Wolga to Tver, and thence up the Tverza, where they arrive at the canal through which they pass, and then descend to Novgorod, thence downthe Volkhov to the Ladoga canal, and at Schlusselburg enter the Neva, so down to St. Petersburg, without ever unloading their cargoes.

A *second canal* unites the Neva with the Wolga, by the Ladoga canal, and by the canals of Tichwin and Siás; the Tichwin canal joins the Sominka with the Lid; this river falls in the Tschagadosha, thence into the Mologa, which runs into the Wolga. The Svir canal is a continuation of that of the Ladoga, which unites the Volkhov with the Siás river, in the same way as the Ladoga canal unites the Neva with the Volkhov. This canal was completed in 1801, during which year 651 barks of different sizes passed through it.

A third canal unites the Neva with the Wolga, by the lake Onega and the Maria canal, which unites the rivers Wytegra and Kowshaga. This canal was also finished in 1801. The Onega canal joins the Wytegra with the river Svir. The Svir canal joins the rivers Svir and Siás.

Junction of the Baltic with the Black Sea.—The Beresinski canal unites the Düna with the Dnieper, consequently the Bay of Riga with the Black Sea; this unction is formed by means of the river Ulla, which falls into the Düna and the Sergatcha, which falls into the Beresina, a branch of the Dnieper. The Beloje and Beresina lakes, lying betwixt, greatly facilitate the junction. Fleets of large barks pass down the Düna annually; exclusive of the large rafts of timber and masts which float down that river; and large barks, with salt, pass annually out of the Dnieper into the Beresina. This canal was begun in the year 1797; the principal part was finished in 1801, and the remainder in 1803, forming a complete line of navigation betwixt Riga and the Black Sea, and extending the general traffic over the heart of the country.

The Niemen is united with the Dnieper, by the Oginsky canal. Count Oginsky, during the last years of the Polish republic, completed this canal at his own expense; it joins the rivers Szczara and Jasiolda; the first falls into the Niemen, and the latter into the Pripetz, which runs into the Dnieper, by which it opens a communication with the Baltic and Black Seas. Its length is 34 miles. Vessels have long ago passed through it betwixt Konigsberg and the Black Sea. The governments of Lithuania and Volhynia send their produce by the river Niemen; also the provinces of Little Russia and Polish Ukraine send their products by this communication to Memel and Konigsberg.

The Western Bug communicates with the Dnieper, by the King's Canal. This canal was begun by order of the last king of Poland, and was afterwards completed. The rivers Pinna and Muchawetz have been made navigable

near to their source; but the canal itself, which unites them, is said to be badly constructed, and is carried through low and morassy places, in hopes that, without having sluices, there would be water enough. The Western Bug floats barks of a middling size, on which the inhabitants of Podolia and East Galicia carry their produce by the Vistula, to Dantzic.

The Düna is united with the Sheksna by means of the Kubenski canal; the Sheksna, since the completion of the Maria canal, has a communication with the river Neva. By means of these rivers, and the Kubenski canal, a communication is opened between St. Petersburg and Archangel.

By means of the lake Ilmen and the Welikoluki Canal, vessels may pass from the Dnieper through the Beresinski Canal, into the Düna, down to Riga, or through the Welikoluki canal, into the river Lowat, the lake Ilmen, and so to St. Petersburg.

A canal is cut from the Düna, below Riga, across a narrow point of land, close to the Jägel and Weissen lakes.

The communication from the frontiers of China, by which the trade from thence, and that of Siberia to Russia will be stated under the head of the Russian trade with China.

The Wolga we have already described, together with its junction with the Neva, connecting the Baltic and Caspian Seas, and also the route to Siberia and China, all which are united by means of the canal of Vishney Volotshok. Several further extensive improvements of the internal navigation by the rivers and canalization of the empire are in progress.

The number of barges which passed through this canal, as early as 1776, amounted to 2537; in 1777, to 2641; and the average number was generally computed at about 2550.

Some idea may be formed of the interior increasing traffic carried on through this canal, by the following statement, for eleven years of the last century:

YEARS.	VESSELS AND FLOATS.				LADING.			TOLLS OR DUTIES.
	Barks.	Half Barks.	One-mast Vessels and Boats.	Floats.	Poods.	Cool.	Barrels.	
								roubles.

Annual average	3,235	353	202	1,738	7,519,327	1,198,412	11,179	27,824

Many of those vessels or barks (as they are called) brought down from 100

to 400 tons each, and some few more, particularly to Archangel. They are perfectly flat-bottomed, and many of a great length; the largest fir planks are selected for the purpose of building them; the timbers and crooks are generally selected from such trees as have roots of a proper shape. The depth of one of these vessels is seldom more than four feet, some few more; the sides are perpendicular, and not much regard had to shape; they load them to draw from 20 to 30 inches of water, or more, according to the season of the year, and to the water they expect to find in their respective navigations. Their rudder is a long tree, like an oar. In case of leakage, instead of a pump, they put up a rough cross-bar, from which is slung, by means of a rope, a wooden scoop, with which they throw out the water. These vessels are rudely constructed, purposely for conveying only one cargo; they cost from 100 to 300 roubles each; and when they arrive at Archangel, St. Petersburg, or Riga, and their cargoes are discharged, they are sold or broken up for firewood or other purposes, seldom fetching more than from 20 to 50 roubles.

Although a great part of the products are brought down by water, while the navigation continues open, yet the great preparation for the following year's business is during the previous winter; and great quantities of goods are conveyed by sledges, during this season, not only to Archangel, St. Petersburg, and Riga, but particularly to those parts which have not the advantage of water conveyance. Flax and hemp come by sledges to Narva, grain to Reval, flax and grain to Riga, particularly if the prices happen to be high at the time. The produce from all parts of the interior, which have not the advantage of water conveyance, is carried by sledge-ways to the nearest *pristan*, or place where the barks are built, from whence they are floated down with the current, so soon as the snow and ice begin to melt: they are previously loaded, to be in readiness to take advantage of the water when it is high. The masts and heavy timber are conveyed out of the forests to the nearest navigable communication, during the winter: at which season a great interior trade is in activity, particularly in the articles imported by the ships last arrived: their cargoes being carried by the sledge-roads to the remotest parts of the empire. So general is this sort of communication, that, to and from Moscow, merchandize has been conveyed that distance, frequently so low as 10 copecs per pood, the ordinary rate being from 20 to 35 copecs per pood = 15*s*. the lowest, the 45*s*. highest per ton, for a distance of between 400 and 500 miles. The cheap rate of land carriage, and still more reasonable rate by water, though more tedious, is very favourable to the external commerce of this empire, as well as to that of the interior provinces with each other.

* This basin includes the Pripiat, which flows into the Dnieper, and its numerous tributaries, connected, on the one hand, by the Oginsky canal with the basin of the Niemen, and, on the other, by the Muchawiec canal with the Boug and Vistula.

† Embracing the whole course of the Volga and all its tributaries, with the secondary basin of the Kama, which rises in the Ural Mountains and that of the Oka, which includes the central provinces surrounding Moscow.

ROADS IN RUSSIA.

THE road from St. Petersburg to Moscow is one of the broadest and best in Europe; and many of the port roads are tolerably well made and repaired. The cross-roads are in a very broken condition.

Extracts.—"The Russian government has at last decreed the construction of a railroad from St. Petersburg to Moscow, and from which it is expected that branches will be extended to Nijnei on the Volga.

"The opening of this new and expeditious channel of intercourse between the greatest emporium of the North and the vast inland provinces which furnish the staple commodities required for foreign markets, and absorb large quantities of the articles imported for local consumption, must necessarily lead to a modification of the means through which these supplies have been hitherto procured and furnished by the foreign merchants.

"Whether the projected railroad will yield to the shareholders any profit beyond the moderate interest guaranteed by government on the vested capital, is not very clear; but there can be no doubt that the new means of communication will render *Iver* and *Rybinsk* the chief *entrepôts* for the surplus produce of Great Russia, and of the provinces that border on the Volga or its affluents, even from the Caspian Sea, since from either of these repositories the goods required for exportation could be regularly conveyed by the train to St. Petersburg, without interruption from the seasons; thus enabling the merchants residing at this port to prepare cargoes during the winter, and commence the shipments at the first thawing of the Neva, instead of losing, as they now do, nearly *two* of the *six* navigable months in waiting for the arrival of their earliest supplies by the canals."

CHAPTER XVIII.

TRADE OF RUSSIA WITH PERSIA, KHIVA, AND BOKHARA.

THE trade of Russia with Persia appears to have greatly diminished by Redout-Kalé, and it does not appear to have increased by way of Erzeroum. The chief part of the trade between Russia and Persia seems to follow the route by Astrakan and the Caspian, and it is conducted by the Armenians of Tifflis and Karabagh, in Georgia.

In 1833 the value of Russian imports into Persia, amounted, according to Hagemeister to 2,960,000 paper roubles, and the imports of silk and other articles from Persia, amounted to 7,419,000 paper roubles. The principal mart for European goods is *Tabriz*, which has become the most commercial town in Persia. Its bazaars, caravansaries, and the beauty of its situation amidst forests of orange and other fruit trees, have long rendered, at a former period, Tabriz one of the most populous cities of the East. For a long period its population was stated to have amounted to 500,000 of inhabitants. It declined to less than 40,000. It appears, from various accounts, that it has for some years been improving in trade and prosperity; and in 1840 the value of European goods sold at its bazaars was estimated at nearly 1,400,000*l.* sterling. The value of Russian manufactures, by way of the Wolga and the Caspian, and through the frontiers across the river Arax, amounted to 360,000*l.*; and consisted of *cotton manufactures of all colours, linens, silks, manufactures of Russia*, or of the Trans-Caucasian provinces; *light woollen cloths*, to suit the Persian usage, and of *green, pearl-gray, chestnut, red*, and *bright blue* colours; *silver* and *gold thread* and *lace*, or *fringes, mirrors, glasswares, porcelain*, and *earthenware*; *iron* (to considerable value), *wrought copper, distilled spirits*, and *sulphur*.

The value of British, French, German, and Belgian manufactures, sold the same year, was declared to be about 1,000,000*l.* sterling, or 25,000,000 of francs, of which the value of French fabrics was estimated at 600,000 francs, or nearly a sixth of the whole importation. The Turkish goods imported into Tabriz were valued at about 40,000*l.* sterling, consisting chiefly of *Brussa* silks, cloths of silk and cotton threads mixed; embroidered cloth, slippers, varnished leathers and gold and silver thread.

The chief quantity of all the imports consisted of cotton cloths; especially those called *Persians*, of the kind formerly manufactured in Schiras and Ispahan, and now skilfully imitated in Germany and England. *Saxony* woollen cloths are those which have succeeded best in Persia; and those of Russia are now said, but we doubt this, to be successfully competing with those of Saxony. (See

Russian Fairs and Manufactures, hereafter.) French woollen cloths now find their way to Persia, and are more approved of than those of England. The fairs of Leipzic and Hamburg supply a great part of thesilks used in Persia: *cutlery* and *hardwares* are chiefly supplied by England. Russian porcelain and earthenware, though inferior, are imported so cheaply, that they supplant others in the Persian market. This arises from the cheap transport by the Wolga and Caspian. Nearly all the trade of Tabriz is carried on by the agency of the Armenian merchants, who resort to the fairs of Leipzic, Hamburg, and Nijnei-Novgorod. English, Austrian, and Greek houses, established at Constantinople, have agents at Tabriz.

In comparison with the trade of Tabriz, that of Teheran and Ispahan is of no importance, and carried on solely by the small Armenian and Persian dealers, who resort to the former from the two latter towns. Notwithstanding the decline of *Schiras*, it is almost the only town in Persia which has any manufacturing industry. Peltries are dressed and prepared, in the manner of those of Bokhara, for pelisses, caps, &c.: woollen, silk, and cotton cloths, carpets, sword-blades, &c., are also made at Schiras. Its wares, always celebrated, are still of good quality. The intercourse and trade between Schiras and Bender-Bushire employ about 2000 mules, and bring back to the former, spices, indigo, sugar, firearms, Indian goods, &c.

Trade of RUSSIA *with* KHIVA *and* BOKHARA.—This trade appears to be growing into importance, chiefly from Nijnei-Novgorod, and through the town of Orenburg on the *river Ural.* (See Fairs of, hereafter.) This town is admirably situated for trade with the Kirghises, and with Khiva and Bokhara; although a part of the Russian trade with the countries east of the Caspian, is carried on from Astrakan across that sea, and to some extent through Persia. Orenburg, which has a population estimated at 19,000 inhabitants, is situated on the north bank of the Ural. This long tortuous river, with the mountain range of the same name, forms a boundary between European Russia and Asia. It is shallow and of little advantage for navigable purposes, but it abounds with fish. The town of Orenburg is regularly built and fortified. The trade of the town is chiefly carried on at bazaars, on the south or Asiatic side of the river.

In 1833 there arrived, according to Schnitzler, 14 caravans of 2547 camels, exclusive of horses; and 13 caravans of 4769 camels and 264 horses departed laden with goods, for various parts of Asia, chiefly for the country of the Kirghises, for Khiva, and for Bokhara.

The *Khanat* of *Khiva*, which now comprises a vast region along the Caspian, from Persia, north to the Kirghis Tartar country, and east to the Oxus and the lake Ural, has only, according to Burnes, a population not exceeding 200,000 inhabitants. He describes them as organized bandits and, according to other authors, they are not generally better than predatory savages. It is agricultural

where the ground is sufficiently fertile for cultivation. There are few horned cattle; sheep, goats, and horses, are numerous; and all these are used as, and considered the chief food of the inhabitants. There are few manufactories except some coarse cottons and silk stuffs made by the women. Camels are chiefly used as beasts of burden,—and caravans of these proceed annually for Russian merchandize to Orenburg, Astrakan, and Karaghan on the east coast of the Caspian, and others go south to Kaboul and Persia. This trade is conducted by the Turkomans, Khivans, and Persians. The Khan, who is chief of the Uzbecks or dominant races, levies duties on goods entering or passing through the Khanat; and especially at the ports or landing-places of Mangasluk, and Karaghan, where boats with goods arrive from Astrakan. The capital of Khiva is a town of mud huts, with three stone mosques, and a mud palace. Its chief trade is in slaves, of whom there are about 40,000 in the Khanat, and it is said there are many captured Russians who are slaves in Khiva.

The *Khanat* of *Khokan*, bounds closely on Russia. This mountainous region produces silk and cotton, and various grains; coals and iron abound. Agriculture, pasturage, and rearing silkworms, and mounting cottons, and embroidered silks. Russian goods find their way to a considerable amount to Khokan the capital. It is said that this town has a population of 150,000. It is like Khiva built of mud, with the exception of three stone bazaars. Russian caravans from the Siberian towns of Semipolatinsk on the banks of the Irtish and from Petropavslok on the Ichim, are said to pass also through Khokan to the frontiers of China with Russian merchandize. Mussulmans pay a duty of 2½ per cent on goods imported, and other importers 5 per cent.

The Khanat of Bokhara, or the country of the Uzbec Tartars, comprises about 230,000 square miles of Central Asia, and Burnes estimates its population at 1,000,000 of inhabitants. Other authorities estimate the Uzbecs alone at 1,500,000, and the other races at nearly 1,000,000. Many portions of this region is remarkably fertile, and agriculture is the principal source of occupation and subsistence. Wheat, barley, rice, maize, beans, melons, are all grown with several other kinds of grain, vegetables and fruits, sheep and goats: the latter yield the fine hair or wool scarcely inferior to cashmere,—the former the jet black woolly skins used for Persian caps, &c. About 200,000 skins are annually exported; mutton is the chief animal food. Horses and oxen are reared, the flesh of the latter is only eaten by the poor. The manufacturing industry is unimportant; some embroidery, silk stuffs, shagreen, sabres, firearms, and articles of various metals, and leather, are among the limited quantity of frabrics made.

The capital, Bokhara, is described by Burnes as a town containing 150,000 inhabitants. It has massive buildings, 360 mosques, 300 schools, the khan's palace or rather fortress; houses built of bricks dried in the sun; very narrow and

dirty streets; lofty arched bazaars in which the different trades have their distinct sections and ponds and fountains for the supply of water. The slave and gem markets are open only twice a week, all others are open daily. Fruits and jellies of all kinds abound in the market, and plenty of ice is to be had during the hottest weather. Tea is the favourite beverage. There are numerous large baths. This mart, which is to Central Africa the great entrepôt, is described as presenting unceasing activity and noise. The caravans from and to Russia, travel by the following routes: viz.—by the route of Khiva, to the shores of and across the Caspian, from and to Astrakan; by the route to and from Orenburg by land in 60 days, through Orghenje in Khiva; to and from Troidska in Tobolsk by the route east of the lake Aral in 49 days; and to and from Petropavslok in 90 days. Of the whole number, 2000, which leave India annually, about 1000 camels, reach Bokhara with oriental goods; the remaining 1000 stop in Affghanistan, Caboul, or diverge west into Persia.

The following account of the trade with Khiva and Bokhara, written at Orenburg, 27th July, 1841, has been translated at St. Petersburg from the Russian:

"When taking leave of you at St. Petersburg on the 9th of June last, I engaged to inform you of the progress of our Asiatic trade through the Kirghise Steppes.

"We arrived at Orenburg on the 3d of July, after a fatiguing journey, owing to the immense quantity of dust, and the oppressive heat, which ranged from 28 to 30 degrees in the shade. I do not remember so hot a summer in Orenburg, though I have resorted to the province for many years.

"You know that having traded for many years with the Asiatics at Orenburg and other frontier places bordering on the Kirghise Steppes, I have always wished and intended to deal with them directly in their own countries, but not before now have I been able to carry my intentions into effect.

"In the months of October and November, 1840, I sent goods under charge of my *Prikashgiks* (agents) into the neighbouring states of Asia, namely, my nephew, V——— G———, with a *Petropavlosk* burgher to *Tashkend*. A Rostoff merchant's son from *Orenburg* to *Bokhara*, and a Rostoff burgher from *Orenburg* to *Khiva*. In this last venture I had a partner in M. D———, a merchant of *Orenburg*, who on his part sent a Rostoff merchant, T——— O———.

"Our caravans were little more than fifty days in reaching *Khiva* and *Bokhara*, and from *Petropavlosk* to *Tashkend*, they were two months in reaching their destination.

"The return journey to Russia, in the spring, was better and sooner accomplished, the difference in the time being from ten to fifteen days. The present first caravan, of 2000 camels from *Tashkend* to *Petropavlosk*, arrived on the 1st of June; the second, of 1500 camels, is just come up to the exchange yard of this place; the summer caravan from *Bokhara* we are still expecting, but it is doubtful whether it will arrive in time for the fair of *Nijnei-Novgorod*, owing to the excessive heats which it has to encounter.

"In their journeys our caravans did not suffer from any extraordinary wants, nor were they attacked by robbers. No losses whatever were sustained in any of the three places they went to. The people performed the journey well, and were all in perfect health. In sending my agent to *Khiva*, I was apprehensive of his fate, owing to the ill state of his health, but quite the contrary has happened; on his return I perceived that the six months' trip had made such an improvement in him, that I think a year's residence at the Mineral Springs could not have done more for his advantage.

"Great good-will was shown in the reception of our Russians by the people of *Khiva*, so recently our enemies. They cleared our goods without the least delay, and levied only the same duty as is paid by their own countrymen, namely, 1 ducat on every 40, equal to 2½

per cent. At *Tashkend* they were not quite so liberal; they levied 1 ducat on 20, or 5 per cent. But the *Bokharians*, with whom we are the most acquainted, whom we meet in both our capitals, and of whom many reside at *Kazan*, while others frequent the fair of Nijnei Novgorod. These *Bokharians* treated the Russians without the slightest consideration, and even with imposition. 1st. They did not examine our goods for 20 days, in consequence of which delay we lost the best time for trading. 2d. They levied 1 ducat on 10, or 10 per cent. Here we do not treat them in the same manner. Even when I was last at St. Petersburg, as you will remember, I met on the exchange a merchant of *Bokhara*, a Jew; he bought goods there from our first traders, and they associated with him personally with every possible urbanity.

"I cannot say that I have derived any great profits from the present caravan. It is not in Europe alone that trade has lost its energy: in the Asiatic countries it is also very dull, and there is a great falling off in the prices of Russian articles. Nevertheless I obtained in *Bokhara* and *Tashkend*, for merchandize, 6500 ducats in cash, or in our money 100,000 roubles. In *Khiva* the trade was more advantageous, but then at that place there is not room for establishing an extensive trade; however, daily opportunities offer for sending goods to *Bokhara*. In *Bokhara* itself, on the bazaar, there is a perpetual fair, and a weekly arrival of caravans from different places in the east; from Persia, Caboul, Cashmere, Castigan, Coukan, Samarcand, and Sharishan. On these interminable bazaars one can always, by a small reduction of price, sell goods to a large amount for ready money.

"Notwithstanding the small failures in this first attempt, the errors in regard to assortment of goods, as well as other misapprehensions, we have not cooled towards this trade, and I again send merchandize to *Khiva* and *Bokhara* by Russian agents. Thanks to the vigilance of our fostering government, the intercourse has become less dangerous and less exposed to extortion from the Asiatics than it formerly was; and I am satisfied that even the *Bokharians* will prove more condescending on our second visit than they showed themselves on our first appearance among them.

"For my own part, my occupation being that of attending fairs and having frequent intercourse with the Asiatics, I am accustomed to travelling, not afraid of fatigue, and well acquainted with the Asiatic trade. You know that I have now gone for 40 years to *Orenburg*, and for about 20 that I have had annual dealings with the Mussulman traders of this place.

"Much labour and trouble have been undergone, and much ground has been gone over during that time. I used to be in *Moscow* in the spring; in June I proceeded from *Rostoff* to *Ouralsk*, from thence to *Gourieff*, on the shores of the Caspian, and I then went to the *Kalmouk, Olorses* of the *Bukief Orde* over the steppe, on horseback, and sometimes on a camel. I go without fail every year to the fair of *Makarieff*—from thence, if there be time, I return to *Rostoff*; if not, I go again to Orenburg, and after finishing there my business with the Asiatics, in October or November I proceed to Froitsk, sometimes even to *Petropavlosk*, and finally, towards Christmas, I am always at home in Rostoff. Such is our life. At present, of course, I cannot go myself to *Khiva*, however desirous I may be of doing so. Every thing has its time. Till now, actuated by my ardent wishes, I have spared no trouble or pains to ascertain how far Russian caravans could journey to *Khiva* and *Bokhara*, and in that respect I have attained my object. Last year I witnessed such a departure, and you may judge of my delight on the occasion, from the fact that, on starting my goods from *Khiva*, I seized the reins of the first camel and led it out myself from the Exchange yard into the steppe. I assure you that my eyes were filled with tears of joy. I regret that I could not arrive in time for the second gratification, when 72 camels, loaded with merchandize for me, arrived from *Bokhara*, and entered directly the Exchange yard. I anticipate that pleasure now, on the arrival of the second caravan from *Bokhara* and *Khiva*. I then hope to justify my opinions in regard to this trade, and to answer the criticisms of my friends, who have often said to me, that being single-handed, I gave myself a vast deal of trouble in pursuit of an impossibility. Already have my anticipations been realized, and I am convinced that the undertaking will prove still more advantageous to the honour and profit of our great mother-country.

"(Signed) T—— P——."

CHAPTER XIX.

RUSSIAN TRADE OVERLAND WITH CHINA.

This trade is carried on by land on the backs of beasts of burden, and also by the more tedious course of inland navigation. It is of far more ancient date than is generally known. The caravans which have long passed from Russia to Bokhara, have diverged to China, as well as by Caboul to India; and others have and do proceed by Samarkand, and by Khokan, to the frontiers of Thibet. The more important caravans which carry on the trade between Russia and China rose to importance, after the conquests of Ghengis-Khan and Tamerlane. European nations were so well acquainted with this overland trade before the passage round the Cape of Good Hope was discovered by the Portuguese, that Russians or Moscovites were employed between the ports of the Baltic and China, to bring the products of the latter to the ports of the former for the use of Western Europe. The protection of this extensive traffic was beyond the power of the Tzars until secured by the conquests of Ivan Vasillievitch, and afterwards by the genius of Peter the Great. The vast distance, from 5000 to 6000 miles between the capitals of Russia and China (Moscow and Pekin), gave rise to the establishment of regular caravans: the only safe way of traversing these extensive regions. The number of Russians accompanying each of these caravans was limited to 200 persons, and during their short stay at Pekin they were confined within the walls of a special caravansary, and only allowed to traffic with a few licensed or privileged merchants, probably much in the same way as the transactions with the Hong merchants at Canton. This intercourse, and the jealousy afterwards of the Tartar government in China, led to the prohibition of foreigners to trade to Pekin, or to pass over the Chinese territory. After long negotiations an arrangement was definitively settled for continuing the trade between Russia and China, and of maintaining a Russian college at Pekin.

By treaty, in 1728, two places were selected, *Kiakta* in Russia, close to the Chinese frontier, and the villages of *Mai-Mat-tchin* (place of trade), in China, near the Russian frontier, for entrepôts for the exchange of the commodities of the respective countries. Kiakta is situated in latitude 50 deg. 21 min. N., and longitude 106 deg. 29 min. E., on a tributary stream, falling into the Selenga, and communicating with the lake Baikal, Irkoustk, and the river Angara, a branch of the great river Yenisei. Kiakta is said to be within cannon-shot distance of the Chinese boundary, and Mai-Mat-tchin, at about the same distance from the Russian frontier. The population of the former is about 5000. The December fair brings great activity to this place, and an average quantity of from 60,000 to 65,000 chests of tea, or from 4,200,000 to 4,600,000 lbs.

The Russians carry to this fair Siberian and American furs: dressed sheep and lamb skins; woollen manufactures of various kinds, required for the cold winter climate of Northern China; coarse linens, leather, cattle, specie, &c., to exchange for the raw and manufactured silk, porcelain, rhubarb, sugarcandy, musk, and especially the tea of China. Klaproth considers that the value of this trade has been exaggerated. An official account published in 1831, declares the value of manufactured goods exported to China by way of Kiakta, to amount to 4,500,000 paper roubles; and the imports from China, to 7,000,000 paper roubles. The great increase of the trade with China since that year, we have stated in the preceding tables of the general import and export trade of Russia. The course of this trade about the middle of the last century is described in the extracts we have taken from Postlethwaite's translation and edition of Savary's Commercial Dictionary. Mr. Oddy, in 1804, says, the communication from the frontiers of China "commences by the river Selenga, from the frontiers of China to the Baikal lake; from thence by the Angara into the Yenisei river as far down as the town of Yenisei: then the merchandize is unladen and carried over a short track of land, and embarked on the river Ket, and thence down to the Obi; from which up the Irtish, the Tobol, and thence overland to the Tchussovia, upon which river it is embarked again and falls into the Kama, and by the Kama to the great river Wolga, and thence up the Wolga to Moscow, &c." This route is nearly the present course, except when tea and other articles are carried by land which though more expensive, is done in about a year, or in about one-third the time by water. The tea which is so highly reputed in its quality, on the ground of its passing over land, is still carried chiefly by water. First from Kiakta by land to Tomsk on the Irtish, a distance of more than 1000 miles: thence by water down the Obi, to its confluence with the Irtish; and then up the latter, and its branch the Tobol, and a river falling into the latter to Tyoumene, or Tourmine; where it is landed and carried overland to Perm. It is then carried in boats down the Kama to its junction with the Wolga, and up this river to the city of Nijnei-Novgorod, at the fair of which tea is sold for distribution and consumption in European Russia. Of the 60,000 to 80,000 chests annually bought at Kiakta, 20,000 to 30,000 chests are said to be carried from Siberia in winter on sledges to Moscow and other places in Russian Europe.

The export trade, from Russia to China, is conducted by the same tedious routes. In the general tables of the import and export trade of Russia we have given a view of the progress of this trade. How far British trade by sea with China can compete profitably with that of Russia, by the long tedious routes above described, must depend upon the arrangements we make with China. Russia has had at Pekin, since 1728, a convent or college for educating Russians, who go there and leave the place by rotation when instructed. In this respect, and in

the intercourse which Russia has by Kiakta, and now by other points with China, the former has great political and intelligent advantage over the latter. Add to which, a great moral superiority with the Chinese government over the English, from the circumstance of Russia never having, as far as we can learn, unless to a small extent lately, been engaged in the degrading trade in opium, and from Chinese blood not having been shed by the Russians. The advantages of capital, transport, and daring enterprise, the English possess in a far greater degree than Russia, and it is in our own power, and it must be the earnest desire of every good man and Christian, to promote that intercourse only with China, which will establish moral respect among the Chinese for British honour and justice, and which alone will secure to the British nation permanent and profitable commercial relations with the great population of that empire.

The export of Russian woollen and cotton manufactures to China increased greatly during the late hostilities between the English and Chinese.

Although Russia, twenty years ago, could not, in all her factories, produce sufficient cloth for the use of the army, she, at the present time, not only furnishes an abundant supply for this purpose, but also manufactures considerable quantities of fine cloths which are exported to the markets of Central Asia and China. The cost of manufacturing cloths and the consequent price, is, however, much higher in Russia than in England, France, Belgium, and Saxony.

The following table shows the quantities of woollen cloth exported to Central Asia, during the undermentioned period:

YEARS.	To Turkey.	To Persia.	To the Steppes of the Kirghises.	To Bokhara.	To Khiva.	To Taschkend and Khokan.

The following is an extract from a letter dated Macao, 17th December, 1842.

"Ever since we have had a footing in the north, I have been trying to get some information regarding the woollen trade of the northern and eastern districts of China: until lately, however, I have met with no success.

"I am happy to say that I am now in the position of being able to give you some accounts of the woollen trade of the above places. I learn that there is a considerable trade going on in the North, but I am sorry to say we have a competitor in the supply, that we have hitherto scarcely considered worthy of notice, and one who will cause a little alarm to our manufactures at home. I allude to the Russians. I have received *musters* or patterns of their cloth, and I send them to you by this opportunity. They were taken off the pieces which were purchased at Ningpo, at which place the pursers of her majesty's ships bought a considerable quantity for the clothing of the crews.

"The cloth is called by the Chinese *Ka-la*, and the person who sold it, says its consumption in reference to English cloth, is as 6 to 1 of the latter, and that it is only within the last five years that the article has been introduced in any quantity. You will find that the breadth of the muster cloth exceeds that of English stripes by 4 inches. The length usually is 50 to 80 cooids (19 to 30 yards) per piece; the breadth varies from 62 to 64 inches. The consumption at Ningpo is estimated at from 3000 to 5000 pieces, and at Soo-choo at 20,000 pieces. The latter is the principal mart, and from it Ningpo gets supplied. The shopman quoted the then rates at 27 dollars per piece of 50 cooids ($19\frac{1}{10}$ yards) for black; 32 dollars blue; 35 dollars scarlet and purple; say $1\frac{4.2}{10.0}$ dollar per yard for black, $1\frac{6.8}{10.0}$ dollar for blue, and $1\frac{8.4}{10.0}$ dollar for scarlet and purple.

"The packages are made up of 5 pieces, and an assortment should contain, according to the shopkeeper's information, 50 pieces blue (the muster sent is not a fast colour, apparently dyed in the piece), 35 pieces black, 10 pieces scarlet, 2 pieces ash, 3 pieces green; but I think this is not correct, as neither purple nor brown is mentioned. The end of the piece that I saw, had the maker's name in gold letters, No. 18,301. The high number of the piece will show that it is a manufacture of some moment. In order that a comparison might be made between the Russian cloth and Spanish stripes, we selected from the man's stock a piece of Gott's manufacture, and regarding which he was told that buyers complained of the quality being inferior to that of the same article imported during the Company's time; they also stated that the consumption of it was decreasing. Ningpo does not take off more than 300 to 500 pieces per annum (chiefly black and blue); Soo-choo, 3000 to 5000 pieces; Hang-chow-foo only a small quantity. The price of a piece of $18\frac{1}{2}$ yards was quoted at 35 dollars purple ($1\frac{8.9}{10.0}$ dollars per yard), 27 dollars blue ($1\frac{4.6}{10.0}$ dollar per yard), and 20 dollars for black ($1\frac{0.8}{10.0}$ dollar per yard).

"Of course there is much that is incorrect in the above accounts; I give them to you as I get them. There is, however, sufficient to show that the Russian cloth trade is one of considerable importance.

"I also send two labels which were taken off one of the packages: these, with the name of the manufacturer, will perhaps enable you to find out what is the cost of manufacture of the article, by applying to some of the large Russian houses, such as Thompson, Bonar, and Co., &c. I make no doubt that the above quotations are below what are usually current, because to allow of Spanish stripes being sold at the rates stated, the price that foreigners would have to sell at in Canton would be less than one dollar per yard, the expenses of duty and transit being 53 cents per yard. I think also the Russian trade would not have gone on increasing unless prices were remunerative, and certainly goods of a quality like the musters I send you, could not be afforded at what I have quoted them at.

"I shall continue my inquiries on this subject, and advise the result. In the mean time I think it would be well to keep from purchasing Spanish stripes on *your own* account, unless you find that the Russian supply is likely to fall short from unremunerative prices.

"The consumption of long ells at Ningpo and its neighbourhood is small, not above 2000 or 3000 pieces per annum, chiefly scarlets, say nine out of ten pieces. *Camlets* in demand. *Long Cloth* is an article that will find a great sale by and by, particularly if prices at home keep moderate; 39 yards by 40 inches are the dimensions required."

The increase of the trade with China, by way of Kiakta, which is the great depot in fine cloths, and the decreased consumption of other foreign woollens, will be seen by the following table.

EXPORTS BY KIAKTA OF

Previously to the earliest period of the above table, the exports of Russian cloths to Asia did not exceed 200,000 roubles assig. annually; and the value of wool exported (20,000 poods) in each year to foreign countries was 500,000 roubles assig.; whilst the value of manufactured European woollens amounted to upwards of 4,000,000 roubles assig. In 1841, on the contrary, the exports of Russian woollen manufactures, sent into Asia, have been valued at 12,821,625 roubles assig., and the wool forwarded to England, France, Germany, and Belgium, at 15,500,000 roubles assig.

The following is a Russian official account of the value in paper roubles of cotton manufactures exported from Russia to provinces of Central Asia.

YEARS.	To Asiatic Turkey.	To Persia.	To the Desert of the Kirghise.	Bokhara.	Khiva.	Kokant, &c.
	roubles.	roubles.	roubles.	roubles.	roubles.	roubles.

"Formerly, Chinese nankins and other cotton stuffs were amongst the most important articles of our importation. Now, Russia exports cotton goods to China, and little by little the tissues of our fabrics have very nearly supplanted, in this trade, those proceeding in transit from foreign countries.

"The cotton stuffs manufactured in Russia and exported into China amounted, in 1826, to the value of 167,199 roubles, paper money, and in 1840 the exports amounted to the value of 920,881 roubles, paper money.

In 1841, Cotton stuffs manufactured in Russia
and exported to China, for . . 975,119 rbls. sil.
„ Foreign stuffs exported for . . . 5,116 „
„ Cotton stuffs imported from China . 19,670 „

We consider that the above account overrates the real value of the Russian trade with China; and recent accounts from Kiakta state a falling off during the early part of this year (1843), and that the quantity of tea brought to Kiakta to exchange for Russian goods and money was only 30,000 chests, instead of 120,000 chests brought to the fair of the previous year.

CHAPTER XX.

RUSSIAN TRADE WITH KAMTSCHATKA AND WITH RUSSIAN AMERICA.

THE Russian trade through Kiakta with China, embraces in the monopoly of the merchants engaged in it the trade with Kamtschatka, the Aleutian islands, and Russian America. The long peninsula and territory of Kamtschatka is about 800 miles long, and 97 to 252 miles broad. Its area about 80,000 miles, and its population not estimated at more than 6000: of whom about 1600 are Russians, or Siberians. Although there are grassy plains and valleys in the interior, the greater portion of this region consists of volcanic rocks and mountains, among which are many active volcanoes. Furs and dried fish are the articles which the country and the sea yield for trade. There are small settlements on the west coast within the great gulf of Okhotsk, and the trading vessels have some intercourse with Okhotsk, the only seaport of consequence belonging to Siberia; and from whence nearly all Russian, Siberian, and Chinese articles used in Kamtschatka, the Aleutian islands, and Russian America, are shipped.

OKHOTSK has about 150 houses, several warehouses, and shipbuilders' yards,

belonging to the Russo-American Company, which may be considered a branch of the mercantile trading body which carry on the trade with China. The merchandize destined for Okhotsk, arrives by land from Yakoutsk on the Lena.

The port of Petro-Pavlovsk, or St. Peter and St. Paul, on the east coast of the peninsula of Kamtschatka, is safe but small, and cannot shelter conveniently more than 20 ships. It is frozen over during winter. A whale-fishery is carried on from this port, which has, however, not more than 200 inhabitants.

ALEUTIAN ISLANDS.—The whole group extends about 600 miles in length, they are generally rugged, barren, and volcanic. Some of the volcanoes are always in activity. One volcanic island rose out of the sea in 1795, and soon increased to 20 miles in circuit, while throwing up fire and lava. There are no trees and little vegetation on these islands. The sea abounds in fish and seals, which supply food and clothing to the inhabitants. Sea otters, now scarce, were formerly numerous. The natives are said to be ingenious. The Russo-American Company has a monopoly of the trade of these islands.

RUSSIAN AMERICA.—The extensive region, considered under Russian dominion is a country of islands, ice, rocks, barrens, pine and beech forests. Its boundaries are supposed to be Dixon's Inlet, in about latitude 54 deg. N.; and, including several islands and a narrow strip along the coast to Mount St. Elias in latitude 60 deg. 20 min., and thence, separated from British America, by a line running due north in longitude 141 deg. W. to the Arctic Sea, comprising the whole region from that meridian west to Behring's Straits, and including the peninsula of Aliaska and the Aleutian islands. The following remarks were drawn up in 1837, by an officer of the Hudson's Bay Company, and in most respects apply to the present time: with the exception that the post of Bodiga, on the coast of Mexico, has been sold to a Swiss adventurer, and that several Swiss and Germans have settled there.

"The Russian Fur Company's principal establishment on the north-west coast is named 'New Archangel,' formerly *Sitka*, and situated in Norfolk Sound, in north latitude 57 min. west longitude 132 deg. 20 min. It is maintained as a regular military establishment, garrisoned by about 300 officers and men, with good natural defences, mounting 16 short eighteen and 12 long nine pounders, and is the head-quarters of the governor, Captain Kanpryanoff, of the Russian army. The Russians have other establishments on the coast and islands to the northward of New Archangel, and one fort, Ross, in the Bay of Bodiga or Romanzoff, on the coast of California, situated near the entrance of the Bay of San Francisco, in lat. 37 deg. 25 min.; in all 10 establishments on the north-west coast of America. They have moreover 12 vessels from 100 up to 400 tons burden, armed with 10 guns each of different caliber. All the officers and most of the people employed in their sea and land service, belong to the Russian army and navy; receive pay from the Russian government, and their services, while attached to the Russian Fur Company, entitle them to the advantages of promotion, pension, &c., in like manner as if employed on active service in the army or navy. They have moreover attached to their establishments a number of Indians of the Kodiak tribe, who are usually employed in hunting or fishing, but are under no fixed engagement, and are looked upon and considered as slaves. Their annual returns in furs are in value from 80,000*l.* to 100,000*l.*

"The post of Bodiga was established many years ago by permission of the governor of California to Count Romanzoff (whose daughter he afterwards married), with the avowed

object of forming a large agricultural and pastoral establishment for the maintenance of their posts to the northward, where the soil and climate are unfavourable to cultivation.

"But it would appear that they have had other objects in view in maintaining that post, as they pay little or no attention to agriculture there, but depend principally on the Spanish missions of San Francisco and Montery for their supplies. The Russians hunt the sea otter in the bay of San Francisco, and on other parts of the coast of California, and have always 2 or 4 of their armed vessels stationed there; and from the surveys they have made of the bay of San Francisco and other circumstances, it is supposed they have it in view to take possession of that harbour. There is no safe harbour at Bodiga, which is an open roadstead, with no other protection seaward than a bar formed by a river falling in at that point, and on which there is not more than 15 to 18 feet water at low tide.

"The Americans of the United States are now migrating rapidly into Northern California, which is a remarkably fertile country; and it would appear from the circumstance of a Swiss now possessing Bodiga, and the number of Germans and Swiss who have settled there, that the Russian Company have abandoned the place. The Hudson's Bay Company have also rented some of the posts, on the Russian territory in America."

CHAPTER XXI.

RUSSIAN FAIRS.

THE fairs of Russia originated chiefly in privileges granted during the middle ages to certain places where people were, from religious zeal and superstition, accustomed to assemble.

In the interior of Moscovy trading and corporation rights were not known, and the congregating of traders at particular towns was the result of local convenience, or of superstition. Pilgrimages on special holidays to the tombs or shrines of saints of renowned sanctity, drew multitudes of devotees; and the prospect, or certainty, of gain attracted dealers from different countries, to sell all sorts of wares at places where the pious, the curious, and the calculating, met at the same time. The frequency of these assemblages led to the organization of fairs; which, growing yearly more important, the fanaticism, which first caused multitudes of religious fanatics to assemble, was obscured by the far larger multitudes which the love of money and profit attracted to the original seats of superstition. To such assemblages Novgorod, Kharhoff, Romni, Makarieff, &c., owed their origin.

OFFICIAL Statement of the total Value of Merchandize offered for Sale at the several Fairs in Russia, in each of the Years 1838 and 1839.

The most famous of all the Russian fairs is that of Nijnei-Novgorod, or *Makarieff fair:* still so named in Russia after the name of the town, lower down the Wolga, where it originated. *Nijnei-Novgorod* was selected by Alexander, as being far more conveniently situated than Makarieff, the annual seat of the fair, 60 miles farther down the Wolga. Kasan was, however, the original seat of this celebrated fair. The situation of Nijnei is described by the Baron Custine and others, as the most beautiful and picturesque in Russia: in a country where flat plains and monotony are the leading features. It is built on the brow of a high mountain on the south side of the Oka and Wolga, commands in front a vast plain, and immediately opposite the flat point of land, where the Wolga and Oka join each other. Although the mountain commands a magnificent view, the ancient town is carried so far behind it, that the natural advantage of a beautiful situation was entirely lost. A new suburb has been built, which relieves in some degree the original blunder, This new city is increasing rapidly in houses and population. It is separated by the *Kremlin*, or fortress, from the old city.

The fair is held on the low point opposite the new town, where the Oka is crossed by a bridge of boats, much like that, and of about the same length as that on the Rhine at Coblentz. Although Nijnei is now the most numerously-attended fair in the world, the city is like that of Leipzic, one of the dullest in Europe, or perhaps in the world, except during the fair.

At that period, the number of sellers, buyers and speculators of all countries, are stated to exceed 200,000, including about 40,000, or more, who live and sleep in the immense fleet of river craft that come from the most distant parts of Russia, and even Asia, to Nijnei during the fair. Although the position of this city is undoubtedly the most convenient in the empire for a great central mart, the ground is ill chosen, on which the streets and the buildings are constructed for the deposit and sale of merchandize.

The lands which lie between the Wolga and Oka, at, and behind, their confluence, and for a considerable distance from the banks of both, are little above the level of their waters, and consequently liable to inundations. A city for merchants, with broad, long, straight streets, was, however, laid out and built here, opposite Nijnei, by Alexander, with much the same rapidity as St. Petersburg was by Peter the Great. Rather than remove this vast oblong bazaar to the opposite side of the Oka, he expended millions in overcoming the natural evil of the site he chose. It became necessary to construct stupendous arched streets, or rather sewers; and over these the houses, bazaars, and the present streets, and the Nijnei fair have been elevated. Several fantastic edifices, called Chinese pavilions, rise above the other buildings. The streets beneath serving as sewers, along which a cossack police drag, rake, or sweep the filth of the whole place into

the Oka and Wolga. The construction of the vast arches which support the upper structures and streets are of solid work, and of vast magnitude.

The fair of Nijnei is regulated by imperial decrees, and the places of sales and purchases have all their respective sections. The bazaars are variously filled with goods; those in which English, French, and Germans take a part, are described as the most distinguished for arrangement and show; and are said, for a few weeks, to display a sort of Palais Royal, or Regent-street, shoplike appearance.

From the variety of people and wares brought to the fair, its sections have been described as separate cities or fairs. The first is the tea section, which occupies an extensive part for the deposit of from 35,000 to 45,000 chests; and the prices of tea, like those of cotton wool at Liverpool, influence very greatly the prices of other commodities. The second, the *rag fair*, is nearly as extensive as the odoriferous one which takes precedence. It is well that absolutism has decreed that all rags brought to this fair must be previously washed. They are sold for Russian use only, the exportation being prohibited.

The third is the large warehouses or sheds in which are piled the iron of Siberia, that which has been extracted from the mines, chiefly by the labour of convicts and of political exiles.

The fourth, is the depot for the wool of Cashmere—then follow the *section* of furs, which is very extensive,—the *section of Persian shops*, filled with carpets, raw silks, &c.,—the *section* for hides and skins,—the *section* for fish, dried and pickled,* a very extensive one,*—the *section* for potashes, &c.,—the *section* for timber, &c.,—and several others. Exclusive of these, the places set apart for moveable theatres, mountebanks, eating and drinking houses and tents; and, as more striking, along the banks of both rivers are ranged, in several tiers, the countless vessels that have arrived from near and from afar, and which depart with very different cargoes from those which they brought to Nijnei.

It is here, as in ancient times, at the Tartar capital Kazan, that the extreme east meet the extreme west of the ancient world—Americans and even Australasians have lately appeared together at Nijnei. The assemblages of people, of all tongues and costumes, is more varied at this fair than probably at any other. Chinese, Calmucs, Baskirs, Mongols, Bokhars, Indians, Kirghises, Persians, Georgians, Circassians, Armenians, Parsees, Arabs, Greeks, Jews, Slavonians, Germans, French, Italians, English, Dutch, &c., all mingle, buy, sell, speculate with, and from, and among each other.

* The consumption of dry and pickled fish is very great in Russia, in consequence of the four long and short Lents which occur in the year.

Goods sold at the Fair of Nijnei (Novgorod), in the Year 1838.

Total	125,481,000	40,519,000	166,000,000
Equal in British sterling money to ... £	5,620,503	1,814,913	7,435,416

* Nearly the whole of the coarse linen was disposed of.

† The skin and fur market was dull compared with last year.

‡ Iron sold remarkably well, the *first hand* price having been from 8 to 20 per cent higher than in 1837. *Sheet* copper also rose about 10 per cent, but the *unwrought* fell about 4 per cent.

§ Very profitable sales in the paper trade.

‖ The tea trade was very brisk, the prices from 10 to 15 per cent higher than last year. The purchases for exportation through Kiakta were fewer than in 1837, owing to that market having on hand large quantities of the stock bought in former years.

There appeared altogether a much smaller quantity of Asiatic goods at this fair than at the preceding ones, and their prices were somewhat higher, particularly for the raw cottons of Bokhara. There were very few Persian merchants at the fair, and in consequence of a fall in the price of their merchandize, it could not be expected that they would make any considerable purchases.

In 1840 the value of the goods brought for sale to the fair of Nijnei, was declared officially to amount to 47,264,967 silver roubles, or 165,427,384 paper roubles = 7,483,619*l.* sterling.

The value of goods sold was declared to have amounted to 38,828,987 silver roubles, or 6,794,897*l.* sterling; being an increase of about 320,000 silver roubles over the sales of the preceding year.

The official authorities class the goods sold at the fairs as follow:

First. The produce of Russian manufactures; viz.,

	Put up for Sale. sil. rbls.		Sold. sil. rbls.
Cotton stuffs for	7,417,480	...	5,865,840
Woollen ditto	3,175,132	...	2,401,392
Manufactures of flax and hemp	3,118,490	...	2,425,990
Silks	3,254,196	...	2,204,196
Furs	1,912,340	...	1,411,740
Skins, tanned and opened	1,063,380	...	888,380
Products of mine and founderies, copper, hardware, jewellery, &c.	5,739,684	...	4,819,684
Porcelain, delfware, looking-glasses, and articles in glass	431,800	...	346,800
Dried fish, caviare, oil of fish, and isinglass	418,640	...	383,640
Corn and flour	2,315,915	...	1,259,915
Wines of Russia, brandy, mead, &c.	747,651	...	686,651
Sugar from the refineries of St. Petersburg and Archangel (142,000 pds.), and divers kinds of merchandizes, such as wax and candles, potash, soap, tobacco, paper, pens, bristles, horses' tails, &c.	4,893,277	...	4,678,277
Total of Russian merchandizes	34,487,985	...	27,282,505
,, value sterling	£ 5,450,598	...	4,319,542

Being an increase of about 10 per cent on 1838, and of 16½ per cent over the sales of 1837.

Second. Merchandize the produce of Western Europe, America, and the West Indies; viz.,

	Put up for Sale. sil. rbls.	Sold. sil. rbls.
Woollen merchandizes	262,871	217,871
Cotton stuffs	205,450	419,450
Flax and hemp merchandizes	196,600	184,600
Silks	425,300	332,300
Coffee (6968 poods)	97,552	
Divers Merchandizes; viz.,		407,152
Oil, fruit, preserves, &c.	498,600	
Foreign wines	791,536	666,536
Indigo (10,790 poods)	1,186,900	1,420,172
Other drugs	486,772	
Total of foreign merchandizes	4,451,581	3,648,081
„ value sterling	£ 704,833	£ 577,612

The above sales amount to a small increase over those of the preceding year.

Third. Merchandize the produce of China and Central Asia; viz.,

	sil. rbls.
Tea in chests, value sold	6,604,000
Tea pressed in cakes for the use of the nomades of the south (20,715 boxes) for	621,450
Other products of China, such as silks, cottons, and knick-knacks	12,500
Total of Chinese merchandizes	7,237,950
Other Asiatic Merchandizes sold whole; viz.,	
Boukharest goods; viz., Furs, cotton, raw and twisted; cotton stuff, called bakhta, 90,200 pieces; shawls for a value of 120,500 sil. rbls.; turkoises for 57,000 sil. rbls. Total	657,745
Merchandizes imported by Persian, Armenian, Georgian Merchants, &c.; viz.,	
Raw silk, 417 poods; twisted cotton, 5300 poods; furs, silks, fruits, &c.	429,706
Total of Asiatic merchandizes, including the products of China	8,325,401

Of which there were sold for 7,898,401 silver; or, 27,644,403½ roubles paper money; or, £ 1,240,770 sterling.

Extract from an Official Report on the Nijnei Fair of 1840.—"The merchants of Kiakhta had never expedited to the fair so much tea as in 1840. In the preceding years there had been put up for sale scarcely 34,000 chests of tea. The importation suddenly rose, in 1840, to 50,800 boxes.

"We may here remark, that several other items, such as the value of horses and beasts (cattle) sold during the fair; the receipts of the Russian and Tartar hotel and innkeepers, the profits of the theatres, public baths, &c., are not included in our estimates of the business of the fair. The value of the horses, Russian and Tartar, sold, may be estimated at nearly 123,000 silver roubles, and that of the cattle at 86,000 silver roubles. The number of magazins and *hangards* let, had successively increased from 4533 in the year 1838, to 4634 in 1839, and to 4810 in 1840; the total amount of the rent rose in consequence up to 142,865 roubles silver, which exceeds the amount of the previous year, by 6479 silver roubles. Before the end of the fair, 908 magazins and hangards had been let for the following year."

Extract from an Official Report on the Nijnei Fair of 1842.—"The total quantity of merchandize put up for sale, as well as that of those sold, have not been much inferior to

that of the preceding year, being nearly equal to the years 1839 and 1840, and had risen a great deal more than during any anterior period; so that, in the end, the movement of affairs has been more satisfactory than was thought for. In the prices of the cotton stuffs, comparatively with the year 1841, there was a decrease of 3 to 5 per cent; in that of silks, the decrease was from 5 to 10 per cent; and the sellers were obliged to accede to credits, which were longer than usual. The tissues of flax and hemp were also sold with difficulty; and at prices less elevated than the preceding year. Iron-plates have also decreased about 8 per cent; but iron in bars has sustained itself at a price much higher than in 1841. Taking all in all, amongst the merchandizes with which the national industry enrich annually this central mart of the interior commerce, there has been but two articles which have offered a more than usual activity,—cloth, the qualities destined for exportation to China being very much demanded; and copper, by the concurrence of buyers, increased to a price more advantageous even than the prices, already very high, of the preceding year. Although the quantity of this metal bought for exportation to Persia was less than usual (not having amounted to more than about 5000 poods), it was so much demanded for several other countries, that it is said that speculators who, after having bought copper, in sheets, for 10 roubles 3 copecs silver per pood, found occasion to resell it at the fair, with 13 per cent profit.

"The total values of the merchandizes which Europe, Asia, and the colonies of other seas had expedited to Nijnei-Novgorod, in 1842, were as follow:—

Merchandizes put up for sale:	silver roubles.	
Russian merchandize for	35,414,484	
Foreign „	4,733,865	
Asiatic „	6,937,468	
Total	47,105,817	£7,458,421

Merchandizes sold:	silver roubles.	
Russian merchandize for	28,173,924	
Foreign „	3,794,425	
Asiatic „	6,478,268	
Total	38,446,617	£6,087,379

"The movement of the preceding years presented the following results:—

Value of merchandizes:	roubles, paper money.	sterling.
In 1837	146,638,181	£6,512,808
1838	156,192,500	6,934,188
1839	161,643,674	7,184,119
1840	165,427,384½	7,352,328
1841	176,773,121	7,856,583

"And the values of Russian merchandizes really sold during those years were as follow:

	roubles, paper money.	sterling.
In 1837	86,185,778	£3,830,479
1838	92,600,530	4,115,579
1839	101,527,074	4,512,314
1840	95,488,767½	4,243,945
1841	104,168,655	4,629,718

In 1842 the merchandize put up for sale.	silver roubles.	silver roubles.
Cotton stuffs for	7,530,310	sold 5,803,810
Woollen	3,315,565	„ 2,876,365
Manufactures of flax and hemp	2,704,400	„ 2,059,960
Silks	3,341,715	„ 2,353,315
Furs	2,001,101	„ 1,495,101

Sugar coming from the refineries of St. Petersburg and Archangel (3500 tons-casks) and divers merchandizes; such as wax and candles, potash, soap, tobacco, paper, pens, silks of pork, horses' tails, &c.	4,721,452	... „	4,502,852
Total	35,414,484	... „	28,173,924
„ sterling	£ 5,607,209	... „	£4,460,871

"Besides this total of merchandize sold, there were articles bought for a value of 1,892,386 silver roubles, to be expedited to the Russian provinces beyond the Caucasus. They were principally woollen stuffs, hemp and flaxen tissues, silks, and especially velvets, porcelain, glass, and iron utensils.

"The sale of produce and goods which came from the west of Europe and from the transatlantic colonies, amounted to a little more than the two preceding years, but they were sold at moderate prices, less than at the periods spoken of. This general decrease, valued at 18 or 20 per cent was sensibly felt, particularly in the price of dye woods and other colouring matters. Of Western European and tropical goods, the values put up for sale and sold were as follow:

	Put up for Sale. sil rbls.		Sold. sil rbls.
Woollen manufactures	262,220	.....	214,580
Cotton stuffs	498,600	.....	418,400
Manufactures of flax and hemp	193,850	.....	181,750
Silks	424,340	.....	329,240
Coffee	96,850	.....	740,150
Divers merchandize, oil, fruit, preserves, &c.	968,300		
Foreign wine and porter	827,384		694,884
Indigo	942,400	.....	1,215,321
Divers articles	519,921		
Total	4,733,865	.....	3,794,425
„ sterling	£ 749,528	.....	£ 600,783

"Of the merchandize imported from China, Persia, and from the different khanats of Central Asia, the tea, as usual, occupied the first place. In 1842 the commerce of Kiakhta had expedited to the fair 45,000 boxes of tea, value 5,046,750 sil. rbls. It has been remarked, that the tea of this year (1842) in general was very fine, and although, in comparison with the preceding year, there had been a sensible diminution in the prices, (diminution of 5 to 10 per cent,) the sales effected did not amount to less, in consequence of the advantageous state of the exchanges at Kiakhta, to the very great benefit of the merchants interested therein.

"Other Asiatic merchandize:—

	sil. rbls.
Tea pressed in cakes for the use of the nomades of the south (6000 boxes) for	265,500
Other products of China, such as silks, cottons, colours, playthings, &c.	13,400
Total of Chinese merchandize, including the tea	5,325,650
Of which were sold for	5,075,650
Bokhara merchandize: namely, raw cotton (18,000 poods), and twisted cotton (9000 poods*) cotton stuffs, called *bakhta*, 150,000 pieces shawls cashmeer, numbering sixty, valued at 120,500 sil. rbls.; turquoises for 42,000 sil. rbls.—Total	943,795
Of which were sold for	895,795

* The preceding year there was imported 39,500 poods.

	sil. rbls.
Merchandize taken by Persian merchants, Armenians, Georgian, &c., such as raw silks of different qualities (2090 poods, valued at 209,742 sil. rbls.), twisted cotton (for 205,627 sil. rbls.), furs, silks, fruits, &c.—Total .	688,023
Of which were sold for	506,823
Total of Asiatic merchandize including the products of China, for	6,937,468
„ sterling . . . . . £	1,098,432
Of which were sold for	6,478,268
Sterling £	1,025,715

"In general the trade in these articles has not been very active. Of 60 cashmere shawls, 22 only were sold, and as for the raw silk, the greater part was obliged to be sent to Moscow.

"To have a just idea of the fair, we must add the value of the Russian and Tartar horses (92,500 sil. rbls.), and of other animals (86,050 sil. rbls.) sold during the fair, as also the receipts of the hotel and innkeepers, Russian and Tartar— those of the theatres, of the public baths, &c., amounting nearly to 352,385 sil. rbls.

"The number of magazines and hangars let amounted to 4814, and the total rents to 151,282 rbls. 80 cop., rather exceeding that of the preceding year.

"Before the end of the fair more than 968 magazines were let in advance, at 40,322 sil. rbls. less than the previous, for the following year."

There is scarcely a town of any consequence in Russia that has not its fairs. The following account of some of these, we have extracted from Kohl's work:

"Next in importance to Nijnei, till very lately, was that of the Root Desert, held near Kursk, in whose vicinity a miraculous picture of the Virgin was said to have been discovered in 1300, on the root of a tree; where, in consequence, a hermitage and a convent were erected, and where, afterwards, a yearly pilgrimage led to the organization of a yearly fair. The number of strangers at Kursk is still greater than at any other fair, except that of Novgorod, but with respect to the business transacted there, the fair of Romni has of late years equalled, and that of Kharkoff has surpassed the fair of Kursk. For Siberia the most important fair is that of Irbit. Considering the business transacted at these five fairs, their relative importance might be expressed thus:—Irbit = 1; Romni = $1\frac{1}{2}$; Kursk = 2; Kharkoff = 3; and Novgorod = 8.

"At Novgorod, in four weeks, goods to the amount of 120,000,000 roubles will sometimes change hands. Like all the fairs of Little Russia, the Kharkoff fair opens with the sale of horses, that arrive in great numbers from the taboons of the steppe, from the studs of the crown and of the rich nobles, and from the Cossack settlements about the Black Sea and the Caucasus. Most of these animals are of an ordinary description, and are sold at very low prices; but there are always a few specimens of superior beauty, for which from 2000 to 10,000 roubles are demanded. At one inn, while I was there, a merchant had hired a private room for the express use of his horse, which he treated with much greater care than he did his own person; feeling, perhaps, how worthless an individual he was himself in comparison with a steed which he hoped to dispose of for no less than 18,000 roubles; a sum for which, at the same fair, he might have purchased a whole taboon of 300 gallopers. There were said to be 6000 horses at the fair. Most of them were bought for the north of Russia, but some also for Poland, Austria, and Moldavia.

"About the end of December the horses have been disposed of, and things begin to assume an appearance of briskness within the town, for the horse fair is held in the suburbs. Strange merchants are seen to arrive, and freely distribute alms, by way of securing the good will of the saints. Bokharians and Persians in their silken vestments, portly Armenians, warlike Circassians, together with Poles and Cossacks, are seen lounging about the streets, for the more distant are always those who arrive first.

"The business done at the fair is all wholesale, and therefore few but merchants trouble themselves about it. The nobility of the neighbouring provinces show themselves but rarely at Kharkoff during the fair, and to this may be owing that so vast a confluence leads to the

opening of no extraordinary places of amusements, such as theatres, concerts, &c. The Russian merchant knows, in point of fact, but of two amusements,—making money, and drinking tea. All the day long he chaffers, and in the evening his favourite recreation is to promote perspiration by copious libations of tea.

"The houses of public entertainment, numerous as they are, are all crowded, as may well be supposed, when it is remembered that independent of the merchants themselves, some 15,000 drivers, and perhaps 80,000 horses, have been required to convey the various articles of merchandize in sledges to the fair, and to carry back their purchases to their several places of destination. The gostinnoi dvor and the customary market-places are, of course insufficient to accommodate all the wares that come pouring in. There are buildings in the town that have been erected on speculation, merely with a view to their being occupied during the fair time. Even the churches and convents seek to take advantage of so favourable an opportunity, by erecting on such waste ground as they may have at their disposal, booths, either of a temporary or permanent nature. One merchant of Kharkoff has erected a bazaar, which is said to bring him during fair time a rent of 50,000 roubles. Many of the inhabitants also vacate the greater part of their houses, and are handsomely remunerated by the merchants for the temporary accommodation.

"Manufactured goods of cotton, silk, and wool, and furs of every description, form the staple commodities. Some of the merchants assured me they had brought cotton goods to the fair to the value of 400,000 or 500,000 roubles. The smallest dealers in this article boasted of having a capital with them worth 40,000 or 50,000 roubles. The plain *kitaika* (calico), was the principal article, and was bought in large quantities by the oriental dealers. The furs brought to Kharkoff were not of the finest descriptions, for which St. Petersburg, Moscow, and Nijnei-Novgorod, are the more favourable markets; nevertheless the fur booths were to me the most attractive and interesting objects at the fair. There were ten merchants who dealt in the finer descriptions, and numbers came with the skins of wolves, sheep, and hares, for the supply of the common people. The greatest of all the fur dealers at this fair was the merchant Shelikoff, who with a few other Muscovites, forms the great American fur company. Nearly a fourth of all the animals killed by the Siberian and Sitka hunters is brought to his various depots at Novgorod, Moscow, St. Petersburg, Riga, Odessa, and Kharkoff. Shelikoff assured me that he had brought 600,000 roubles' worth of skins to the Kharkoff fair. In one small box alone, he showed me a few black fox skins, which he estimated at 30,000 roubles; the least valuable of these skins were worth 2000, and for some he asked 5000 roubles. Furs in Russia are examined and valued with the same minute care as diamonds are with us; and a skin which unites all the sought-for qualities, rises sometimes to a most enormous price. The lightness of the hide, the colour and gloss of the fur, the age of the animal, the season in which it has been killed, the length of the hair, the condition of the under wool, and various other points, are carefully considered. Some of the animals must be shot only with blunt pieces of wood, others caught in traps, and others stuck in a particular part of the body."

For an account of the Riga and Reval wool-fairs see Riga.

CHAPTER XXII.

RUSSIAN TRADE ON THE CASPIAN SEA.

The waters of this great lake are salt, and no river or stream flows from it into any other lake or sea. It is about 765 miles in extreme length, and from 200 to 400 miles broad. Its coasts, as far as we know, are imperfectly surveyed, and according to such accounts and maps as we possess, are indented by nu-

merous inlets and harbours. It is remarkably shallow for a long distance from the Northern shores: frequently not more than 10 to 12 feet for 20 miles from the coast; while in many parts of the centre soundings have not been found at a depth of 450 fathoms, and the depths along the southern, eastern, and western coasts near the shores are stated to vary from 5 to 25 fathoms. The soundings are exceedingly irregular, and the bottom appears to be often in the form of a succession of broad terraces. On the west, and especially at and on each side of the mouths of the Wolga, countless islands, low, marshy, or sandy, are spread along the shores. The east shore generally rises abruptly from the sea, and the country behind, and eastward along the coast, extending from the frontiers of Persia to the river Kouma, is desert, flat, and dreary. The Caspian receives the mountain rivers and torrents which descend from the Caucasus. There appears to be neither tides nor currents in the Caspian, but its waters, driven by the winds, often rise violently along its shores, and rush into the rivers and inlets, which then rise far above their natural level. Its navigation is considered remarkably dangerous. There may, however, be much exaggeration in the accounts given us: for the Black and Red Seas were, until lately, considered far more dangerous than is now proved to be the case, and steam-ships may on the Caspian, as on the great lakes of Canada, render the intercourse between the Caspian ports of Russia and the coasts of Persia and those of Khiva, &c., safe as well as expeditious.

There are many phenomena related by Hanway, Burnes, Forster, and others, as being in a great degree peculiar to the Caspian. Such as periodical rises and depression of its surface at periods distant from 30 years to more from each other. The surface of the Caspian is much lower than that of the Baltic or White Sea. The Wolga and its great branches drain nearly half of Russia, south of latitude 60 deg. N. The country through which the Wolga flows is not greatly elevated at its source, and it is generally level throughout its course: yet that river is rapid, and consequently the level of the Caspian must be much lower than that of the seas which have a communication with the ocean. The population along its coasts are nearly all migratory, with the exception of the Russian settlements at Astrakan. The fish caught are salmon, sturgeon, porpoises, seals, steret, &c., and aquatic fowls abound along the shores.

The vessels navigating the Caspian belong chiefly to Astrakan and Baku. A few exceed 150 tons burden, but their general size varies from 40 to 100 tons. A great number of smallcraft are employed in the fisheries and in the river navigation. The command of this sea may be considered entirely under the power of Russia, for neither Persia nor the people of the dreary eastern coasts appear to assume any right over it.

Astrakan.—This city has a population of about 32,000 inhabitants. It is the chief entrepôt of the Russian trade with Persia and countries east of the Cas-

pian, and for the fisheries of the Caspian, which supplies a great part of the interior of Russia with caviare and cured fish.

BAKU (the ancient seat of the Ghebers) is one of the best and most frequented ports on the Caspian. It is situated on the west coast in latitude 40 deg. 22 min. N., and has a population variously estimated at from 4000 to 7000. It imports raw silk, cottons, &c.; exports saffron, naphtha, &c.

TIFLIS communicates with the Caspian by the river *Kin*, but which is only navigable for large boats for about 100 miles from its mouth; where there are several fishing villages, or rather moveable tents, occupied by those engaged in the fisheries.

STATEMENT of the Foreign Trade of Tiflis, showing the Value of Imports and Exports thereat, in each Year from 1824 to 1831, both inclusive.

CHAPTER XXIII.

RUSSIAN MANUFACTURES.

The manufacturing industry of Russia is far in arrear of that of Germany, of France, and even of Austria. That it has greatly advanced during the last half-century is true, but if we except the ordinary articles of clothing, and rude implements which almost every serf makes for his own wear and convenience, the fabrics of Russia are unimportant for a population of 60,000,000.

The policy of the government has long been to create home manufactures, by prohibiting those of other countries being used within her vast dominions. In regard to the latter part of her policy, Russia has succeeded, excepting so far as the contrabandist, that extensive despiser of ukases, prohibitions, and high duties, has managed, and that with success, to evade the fiscal forts and army of revenue officers which Russia has established.

Previous to 1790 the Russian army was clothed with foreign woollens, at present the use of foreign cloths for the army is prohibited, and Russian cloths of worse quality and higher cost is solely used. It has been argued that Russia can produce cheap fabrics by her unpaid serf labour. This is untrue. Wages paid for the labour of free persons has been found, even in Russia, the most profitable.

STATEMENT of the Number of Manufactories throughout the Russian Empire, in the Years 1812, 1816, 1820, and 1824.

DESCRIPTION OF MANUFACTORY.	1812	1816	1820	1824
Cloth manufactories	136	235	304	324
Silk ditto	105	158	159	184

N. B. The above return does not include the shipment for Riga and Finland, nor the quantities purchased by masters of merchant-vessels for ship's use.

See tables of General Exports of manufactured Goods from Russia for several years, which precedes the trade of the Russian ports.

Account of the Progress and present State of the Cotton Manufactories of Russia; translated from the St. Petersburg Official Gazette.

"Of all the branches of manufacturing industry, that of cotton is one which has received, in the course of the last twenty years, the greatest development in Russia; and the progress of which has produced remarkable results. In the present state of our fabrics, more than 300,000 poods of raw cotton are yearly converted into yarn in our cotton spinneries. Our cotton-cloth manufactories require, in the same space of time, a supply of 800,000 poods of cotton yarn; and Russia exports annually two millions of silver roubles' worth of this tissue; whereas, before the time here alluded to, the actual working of our factories did not produce one-fourth of the quantities just mentioned. The state of prosperity which these very establishments have reached in so few years, due, in a great degree, to the wise measures adopted by the government for the protection of this branch of national industry, proves, at the same time, how well those measures had been calculated. The increasing activity of which we have spoken, is in itself so remarkable for the regularity of its progressive advancement, that (interesting as it must necessarily be on this and many other accounts) we consider it our duty to enter into some further details on the subject.

"The following comparative table shows the importation of raw cotton from 1824 to 1841:

	Cotton from America, India, & Smyrna, &c., by the Frontiers of Europe. poods.	Cotton from Persia, the Khannts of Khiva, and of Bokhara, &c., by the Frontiers of Asia. poods.		Cotton from America, India, & Smyrna, &c., by the Frontiers of Europe. poods.	Cotton from Persia, the Khannts of Khiva and of Bokhara, &c., by the Frontiers of Asia. poods.

"Russia alone consumes about one-fifth of the whole of the raw cotton annually exported by England, the principal entrepôt of this trade. Our immediate relations with America, in this respect, are of much less importance; the quantity of cotton imported directly from the United States scarcely ever amounting to one-fourth of the whole sent to us annually by England. We ought at the same time to observe, that the transatlantic importation of cotton will necessarily increase in proportion as our cotton-spinning factories shall acquire more development, and at a greater rate than that of the cotton we import from Asia. The first, having a longer wool, is the only one that can be used in our mechanical cotton-spinneries; whereas that which we import from Persia and Turkistan, is only fit for

spinning by hand, or to be converted into wadding. Notwithstanding the increasing activity of this trade (a proof of the progressive development of our spinneries), Russia continues still to import spun cotton from abroad in considerable quantities, with a view of supplying the cloth manufactories, being in advance of the cotton spinneries established in the interior of the kingdom, with yarn. The activity which reigns in these cotton-cloth factories has, in point of fact, become so remarkable, that the quantity of spun cotton imported annually from abroad for their supply has increased, in the period hereafter mentioned, from less than 300,000 to nearly 600,000 poods, which is shown more in detail in the following table:

COTTON Thread imported by the Frontiers of Europe and Asia.

*The importation of dyed thread diminishes; the number of dyers in Russia having successively augmented.

"It is again from England that we import the largest quantity of cotton yarn, used in our fabrics. The importation of it, in the last five years, distributed in the following manner among the different European countries and Asia, which send this article regularly to Russia, will prove the fact.

IMPORTED FROM	1837	1838	1839	1840	1841
	poods.	poods.	poods.	poods.	poods.
England, white thread	595,173	564,159	511,810	458,852	504,216
— dyed	847	1,780	1,403	1,437	1,206
Germany, white thread	735	5,841	770	2,174	1,893
— dyed	2,541	3,269	2,714	1,077	1,155
Turkey, white thread	4,156	1,591	1,132	3,977	1,488
— dyed	619	513	217	210	97
Persia, white thread	8,176	7,834	6,921	14,175	16,660
Khiva, ditto	....	....	....	....	6,107
Bokhara, ditto	34,897	20,537	15,151	28,689	25,575
Taschkent, ditto	13,945	6,459	....	9,997	4,679
Several other countries, white thread	455	216	633	1,325	181
— dyed	280	31	122	300	32
Total white	657,537	606,667	536,417	519,189	560,799
„ dyed	4,287	5,593	4,456	3,624	2,490
By way of St. Petersburg, white thread	527,572	498,064	438,163	381,507	397,369
Ditto, ditto, dyed	3,285	4,248	3,429	2,420	1,383

"By this we see that English spun cotton forms by itself nearly nine-tenths of the whole of the imports. We might add that the quantity which Russia takes, constitutes at the same time about one-sixth of the total amount of the cotton yarn annually exported from England; and that in consequence her relations with Russia are among those which are in this respect of the greatest importance. As regards the cotton thread imported from Central Asia, the importation of it has during the last ten years equally augmented; it is employed for weaving cloth of an ordinary quality, and for making candle-wicks.

"Notwithstanding the importance of the progress which we have made, our cotton-cloth manufactories cannot, in their present state, produce the quantity of cloth of this descrip-

tion required by our markets in the interior of the country, and although Russia annually exports a certain quantity of the same cloth, she is nevertheless compelled to import it regularly from abroad to a considerable amount.

"Stuffs of superior quality, sent to us by England and Germany, diminish as is seen; whereas those of ordinary quality, and of small value, which come from Asia, successively augment. The latter are destined for the use of the Asiatic race of people which is so numerous in the provinces of the west and south.

"However satisfactory this increase of imports may seem, we cannot help remarking that our foreign relations as regards our cotton manufactures will for a long time to come yet continue to be of much less importance than the immense market of the interior, which cannot fail to increase more and more on account of the uninterrupted increase of population and national wealth in Russia. Foreign exportation is not yet an imperious necessity, for our factories, as is probably the case in other countries, where a spirit of enterprise has led people into a state of exaggerated manufacturing activity. Without having to fear the effect of accidents and events (which so often bring with them stagnation and catastrophes in the speculating trade), our manufacturing industry may still freely develop all its energy with the view of attaining that degree of activity which will make it necessary for Russia to require from foreign nations any thing else beyond the raw materials. The progress she has already made authorizes us to believe that Russia will reach this great desideratum."

Public Exhibitions of Russian Manufactures and Industry.—The first of these exhibitions was in 1829. The second was in 1833, and is thus described by a French traveller as having taken place in St. Petersburg:

"Eight large halls were appropriated to the display of articles, which were classed in 33 sections.

"Section 1. *Metals, and articles in cast iron.*—It is this branch of industry which seems to succeed best in Russia. In many respects she can sustain competition with foreigners. We particularly remarked large works of cast metal, nailmaking, iron rolled for covering houses. Firearms, although still inferior to those of France, are improving. White arms, other than the sabres and poniards of Asiatic description, made at Haloousk, in Siberia, are generally inferior.

"2. *Machines, models, &c.*—We have especially admired a steam-engine of high pressure, 120 horse power. The principal articles exhibited were from the imperial works, and particularly from the '*tectonological institute.*'

"3. *Mathematical, physical, and surgical instruments.* — The surgical instruments were quite ordinary.

"4. *Chemical products.*—The progress of manufactures requiring these, has caused some improvement in their preparations. Two essential qualifications are still wanting in their dyes, brilliancy and permanency.

"5. *Sugars and sirups.*—The refining of sugar of cane is with difficulty maintained, notwithstanding the low price of raw sugar, which is very lightly taxed on importation. The manufacture of sugar from beet-root has, of late years, been greatly increased in some of the governments of the interior, owing to the low price of labour, and to the difficulty of transporting colonial sugar.

"6. *Soaps.*—The best Russian soaps are those of Kasan. St. Petersburg has, however, exhibited some, which nearly equalled those of the factories of Tartary.

"7. *Bougies, or wax candles.*—The high price of the transparent bougies exhibited, will not permit competition with the ordinary bougies.

"8. *Equipages.*—Taste and elegance of forms recommend less the coachmaking of St. Petersburg, than the solidity of the leather and iron.

"9. *Paper for writing and for hangings.*—These two manufactures, the last especially, are almost stationary. The imperfection of paper for hangings prepared in Russia, the strict prohibition of imported paper, prevents recourse to this species of decoration.

"10. *Tissues of flax and hemp, linen thread.*—Sailcloth, and other cloths, maintain their reputation. In fine cloth there is no improvement since 1829, except perhaps in the weaving and bleaching of damask table-linen. The imperial spinning-works of Alexandrowski has produced up to No. 140 in brown, and 120 in white, but their high prices do not permit them to be extensively used in weaving.

"11. *Leather and skins.*—Next to industry in iron, that of leather is among the first in the empire. The yuft, or leather of Russia, preserves always its superiority over similar foreign products. The morocco of Kasan and the sole leather, are quite inferior to the morocco of England and the sole leather of France and Belgium.

"12. *Taffetas gummed and oilcloth.*

"13. *Haircloth for furniture.*

"14. *Various manufactures.*

"The articles of these three sections were not susceptible of remark.

"15. *Tobacco.*—The culture of the tobaccoes of Turkey, and of Asia Minor, has become, in the middle of the empire, and especially in the Crimea, the object of speculations to which the extent of national consumption promises great advantages.

"16. *Bronzes.*—Some candelabras and pendulum clocks were remarkable for the perfection of the gilding, but the forms of the articles entirely of Russian creation were generally deficient in grace and elegance.

"17. *Silver and plated ware.*—The most important article was a silver vase, antique in form, valued at 7000 or 8000 roubles; as in the case of the bronzes, this article sinned against taste in its form.

"18. *Porcelain queen's ware pottery.*—The china of the imperial manufacture, maintained at great expense near St. Petersburg, cannot be compared with the French of second order, and the prices are exorbitant.

"19. *Crystals, glassware.*—Those of imperial manufacture are perhaps the only articles of luxury that Russia can export to Europe with success. Belgium buys largely.

"20. *Tissues of cotton.*—Russia seems approaching to competition with England and France; Asia offers an immense outlet for common cotton fabrics.

"21. *Tissues of wool, cloths, and carpets.*—An equally extensive demand is found for common Russia cloths in the consumption of the middle classes, the clothing of the army, and the commerce with China, Persia, and Armenia. This manufacture has greatly increased, and has been improved by competition. The markets of St. Petersburg and Moscow may be considered as closed against foreign common cloth, no matter what modification may be given to the tariff. The light or ladies' cloth, used in Asia, particularly received praise.

"A grand carpet, from the imperial manufacture, and priced at 6000 roubles, did not meet purchasers. The preparing of wool is not sufficiently understood to give success to such work.

"22. *Musical instruments.*

"23. *Furniture and cabinet wares.*—A handsome exhibition.

"24. *Hats of beaver, straw, and silk.*

"25. *Book trade and book binding.*—Printing improves; binding begins to approach the French, always much sought after in St. Petersburg.

"26. *Glovemaking.*—The inferiority of Russian gloves is such, that notwithstanding the very high duties, French gloves are in general use among the rich.

"27. *Lackered ware.*

"28. *Tissues of fine cottons.*—The manufacture of these tissues has been extended since 1829, but has not made much progress.

"29. *Tissues of pure and mixed silk.*—Watered silks, ribbons especially, have greatly increased. The progress is less perceptible in common ribbons, in gauzes and other fancy

articles. The tissues exhibited, offered a very imperfect imitation of the products of Lyons and of St. Etienne. Not sufficient taste or variety in the figures, nor of permanency in the colours. The cultivation of the mulberry-tree has made but little progress in the provinces within and beyond the Caucasus; there are two great obstacles, a desire of change, and continual revolts among the mountaineers, have paralyzed the efforts of government.

"The *organsonage* of silk is confessedly at a stand; quite in its infancy, in the hands of peasants, who alone attend to this important part of the work of preparing silk.

"The silk of Caucasus and Georgia can only be used for common work. The silk stuffs approved at the exhibition, were made from Italian silk, of which Russia is estimated to require about 6000 pounds.

"30. *Shawls, scarfs, &c.*—A single manufactory of Moscow presented articles somewhat superior to those of last exhibition. Some articles of goats' hair were marked at extravagant prices.

"31. *Embroidered and spangled stuffs in gold and silver.*—Public attention was particularly attracted to these tissues, specially intended for religious ceremonies, which are both very frequent, and very pompous in Russia. They have not the brilliancy nor the richness of the brocades of Lyons, but their quality is very fine, and the prices higher. This part of the exhibition ought preferably to interest foreign merchants, who must have perceived much improvement and progress.

"32. *Gold and silver, fine, spun; false gold, spun; works in fine and false.*—This section comprises lace-work generally. All which belongs to military equipment has reached a remarkable degree of perfection. The prices, however, are much higher than those of France.

"33. *Medals and coins.*—Those which have been struck under the present reign, do not appear superior to the coins and medals of the preceding reign.

"To sum up. The exhibition of 1833 will, probably, in its result, encourage a perseverance in the system of absolute prohibitions and excessive restrictions, adopted for the protection of Russian industry, in like manner as the exhibition of 1829 has contributed to aggravate the rigour of this system.

"All idea of softening the rigour of the tariffs, if suggested, on beholding the rich manufactures of the country, would cede to the clamours of those engaged therein claiming exclusive patronage; upon the faith of which, the largest fortunes have been invested. It must not be lost sight of indeed, that in the greater part of Russian manufacturing establishments, raw materials, directors, managers, workmen, process, machinery, all is foreign; it will require a long time before so many new establishments can be well seated on the soil.

"The exhibition of 1833, as well as that of 1829, attests also that immense sacrifices have been submitted to by all orders of the nation, and a great degree of activity imparted to all minds.

"Moscow seems still to produce more and better than St. Petersburg, but, comparatively, the progress of manufactures in St. Petersburg, where they have been more recently commenced, has been more rapid.

"Experience ought, by this time, to have answered the important question, as to the capability of those engaged in manufactures to supply therewith the wants of the nation, conformably to the qualities and prices shown at the exhibition.

"Official reports attest, that the number of establishments in Russia has increased 142 in the course of the year 1832; that the workmen employed in these new works amount to 10,465; making the total number of establishments 5599, and of operatives therein 284,000.

"A great number of manufactures of cloth from Saxony and the north of Germany, who were established in Poland, attracted by the advantageous offers held out by government, have transported their workmen and machinery to St. Petersburg, to Moscow, and to other towns in the interior of Russia.

"The Jews of Galicia, obliged to relinquish their contraband trade, organized on the frontiers of Poland, have quitted Brody to go into Moldavia and to Odessa, where they devote themselves exclusively to trading in the products of Russian industry."

The exhibition of the present year at Moscow, of which we have seen the programme, was to be similarly arranged to that above described. The following is translated from the Leipzic Gazette:

"The decree of the Emperor is about to be fulfilled at Moscow, and great preparations are making for the exhibition of Russian manufactures in the month of June, 1843. The decree concerning manufacturing industry declares that every four years there shall be an exhibition of the products and manufactures of Russia, either at St. Petersburg or at Moscow. As there has not been here any exhibition since 1835, that which is to take place in June will certainly bring to view the great progress of our industrious town as well as the productive abilities of the other provinces. Experience has shown the necessity of putting the stamp or mark of the fabric to which the goods belong, and their Russian origin on every piece of manufacture. By this they have the advantage of being free from town dues, even if they are sold during the exhibition.

"The discovery of a peat-ground (a great part of which is already excavated) in the neighbourhood of our town is a great benefit. It is worked by 43 steam-engines within the town and its environs. The high price of burning-materials will certainly fall by this discovery.

"The Russian trade with the kingdom of Poland, has undergone within the last two years a remarkable change. The greater the exports of grain and other provisions and raw materials of Poland increases, the lesser are its imports, from our manufactures. It is difficult to decide, whether the latter is on account of the increasing poverty of the country, and thereby diminishing its consumption, or whether it is on account of its rising industry. The entire value of Russian imports from that country amounted last year, according to the custom-house registers, to 2,034,739 roubles, whilst the declared worth of the Polish imports amounted only to 820,541 roubles. The principal articles of export of the latter country are the Polish cloths, in weight 3086 poods. In 1830 more than 5000 poods were exported from that country to Russia."

HOURS OF LABOUR, &c., IN RUSSIAN MANUFACTORIES.

"No regulations have been established by government as to the hours of working. The number of working hours is regulated by the will of the manufacturer. The general time is from six in the morning to eight in the evening, with three hours' rest—one for breakfast and two for dinner. The food is beef, rye bread, cabbage, and buckwheat porridge and fish during the fasts. The wages vary from 20 to 150 roubles per month, and are always paid in specie."

Answers received to the several Queries, from a Person engaged in the Russian Manufactories.—"In reply to query, No. 1, I may state that no regulations have yet been established by government as to the hours for labour in factories, or as to the employment of children there. It may be as well to explain that what is called the 'Factory System' cannot yet be said to exist in this country; there being at present only a few establishments in St. Petersburg where there is any thing approaching it. In the interior generally, not excepting Moscow, manufactures are carried on, either on what, in contrast to the 'Factory System,' may be called the 'domestic system,' where the establishments are very small, and for the most part in the dwelling-house of the master, who lives with and is in fact one of the workpeople; or else in mills where the workpeople are slaves of the owner, which so entirely alters the relation between them, that no comparison can well be made between a mill so conducted, and one where free labour is employed.

"Nominally much less wages are paid in small mills, but much less work also is performed by the workmen in a given time.

"Annexed is a list of wages paid in a cotton-mill at St. Petersburg, in which the workpeople are free, or at least are not the slaves of the owner of the mill. The wages are paid altogether in money, and the people lodge and feed themselves. The list contains a note of the expense of living, &c. &c. They usually form societies among themselves of 10 or 20 persons, who live in a common room and mess together.

"The lowest sum for which a labouring man can exist in St. Petersburg, taking into calculation food, clothing, lodging, &c., is from 14 to 15 roubles bank-notes per month, or 13*s.* to 14*s.* sterling. Such a man lives on rye bread exclusively, drinks quass (a fermented drink made from rye), wears a sheepskin throughout the year, lodges in an apartment with 10 or 12 other men, with whom he messes in common, and sleeps on the bare boards or on a mat.

"During the summer thousands live in this manner at St. Petersburg, and return in the winter to their villages in district governments, with the surplus of their earnings.

"Those who have steady employment throughout the year live rather better, and spend in proportion more.

"The universal food is rye bread; but all, except the lowest order of workmen, vary it by an occasional mess of buckwheat, and a little soup and sour cabbage.

"In St. Petersburg wages are paid in money, but it is very common for the master to agree with his men to pay lower wages on condition of lodging and feeding them."

WAGES of Workpeople in a Cotton-mill at St. Petersburg, in 1841.

Third class of ditto	0	60	15	0	10	0	5	0	0	0

Hours of labour, 13 per diem, except Saturday 10 hours, or 75 hours in a week of 6 days. There are about 295 working-days in the year.

The above wages are in bank-note roubles: 1 rouble bank-note is nearly equal to 11*d.* sterling.

The spinners' wages are considered high, and are likely to be reduced; but it is not probable that the wages of the other hands will soon decline.

Under the head of the General Trade of Russia will be found the export trade of wool and woollen cloths, the produce of Russian factories, annually sent to China and other Asiatic countries.

The following is an official account we have recently procured of the value of woollen goods imported in each year, whether from European, or by the Asiatic frontiers of Russia.

Since the year 1820 the value of such imports, including cloths, shawls, handkerchiefs, &c., and other light materials has been annually as follows: viz.—

	Rbls. Assig.	Woollen Yarn.
In 1820 . . .	22,350,112	
1821	28,863,119	. . 600 poods the value not being included in the total for this year.
1822 . . .	12,049,367	
1823	12,427,478	

YEARS.	By the Frontiers of Europe.		By the Frontiers of Asia.		Yarn.
	rbls. ass.	£	rbls. ass.	£	poods.
1824	7,388,831	301,136	807,902	32,975	
1825	8,752,495	380,543	1,273,100	55,352	1,974
1826	7,584,177	309,558	1,704,949	69,589	3,166
1827	8,261,180	351,114	1,491,903	63,485	1,751
1828	7,320,677	318,290	2,078,142	90,350	2,132
1829	7,215,261	322,011	1,964,281	87,301	2,150
1830	7,365,355	327,349	2,123,925	94,396	2,738
1831	7,426,931	330,085	1,021,116	45,397	2,358
1832	10,410,827	453,949	542,089	23,569	3,976
1833	7,905,169	343,702	507,786	22,077	655
1834	7,120,348	316,459	569,850	25,326	4,768
1835	6,595,495	293,133	290,002	12,800	7,152
1836	7,574,847	336,660	346,058	15,380	10,051
1837	8,816,195	391,386	366,917	16,307	9,403
1838	8,556,185	380,274	326,147	14,539	8,937
1839	10,219,751	454,211	361,521	16,067	7,313
1840	11,143,772	495,278	442,767	19,679	8,692
1841	12,536,391	557,172	722,547	32,113	8,557

"The total value of imports has remained nearly stationary since 1822. This result is produced by the increased value of the imports of finer descriptions of woollen goods, such as shawls and light materials.

"As regards the importation of cloths (once so considerable), the total value of such imports will be found to have decreased since 1824, in the following ratio: viz.—

	Value. roubles.	£		Value. roubles.	£
In 1824	2,516,218	102,702	In 1833	2,940,453	127,845
1825	3,908,257	169,924	1834	2,166,105	96,271
1826	2,644,652	107,944	1835	1,945,127	86,450
1827	3,849,554	163,810	1836	2,207,035	98,135
1828	3,683,880	160,168	1837	2,213,331	98,370
1829	2,818,091	125,248	1838	1,751,977	77,865
1830	3,124,082	137,818	1839	2,011,367	89,391
1831	3,882,808	172,569	1840	1,888,131	83,912
1832	4,862,331	211,405	1841	1,884,022	83,734

"The importation of woollen cloth and other woollen stuffs, from various European and Asiatic States, during the two lastmentioned years (1840 and 1841), has been as follows:

IMPORTED FROM	1840		1841	
	Cloth.	Other Woollen Stuffs.	Cloth.	Other Woollen Stuffs.
	silver roubles.	silver roubles.	silver roubles.	silver roubles.

SEATS OF RUSSIAN MANUFACTURES.

St. Petersburg.—The manufactures of this city comprehend all the usual handicrafts of large towns, such as coachmakers, saddlers, shoemakers, tailors, carpenters, joiners, watchmakers, jewellers, &c. The gunpowder manufactory, the cannon foundry, the tapestry works, the porcelain manufactory, and two other manufactories of miscellaneous articles, all belong to the government. The private manufactories, which include about 240 establishments, are those for silks, cottons, woollens, linens, chiefly canvas, paper, waxed cloths, leather, soap, tobacco, printing types, and various stuffs. The glassworks of Oserski, near the town, are extensive, and produce plates, valued as high as 500*l.* to 600*l.*

Moscow.—Exclusive of the various handicrafts, the manufactures of this city and its neighbourhood are of much greater extent than those of St. Petersburg. They consist chiefly of woollens (some of which are on a large scale, and very fine), cotton, and silk woven goods. Steam-engines and machinery are now used to a great extent. In 1820 there were only 2 engines at Moscow, and at present there are about 120 at work. In 1840 there were in the province of Moscow about 1150 factories, great and small, employing 85,400 workpeople.

Kaluga.—Bog iron is found in this province, but in no great quantity, and a good deal has to be imported to supply the various iron-works. The soil of this province being ill adapted for agriculture, the attention of its inhabitants has been naturally turned towards manufactures; in this respect Kaluga ranks immediately after the governments of Moscow and Vladimir. In 1830 there were 18,600 workmen employed in distilleries and manufactures of sailcloth, linen, and cotton goods, leather, soap, candles, and hardware. The manufacture of beet-root sugar has been lately introduced. Nearly all the peasants' families employ a considerable portion of their time in weaving. The chief exports are oils, spirits, potash, honey, linen, sailcloth, and other manufactured goods. The chief commercial towns are Kaluga and Poltosk. Kaluga is the capital, in which there are 5 sailcloth factories, employing 400 weavers, and 1000 spinners; 30 or 40 oil factories, sugar refineries, &c. It carries on an extensive internal trade, and exports large quantities of lambskins, leather and wax, to Dantzic, Breslau, Berlin, and Leipzic.

Kazan.—There are in this province numerous distilleries, saw-mills, potash works, and tanneries, &c. In the city of Kasan there is a great cloth manufactory, established by Peter the Great; it is now the property of private individuals, and employs about 1000 workpeople; there are also manufactories of cotton, hardware, earthenware, &c. Kasan is the seat of an admiralty. It also carries on an extensive trade, for which its situation adjoining the Wolga gives it peculiar facilities.

Courland.—The manufactories, with the exception of distilleries, are insignificant. The peasantry weave coarse cloths for domestic use.

LIVONIA, ESTHONIA.—The same remark applies to Esthonia and Livonia as to Courland, except to Riga, which see.

GRODNO has no manufactories worth noticing, excepting common domestic cloths, &c., made by the peasants.

KHARKOFF.—With the exception of numerous distilleries and some tanneries, there are no manufactories in this province worthy of remark.

KIEF.—Excepting the domestic fabrics made by the peasants for their own use, there are no manufactories in this province.

KOSTROMA.—Tar, pitch, and charcoal, are produced in large quantities in this province; and in the city of the same name, which has its fairs, there are linen manufactories, tanneries, and soap, Prussian blue, and tallow works, also a cast metal and bell foundry.

MINSK.—Sawing and trading in timber ranks next to agriculture in occupying the people of this province. The linen manufactories and distilleries are rather important, and there are forges, Russian leather and glass manufactories, and some of woollen cloths, hats, &c.

MOGHILEV has some distilleries, and a few other fabrics; and in the capital there are important tanneries.

NIJNEI-NOVGOROD.—This province has several manufactories of coarse linens, canvass, cordage, iron, leather, and glass; also tanneries, distilleries, soap-works, &c.

NOVGOROD.—The manufacturing industry of this province is scarcely worth notice, and its once famous city ("*Quis contra Deus et Magnum Novogordiam*") has become insignificant.

OLONETZ has but little manufacturing industry.

ORENBURG.—With the exception of a manufactory of firearms and the salt-works, there are no manufactories worth noticing in this province.

OREL has several distilleries.

PENZA.—The peasants weave considerable quantities of coarse woollens and linens: exclusive of which there are cloth manufactories and glass and soap works, and tanneries on a large scale, and there are seven or eight beet-root sugar works.

PERM.—With the exception of the mining, which employs about 100,000 persons in the Ural mines, there are no other occupations, excepting agriculture, of much importance in this province.

POLTAWA.—This province has generally but few manufactories of any importance; there are numerous distilleries, and some cotton, woollen, and linen fabrics. The capital of the same name has three large fairs annually.

PSKOV has some coarse fabrics of various kinds, and those of leather are celebrated.

RIAZAN.—The manufactories of glass and hardwares of this province are rather

important. Woollen, linen, and cotton woven goods are also considerable. There are numerous distilleries, tanneries, soap-works, rope-works, &c.

SARATOV has several government manufactories worked by free colonists. Those of linen, cotton, wool, iron, leather, and earthenware, and the distilleries are the most important. SAREPTA, a town near Saratov, has rather extensive fabrics of cottons, linens, silks, and hosiery.

SIMBIRSK has numerous distilleries, and the peasants weave coarse cloths for domestic wear. There are also some coarse woollen, linen, and canvass factories, soap-works, glass-works, &c.

SMOLENSKO has but few manufactories of the least consequence. Distilleries are the most important; and in the capital there are some carpet, hat, soap, and other fabrics.

TCHERNIGOFF has numerous distilleries, and some rather important fabrics of various woven goods.

VIATKA is rather an important manufacturing province. It has about 70 woollen, linen, and cotton factories, a large arms manufactory at Sarapol, that of anchors at Viatka, and several iron-founderies.

VLADIMIR.—This province ranks next to Moscow in manufacturing industry. In 1830 above 48,000 persons were employed in the various cotton and other manufactories, more than half the number in the cotton factories of *Chouia* and *Ivanova;* and in 1840 there were above 327 factories which gave employment to above 84,000 persons. There are iron-works and various other factories.

VOLHYNIA, formerly a part of Poland, has glass-works, potteries, potash-works, &c.; and the peasant women spin and weave woollens and linens for domestic wear.

VOLOGDA.—In this large province, there are nearly 200 woollen, linen, and other manufactories, besides the domestic articles made by the peasants. There are also distilleries, soap-works, tanneries, and glass-works; and timber and masts, tar, pitch, furs, and numerous other articles are exported from it. The tallow candles of the capital are celebrated.

VORONEJE.—The coarse woollen manufactures, and several other fabrics, are described as increasing rapidly in number.

WILNA.—The manufactures of this province are considered unimportant.

VITEPSK.—The fabrics of this province, with the exception of the woven articles made by the peasants, and some tanneries and woollens made at the capital, are not worthy of notice.

MANUFACTORIES OF SIBERIA.

TOBOLSK.—Iron and copper are extensively mined and prepared in this government, especially in the Ural chain; and there are tanneries, felt manufac-

tures, soap and tallow works, and various common fabrics in different places. The fur and hide trade, and the transit trade, employ a great proportion of the male inhabitants. There are some coarse cloth, leather, and soap manufactories at Tomsk and other places.

YAKUTSK.—This town, the capital of the province of the same name, is the centre of the commerce of eastern Siberia, for all kinds of furs, walrus' teeth, &c. The country abounds with cattle; and salt, iron, talc, &c., are said to be plentiful.

IRKUTSK has an imperial factory of woollen cloth for the supply of the troops in Siberia, manufactures of linen and other piece goods, glass, hats, soap, leather, &c.; and is the residence of numerous artisans in the different trades common in Europe. It is the great entrepôt for the commerce of north-east Asia, importing tea, rhubarb, fruit, paper, silks, porcelain, and other manufactured goods from China, by way of Kiakta, and furs, &c. from Kamtschatka, the Aleutian islands, and Russian America; which articles are here exchanged for European goods sent from St. Petersburg and Moscow by way of Tobolsk. It has also some trade with Bokhara and Khokan. The total annual amount of its commerce is estimated at 4,000,000 paper roubles (or francs), one-fourth of which has sometimes been transacted at its annual fair in June.

Manufactories of the CRIMEA *and* BESSARABIA.—With the exception of leather and salt, the manufactures of the Crimea are insignificant. In Bessarabia there are distilleries, and soap and tallow works.

Salt monopoly of the CRIMEA, BESSARABIA, *and* SOUTHERN RUSSIA.—The most valuable product of the Crimea and Bessarabia, is the salt derived from the limans, or salt-lakes in the vicinity of Perekop, Kaffa, Koslow, Kertsch, and Akerman, which are all monopolized by the government. The quantity exported from the lakes near Kertsch, amounts to about an average of 2,000,000 poods a year: the lakes of Perekop are even more productive. At Koslow there is only a single lake. In 1833 the different lakes of the Crimea produced the immense quantity of 15,065,000 poods (242,000 tons); of which 8,514,885 poods were sold in the course of the year. About 13,000 men are employed in the works; each pood costs the treasury 4 copecs, or thereabouts; the expense of production being seldom greater than from 6 to 10 copecs. Government sells this salt at 80 copecs per pood, except the portion destined for the consumption of the peninsula which only pays 15 copecs. Salt exported pays a duty of 5 copecs.

Opposite to Krementshug, on the other side of the Dnieper, lies a little place called Kriukoff, which serves as a storehouse to the former. No article is found in it in greater abundance than salt; for here are the great government magazines from which the country round is supplied. This salt is furnished partly from the lakes of the Crimean steppe, and partly from the shores of the Euxine,

from which, and from the *limans* of Bessarabia enormous quantities are procured. On the Volga are found similar, but still more considerable depots of this article. The northern provinces of the Baltic, the territory of the Dwina, &c., receive their salt principally from Norway, and Poland receives hers mostly from the Carpathian mountains. The annual exportation of salt from Kriukoff is about 25,000,000 lbs.

CIRCASSIA and the CAUCASUS can scarcely claim the possession of manufacturing industry. There are, however, skilful amourers, cutlers, goldsmiths,—and gunpowder has long been prepared in the country.

GEORGIA.—Coarse woollen, cotton and silk fabrics, leather, shagreen, and a few other articles are manufactured; the arms made at Tiflis have some reputation, but most of the other goods are very inferior, and fit only for home consumption.

CHAPTER XXIV.

TRADE AND MANUFACTURES OF POLAND.

THE following account of the trade and manufactures of Poland, we have extracted from a lengthy report drawn up at Warsaw, in 1842:

"The trade of the kingdom of Poland with other parts of the world, consists chiefly of an interchange of the raw products of its agriculture for colonial goods and the manufactures, the cattle, and some of the principal mineral productions of other countries. The exportation of corn is the only branch of this traffic which can be called a wholesale trade, and this is carried on almost entirely by merchants residing out of the country. Some years ago, the government endeavoured to take this trade out of the hands of the Dantzic merchants, by erecting large and convenient magazines at several points on the Vistula, for the deposit of corn, promising the proprietors advances of money on the security of these deposits, in order to enable them to await high prices in the distant foreign markets, to which the corn is sent from Prussia and the Black Sea. But the plan failed, owing to a want of confidence in the government, and the whole of the trade of the kingdom may be considered as a retail business.

"Corn, wool, oil, seeds, wood, and zinc, are the articles of most importance in the exports, and the value of the corn alone amounts to very nearly one-half of the whole. The principal imports are cotton twist, colonial produce, wines, and other liquors, silk goods, salt dried fish, live cattle and metals; their relative importance being indicated by the order in which they here stand. But the return of trade for the year 1841 specifies all the commodities, exported or imported; shows the declared value of each sort, and also the different countries which supply the latter, and to which the exports are sent. Owing to the geographical position of Poland, and to the existing regulations of the customs, it would, at first sight, appear that all the imports were furnished by, and that all the exports were sent to, either Russia, Austria, Prussia, or Cracow. That, in short, the foreign commerce of Poland was restricted to these countries only.

"The general regulations with respect to trade in Poland, may be considered as based on a system of protection to the native manufactures, by the exclusion of those of all other countries (except Russia) for these are either absolutely prohibited, or charged with duties so enormously high, as to make fair competition impossible. Under this system, the manufactures of the country acquired at first, a very considerable development. But their pro-

sperity has not been progressive; and not only are several of the most important amongst them, at present, in a worse state than at an earlier period, but commerce has been crippled by the retaliatory restrictions imposed by other nations, and the whole country is languishing under the pressure of high prices, caused by this species of monopoly; prices which, in every instance, are higher than those in every other part of Europe, except, perhaps, in Russia.

"Russia has reserved to herself very great advantages and privileges over other countries in respect to the importations into Poland; and it may be stated generally, that all the articles absolutely prohibited from other countries, are liable to a trifling duty only if coming from Russia, and are admitted even from Cracow, but then charged with so high a duty that they cannot compete with the Russian products.

"Besides the duties fixed by tariffs, merchandize, moved either by land or by water carriage, is liable to other charges levied in lieu of the tolls. These charges, however, are much higher than were the old tolls, and give rise to great complaints; a separate tariff exists for these charges.

"*Warehousing in Bond.*—An accommodation of this kind exists to a limited extent at Warsaw, which city is not only the great centre of all the Polish commerce, but may almost be considered as the port of Poland, because it has an uninterrupted water communication not only with the Baltic, but likewise with the North Sea.* The custom-house at that place receives merchandize direct, without stoppage or examination at the frontiers, for all merchants who have entered into a surety of 60,000 florins (or about 1500*l.*) called a 'remise'—'pass.' If such merchandize be intended for consumption in the country, or for transit to another market, which must be declared at the time of their passing the frontiers, it can remain in bond three months; but if it be declared to be brought into the country for the fairs at Warsaw, for which purpose a special permit, but no extra charge or surety, is necessary, the period is extended to twelve months, after which the goods must be either declared and removed for consumption in the country, or exported again. In this latter case, as also if they were originally declared to be in transitu, no duty is charged. The cost of warehouseing is 10 groschen, or about 2*d.* per cwt. monthly; but the merchants who have entered into the required surety, may save this expense by keeping the goods in their own warehouses under the government seals. The advantage of the special permits for the fairs, were granted with a view of encouraging the two fairs established at Warsaw, in the hopes of rivalling those of Leipzic; but this scheme has not answered, and the fairs which occur in May and November of each year, may be considered as merely nominal in so far as commerce is concerned.

"*British Capital.*—British capital is not employed to any extent in Poland for there is only one English house in the manufacturing line; and although there are a great many British subjects employed as artisans and engaged in agriculture, the generality brought to Poland little more than their industry and ingenuity.

"The whole of the river craft employed between Warsaw and Dantzic, and between Warsaw and the Prussian waters, is the property of and manned by Prussian subjects.

"To show more distinctly how hard the existing commercial relations between the two countries press on Poland, it may be adduced that, in 1839, the public revenue derived little more than 450,000 florins from the duties levied on the imports from Russia, which were valued at upwards of 14,000,000, or about $3\frac{1}{4}$ per cent; whereas the duties paid to the Russian customs for the goods introduced into that country in the same year amounted to 550,000 florins, or about $12\frac{1}{2}$ per cent on the total declared value (4,808,756 florins); and if the value of the cloth—the staple article of export from Poland to Russia—be alone taken into consideration, the duties amounted to 21 per cent, or 408,917 florins upon a declared prime cost of 1,879,759 florins.

* The communication between Hamburg and Warsaw is effected *viâ* the Elbe, the Havel, the Spree, the Oder, the Wasta, and the Bromberg canal, into the Vistula near Thorn. This passage generally occupies from 10 to 12 weeks. Freights average about 75*s.* per ton, including the Elbe and canal dues, and Prussian transit-duty.

"The passage from Dantzic to Warsaw by the Vistula, was lately performed in 10 days, under favourable circumstances of wind and water; generally, six weeks are considered necessary. Cost of freight averages about 10*s.* per ton.

"POLAND'S commerce with AUSTRIA appears of trifling importance, if the sums representing its amount be simply compared with those expressing the trade of Russia and Prussia. But this would be a fallacious way of estimating the comparative value and real importance of each of those branches; because the amount of the Prussian commerce is made up of many most important commodities which are foreign to her soil, and to her manufactures; and although after these deductions have been made, Prussia may still appear to carry on the most important commerce with Poland, it is almost certain that Austria derives a direct benefit from her intercourse with this country, which is but little—if any thing—inferior to that either of Prussia or Russia. For of the whole of her exports to Poland, averaging annually about 7,500,000 florins, or about 187,500*l.*, the indigenous produce of Austria and Austrian manufactures, furnish at least 6,500,000 or 162,500*l.*; and she takes from Poland so small an amount in return (scarcely 4650*l.* annually), that the whole amount of export shown in the table may be considered as the balance in her favour, because it is known that an extensive contraband trade in Austrian commodities is carried on through the territories of Cracow.

"The great staple of the Austrian commerce with Poland is salt, which produces nearly one-third of the whole declared value of the imports from thence, besides furnishing the principal article of the lucrative contraband trade above alluded to. Next to salt, are the wines of Hungary, which, generally speaking, are preferred in Poland to all others except Champagne, and the quantity consumed is nearly double that of all the other wines taken together. Since the reduction of the duty on Austrian wines in 1836, the consumption has greatly increased in Poland, and a proportionate diminution appears to have taken place in the Rhenish and other German as well as in the French wines, except Champagne.

"On the whole, the trade with Austria has not varied much in amount since 1829; and although it was somewhat less in 1841 than in 1840, the general belief is, that this branch of Poland's commercial foreign relations will considerably increase so soon as the railway which has been commenced between Warsaw and Cracow shall be finished, and, by means of its junction with the Austrian lines, shall place the capital of Poland (the great entrepôt of its trade) in direct and speedy communication with the Adriatic. This condition, however, does not appear likely to be soon fulfilled, although the earthwork along the whole line has been commenced, and some progress made in other parts of the work: not more than one-half of the estimated cost of the undertaking has been subscribed for as yet, and there appears little chance of getting the rest from private persons, although the government has guaranteed 4 per cent dividend to the shareholders.

"Prussia, commanding the embouchure of the Vistula and the other water communications of Poland with the sea, must naturally play a conspicuous part in the commercial relations of this country; for the last thirteen years the amount of this commerce has been between 55,000,000 and 60,000,000 florins, about 1,375,000*l.*, to 1,500,000*l.*, divided nearly equally on an average between the exports and imports. But when it is remembered that amongst the imports from Prussia are included the productions and manufactures of many other countries of Europe, besides the produce of more distant parts of the world, a very considerable diminution of the importance of the *bonâ fide* Prussian trade will at once suggest itself.

"Prussia must derive a very considerable benefit from the transit duties, and it is well known that the prosperity of Dantzic almost entirely results from the business done for Poland, and more especially in the export of its corn and grain.

"The various endeavours made to arrange a new treaty of commerce between the two countries have hitherto been fruitless, and mutual vexations are kept up. Poland, by way of retaliation for the transit duty on corn, imposes an additional duty of 8 florins, or about 4*s.* per Polish cwt. on all sugars refined in Prussia; by which means this very important branch of Prussian manufactures is kept completely out of the Polish markets.

"The great recent increase of the value of the exports from this country is attributed solely to the enhanced prices of corn—a circumstance too uncertain in its duration to justify the hope that this favourable state of the balance for Poland will be durable.

"Of the commodities which Poland exports to Prussia only, very few and those of comparatively trifling value, are for the use or consumption of that country; amongst them may

be particularized as of most importance, horses, green and dried forage along the frontiers, stones, and feathers and down, but all the principal exports, which make it appear as if Prussia were the most important customer of Poland, are destined for other countries—and in great part for England, or for the British colonies. For although a considerable proportion of the corn and grain is in the first instance shipped from Dantzic and other Prussian ports for Holland, it may be safely assumed that it is only kept there until a favourable moment occurs for introducing it into the English markets; and that the distilleries of Holland consume only a part of the rye and barley, leaving all the wheat and flour for the British trade. The wool, oilseeds, wood, and zinc are also considered here as specially destined for the same market.

"CRACOW.—The commerce between the kingdom of Poland and Cracow is not so unimportant as might have been imagined, from the mere territorial extent of the free state, but has for many years past averaged in declared value between 3,000,0000 and 4,000,000 florins; the balance has always been in favour of Poland, and since the last commercial treaty between the two countries, in 1834, has been grievously felt by the merchants of the free state. The smuggling trade which Cracow carries on into Poland bears her nearly harmless in a commercial point of view.

"*Internal Trade of Poland.*—In regard to this important branch of national economy, the improved state of the roads would offer every facility to its favourable development, did not the high prices produced by the unfavourable state of the foreign commerce, and the monopolies of the manufactures, restrict, by the present scarcity of money in the country, the sales of almost all articles to the mere supply of the indispensably necessary. The government is at great pains and expense to encourage the internal commerce by other means than opening the foreign trade; and amongst other expedients for this purpose may be mentioned the gradual increase of the number of fairs in the kingdom to 17 annually, and of the number of privileged markets to 208. But the effect as yet produced has not been of much importance. In 1839 the value of the goods brought to these fairs and markets was declared at about 63,500,000 florins, or about 1,587,500*l.*, and the sales effected amounted to 24,500,000 florins, or about 612,500*l.*, only.

"*Manufactures of Poland.*—The manufacturing system of the kingdom may be considered as dating no further back than 1823, and must be in part ascribed to the prohibitory nature of the commercial regulations which the government adopted in that year.

"Under these regulations it appears the newly established manufactories flourished in the first few years; but numerous other concurrent circumstances of that period extended their beneficial influence not only to undertakings of this nature, but also, to every other part of the nation's material prosperity. The comparative liberal institutions of the young state, and the influx of foreign capital arising from the high prices paid, in foreign markets, for Polish corn, during many years after the termination of the great French war, and from the very considerable sums expended by the Grand Duke Constantine's court, and the numerous officers of the corps of Lithuanian and Volhynian guards that garrisoned Warsaw; as also, the free circulation of the national wealth caused by the conflux of so many of the richest magnates and other persons from all the Polish provinces, who were drawn to the capital, either by political duties, or by the social pleasures which it then offered by the Emperor Alexander's generosity in allotting the whole amount of his civil list to the encouragement of undertakings of public utility, and perhaps not less by the maintenance of an extremely well-equipped and well-paid native army; by these concurrent circumstances, by the establishment and prudent administration of a national bank, and by the wise operations of a territorial-credit union, which rescued the landed proprietors out of the hands of the usurers, and procured for them, at the very moderate rate of 4 per cent, the means of improving their estates, a vivifying activity and industry were produced which could not fail to be favourable to the then newly established manufactures. Not these alone, but the country generally made such rapid improvement in a comparatively short period as to promise the brightest futurity and prosperity to this small kingdom. Foreign artisans and capitalists flocked to the country, and these were encouraged and assisted by the government in the most liberal, often in the most extravagant, manner: rapid fortunes were realized and again invested in useful speculations; manufacturing and agricultural colonies rose in all directions: the existing towns, particularly

Warsaw, were extended and embellished, many villages acquired the importance of towns, and the almost entirely new town of Lody started into life as it were, and is still third in rank in the kingdom in point of population and importance.

"Poland also had been able to conclude with Prussia, in 1825, a very advantageous commercial treaty for ten years; and her manufacturers enjoyed considerable privileges in the Russian market.

"The result of the fatal revolution of 1830 not only nipped in the bud this incipient prosperity and closed the brighter prospects which had opened upon Poland, but the political changes which followed that disastrous event deprived the country of many of the foreign sources of the stimulating wealth, and further impoverished it through the withdrawal of much of its own capital, either to foreign countries by some of those persons who were obliged to expatriate themselves, or at least from circulation, in consequence of the retired manner in which many others, somewhat less compromised by their political conduct in that contest, now live on their estates. The occupation of the country by a Russian *corps d'armée* of upwards of 40,000 men, who are clothed and fed by contracts generally made in Russia, and receive not more than a few shillings per annum per man, to expend for their other wants, is likewise a great burden to the country, and bears particularly hard upon the poor peasants and other poor classes of persons with whom these suffering men come into direct contact. Taxation, also has been increased, to cover the extraordinary expenses which the revolutionary war had caused; and the very onerous war contributions, levied by the local municipal authorities, such as billet money, the money for defraying the expense of the citadel of Warsaw, and of other extensive fortresses which are being erected.

"The advantages enjoyed in virtue of the commercial treaty with Prussia expired in 1835, and since 1836 very heavy duties have been levied by that country on the exported raw produce of Poland, and likewise heavy transit duties on all goods destined for the Polish markets.

Another and more fatal blow to manufactures was given by the imperial ukase of the 2d (14th) of November, 1831, which rescinded all the privileges before enjoyed by the merchants and manufacturers of Poland in the Russian markets, and at the same time granted most important advantages to Russian subjects for the introduction of their goods into Poland. This ukase is considered so particularly fatal, because Russia was, and is still perhaps the only country in Europe with whose productions the infant manufacturers of Poland could hope to compete; and because she has not only been excluded from this market, but doomed to see her own markets inundated by Russian goods, in consequence of the inequitable tariff, but not of fair competition. These circumstances induced many of the foreign manufacturers settled in Poland to carry their talent and enterprise to Russia, from whence they daily aggravate the commercial evils of their former adopted country, and the attempt to foster the manufactures of Poland, by a prohibitory system against those of all other countries, now that the system is unaided by the other concurrent circumstances that have been adverted to, has led only to the extension of the contraband traffic, and to the demoralization amongst an immense number of individuals of all classes.

"*Woollen Manufactures.*—The breeding of sheep generally, and particularly of the fine-woolled kinds, which, according to Mr. Jacob's report on the agriculture of Poland, appears to have been very much neglected, must have made rapid progress subsequently; for, in 1838, the official returns to government showed 2,900,000 sheep and lambs, the greater number of which were said to be of the Saxon electoral breed, or of crossed breeds between that kind and the sheep of the country. In 1839 the number had augmented to 3,270,000; and it is said that a considerable increase has taken place since then. By careful sorting and washing, and better management generally, the Polish wool has also risen in the estimation of foreign manufactures, and a very considerable proportion is now annually exported.

"The total quantity produced in the kingdom, was estimated by government, in 1838, to be about 60,000 Polish quintals; in 1839 it was calculated at between 60,000 and 70,000 quintals, and it is supposed to have been about 75,000 in the two last years. In the firstmentioned year it was ascertained that the woollen manufactories of the country consumed only about 15,000 quintals; and as this consumption cannot have increased, judging

from the productions of the manufactories, there must be at present about 60,000 quintals, or about 53,618 cwt. British for annual exportation.

"The woollen manufactures,—which, before the revolution, produced 8,000,000 ells of cloth and different other woollen articles, valuing from 48,000,000 to 52,000,000 florins, and employing 35,800 persons,—in the year 1839, which has been officially declared to have been the most favourable to this branch of manufactures since the revolution, did not furnish even half of that quantity, nor employ much more than one quarter of the number of persons, and exported to Russia only 158,000 ells, valued at about 138,000 florins, whereas the value of the exports to Russia and China before 1830, amounted to between 12,000,000 and 13,000,000 florins. The duties on these manufactures were raised, by the Russian tariff, from about one penny (on an average per ell) to about thirteen pence for the same quantity. The year 1841 again showed great distress amongst the manufacturers of this important article. It must be stated likewise, that the fallacious symptoms of improvement in 1839 were caused by the production of a great quantity of half-woollen and other fancy articles, but which have not been able to bear competition with the same class of manufactures imported from Russia. The increase in the number of persons employed in the woollen manufactures in 1839, results principally from the fact of a great many individuals having been included in the account of that year, who have in reality little or nothing to do with the woollen manufactures considered as a separate branch of national industry.

"In regard to the quality of the woollen manufactures it may be said generally, that the superfine and middling sorts of broad cloth are very good; but that the lighter kinds called *draps de dames* and *draps de chine*, and all the fancy articles such as merinoes, Thibets, chalines, wool muslins, shawls, handkerchiefs, called *ternaux*, and the *chalis* imitating oriental patterns, are inferior to the same articles made elsewhere on the continent, even in Russia.

"The prices of all these manufactures are considerably dearer than the same descriptions of articles of British production; and could in no way bear competition with them if the latter were not absolutely prohibited by the existing tariff.

"Amongst the manufactories for woollen stuffs must be particularized the carpet manufactory at Warsaw. In this establishment the business is carried on completely after the English modes, and the various descriptions of Brussels, Kidderminster, Venetian, and other carpets are all of very good quality, but rather old-fashioned in design, and rather more than twice as dear as the same article in England. This manufactory formerly exported considerably to Russia; but the imposition of the high duties of 1831, about sixpence, per lb. for this article, has acted as a prohibition, and since then the sales have been restricted to Poland alone.

"The absence of all competition, native as well as foreign, has enabled this manufactory to keep up its high prices, and it appears to be exempt from the fluctuations and decline which the rest of the woollen manufactures have experienced.

"A very extensive steam machinery for the preparation of patent felted cloth, is at present in process of construction.

"*The Cotton Manufactures* made in the kingdom are still insufficient for the supply of its own consumption; and this branch of national industry, neither possesses at present, nor has it possessed at any previous time, the prosperity which the cloth manufactories had attained before the revolution; nevertheless it is now considered as the second, if not the very first business in point of importance, in the country, and considerable profits are said to be realized by it, although only the coarser kinds of goods are manufactured, and although the faulty system of commercial intercourse with other countries tends seriously to fetter and impede the production which it was meant to foster and encourage.

"The prosperity of the cotton manufactories, such as it is at present, commenced in the year 1836. Previous to that date no spinning-jennies existed in Poland; and the manufacturers who were engaged in the other branches of this business were too much dependant on foreign countries for twist to be able to make regular profits since the erection of the extensive spinning-mills in the towns of Lody and Lublin, in the just mentioned year, the business throughout the whole country has assumed more consistency and regularity, and the prosperous condition of these two places proves at least the importance of these

manufactures as a means of augmenting individual wealth; but whether, in a national point of view, it can be deemed worthy of the same consideration is very doubtful, as the high prices which, owing to want of competition and other circumstances, must be paid for its productions impoverish the purchaser, without having the merit of encouraging any branch of indigenous agriculture like the woollen and other manufactures fostered by the same system of monopoly.

"In 1830 the number of persons employed in the cotton business was only about 11,500; in 1837 it amounted to nearly 14,500; in 1839 to about 16,000, and it is said at present to exceed 26,000. It has not been possible to obtain any information in regard to the value of the cotton goods manufactured previous to the year 1841; and even for that year it has been stated in one gross sum only amounting to about 9,300,000 florins. But this sum includes the value of the linen manufactures made in the same year; and there are no means of remedying this faulty arrangement, because the local government here has thrown the two branches of business into one class for administrative purposes, and no distinctions are made in the public returns. This same remark must be applied to the number of persons stated to be engaged in the cotton manufactures in 1841.

"It is stated that nearly 1,500,000 lbs. of cotton twist are annually used in the production of the goods in question; very little more than one-third of that quantity is made in the country. The rest is imported, principally from England *viâ* Hamburg, on payment of the enormous duty of 138 florins per quintal, or about 8*s*. 4*d*. per lb.: and this circumstance renders the prices of the manufactured goods so high, that a most extensive contraband trade is carried on, which completely frustrates the efforts of the manufacturers in regard to the production of any of the finer kinds of wares; and, by restricting their business to the commonest and coarsest articles, only prevents these manufactures from attaining that development which, with a little more liberal tariff, they would almost be sure to reach.

"The twist made in the country is almost all of the coarser kind, but of such good quality that some specimens which were sent to Hamburg were supposed to be of English manufacture. The cotton-wool (unspun cotton) which is used here is principally of American growth, received from Hamburg; but a portion is also drawn from Egypt *viâ* Trieste.

"A great deal of steam machinery is used in the production of these manufactures, but the price of all descriptions—as might be expected from the circumstances before adverted to—are much higher than in England or than in Germany, although of inferior quality.

"The last exhibition of manufactural products contained some specimens, however, that showed considerable progress in the different processes connected with these manufactures, and some spotted muslins (called Bengal muslins) were mentioned as being of superior workmanship and finish.

"The *Linen Manufactures* have been very much neglected, and appear even to be retrograding both in respect to the quantity and the quality. Poland produces considerable quantities of flax and hemp, it is true; but the former of these productions is by no means of a good quality, and the manufacturers have been obliged to use Belgian and Silesian flax, although the expense of carriage and duty is very considerable on these articles. The damask and other table-linens, as also all other kinds of fine linens, made in the two existing manufactories, are consequently very high in price, and at the same time of very inferior quality and imperfect bleaching. Some attention has lately been paid to the better culture of flax by using seed obtained from other countries; but these experiments are still of too recent a date to justify an opinion as to their final result—and still less to produce any effect on the manufactures of this article.

"Spinning-machines for flax have not yet been introduced into Poland, and this business is all done by hand, by the peasantry, and principally in the government of Augustowo, where the greatest quantity of flax is cultivated—a great deal of this yarn is exported—a good deal of hemp is used in the manufacture of coarse linens, but the greater portion of the produce of this kingdom is exported in the raw state; that is to say unspun.

"*Silk Manufactures.*—The production of the silk manufactories is described in an official document as being '*à peu près nulle;*' but it is added, the specimens of some plain silks, recently shown in the exhibition of the manufactural products of the kingdom, were not without merit.

"There are only two manufactories of this description in the country, both of which were established in 1837. In the first year after their establishment they manufactured various light articles to the value of about 40,000 florins, or about 1000*l.*; but since then their production, it is said, has never been so high, and both manufactories are kept going only by the pecuniary aid which the government affords them. The government seems determined to encourage this branch of business at all costs, and gives considerable premiums for the cultivation of the mulberry-tree, and for the rearing of silkworms. In the southern part of the kingdom there are already considerable plantations of the white species of that tree, and one nursery-garden not far from Warsaw contains upwards of 100,000 plants of the same kind: and some other towns are likewise raising these trees from the seed, with the view of producing plants better acclimated than if propagated by slips, layers, or otherwise. Some specimens of silk from worms reared at the town of Wislica have induced the sanguine to hope that this branch of national industry may be rendered indigenous and profitable to Poland; although it must be evident to all that the climate and other unfavourable circumstances, resulting from the state of its population, are diametrically opposed to the conditions of success in such an experiment.

"The extent of smuggling in silk goods may be inferred from the fact that the returns of the custom-house show an importation of only about 40,000 lbs. or about 10,000 lbs. for each million of inhabitants, in a country where the use of such articles is comparatively very general even amongst the lower classes, on account of the great proportion of Jews, amongst the males of whom it is much worn. In Russia, on the contrary, where this article is almost unknown to the lower classes, the annual importation exceeds 23,000 lbs. for each million of its inhabitants, besides the very considerable produce of its own silk manufactories. It is notorious, besides, that hundreds of individuals, and whole families even, annually make journeys from Poland to Dresden, Berlin, and Cracow, for the sole purpose of saving the enormous duties on articles of dress—particularly on silk articles—by getting fitted out in those places for a year at least.

"*Tanneries and Leather Manufactories.*—The dressing of hides and skins appears to have been neglected longer than most of the other branches of manufacturing industry, and the production was long unequal to the wants of the country. The prohibition of foreign leather, however, has stimulated this branch of business into sufficient activity to supply the home demand.

"In 1837 only 130,800 hides and skins of different sorts were dressed; whereas the latest statement which it has been possible to procure shows upwards of 471,000.

"Some of the fine qualities and fancy leathers, such as Bruxelles skins for bookbinders, morocco, and shagreen, are considered to be of very good quality; but sole leather and the other heavier sorts are not considered equal to those produced by the tanneries of other parts of the continent. The Russian mode of tanning is not practised in Poland, and the manufacture of glazed leather has not yet been introduced. The prices generally are, comparatively, cheap; that is to say, they are not dearer than the same commodities in other parts of the continent.

"*Paper Manufactories.*—A few years ago Poland was completely dependant on foreign markets for all the fine paper used for writing or printing, but at present every description of article of this branch of manufacture is made in the country, with the exception of drawing-paper, milled (or Bath) boards, and the embossed or otherwise ornamented fancy papers, which have been brought into fashion of late.

"The improvement in this branch of national industry—above alluded to—is mainly attributable to the erection of the paper manufactory at Jeziorna, near Warsaw, which is administered by the bank of Poland, on the account of government.

"This establishment is provided with the best English and French machinery used in the manufacturing of paper, and may vie, in point of its arrangements, as also in point of the quality of some of its products, with the most perfect establishments of this kind in any part of the world. It employs, besides the steam machinery, about 200 persons; and alone furnishes about one-half of all the paper used in the country—of the finer sorts and of the paper used for stained or printed hangings (fancy papers) almost all.

"This important establishment has done much to stimulate, at first, the perfecting of the branch of manufactures to which it belongs; but the exclusive advantages of direct government patronage and government capital and credit, which it possesses, has already

proved fatal to several private mills, and cannot fail to be injurious to the real interests of the country by the extinction of fair competition and unaided enterprise.

"In regard to the quality of the paper produced, it may be said generally that, with exceptions of the different sorts made at Jezioma, particularly that used for the notes of the bank, the manufacturers have still much to learn—even the Jeziorna paper, although good, is out of all proportion dear for its quality; and it may be assumed as very near the truth, that all paper is nearly three times as dear as the same kind and quality would be in England. There is also a manufactory of stained or printed paper hangings.

"The importation of paper manufactures, as indeed of almost all others, is absolutely prohibited by the existing tariff; a manufactory for their production was, therefore, early established at Warsaw by two Austrian subjects. This establishment furnishes very good work, and exports its products to Russia, although there is a duty of about one halfpenny per pound to be paid on entering that country. The amount of business done, however, is but small, because the prevailing fashion in Poland is to colour the walls of rooms, and the high price of paper-hangings—resulting from the cost of the principal materials—is calculated to impede the demand for this commodity becoming more general. In 1837 the manufactory sold for about 178,000 florins, or about 4450*l.*; in 1838 its sales amounted to about 4600*l.*; in 1839 they were about 150*l.* more; and in the two last years they averaged about the same as in 1839.

"*Manufactures of Caoutchouc.*—In 1834 a manufactory of all kinds of articles of prepared caoutchouc was established at Warsaw, and appeared at first to offer every prospect of success. Impermeable cloths and cotton stuffs, air-tight cushions and mattresses, elastic ribbons, surgical bandages and galoshes, &c., of excellent quality, are made at this establishment; and its proprietor has succeeded in manufacturing thin transparent sheets of pure caoutchouc, of about 5 feet in breadth and any desired length, without the mixture of any extraneous solvent—an article which is considered very valuable for preparations connected with surgical operations, and which is said to be still unknown in Great Britain.

"In 1838 this manufactory consumed upwards of 130,000 lbs. of the raw material in manufacturing the different articles offered for sale. In 1839 the business was extended with the aid of a loan from government; and the sales made in 1840 are said to have amounted to about 91,000 florins, or about 2275*l.*; a part of which was for exports to Russia, into which country these articles are admitted on payment of a duty of 6 per cent, *ad valorem*. But notwithstanding this propitious commencement, the establishment has not been able to contend successfully against the contraband trade in these articles; and, after having received pecuniary aid more than once from the government, the proprietor has just declared himself insolvent. The business is carried on under his guidance for the benefit of his creditors, but it is very much doubted that it will be able profitably to maintain itself, or offer them, particularly the government, any advantages for the money sunk in the speculation. The debts amount to more than 15,000*l.*; the assets to little more than the value of the trifling machinery employed in the business and of a very small stock in hand.

"*Beet-root Sugar* has attained but little importance in the kingdom of Poland. It appears that so late as in 1837, there existed only one establishment on a large scale for its production; and in the following year the quantity produced decreased from about 90,000 lbs. which it had averaged in previous years, to somewhat less than 78,500 lbs. This decrease, as well as the want of development generally of this branch of manufactures was attributed to the want of sugar refineries in the country. In 1838 this want was remedied by the erection of very extensive works at Hermanow, and in the following year already the quantity of beet-root sugar produced and refined amounted to 131,500 lbs.; besides the molasses, which were valued at 31,000 florins, or about 775*l.* It is supposed, however, that the production has not materially increased since then, because the expenses of the manufacturing are so great. Government has officially refused to grant any further protection to this branch of national industry, although so intimately connected with the advantages of agriculture, because a very considerable portion of the public revenue is now derived from the high duties on foreign sugars.

"The consumption of sugar in Poland is very trifling in comparison with that of the other countries of Europe, particularly those towards the west, as France, England, and Germany. If the custom-house returns could be relied on, the whole consumption, including

the sugar made in the country, would scarcely amount to an average of ¾ lb. per annum for each individual of the population; but a considerable contraband trade in this article is known to exist, and the consumption may therefore be somewhat higher.

"*Manufacture of Dyestuffs.*—Since the decline of the woollen manufactures the fabrication of dyestuffs and other chemical products has greatly diminished in Poland, and although some of the manufacturers in the nearest Russian provinces draw their supplies from hence, the produce and the sale is much less now than at earlier periods, less even than in 1837. In that year the quantity is stated to have been about 10,400 polish quintals. In 1841 the declared value of the quantity produced was about 532,000 florins, or about 13,300*l.* Further details of this branch of manufactures could not be obtained.

"*Breweries and Distilleries.*—Beer of all descriptions is a favourite beverage of the middle and higher classes in Poland, and a preference for English porter and ale appears to have existed for many years back. Upon the adoption of the prohibitory tariff, in 1823, English beers were excluded from importation for public sale, and admitted only for private use on the payment of an excise duty of about 1*s.* per bottle. These circumstances induced several capitalists to establish breweries for the purpose of producing these descriptions of beer in the country; and enormous sums, it is said, were invested in the erection and arrangement of buildings, and the purchase of utensils agreeably to the English modes, as well as for travelling expenses, premiums, salaries, &c., paid to brewers, to maltsters, and their assistants, all of whom were brought from England or Scotland; but the quality of the beer produced appears always to have been very inferior to English ale and porter, and the public prefers paying more than 3*s.* a bottle for these (which can always be obtained, notwithstanding the prohibition) to giving 6*d.* for the imitations.

"The speculators have consequently been greatly disappointed in their sales, and very few have reaped any proportionate benefit from the outlay of their capitals. But the real cause of their disappointments must be looked for in the disproportionately expensive style in which the breweries had been established and were managed; and it is said that only one establishment of this kind belonging to, and entirely managed by, an English family, named Hall, was in a prosperous state, even before the outbreak of the revolution of 1830, which is the golden period of all Polish manufactures. The fatal change in the political relations between the two countries put an end to these and many other nascent hopes of Poland.

"*Distilleries.*—The landed proprietors in Poland possess the privilege of obliging their tenants and other persons employed on their estates to purchase on the estates the spirituous liquors which they may require, and this privilege (called *Droit de Propination*—a species of truck system) being of great and twofold importance to all proprietors, not only by the sale of the spirits, but still more on account of the use which is made of the waste of the distilleries to feed the cattle in winter, there is not an estate, however small, which has not its distillery, and this privilege is abused to an extent that produces the most demoralizing consequences amongst the lower classes of the population.

"The principal substance used in all these private distilleries for the extractions of the spirit—a species of whiskey—is the potato, but a small portion of rye is added to the mashes to aid the fermentation. A great deal of very excellent apparatus is employed throughout the country in this business, and very successful efforts have been made to free the spirits thus produced from the disagreeable taste which characterizes the distillations from the potato and other esculent plants, and is attributed to the essential oil contained in them.

"The quantity of spirits produced and *consumed* in this country is known to be enormous in proportion to its population; but specific information could not be obtained on this head: it is said, however, considerably to exceed, on an average, a gallon per annum for each individual, or rather more than the consumption of the same article by the population of Ireland.

"*Glass Manufactures.*—This branch of business not only owes its original introduction into Poland, and its gradual development and improvement, to persons who immigrated from Bohemia, but it is still exclusively in the hands of natives of that country. Considerable improvement is said to have been made, since 1838, in the quality of these manufactures, particularly in the coloured glass after the fashion of Bohemia; but there is still a most sen-

sible inferiority in comparison with the genuine articles of that country, and yet greater when compared with British manufactures of this kind. The prohibition of all foreign glass, except plate glass for mirrors, procures the native manufactures a ready sale; but the want of competition retards their improvement, and keeps up exorbitantly high prices.

"There is no manufactory for plate glass in Poland, and the duty on this article from foreign countries is so high, that there is a great scarcity of it in the market.

"*Porcelain, Earthenware, &c.*—The manufacture of all these articles, even of the commonest pottery, is still in a very low state in Poland. Of porcelain there is only a single manufactory in the country, and although those for fine earthenware are more numerous, they too are unable to supply the annual demand, and a great deal of both kinds of wares is imported from different countries. More articles of these descriptions, of Russian make, are seen in ordinary use than of any other kind, either native or foreign; but the taste of the higher classes is decidedly in favour of English earthenware, particularly that called wedgewood and stone china—and more of this is used in the country than could be expected, considering the enormous price as enhanced by the import duties. A dozen of common white earthenware plates is charged 1*s.* 6*d.* alone for the road tax, (although this ware comes from Dantzic or Hamburg by water,) besides about 2*s.* 6*d.* per dozen import duty, and generally sells at Warsaw for about 14 florins, or about 7*s.* Other articles are proportionably dear, and a very ordinary description of coloured earthenware plates have sold as high as 20*s.* per dozen. Their average price is still about 18*s.*

"Common pottery, and fire bricks—which are usually made at the potteries—and particularly smelting-pots and other utensils made of the same description of material, are all inferior to those made in other countries, and cost dearer than those imported from Saxony after paying duty and carriage.

"*Iron, Zinc, and Copper works.*—The manufacture of metals in their crude state, particularly of iron and zinc, constitutes the most important branch of the national industry of the kingdom of Poland, and bids fair, under the care which government devotes to it, still more to develop itself, and become adequate to the demand of the country for these metals, and proportionate to the mineral resources which nature has so bountifully placed in its bosom. The immense importance of these manufactures will be doubly appreciated, when it is borne in mind that the minerals of the country alone, without any foreign ingredient whatever, aliment this branch of business, and that consequently, almost all the money realized by it goes for wages to the artisans, and other persons employed in it.

"Upon the formation of the kingdom of Poland in 1815, the Abbé Staszic, who was subsequently named one of the ministers of state, in a work which he published, directed the attention of the new government to the great mineral resources of the country, especially to those extensive mining districts which belonged to the crown, and which had been long neglected. Under this able administrator's superintendence, an impulse was given that was afterwards followed up by the measures of the energetic Prince Lubecki, whilst he remained at the head of the government of the kingdom.

"The original and principal object of the attention to the mines, on the part of the government, appears to have been the hope of obtaining silver, by cleaning out and working the mines in the Olkusz district; which mines had been submerged—maliciously it was supposed—in the reign of the last Swedish prince in Poland, and had since then been abandoned. Various projects were adopted, and much expensive machinery employed, at different periods, in furtherance of this object, which although hitherto unattained, has of late been again taken up with renewed ardour, but this time more on account of the zinc and lead ores which those mines are known to have furnished, than for the sake of the more precious metal mixed with them. The various vicissitudes of these mining operations finally led, in 1833, to the management of the crown mines, and of the different kinds of works connected therewith, being placed in the hands of the Bank of Poland, who, in 1837, again farmed them out for a fixed minimum sum and certain share of the profits exceeding an adopted normal sum; remaining responsible, however, for the charges of administration. Since the administration of this body corporate, no expense has been spared in improving the mode of working the mines and treating the ores and metals; and the introduction of the machinery and the various processes adopted by the crown manufacturers has produced such an influence on the works belonging to private persons, that the commencement of the

administration of the bank may be considered as the date of the development of this branch of national industry throughout the country generally, which is at present visible. But to the administration of the bank also, belongs in particular the merit of having directed the principal attention and efforts, as well of private persons as of the government, to the working of iron, which until then had never received the same encouragement bestowed upon the schemes for bringing the mines at Olkusz again into activity.

"Almost all the mines of Poland exist in the southern parts of the kingdom, and in those parts also, are situated the different works for the reduction of the ores. The works belonging to government alone employ upwards of 13,600 persons, agreeably to official returns; and it has been calculated that the private works employ at least 20,000 more; but it is impossible to ascertain this point precisely, because so much 'corvée' labour is employed, of which no account is kept by private proprietors.

"The system of management of the government works is considered by practical men much too expensive; and there is, likewise, still a great want of skill in the technical manipulations. From these combined causes it results that the undertakings, although so beneficial to the country generally, by employing so many individuals of its population, are, nevertheless, far from being in a flourishing state, if considered merely as manufacturing enterprises. The credit of the public purse administered by the bank, however, supplies all wants, and makes these circumstances comparatively little felt at present.

"The private mines and works give much better returns to their proprietors, and are considered to be in a progressive state of improvement.

"The present inferiority of charcoal, and also its increasing price, arising from the daily augmenting difficulty of getting at the still existing forests, (wood fuel as well as charcoal, has risen more than 40 per cent in the last two years,) injuriously affect the production of iron, which costs almost twice as much here as in England.

"*Pit-coal* exists not far from the sites of the iron ores, and it has been worked for a number of years past; but all the kinds as yet found have turned out perfectly useless for coking, and can, therefore, only be used in smelting the zinc ores.

"The quantity of iron produced in the country is still inadequate to supply the demand for the metal, the use of which, particularly in building for machinery and agricultural implements, has very much increased of late years.

"The production of zinc has remarkably increased, and appears to be limited only by the want of the market. Prince Lubecki endeavoured to find a suitable opening for the sale of this mineral, which is so abundant in Poland, by sending a special commission to the British possessions in India to treat for a direct trade in the commodity with the local authorities there, but the well-conceived project did not succeed.

"The transit duties paid in Prussia are a heavy charge on this product of Poland; but notwithstanding these, and the very considerable import duty paid in England, a great deal of the metal in ingots is sent thither; and the supply might be increased to almost any extent, as the mines already in operation are extremely rich, and still greater sources are likely to be opened by the operations going on in the Olkusz district. The successful issue of these operations will also give Poland a supply of lead, which metal she at present imports.

"The price of zinc averages from 28*s.* to 30*s.* per cwt.

"The production of copper is very trifling, and totally inadequate to the supply of the manufactures of the country; so trifling, indeed, that its price is never quoted in any of the returns of the productions of Poland.

"Pit-coal has been worked in Poland since 1789; and from that date, until the end of 1840, the quantity produced was about 12,500,000 korzecs only, or about 1,250,000 tons. The greater proportion of this quantity falls to the last few years; because, since 1836, this combustible has been used for smelting the zinc ores, and, in few instances, also for the blast furnaces used for the iron.

"The present annual production is about 1,000,000 korzecs from the pits belonging to the government, and 200,000 from those belonging to private individuals, together about 120,000 tons. This production is not likely to be much increased as the attempts to use the coal in the blast furnaces has not been very successful in this country; and to coke them, in masses of a useful size, has hitherto been found impracticable. It may also be observed

that Newcastle coal for the use of manufacturers may be imported from England for almost the same price that the inferior article, found here, can be obtained at any distance from the pit's mouth.

"*Cast-iron Founderies, Manufactories of Machinery and of Agricultural Implements.*—Two very extensive establishments for casting iron articles, and for the manufacturing of all kinds of machinery and agricultural implements, exist at Warsaw; the one belonging to the government and administered by the Bank of Poland—the other belonging to two English gentlemen, who were the first to introduce into Poland this important branch of national industry. A third establishment of the same kind, conducted by two Englishmen, but belonging to the government, is situated at Bialogon, near the small town of Kiela; and there was a fourth, at Zarki, which had been established by a Mr. Steinkiller, but which, after having furnished some important pieces of steam-machinery, was closed last winter.

"The establishment at Warsaw belonging to the government was commenced on a scale totally out of proportion with the demand of the country for such articles as it undertook to manufacture, and its expenses of management are said to absorb nearly all the profits that might fairly be expected from the great capital invested in its erection—which is said to have amounted to 340,000*l.* In 1840 the establishment was offered to the late well-known Mr. Cockrill, of Seraing in Belgium, on very advantageous terms; but as this gentlemen died before the transfer had been effected, and as the bank has not been able to find another purchaser—on any terms—a gentleman formerly in the employment of Mr. Cockrill has been engaged to conduct the business under the administration, and on account of the government, as hitherto. This gentleman has introduced more order and economy in the internal management; but as yet the government do not receive any commensurate profit from this extensive enterprise. The agriculturalists and manufacturers, however, benefit by the facility with which machinery and other articles are obtained on credit from this establishment. This manufactory furnishes principally steam-engines, hydraulic presses, distillery apparatus, and such work generally, particularly castings, as is ordered on account of government.

"The manufactory of Messrs. Evans, established on more prudent principles at first, and extending its operations in proportion only as the demands of the country increased, has attained a degree of importance little inferior to that of the government work (Szula). In many articles, especially in agricultural implements, the manufactory of Messrs. Evans has a decided advantage over its great and favoured rival; and for many years past these gentlemen have sold annually, on an average, between 400 and 500 agricultural machines, amongst which may be especially mentioned, chaff-cutters, thrashing-machines, potato-cutters and bruisers, winnowing-machines, besides ploughs, rollers, harrows, and various other smaller implements of husbandry, and a very considerable quantity of castings of all kinds; a business giving employment to between 300 and 400 persons, and turning annually a sum of at least 25,000*l.* The annual value of the work done at Szula is estimated at about 25,000*l.*, but much of this is made on speculation and remains on hand, or is obliged to be given on credit, whereas the amount of Messrs. Evans's transactions are *bonâ fide* sales. These gentlemen are highly respected in the country, and are supposed to be acquiring an honourable fortune. The Szula establishment, it is said, is kept up only by the pecuniary aid or credit of the government, and is daily restricting the extent of its manufactural operations.

"Of the establishment at Bialogon no other particulars could be obtained except that it possesses, in addition to its other machinery and appliances, rolling-mills, and furnishes besides agricultural implements and castings generally, several articles which neither of the other two establishments can furnish, namely sheet iron, iron boiler-plates, and tinned iron plates; this establishment is said to be in a flourishing condition.

"The price of steam-engines and of other complicated machinery requiring nice fitments, made at those different establishments, is more than half as dear again as at the best establishments in Great Britain; and, as the importation of such articles is duty-free, there is no doubt that much machinery of that kind would be ordered from thence, were it not for the great expense of freight and carriage, and the subsequent embarrassment of putting together the machinery without the aid of a person who has superintended its construction.

" Smaller machines of simpler construction, and agricultural implements of all kinds are made here at about the same prices as in England. It ought to be added, that almost all the principal artisans employed in these establishments, such as the engineers, the moulders, modellers, and founders, and likewise some of the principal persons employed in the iron-works, namely, puddlers and steel makers, are either English or Scotch; and that all the machines and implements are made after English models. It is stated that, with the exception of Seraing, not any other establishment of this kind in Europe, sells so many agricultural implements as the manufactory of Messrs. Evans; and it may serve to give some idea how much the use of these has increased in Poland, to state, that when Messrs. Evans first commenced making chaff-cutters, they sold annually about five dozen of knives for such machines, whereas they now sell upwards of 600 dozen! which are all imported from one Birmingham house.

" *Corn Steam-mill at Warsaw.*—In 1826-7, a steam-mill of 62 horse power, with 16 sets of stones, was erected at Warsaw, by a society of shareholders, for the purpose of commencing an extensive export trade of flour, instead of selling the grain of Poland to the merchants of Dantzic, who, until then, alone occupied themselves with this profitable branch of the corn trade. But it appears, that this speculation like many others in Poland, was commenced on too grand a scale, and with very unnecessary expense in the building arrangements, and other details connected with the establishment. It is said to have been very badly managed, and was unfortunately interrupted at a critical moment, by the outbreak of the revolution of 1830, from which epoch it struggled on in a precarious state until 1837, when it was sold to the banking firm of Peter Steinkiller and Co. for a price which barely covered the mortgages upon the property; leaving the shareholders minus their capital as well as the interest, which had not been paid since the first year after the erection of this very costly establishment.

" Since it has been in the hands of the present proprietors, the mill has ground annually on an average, about 36,000 korzecs of wheat, and 90,000 of rye, or about 15,820 imperial quarters of the former, and 39,648 of the latter. These quantities are quite disproportionate to the great power at command, and inadequate to produce a remunerating income from the sum invested in the establishment. The idea of exporting flour appears to have been quite given up, and that which is at present produced is used for the bread of the troops, and of other public departments, for the supply of which the firm of Steinkiller and Co. has a contract with government.

" Besides the different manufactures which have been specified in the foregoing notice, there exist in Poland various others of less extent.

" The *Musical Instruments* of Warsaw still possess considerable fame in some parts of the continent, at least in Russia; but the pianofortes which were formerly exported to that country, to a great amount, although still good, have not been able to compete with the greater cheapness of the same quality of instruments furnished by other countries.

" *Carriages* also, which formerly constituted a very important article of export to Russia, and are still of very good workmanship, have been undersold in that country on account of the dearness in Poland of some of the materials used in their construction, and the high rate of wages paid to skilful artificers.

" From the examination of the foregone specification of the present and past state of the manufactures in Poland, it is evident that although some of them may have improved in point of quality, and, perhaps, a few also in point of extent, there are others, and these amongst the most important in the country, which have retrograded in prosperity; and that the whole system generally, notwithstanding the long duration of the prohibitory tariffs of the country, is still unequal to supply the wants of the nation at *reasonable* prices, if we except perhaps some of the very commonest productions, such as soap and candles, and oil, and vinegar. An enormous tax is thus laid upon the consumers; while the manufacturers are so much hampered by high duties on some of the indispensable articles required in their various branches of business, that they do not by any means derive that advantage from the prohibition of foreign manufactures which might be imagined; but on the contrary are in a very precarious state of existence. In imitation of other parts of the continent, exhibitions of the manufactures of the country have been established, and the Polish manufacturers are permitted to send their specimens, duty free, to the exhibitions at St. Petersburg. Premiums

and loans are liberally granted, and medals and honorary distinctions are showered upon all who have the slightest claims; but in despite of these means, the state of the manufactories generally, remains much below what had been expected from the adoption of the prohibitory system of 1823; for, if the loans and other aid which government gives to this branch of national industry—and of which it frequently boasts in public documents—if these loans prove the generosity of government, they also afford a convincing proof that the manufactories are not in a satisfactory state, or they would not require such assistance.

"It is worthy of notice, that of 68 polish manufacturers who, in 1839, had sent specimens of their goods to the exhibition at St. Petersburg, 23 received medals, or honorary distinctions; and it may likewise be added, that the elder brother of the firm of Evans has just been decorated with the order of Civil Merit of Stanislaus, in acknowledgment of the advantages which Poland's agriculture has derived from the establishment of their manufactory of machines and agricultural implements."

FOREIGN Trade of the Kingdom of Poland for each of the following Years.

1841.....	....	....	1600	....	....	1,489,960	....	....	1,867,328

The quantities and values previous to 1839, are averages of the number of years which are braced together. The importation from Russia for those years could not be ascertained, and for 1841 the values only could be obtained; these may serve as guides, however, to the quantities, as prices have not changed since 1840.

The wines from Russia are for the most part an imitation of champagne; made from wines of the Don, they are daily falling in estimation, and making way for the champagnes from France, although these are twice as dear.

The decrease of the value of the wines imported from Austria (which are all Hungarian wines) in 1839, as com-

pared with that of the preceding year, is attributed to the inferior quality of the growth of that year; which circumstance lessened the demand as well as the price.

The wines imported from and through Prussia, may be considered as nearly all French wines, because Rhenish and other German wines, or Spanish and Portuguese wines, are not liked and very little used in Poland. Of the wines in bottles from Prussia, at least two-thirds may be considered as champagne, the consumption of which is increasing every year.

The duties on wines imported from Prussia are 4 florins per garnitz.

Hungarian or Austrian wines, if imported from the Austrian frontiers, pay only 2 florins 8 groschen per garnitz.

The garnitz (or garniex) = 244.17768 cubic inches, or 1.13 garnitz = 1 gallon imperial measure; therefore the duty on Hungarian wines is about 1*s.* 3½*d.* per gallon, and that on all other wines, 2*s.* 3*d.* per gallon.

STATEMENT of the Quantities of Wool brought to the June Wool-markets at Warsaw, and of the Average Prices paid for the different sorts, in each of the Years specified.

YEARS.	Quantity brought to Market.	Average Prices paid per Polish quintal.		
		1st Quality.	2d Quality.	3d Quality.
	quintals.	florins.	florins.	florins.
1835	15,576	540 to 750	450 to 510	360 to 420
1836	11,455	510 to 690	336 to 480	216 to 300
1837	13,479	480 to 654	300 to 450	196 to 270
1838	14,628	492 to 648	348 to 468	204 to 312
1839	15,910	480 to 630	330 to 450	192 to 300
1840	14,000	360 to 420	240 to 270	216 to 240
1841	14,341	540 to 660	312 to 348	252 to 288
1842	14,445	480 to 600	288 to 390	196 to 288

The whole of the wool brought to this market is washed wool, and nearly all is of the improved breed of sheep. The sales are generally rapidly effected, and it occurs very seldom that any quantity remains on hand.

In 1840 the prices were unusually low, which circumstance is in part attributed to an epidemic disease among the sheep having affected, or being supposed to have affected, the quality of the wool.

The Polish quintal is 98.473 lbs. avoirdupois; and in commercial transactions of any extent, the Polish florin is assumed equal to 6*d.* sterling. According to these proportions, it appears that the prices obtained during the period included in this statement were—

	1st Quality, per lb. avoirdupois.	2d Quality, per lb. avoirdupois.	3d Quality, per lb. avoirdupois.
Highest	45½*d.*	31*d.*	25½*d.*
Lowest	22*d.*	14¾*d.*	11¾*d.*

The wool brought to this market is generally bought up by merchants for exportation; the manufacturers of the country buying direct of the proprietors on their estates, and the greater part of the purchases for the foreign market are effected in the same manner. There are no other wool fairs in the kingdom, except at Warsaw.

The number of sheep and lambs in Poland, in 1838, was officially stated to be 2,900,000; in 1839 it had increased to 3,270,000, and it is said that since then the number has considerably augmented.

The total quantity of wool produced was estimated, in 1838, to be about 60,000 Polish quintals; in 1839, between 60,000 and 70,000, and at present it is supposed to be upwards of 70,000.

The quantities consumed by the manufactories of the country is said not to exceed 15,000 quintals.

In 1832 the quantity of wool brought to market was only 5000 quintals; in 1833 it was about 6000, and in 1834 somewhat more than 9000.

SALES of Wool effected at the Fairs held in the Kingdom of Poland in the Year 1843.

NAMES OF FAIRS.	Quantities brought to Market.					Quantity Sold.	Prices obtained per Wool Quintal.			
	Superfine.	Fine.	Middling	Common.	Total.		Superfine.	Fine.	Middling.	Common.
	wool qtl.	wool qtl.	wool qtl.	wool qtl.	wool qtl.	wool qtl.	thalers.	thalers.	thalers.	thalers.
Warsaw, 15th June, for 4 days	1500	3500	5000	1824	11,824	7722	80 to 95	60 to 70	52 to 58	40 to 52
Kalisch, 14th June, for 3 days	500	800	1300	400	3,000	2250	105	75to 85	48 to 63	40 to 44

It is customary, also, in wool dealings, to quote prices, for the facility of comparison with the German markets, in thalers or dollars, assumed to be equal to 6 Polish florins, or to 3*s.* British currency at the commercial par of exchange of 40 florins to the £ sterling. The current exchange at the time of the fairs was quoted, however, at 42 florins, 12 groschen, or about 5 2-3ds per cent in favour of England.

The superfine and fine qualities consist of the wool of sheep of the pure electoral (Saxon) breed; and some fleeces of this description from the flocks belonging to government were paid as high as from 110 to 115 thalers per quintal.

The middling quality of wool is obtained from the mixed breed of sheep of the country crossed with the Merino; and the common wool is that of the indigenous, or, at least, long known race of Eastern Europe.

Of the difference (3102 quintals, principally of the finer qualities) between the quantity brought to market and the quantity actually sold at Warsaw, about 1000 quintals have been taken back again by the owners, and the rest has been left for sale in the government warehouses.

The washing, shearing, and sorting of all the kinds of wool brought to the fairs are reported to have been more carefully performed this year than in the preceding one; and to show a general progress, throughout the country in these important operations.

QUANTITY and Value of the Produce of the Woollen Manufactories of the Kingdom of Poland, and the Number of Persons employed therein, in each of the Years following.

YEARS.	Cloth and other Stuffs sold by measure.	Shawls, Kerchiefs, &c., sold per piece.	Declared Total Value.	Number of Persons employed.
	Polish ells.	number.	florins.	
1829..... 1830.....	8,000,000	....	48 to 52,000,000	35,800
1837.....	2,566,256	....	....	9,000
1838.....	2,444,962	66,116	....	5,000
1839.....	3,350,746	84,790	....	9,800
1840.....	....	....	....	....
1841.....	1,382,767	....	7,763,426	4,141

The quantity of stuffs produced in 1829 and 1830 is said to have been principally fine cloths, a great deal of which was imported to Russia. In the years 1837 to 1839 inclusive, the coarser kinds and light fancy articles constituted a great proportion of the total quantity shown. In the latter year, for example, about one-fourth of the whole consisted of such articles as will be seen by the annexed details: viz.—

	ells.		ells.
Kerseymeres	5,520	Flannels	16,032
Ladies' cloths	14,695	Moltans	52,273
Merinoes	4,350	Duffles	464,505
Sirkars	144,930	Blankets	7,975
Talas for Jews	6,157	English cords	70,234
Sundries	47,090	Horse-clothing	47,090

Total, 834,347 ells.

And in that year there were likewise manufactured 328,631 lbs. of fancy yarns for embroidering and knitting; 151,000 ells, principally of fine cloth, were exported to Russia.

The quantity manufactured in 1841 shows only the cloths: the returns of the lighter and coarser articles could not be obtained; but the quantities of these are supposed to be about the same as in 1839. The quantity of cloth, however, is upwards of 1,000,000 ells less than in that year, and a very great reduction in the number of persons will also be observed. This latter circumstance may, perhaps, be owing to some unexplained change in the mode of computing the workmen; but it is notorious that the woollen manufactures have again fallen off from the comparative state of promise which they, for a moment, reached in 1839.

That state, however, must not be judged of by the extraordinary increase of the number of persons employed, as shown in this statement; for that only seeming increase was caused by the adoption of a different mode of counting those persons, and including amongst them all such peasants and others who occasionally employed themselves in the manufacture of the coarse stuffs for their own use.

There were in 1841, in the kingdom, 198 spinning-machines, 1819 looms, of which number 486 were power looms moved by 4 steam-engines; 201 steaming machines, and 37 fulling mills.

The Polish ell is equal to about 23 inches British standard measure.

The woollen carpet manufactory of Warsaw made, in 1839, 20,371 ells of different kinds of carpetings in breadths; and 415 small carpets in one piece.

PRINCIPAL Cotton Manufactures produced in Poland during the following Years.

YEARS.	NAMES AND QUANTITIES OF THE DIFFERENT ARTICLES.						
	Calicoes, Muslins, Ginghams, Nankins, and other similar Stuffs.	Shawls, Kerchiefs, and other Fancy Articles sold per tale.	Napery and Towelling.	Ribbons.	Stockings and Socks.	Twist.	Drills.
	Polish ells.	number.	number.	pieces.	pairs.	lbs.	pieces.
1837	11,505,103	2,372,924	2,837	313,776	107,926	201,679	
1838	11,096,662	3,058,127	4,762	746,504	115,129	233,660	
1839	14,279,735	856,561	4,806	312,384	117,949	331,711	
1841	16,054,900	281,245	16,884	253,333	59,285	471,156 and 7950 lbs. cottonwicks.	5382

No returns for 1840 could be obtained, and those for 1841, although from an official source, are suspected of being very inexact. At all events it is necessary to observe, that the productions of the linen manufactures have been included with those of the cotton works, an objectionable arrangement which it was quite impossible to remedy in drawing up this statement.

The total value of these goods, as shown in the same official returns, is 9,299,203 florins, or about 232,430*l.* sterling.

The demand for stockings or socks must naturally be very limited in a country, the lower classes of which, at least those living in the smaller towns, villages, and open country, do not use such articles.

The falling off in the number of shawls and kerchiefs is attributed to the greater demand for Russian articles of this description, which are said to be better.

There are at present in Poland, 4419 looms for this branch of business, 36 mangils (or calenders), and two extensive spinning-works, but the number of reels, &c. of these works could not be ascertained. The principal seat of these manufactures is in the towns of Lody, Lublin, Kalieg, and Warsaw.

The Polish ell is equal to about 23 inches British standard measure.

The number of persons employed in the joint branches of cotton and linen business, in 1841, is stated at 26,000. In 1830 the cotton manufactories employed only 11,500. The new manufactories may be said not to have existed at that time.

QUANTITIES of some of the principal Linen Manufactures produced in the Kingdom of Poland, during each of the Years specified.

YEARS.	NAMES AND QUANTITIES OF THE DIFFERENT ARTICLES.					
	Linens, Sheetings, Towellings, &c.	Napery.	Drills.	Tape.	Stockings or Socks.	Yarn.
	Polish ells.	Polish ells.	Polish ells.	pieces.	pairs.	lbs.
1837.....	1,768,216	55,836	158,719	12,376	737	130,251
1838.....	2,057,132	54,045	163,632	14,844	1698	161,483
1839.....	1,660,670	77,962	201,028	2,280	768	352,420
1841.....	Included in the statement of the cotton manufacture, *vide* "Observations" of that document, and body of the general report.					

There are only two manufactories; namely, one for damask and other table-linen (napery), and the other for sheetings, shirtings, and other plain linens, in which this branch of business is carried on, *en gros*; but even in those establishments there is no machinery for spinning.

A great proportion of the yarn, hand-spun, produced in the country is exported. The other articles are not adequate to the consumption at home, and are much too inferior in quality and too dear in price to admit of being exported, even if the quantities produced were greater.

The great falling off in tape and stockings is said to be caused by the substitution of cotton articles of those descriptions.

The prices are higher than Irish, Dutch, Saxon, or Silesian articles of the same description, and all these are charged with a high import duty. Pointed linen handkerchiefs are absolutely prohibited from all countries, except Russia, because this article is one which is produced in great quantity and tolerable perfection in that country, and finds a good market in Poland. (*Vide* Observations, in statement No. 6, relative to shawls and handkerchiefs.)

The Polish ell is about 23 inches standard measure.

NUMBERS of the different kinds of Hides and Skins dressed in the Kingdom of Poland, in each of the Years specified.

YEARS.	NAMES AND NUMBERS OF THE DIFFERENT DESCRIPTIONS.							
	Cow or Bull Hides.	Calfskins.	Horse Hides.	Sheepskins.	Goatskins.	Dogskins.	Different other Sorts not specified.	TOTAL.
	number.	number.	number.	number.	number.	number.	number.	number.
1837.....	....	....	....	....	....	....	....	130,800
1838.....	....	....	....	....	....	....	....	174,459
1839.....	139,458	65,207	13,628	143,428	5865	1939	99,295	471,011

The number of persons at present employed in this branch of business is stated at about 2000; and the business is said to be increasing.

The increase, however, must not be judged to be so sudden nor so great as the difference between the numbers of hides and skins dressed in 1838 and 1839 would make it appear. A great part of this seeming increase ought to be ascribed to the more exact mode of making the returns to government which was enforced in the latter year. The imitations of Morocco leather are said to be particularly good; but the demand for this article is on the decline, as it is at present little used for furniture; for the covering of which silk, cotton-cloth and other stuffs are now preferred.

Sole leather, pigs' skins, saddlers' hides, and other heavy descriptions are not considered equal with the same articles manufactured in other parts of the continent. The prices are about the same as in Germany.

NUMBER of Mills, or other Establishments, and of the Persons employed in the Manufacturing of Paper, in the Kingdom of Poland; of the Quantity and Value of the Annual Production, and of the Prices of Wages.

NAMES OF ESTABLISHMENTS.	Mills, or other Establishments.		Machines or other Apparatus Employed.	Annual Production.		Number of Persons Employed.	Price of Wages (daily).
	Existing in the Kingdom.	In Activity.		In Quantity.	In Value.		
	number.	number.	number.	reams.	florins.	number.	Polish currency.
Jezionna, near Warsaw, belonging to the Bank of Poland. The other 20 mills are too unimportant to deserve specific mention.....	21	18	1 machine, technically called machine sans fin, and 50 dipping vats.	499,980	about 2,666,000	300 men, 400 women, or girls from 12 to 15 years.	men, 2½ flo. women, 1 flo. girls under age, 2-3 flo. or 20 groschen.

The establishment at Jezionna alone employs 200 persons, out of the 700 employed in the whole country. Of the quantity of paper manufactured, 301,680 reams were coarse blotting-paper, packing or other unsized paper; and of the remaining quantity of fine paper, for writing or printing, Jezionna is said to furnish about 150,000 reams.

In 1837 the total production of the kingdom is stated to have been only 80,000 reams; and in 1838 only 6300 more. The quantity shown in this statement refers to the productions of 1841.

To give an idea of the prices of paper in Poland, it may be mentioned, that the paper on which these observations are written costs 6 florins, or about 3*s.* the quire.

QUANTITIES of Beer of different Descriptions brewed in the Kingdom of Poland, in each of the Years specified.

YEARS.	QUANTITIES.		
	Porter and Ale.	Bavarian and other light Beers.	TOTAL.
	fass.	fass.	fass.
1838	2940	....	2940
1839	3595	5996	9591
1840	4944	8	

The quantity of Bavarian beer, and other light beers, brewed in 1838 and 1840, could not be ascertained.
The fass (barrel) contains 32 garnitz, or about 28⅛ imperial gallons.

QUANTITIES of Glasswares manufactured in the Kingdom of Poland in the Year 1839.

YEAR.	DESCRIPTIONS AND QUANTITIES.						
	Window-glass.			Drinking-glasses, Decanters, and all other kinds.			Black Bottles.
	Common.	Medium.	Fine.	Common.	Medium.	Fine.	
	quintals.	quintals.	chests.	scores.	scores.	pieces.	quintals.
1839	6798	14,080	360	36,508	30,284	230,628	12,000

The Polish quintal is equal to 98,473 lbs. avoirdupois.
The chest contains 120 panes.
There are only two manufactories of these wares in Poland, which employ about 700 persons.
The window-glass, even the fine, is of the most wretched description, uneven of surface and bad in colour, besides being dear. The cut-glass wares are proportionably better, but their price is exorbitant, as dear again as in England. Plate-glass for mirrors is not made: that imported comes from Russia, and is rendered doubly expensive by the land-carriage and heavy import duty.

KINDS and Quantities of Earthenware and China manufactured in the Kingdom of Poland, in each of the Years 1837, 1838, and 1839.

YEARS.	UTENSILS OF ALL DESCRIPTIONS.		
	Of Earthenware.	Of China.	TOTAL.
	dozens.	dozens.	dozens.
1837	46,180		
1838	43,959	1850	45,809
1839	46,108	2500	48,608

Besides the articles here enumerated, the same manufactories furnished fire bricks in 1837, 36,000; and in 1839, 13,650.
The number of China articles produced in 1837, could not be ascertained; indeed, very little information relative to this branch of the manufactures of Poland could be obtained.

NUMBER of Establishments in the Kingdom of Poland for the Manufacture of Metals; Number of Furnaces, Forges, and Appliances used, and the Number of Persons employed, as well as the Quantities of Metals produced in each of the Years specified.

YEARS.	ESTABLISHMENTS.		APPLIANCES.				QUANTITIES OF METALS PRODUCED.						Number of Persons employed.

	Private Individuals.	..	..	..	..	..	....	....	14,000	....	....	....	

In the year 1838 the number of furnaces, &c. in the government works was not stated in the official returns, nor the number of persons employed in these works.

For the year 1841 it has been impossible to ascertain the exact number of furnaces, &c. in the private works, or the quantity of iron produced; the number, however, are supposed to be about the same as in 1838, as no new works have been erected.

There are no copper-mines, nor copper-works belonging to private individuals.

The blast furnaces and forges are worked with charcoal: puddling has been but little adopted as yet, in comparison with the open forges, for the purpose of converting pig iron into rolled, or bar iron; and better metal is obtained from the forges than from the puddling furnaces; but whether this fact be owing to want of skill in conducting the process of puddling, to the use of wood instead of coke, or to some peculiar quality of the crude iron, is not exactly known by the manufacturers of this country.

The rolling-mills are said to furnish very inferior metal.

The quantities of iron produced have not increased very much it appears, in the last four or five years. And the supply is still insufficient for the consumption of the home market; very extensive additions to the government works are in contemplation.

The quality of the iron is good, it furnishes sheet iron but little inferior to that of Russia, and is well adapted to the manufacture of cast steel.

The price of all descriptions of iron is nearly twice as high as the present prices of the same articles in England.

The working of the zinc ores shows the greatest proportionate increase since the commencement of operations. The annual produce from 1817 to to 1832 varied from 5000 to 9000 quintals; in 1822 it was 15,000; in 1834 it had more than tripled this last amount; in 1827 and 1828 it increased 70,000 quintals, which caused such a glut in the market that only 50,000 quintals were manufactured in the following years since 1830; in order to avoid a similar over-production, the supply has been steadily kept at about 60,000 quintals from the government works, and about 14,000 quintals from those belonging to private individuals. Of this quantity about 20,000 quintals are annually rolled for roofs, gutters of roofs, and other similar purposes. The remainder of the metal in blocks (or ingots) is exported.

The total quantity of zinc produced since 1816, to the end of 1840, was—From government works 945,070 quintals; from private works 137,030 quintals; total 1,082,100 quintals; of which was rolled into sheet zinc by the government works, from 1826 to 1840 included, 196,830 quintals.

The private works do not produce sheet zinc; they were commenced only in 1822, stopped working altogether in 1828 and 1829, in consequence of the unfavourable state of the market, and two works only have recommenced of late.

The production of copper in Poland is trifling, and although inadequate to the demands of the home market, from 1817 to 1840 it has averaged only about 5800 quintals of metal produced from upwards of 70,000 quintals of ore; which disproportion proves that the ores are not of a rich quality, and contain on an average only about 8¼ per cent of metal: whereas the Abbé Staszeee, in his work, alluded to in the body of the report, had promised 30 per cent, besides from ¼ an ounce to an ounce of silver for every quintal of ore.

The silver really obtained from the quantity of ore refined from 1817 to 1840 (1,610,000 quintals) is 747 grzyveen.

The Polish quintal = 98,473 lbs. avoirdupois.

Annual Amount, or Value of the Annual Sales of several of the minor Manufactories of the Kingdom of Poland, in the Year specified.

Basket-makers, &c.—In 1839 were produced 1662 pieces of fine fancy articles of this description; besides 247,900 plaitings for sieves, and 6500 for coarse bolting-cloths.

Bronze, gilt and lackered.—Very good articles of this description, particularly small statues, are made at Warsaw, but few are sold in consequence of the very high price.

Carriages.—In 1838 there were sold 272 carriages; in 1839, only 216; value together 474,000 florins, or about 11,850*l.*; and since then the sales are said to have decreased.

Chandleries.—Tallow candles and soap, made in 1841, amounted to about 1,804,000 pounds, value 105,360 florins, or about 26,000*l.* This branch of business employed about 320 persons.

Wax.—In 1839 about 33,000 pounds of candles and about 100 pounds of tapers were made.

Stearine.—About 25,000 pounds of candles were made of this patented composition in the same year, and since then the quantity is said to have increased considerably.

Chemical matches.—The manufactory of these trifling articles sold in 1839 to the amount of 90,000 florins, or about 2250*l.*

Chicory.—About 958,600 pounds of this surrogate of coffee were sold in 1839.

Cutlery.—Fine cutlery, particularly surgical instruments of very good quality, is made at Warsaw. In 1839 there were sold of these instruments just specified to the amount of about 45,000 florins, or about 1125*l.* The supply of commoner articles, especially of the knives used by the peasantry, is insufficient for the home market.

German silver.—The value of the article of this composition sold in 1838, was about 200,000 florins, or about 5000*l.* The sales are supposed to have decreased since then.

Flowers, artificial.—Besides 1600 bouquets for vases, other flowers to the amount of 54,000 florins, or about 1350*l.*, were sold by the manufactory of those articles at Warsaw. Foreign articles of this description are prohibited; but a great many are smuggled into the country. Considerable progress has been made of late in the manufacture of these articles at Warsaw.

Horsehair cloth.—The manufactory of this article employed, in 1839, 425 persons, and produced 1580 ells of cloth for furniture, besides 910,700 sieve cloths, and 2007 hats, caps, or other small articles. The value of this production could not be ascertained.

Instruments, musical.—Wind instruments are sent in great quantities to the interior of Russia, and also about 40 pianofortes annually. In 1839, 160 such instruments, valued at 156,000 florins, or about 3900*l.*, were sold by the different makers at Warsaw, and 16 were imported from Austria.

Japanned and lackered goods.—The sales of these articles amounted in 1841, to about 135,900 florins, or about 3397*l.* The quantity manufactured was rather more than twice that amount. About 150 persons are employed in this branch of business: the wares are of very inferior quality, and very dear.

Oil of vegetable substances.—In 1839 there were produced in Poland 61,000 garnitz of clarified oils, and 108,500 garnitz of common oil. This is all used in the country, and is insufficient for the consumption.

Straw hats.—To the value of about 32,000 florins, or about 800*l.*, were made in 1839

Vinegar.—78,800 garnitz were made in 1839, inadequate to the supply of the markets.

Manufacturing Industry, and Export Trade of the Kingdom of Poland, in the Year 1840, translated from the St. Petersburg Official Gazette.

"The following observations on the manufacturing industry and export trade of Poland in the year 1840, show the progressive development of the national resources, notwithstanding the unfavourable character of the harvest in this year in the greater part of the kingdom.

"Among all the branches of industry existing in Poland, none is more deserving of attention than the manufacture of cloth and other woollen stuffs, since their raw materials are almost exclusively furnished by the country itself. Their prosperity is, therefore, of the highest importance to the kingdom, and it is to be regretted that the losses occasioned by the disastrous events of the year 1830, are not yet entirely repaired. But notwithstanding this, the improvement is very perceptible, especially compared with the years immediately following this fatal epoch. The number of workmen employed in the cloth manufacture amounted to 9515 in 1839, and to 10,742 in 1840, and the total quantity manufactured in these two years was as follows:

	1839.	1840.
Cloth of the first quality	324,154 ells.	315,030 ells.
„ mean quality	945,061 „	1,007,517 „
„ ordinary quality	1,247,204 „	1,116,229 „
Total	2,516,419 „	2,438,776 „

"The value of cloth manufactured in the year 1840, was estimated at more than 17,500,000 Polish florins (2,631,531 silver roubles), exclusive of several other descriptions of linen stuffs, of which there was a considerable manufacture; viz.—

	1839.	1840.
Frieze	16,032 ells.	6,570 ells.
Flannel	52,273 „	78,240 „
Swanskin	464,505 „	387,110 „
Total	532,810 „	471,920 „

"The quantities of linen and hemp stuffs manufactured in 1839 and 1840 were—

	1839.	1840.
Linen cloth, fine	29,565 ells.	703,063 ells.
„ middling quality		1,276,296 „
„ inferior	333,148 „	114,475 „
Ticking, &c.	41,253 „	129,834 „

"We see by this that this industry is very important, and promises to become daily more useful and more productive; and the government has exerted every means in its power to encourage it, especially by giving increased activity to the spinning industry.

"The same is the case with the cotton manufacture, which is in a rising state of prosperity. The following table shows the quantities manufactured in the year 1840:

Stuffs which are sold by the ell	14,067,931 ells.
Cotton velvet, quilted, &c.	1,276,070 „
Tissues which are sold by the piece, such as shawls, handkerchiefs, &c.	641,071 pieces.
Ditto, ditto, smaller	353,710 „
Stockings	112,014 pairs.
Stuffs which are sold by weight	483,967 lbs.

"The cotton and linen cloth manufactures employ 17,000 workmen. The produce of the silk manufacture, which has only been lately introduced amounted in 1840 to 6000 ells of ribbons, &c., of a value of more than 10,000 florins.

"The following table shows the produce of the tanning trade in 1839 and 1840, which in the latter year, was valued at 2,800,000 florins :

	1839.	1840.
Ox and cow hides	139,458	73,565
Horse ditto	13,628	5,371
Sheepskins	143,428	127,805
Buckskins	2,191	1,762
Other descriptions of hides, &c.	....	206,249

"The amount of glasswares, &c., manufactured in 1840, was as follows :

White glass, in squares	37,149 scores.
—— inferior	4,306 cases.
Miscellaneous vessels (glasses, caraffes, &c.)	15,830 „
—— (bottles, &c.) ordinary quality	154,482 scores.

"There has been a falling off in the quantities of paper manufactured; viz.—

In 1839	198,306 reams.
1840	152,488 „
Decrease	45,818 „

"It is, however, expected that in future years the amount will be increased, as great improvements have been introduced into the paper manufactory at Esern, which belongs to the bank of Poland, and which will hereafter furnish with paper all the civil and military departments of the kingdom.

"One branch of Polish industry, which in the short space of one year has made surprising advances, remains to be spoken of; viz., the manufacture of beet-root sugar.

"In the year 1839, 132,000 lbs. of sugar were manufactured in the various establishments in the country. Since then, new manufactories have been established; and, in 1840, more than 3,200,000 lbs. were manufactured.

"Among many miscellaneous manufactures of secondary importance, together employing 3000 men, may be mentioned a large chemical manufactory at Warsaw, the value of the produce of which amounted in 1840 to 1,771,000 florins.

"The produce of the iron-mines and forges belonging to individuals, and where the number of workmen amounts to 6133, was estimated at 8,420,500 florins, including cast and bar iron, machinery, implements, &c.

"Such was the state of the manufacturing industry of Poland in the year 1840. The next point to be considered is the export trade of the kingdom, beginning with the produce of its mines, particularly zinc, from the rich beds of calamine, situated near Olkusz.

"In the year 1840 there was exported of this metal,

To Russia	13,243 quintals.
Prussia	40,810 „
Cracow	181 „
Total	54,234 „

of a value of 1,767,799 florins. The export of this metal in the preceding year amounted to 57,559 quintals, of a value of 1,552,179 florins, showing an increase of value of 215,620 florins, in consequence of the rise in the price of zinc, notwithstanding there is a decrease of 3325 quintals.

"The immense forests with which a large portion of the kingdom is still covered, lead to a considerable export trade in timber and firewood, which in the years 1839 and 1840 was as follows:

TIMBER.

In 1839	119,536 pieces,	valued at	2,568,504	florins.
1840 { To Prussia 83,847 / Cracow . 315 }	84,162 „	„	1,750,644	„
Decrease in 1840 .	115,374 „	„	817,860	„

FIREWOOD.

In 1839 . . .	To the value of	27,687 florins.
1840 . . .	„	1,380,001 „
Increase in 1840 . .		1,352,314 „

"The decrease which appears to have taken place in the export of timber is not so in reality, as a large portion of the wood intended for firewood, but floated down the rivers to the frontiers, before being made up into fagots, was, in the year 1839, entered as timber for building. The total value of wood of all kinds exported in 1839 and 1840 was as follows:

In 1839	2,596,188 florins.
1840	3,130,645 „
Increase in 1840 . .	534,457 „

"This trade and that in metals, considerable as they may appear, are but insignificant when compared with the agricultural produce annually exported to foreign countries."

We have introduced this extract of the Russian *official report*, which, to us, appears glowingly exaggerated, in order that it may be compared with an account which we have condensed from an able report drawn up at Warsaw.

CHAPTER XXV.

AGRICULTURE AND AGRICULTURAL PRODUCTIONS OF THE RUSSIAN EMPIRE.

We have, in a general view of the soil and resources of the Russian empire, given a summary description of its agricultural capabilities. The most exaggerated accounts having been given of the agricultural progress of Russia. We have entered with great care into an inquiry, as far as we could obtain information, on this subject. Plescheyeff we have found one of the best authorities, and whatever has appeared in official, or semi-official prints, is, we regret to say, the least to be relied upon. Kohl has supplied some useful information, and we have borrowed also from Schnitzler and other authorities; and especially from private sources.

According to Plescheyeff, Russia is divided into two great parts by the Ural mountains, which form nearly an uninterrupted barrier, from the north-eastern boundary of Orenburg to the Arctic Sea, and separate Siberia, or Asiatic from European Russia.

That part of Russia which lies west of the Ural mountains, presents an immense plain declining westward by an easy descent. This vast plain has a great

variety of climates, soils, and products. Its northern part, which declines towards the white and frozen seas, is covered with forests and marshes, and is but little fit for cultivation. The more southerly portion of this great plain, includes the whole region along the Wolga, as far as the steppes, or deserts between the Caspian and the Sea of Azof, and constitutes the most fertile part of Russia; generally it has a productive soil: the arable and meadow lands exceeding the woods, marshes, and heaths.

That portion of this region which extends over Voronejé, Penza, Tamboff, and Simbirsk, and eastward as far as the deserts, is the most remarkable for the quality of its fruit and agricultural produce. It has generally a rich soil, consisting of black earth strongly impregnated with saltpetre. But the tract which commences between the Sea of Azof and the Caspian, and extends near the shores of the latter; and between the Wolga and Ural, as far as the Emba, is little more than a level, dry, high, barren desert, interspersed with bogs and salt lakes.

The country lying on the east of the Ural mountains, known by the name of Siberia, is generally a barren flat tract of vast extent, watered by large rivers, but towards the south, susceptible of profitable cultivation.

AGRICULTURE OF THE NORTHERN RUSSIAN PROVINCES.

ARCHANGEL.—This province can scarcely be considered as to any extent a corn-growing country. It affords some pasturage, and some grain is grown south of 60 deg. N. latitude. Its total produce is less than 150,000 quarters, chiefly rye and barley. About 22,000 head of horned cattle, 5000 sheep, 15,000 horses, are pastured or fed in the whole region. The total area of this government is estimated at 164,000,700 English acres, of which only 459,000 are considered arable, and 144,990 meadow and pasture: the latter is, however, of greater extent, and 92,000,000 of acres are estimated as being covered with wood; a great part of which is useless for timber or building purposes. It is, however, computed that 8,000,000 or 9,000,000 of acres might be reclaimed of the whole extent of this province by drainage, cutting down the forests, &c., but that the expense would never be repaid in the value of the produce that it could be made to yield.

FINLAND can scarcely be included in the category of agricultural countries. The coasts, especially the southern, are chiefly surrounded by rocky islets, and the inland parts are covered with myriads of lakes, and it has no great rivers; it has a foggy climate and short seasons. Where corn is grown, it is sown and reaped within six to eight weeks: being rather more productive than the opposite coast of Sweden, it sends barley and rye there; little or no wheat or oats are grown. The grain is dried in ovens, the climate being too humid. The forests are extensive, but are burnt down in order to obtain the ashes for manuring the

steril soil. The pasturage is inferior, but a good many cattle are reared. Deals, timber, pitch, tar, and resin, are among the chief and the most valuable exports of this, generally speaking, poor, though very extensive country. The shores and lakes abound with fish, and the strœmling (*clupea harengus*) constitutes a principal article of food. In that portion of Lapland included within Finland, the peasantry rear herds of reindeer. Coarse woollen cloths and linens are woven for their own use by the peasants, who are an indolent, dirty, and generally uneducated people. The Finnish peasant, however, constructs his own rude boat, extracts the tar from the pine, and makes his own utensils.

In this thinly-settled country the area of which is much greater than that of the United Kingdom, the population, about 1,400,000, live generally far from each other amidst the lakes, islets, and solitudes of a dreary land. Those of the small towns forming the exception. Several privileges are still retained by the Finns, among which is their Diet, which now rarely assembles. By law, none but Finns can hold places of trust,—Finnish troops are not to be amalgamated in the Russian regiments, and the Finnish fleet shall bear the Finnish flag. This flotilla is better manned than any part of the Russian fleet. The people of Swedish origin, forming a small part only of the population, resemble in habits and appearance those of Sweden. The Finns, who are evidently of eastern origin, dress, with the exception of wearing a hat, like the people of Cabul.

Olonetz.—This government partakes very much of the same character, in regard to soil and climate, as Archangel. Area (including Lake Onega), estimated at nearly 62,400 square miles: population in 1838, 239,000. The west part of this government is alternately mountainous and marshy, or covered with lakes. The total area is computed at 40,000,000 of English acres, 920,000 of which is considered arable, and about 300,000 used as meadow and pasture; 26,000,000 acres is forest land, and mostly unfit for cultivation; and the remainder is waste, rocks, and water. The soil is thin, stony, and not fertile. Except in the district of Kargopol, into which some improvements have been introduced, agriculture is very backward. The produce of corn, chiefly barley and rye, in 1833, was estimated at 370,000 chetwerts, or nearly 280,000 quarters: not more than half the quantity is sufficient for the wants of the population. The peasantry are supported also on turnips, carrots, and other vegetables, and on the produce of the fisheries and chase. The principal source of wealth consists in the forests, which are of great extent. Pasturage is not abundant, and but few cattle are reared. The number of horned cattle being only about 15,000; of horses, 12,000; of sheep, 4000.

St. Petersburg.—Area estimated at about 15,000 square miles, or 9,600,000 acres; population 885,000. The country is generally flat, with the exception of a few undulating hills. The soil is mostly sandy and thin; and the climate damp, severe, and unhealthy. Rye, barley, oats, and some wheat are

grown, but the climate is unfavourable to the growth of corn; and nearly two-thirds of the province is covered with wood, marshes, and lakes.

The best agriculturists are German colonists, who raise flax, hemp, and above all, kitchen vegetables for the use of the capital.

Novgorod.—Area estimated at 43,880 square miles, or 27,083,200 acres: population in 1838, 825,400. Except in a few districts the soil is not very fertile, and night frosts often spoil the crops. Scarcely any orchard trees are met with; but hemp and flax are grown for exportation; and in 1832, 868,000 chetwerts of corn, principally rye, oats, and barley, were raised. Timber is an important product. Few cattle are reared.

Vologda.—Area estimated at 145,800 square miles, or 93,312,000 English acres, population (1838) 747,500. In the south and south-west parts, the soil is fertile, but elsewhere it is sandy or thin, and a great part of the surface is covered with marshes and forests. The arable land ploughed, is computed at nearly 9,000,000 English acres. The pastures and meadows at nearly 4,000,000 acres. The woods, forests, marshes, swamps, &c., at 80,312,000 acres, of which nearly 10,000,000 only is computed as reclaimable for agriculture and pasturage.

The grain principally cultivated are rye and barley; but while the produce of corn is computed by some as insufficient for the consumption, a Russian official return for 1835 states that the produce was 1,860,000 acres, or a surplus of 560,000 over the consumption.

Hemp, flax, and hops, succeed as well as beans and peas. Cattle and horses are numerous and good. In 1835, horned cattle, 410,000; horses, 285,000; sheep, 140,000; pigs, about 100,000.

Pskof.—Area about 22,000 square miles, or 14,180,000 English acres; population 705,300. Surface generally flat, with numerous marshes. The soil poor. More grain, chiefly rye, barley, and oats, is raised, than is sufficient for this thinly-peopled province. The annual produce is about 3,500,000 chetwerts, of which upwards of 1,000,000 may be exported. It consists chiefly of rye and barley. The cattle are inferior, and not reared in great numbers.

Tver.—The area of this government is estimated at 24,100 square miles, or 15,394,000 English acres; population 1,297,900. The climate is severe. The soil is generally poor, and the cold and uncertain climate is said to cause precarious harvests. The corn produced is scarcely sufficient for home consumption. Flax and hemp are grown in considerable quantities for exportation.

Smolensko.—The area about 21,400 square miles, or 13,494,000 acres; population 1,064,200. The surface is generally an undulating plain, with some marshy districts; and towards the north the surface consists of an elevated *plateau*, through which the Dnieper and other rivers, rise or flow. The soil is generally fertile, and produces more corn, chiefly rye, than is sufficient for home consump-

tion. Hemp, flax, tobacco, and hops are cultivated. Cattle-breeding is not commonly followed. Swine are very generally reared. The forests, which notwithstanding the long-continued felling of timber, are still extensive, constitute one of the chief sources of employment to the serfs and of riches to the proprietors.

PERM.—The area of this government is about 116,000 square miles, or 69,240,000 acres; the population about 1,450,000, and the greater part of this extensive region, which is considered to extend from Viatka and east over the Ural mountains, is covered with dense forests: arable land estimated at 5,100,000 acres; pastures 900,000 acres. It is stated, by some authorities, that Perm raises a surplus of corn: by others, that it does not yield sufficient corn for the consumption of the inhabitants.

VIATKA.—The area of this province is estimated at about 47,000 square miles, or 28,080,000 acres; population (1838) 1,511,600. The soil is mostly good, generally fertile, but with many extensive marshy districts: 6,500,000 acres are said to be arable, and about the same extent pasture. Agriculture is the principal occupation of the inhabitants, especially along the banks of the numerous and large rivers. The average crops of corn are more than the usual consumption of the people. Rye, barley, and oats are the principal grains; potatoes are seldom grown. Very little wheat is raised; peas, lentils, buckwheat, and large quantities of flax and hemp, are grown. The surplus produce goes chiefly to the North Russian provinces. Fruits are scarce, and apples rarely ripen. Pasturage and rearing live stock, chiefly horned cattle, is of next importance to agriculture.

AGRICULTURE OF THE BALTIC PROVINCES.

ESTHONIA.—The area of this province is about 10,000 English square miles, or 16,400,000 acres. The soil is in great part sandy or marshy, and naturally not adapted for the growth of corn, and the cultivable lands are estimated at not equal to one-third of the whole: the remaining two-thirds being unproductive or covered with firs, &c. Agriculture is, however, the chief employment of the people, and they raise more corn than is sufficient for their own consumption. Various vegetables, rye, barley, and oats, constitute their food; but wheat and buckwheat, flax, hemp, hops, and tobacco are also raised. The corn not required for food is chiefly used for distillation. Vegetables are very generally cultivated for the nourishment of the peasantry. Live stock are generally reared, and cattle are driven into Esthonia from different parts of Russia, to be fattened for the St. Petersburg market. The oxen, horses, and sheep of Esthonia are ill-bred and made; poultry is abundant. Elks, bears, wolves, badgers, foxes, &c., are still found in the woods. The fisheries on the coasts are of importance to the inhabitants. On the islands boat-building is a source of employment.

LIVONIA.—The area, including the island of Œsal in the Baltic, is 21,370 square

miles, or 13,676,800 acres; the population 740,100. The coast and the greater part of the inland counties are generally flat and marshy, with some hilly districts. The soil is in a few parts loamy, but generally sandy, being abundantly watered. By manuring it is rendered productive chiefly in rye and barley crops; of both which more is grown than is used for home consumption. Wheat and oats are partially cultivated, and buckwheat grows on sandy soils: flax, hops, vegetables, and potatoes are generally cultivated. The fruits are described as of an indifferent quality. Agricultural industry and the distillation of spirits constitute the leading occupations of the people, and the breeding of live stock is much less attended to; all which, including horses and sheep, are of inferior kinds.

COURLAND.—The area of this duchy is about 11,200 miles, and the population about 385,000. The coasts of this province and a great part of the country generally are flat, and marshes and sandy heaths occupy extensive districts. Part of the interior is an undulating country, and a chain of hills, which extend along the bank of the Düna, diverge in ramification over many parts of the country. The Düna and several other streams water the province, in which there are also numerous lakes. The atmosphere is damp, the sky often obscure, and the climate variable. The soil is generally light and sandy, and only rendered productive by constant manure. The eastern section is the most fertile: more than one-third of the surface is still covered by pine, fir, birch, alder, and a good deal of mixture of oak trees. The large pines and firs are said to have generally disappeared. Agriculture is the chief occupation of the people, who cultivate a poor soil with considerable industry and skill, and grow more corn, chiefly rye, barley, and oats, than is necessary for home consumption. Flax and hemp, vegetables, a few fruits, and some tobacco are also cultivated. The pasturage is scanty, and few cattle are reared; the oxen, sheep, and horses are generally of inferior breeds.

The following sketches of the Baltic provinces are translated from Kohl and other travellers:

"Near Narva," observes Kohl, "we saw a large piece of forest that had been cleared, and the trees and branches were lying on the ground. I was told this was done to strengthen the ground. The wood would decay in 5 or 6 years, and would then be excellent manure. Manuring with decayed wood is practised in all the Baltic provinces; but nowhere are the noble trees wasted for this purpose, on so large a scale, as in Ingermannland. In Courland, only the useless twigs and branches are used as manure.

"As the cultivation grows much more imperfect, and the number of inhabitants much less in Ingermannland, so the wild beasts become much more numerous and bold. We met several wolves almost immediately after leaving Narva. A little way before us, on the road was another sledge, and the wolves continually crossed the road between the sledges, with astonishing boldness and *nonchalance*.

"The bears, though stronger, are much more shy than the wolves, who are every day persecuted with sticks and stones by the shepherds, and therefore, if they do not grow more courageous, they become more impudent and indifferent to blows.

"Travellers who mount their *kalesch* at Memel, and changing horses from station to station on the road to St. Petersburg, fly swiftly through Courland, Livonia, and Esthonia, judge very unfavourably of these provinces. They imagine themselves driving through a wilderness of alternate forest, marsh, and desert.

"Here and there they see a solitary uninviting house lying alone in the frowning forest, and the inhabitants muffled in their gray sheepskins. True the landscape is always flat and low, and the vegetation monotonous. The inhabitants, too, take little pains to adorn the exterior either of their persons or dwellings; but the country notwithstanding has charms of its own.

"The country inhabited by the Lettes and Esthonians lies between 55 and 60 deg. north latitude. Their winter is six months long and very cold and stormy. Their summer is short and hot. The autumn is dreary, rainy, and dirty; and a spring scarcely exists. Both the air and the soil of these countries have a great disposition to dampness. Whether on account of the marshy nature of the ground, or a predisposition of the air, it often drizzles for days and weeks together, without either clearing up or pouring down. Every thing seems to be mixed up together; even rain and snow often fall at the same time. The Germans have invented the expression of '*Es schlakert*' for this chaotic sort of weather. In the dark months of October and November, impenetrable clouds for ever conceal the sky, and night and day are scarcely distinguishable from each other. The pleasantest peculiarities of the climate are the light summer nights, and the Aurora Borealis in winter. At certain seasons of the year the whole country appears to be one vast marsh. Clear brooks scarcely exist any where, and all the small rivers are marshy and dangerous. The aspect of a great Livonian marsh is dreary. Nothing is to be seen but a barren desolate chaos overgrown by moss and rushes. Here and there rise a solitary pine or stunted birch. Where the ground has sunk and water collected over it, lakes are formed. These lakes sometimes contain floating islands—pieces of the marshy soil detach themselves from the land, with all that may be growing on them, and the wind drives them backwards and forwards between the opposite shores. The inhabitants fasten these islands now to one side, now to the other, according as they wish to graze their cattle.

"Though the marshes, lakes, moors, and sandwastes, render many parts useless for agriculture, yet the country is upon the whole fertile in crops of rye, barley, and flax. The fertility, however, decreases the further northward we go; Courland is the most fruitful, Esthonia the least so, and Livonia occupies a middle rank. Livonia, however, is distinguished by a greater perfection of agricultural skill than Courland.

"In spite of the immense consumption of wood which has been going on for centuries, in the ovens, distilleries, bathing-rooms, houses, and in the manuring of the Baltic provinces, the magnificence and extent of their pine and fir forests is still great.

"The most common trees are the fir, pine, birch, and alder. The birch does not grow in the thick forests, but forms light and graceful groups on the meadows and on the borders of the lakes. The birch grows better the further northward we go. The contrary is the case with the beech, oak, poplar, alder, and willow. No tree in the country is so systematically persecuted and rooted out as the oak. For, different from the pines, which prefer a sandy soil, and the birch which flourishes best in damp ground, the oak always chooses the most beautiful and fertile spots; the oak, therefore, gives way to agricultural industry, and the plough is its sworn foe.

"The wolf is the most common of all the wild animals, particularly in Esthonia. The bear has quite abandoned the province of Courland; but in Livonia and Esthonia he is still common. Many different kinds of bears are found. On the Peipus lake, and between Narva and Dorpat, the largest, strongest, and most dangerous species is met with. It is ash-gray with a white stripe round the neck. Lynxes are not so common as bears, and beavers and squirrels are still less so. There are foxes also; and the wild hog is a frequent guest from Lithuania. In all the large forests the elk abounds. They are most numerous in eastern Livonia. Hares are common, and deer are often found in Courland.

"For many centuries the corn of the Baltic provinces, and of Poland, has travelled all over the west of Europe. Sweden, Holland, and many other countries have fed from these granaries for ages.

"These abundant stores of corn, nourished by the toil of enslaved and unrewarded thousands, have built the luxurious houses and formed the wealthy communities of Riga, Reval, Narva, and other cities, and connected the Baltic provinces with every part of the earth.

"The whole of the Baltic provinces, with the exception of the land possessed by the

great cities in their immediate neighbourhood, is divided into great and small estates called '*gebiete.*'

"There are 2500 such divisions in Courland, Livonia, and Esthonia. As the country contains 1600 German square miles, each estate extends, on an average, to two-thirds of a square mile, and 500 inhabitants. Many *gebiete*, however, contain 10, 20, and even 50 square miles, with a population of 10,000, while others again fall far below the average.

"The owners of these territories have always sought, as much as possible, to preserve the principle of unity and indivisibility.

"They never divide their estates, but leave them to the eldest son, and provide for their other sons and daughters in different ways. Neither are several estates ever united into one, for a lord who possesses more than one estate, always keeps each strictly apart, under a different administration.

"The peasantry of one estate will differ strikingly in dress, manners, and customs, from those of others. The serfs of every domain have much that is peculiar to themselves in the form and fashion of their harness, in the cut and colour of their coats and hats, and in their customs at weddings, festivals, &c. Even their moral characters are very various, so that the peasantry of one estate will be thievish, brutal, and deceitful, while those of another will be honest, civilized, and faithful.

"The landowners keep the serfs of different estates strictly apart. They forbid and hinder in every way the intermarriages of serfs belonging to different domains.

"The residence of the nobleman and his family, which is called the 'hof', is usually placed on a hill, or on the bank of a river. It consists of the principal dwelling-house, of houses for guests, of a building for the household, and of stables, greenhouses, mills, beer-houses, inns, distilleries, &c., often amounting to 20 or 30 different buildings, surrounded by gardens, parks, woods, and cornfields. The peasantry live at some distance from the 'hof,' in the surrounding forests and marshes, divided into little communities, called in German, '*bauerhöfen*,' and in Lettish, '*gesinde*.' To each *gesinde* small pieces of land are attached, which the peasants cultivate for their own profit. These pieces of land are again variously subdivided, the principal part belonging to the *wirth* of the *gesinde*. Every gesinde must include in itself all that it requires; a piece of land for rye, another for barley, another for flax, a patch for sheep, and another for cattle-grazing, a piece of water, a piece of woodland, a garden, a beehive, and so on.

"All domains are either private estates, crown-lands, church-lands, or town-lands. The crown-lands are generally let to German noblemen. The pastoral estates, or church-lands, resemble in every respect those of the nobility, having their own *hof gesinde*, gardens, forests, meadows, &c. A pastor in the Baltic provinces is as much a landowner as his noble patron himself.

"Rye is decidedly the principal production of the country, and attains greater perfection here than anywhere else. Wheat, barley, and oats, are indeed cultivated; but it is upon their rye harvests that the provinces depend. The whole art of agriculture is very much simplified by this circumstance. The flax and hemp of Courland and Esthonia is very unimportant; only enough for home consumption is grown. The far-famed flax of Riga comes chiefly from Livonia, Lithuania, and White Russia.

"In no country is agriculture carried on upon so broad a scale as in the Baltic provinces. The cornfields of an estate generally lie altogether, in one wide, far spread mass of grain, and in many places a whole square, *verst*, will be found covered with rye. Whenever any work is to be done, a hundred hands are always ready to begin together.

"When a house is building, it swarms like an ant-hill, with numbers of busy beings, old and young, men, women, and children, all hammer, paint, plaster, fetch and carry, till the house is finished. When a new field is to be laid out, or a forest cleared, half the population of the estate is called out, often amounting to perhaps 400 or 500 men. They rush into the woods with their axes, chopping, hacking, digging, and tearing away at the branches and roots, and long before it could be expected, the forest has vanished, the trees lie sawn to pieces and scattered in large heaps, and fifty ploughs draw their long furrows through the soft mould.

"Their agricultural instruments are small, light, and although apparently clumsy and

barbarous, yet well adapted to their purpose. The harrow for instance, consists of young fir-trees, bound together by cross boughs, in which the short thick twigs are left as teeth. None even of the best constructed harrows serve them so well as this primitive contrivance.

"The ploughshare used all over the country (for a regular plough is unknown) is so small and light, that a man can easily carry it under his arm. It is, however, difficult to guide, as its principal support is in the hands of the ploughman.

"Every peasant has a piece of land measured out to him, which he must plough before night. As far as the eye can reach, the ground is then seen covered with ploughs, horses, and labourers.

"In this country, the corn, rye chiefly, grows very fast; and to an enormous height; the heavy-laden ears droop like bunches of grapes on a vine. The green springing grain shows itself above the earth in May; in June it stands in ear, and in the bright summer nights of July it falls beneath the scythe of the reaper. The harvest is reaped at night. This I was told, was because the night-dews closed the ears, while in the day time, the dry grain falls out more easily.

"After the harvest, begin the *rigenarbeiten*. The *rige* is a building used partly for the thrashing, and partly for the *previous* drying of the grain. Whether the great dampness of the climate, or whether a peculiarity in the corn renders such an operation necessary, it has long been the custom in these countries, and in the neighbouring Russian and Lithuanian provinces, to dry corn by fire, previously to thrashing it. The *rigen* are usually very large, and built near the *hof*, or in the middle of the fields. They consist of two wings, of which one is for thrashing, and the other for drying. The latter contains a large oven which raises the temperature of the air to 40, 50, or 60 degrees of Réaumur. The corn is spread out on boards around it, and soon loses all dampness. Many advantages are gained by this process. The thrashing is rendered easier, the corn is firmer, healthier, drier, more lasting, and less liable to worms. The labour attending it is very light, and carried on by men, women, and children.

"In winter, half the population is employed in the transport of goods. In summer the forests, on account of their marshy character, are in great part inaccessible to man, but the winter makes firm roads everywhere. On this account, all transports from one place to another, and all wood and forest labours are put off till winter. As the whole plan of labour, and all the agricultural arrangements are made with a view to a snowy and severe winter, it may be imagined what expense, trouble, and vexation, is occasioned by a mild one. If there be not plenty of snow and ice, and if the weather be not very cold, the forests and roads remain marshy, the communication with the towns is cut off, the corn cannot be sold or exported without great cost and trouble, and all building is at a stand-still for want of wood.

"If June is without rain, and the hay is used up, the cattle are sure to suffer from famine, as there is no second hay crop. In bad hay years the cattle die in great numbers; and after bad corn harvests, the peasantry have to live entirely on the bread purchased at high prices by their lords.

"The labours of the forests are the hardest and most oppressive of all. The quantities of wood used is enormous. The shoes of the peasants and the bark for the roofs of the houses alone waste an immense number of trees. The quantity burnt in the houses, distilleries, and the *rigen*, must be very great.

"In December, when the snow roads become firm, all the different populations of the estates lose no time in taking advantage of the ice, and all the paths and roads are seen filled by long processions of small sledges, each drawn by one horse, and laden with a few sacks of corn, hastening to the seaport towns.

"The horses and oxen of the Baltic provinces are particularly small and mean-looking. A meagre Livonian cow is the very picture of want and misery. The loads which the horses can carry are so lilliputian, and the milk given by the cows is so scanty, that it is only their great numbers which can supply their deficiencies.

"The cow of these provinces is naturally of a poor race, and is still more so from its bad and scanty food. In very good years they are fed on hay, but otherwise they only

get straw and marshweed. The horse is small and not strong, but sustains fatigue and hardship in an extraordinary degree. The horse has a great deal of labour to perform, yet the Lettes treat their horses with the greatest cruelty. The race is spread not only over Courland, Livonia, and Esthonia, but over Finland, Ingermannland, and part of Lithuania.

"In Livonia, agricultural societies of landowners have lately been formed, after the pattern of those in Germany. Many books and pamphlets have been written upon the means of adapting foreign improvements to the circumstance and condition of the country. The young nobles, more than they ever did before, study the science of agriculture now at the German universities: agricultural books and journals are much read, and improvements in the management of land are the current subjects of conversation. New thrashing machines are imported and invented; food and shelter are beginning to be prepared for cattle. The cattle of Holstein and Switzerland are imported to improve the breed.

"Some enlightened landowners employ German veterinary surgeons, and German foresters. Notwithstanding all this, however, the reform progresses very slowly. From no branch of industry is it so difficult to banish old prejudices and habits, as from the agricultural arts.

"The vegetable gardeners in the environs of towns are exclusively Russians; they spread themselves all round the cities with their cabbage and asparagus gardens. The Russians are also frequently masons, carpenters, smiths, &c., in the great cities.

"If we cast a summary glance over the whole population of the Baltic provinces, we find the original inhabitants, the Lettes and Esthonians, are agricultural labourers, with a very few exceptions.

"The Germans are the aristocracy of the country, and consist of the nobility, living on their own estates, of the merchants and tradesmen in the towns, and of the *literaten*.

"The most rising and industrious class are the Russian settlers, and travelling mechanics and tradesmen. The Jews are scattered through the provinces as innkeepers, small shopkeepers, and beggars; and the gipsies as thieves and horse-dealers.

"The whole population of the Baltic provinces is about 1,500,000, and the population decreases in density towards the north. Of 1000 inhabitants, about 900 are Lettes and Esthonians, 50 Germans, 30 Russians, 5 Swedes, and 15 Jews.

"The interesting but almost unnoticed races of the Lettes and Lithuanians are a perpetual and puzzling enigma. Lonely and unconnected with any of the surrounding nations, they occupy their little nook of northern land, evidently unsimilar and unrelated to any European nation, and bear affinity only to the tribes that inhabit the far east, at the foot of Dawaligiri, or on the shores of the Ganges.

"The Lette always brews his own beer, builds his own house, and every family make their own clothes; so that there is no occasion for tailors, masons, &c. Every household has always kept a great deal to itself, without associating much with others; and this has prevented the rise of great and powerful families.

"It is probably on account of this repelling and unsocial spirit, that a race gifted with so many talents and so much natural intelligence, should have remained for hundreds of years so thoroughly useless and insignificant. Scarcely a nation can be named who would not appear bold, spirited, and energetic, compared to the Lettes. They are soft-hearted, timid, and fearful, childish, quiet, and resigned to good or evil fortune, and all these good and bad qualities unfit them for any thing but servitude and dependence. The spirit of trade and speculation is as deficient in the Lette as it is conspicuous in the Russian. They never wander from place to place, but cling like plants to the little spot of land to which they belong, bitter as is often their lot in the land of their fathers.

"One quality the Lettes share with all enslaved tribes, is a great disposition to thieving. It is remarkable, however, that they never commit any great robberies. A sack of gold might be left outside for days or nights without being touched by a Lette; but there is hardly one of them, within whose reach, needles, pipes, ribbons or such trifles can be safely trusted.

"A Lettish *bauerhof* consists of the dwelling-house, the stables, cowhouses, bathing-house, the *kleete* and the *rige*. These buildings lie together in a circle or square, with a

court in the centre. They are always situated on the banks of some river or stream. Two or more of these *gehöfte* sometimes stand together, but never enough to form any thing like a village. A narrow little passage, with high wooden walls on each side leads to a little low wooden door, the only entrance into the *gehöfte*. All the other doors and windows look into the courtyard. The dwelling-house may be easily distinguished by its size, and the number of little windows. On entering, a little hall presents itself, in the centre of which is a fire with the porridge kettle suspended over it. On the right hand side is the sitting-room for the principal family; and on the left another for different purposes and for the serving-maids and men.

"The oven is the most important article of furniture, and the favourite resting-place. It is built of Dutch tiles, around it are placed benches, and over it sleeping places, where they enjoy their greatest luxury, that of baking themselves. The other buildings are partitioned into an endless number of little divisions. There is one stable for the horse of the father of the family; another smaller one for those of the men; a stall for the cows, one for the sheep; a little building called the *kleete*, containing the clothes, linen, butter, flax, and corn of the family; another for those of the servants: a building for the carts and sledges, another for ploughs and agricultural implements, another for drying cheese, a *rige* for the thrashing and drying of corn, and finally a bath-room.

"The dwellings of the Lettes are much superior to those of the Esthonians, who have no separate rooms. When we enter an Esthonian house, we are generally at once in the bedroom, sitting-room, kitchen, provision-room, sheep-pen, and pigsty. The Lettes have always chimneys. The Esthonians let the smoke escape at the door.

"The olive was not of more use to the Athenians, the date-tree to the Arabs, than the birch-tree is to the Lettes. The birchwoods or *behrsen* often present the most beautiful appearance; they resemble parks laid out by nature. From its root to its summit, there is nothing in the birch-tree, neither leaves, wood, root, bark, nor juice, which is not turned to many different uses by the Lettes. The foliage, when young and fresh, has many medicinal qualities, and the buds and young sprouts are collected in great quantities in the spring, particularly for strengthening baths to those suffering from gout or rheumatism. In May or June, the leaves, which then assume a bright green colour, are collected and boiled, and a beautiful yellow dye is extracted from them, which, when mixed with other materials, produces again other colours, and is used by the Russians, Lettes, and Fins, to dye and ornament their clothes. In July and August, when mature, they are plucked with the little twigs on which they grow, for a very peculiar purpose. They are called *slotes*, and are used by the Lettes to sprinkle and splash themselves when bathing. Finally, in autumn, the dried fallen leaves are used for stuffing pillows and cushions.

"Nearly all their furniture is made of the birchwood, as well as their agricultural and other implements. It produces excellent charcoal, which is the most common kind of fuel in the north. From the roots are prepared the well-known birch-tar called '*deggot*.' The bark is very tough, thick, and water-tight, and is made into bottles, baskets, flasks, cups, shoes, and other things. It is also used in large quantities for covering roofs, and a beautiful black dye is extracted from it. From the juice of the birch-tree is prepared the ordinary drink of the Lettes, their '*birkenwasser*,' from which they also make vinegar; and in some districts they boil it into a sweet syrup, which serve them instead of sugar. For those who are too poor to drink beer or mead, this northern wine is the only festive drink. The birch-tree is, indeed, indispensable to these tribes, for it furnishes them with roof, clothing, furniture, wine, vinegar, sugar, bedding, fire, medicine, and other things.

"The Lettes are not at all fond of going on foot, and make use of their active little horses upon every occasion. The women always ride and understand the managing of horses as well as the men. They go to their markets on horseback or in sledges. Handbarrows and wheelbarrows are unknown. They use their sledges and horses for carrying every thing, and a pound of butter, flax, or any little trifle, is conveyed in this way. They will often harness two horses to a sledge to carry a hare to market. They go to church on horseback or in sledges; and when taking the dead to be buried, they place the coffin on a sledge, and ride behind it on horseback. The night-watching among the Lettes by the corpses of their dead resemble those of the Irish."

The foregoing character of the *Lettes* has close affinity to that of the Egyptian fellahs. (See Egypt.)

"*Agriculture of the Esthonians.*—During the five centuries they have been subject to German sway, the Esthonians have scarcely adopted from their masters a single improvement in any of the useful arts, and they still cultivate, not only their own fields, but those of their lords, in the old Esthonian fashion. Barley, oats, and rye, are the kinds of grain most cultivated; wheaten bread is never eaten but on great festivals.

"Horticulture is unknown among the Esthonians; they have neither flower, fruit, nor vegetable gardens. It is rare to see so much as a few stunted and solitary apple-trees growing in their courtyards. Even potatoes are all but unknown to them, and cabbages are almost the only vegetable they eat. The tending of bees is a very important part of their occupations. By means of thick trunks of trees, which they saw off and hollow out, and in which they place their beehives, they manage to preserve these animals even through the piercing cold of the northern winter. They use honey in the making of cakes, mead, and all holiday dishes.

"The Esthonians are far bolder hunters and fishermen than the Lettes. An Esthonian though alone, and armed only with a single-barrelled piece, will follow a bear into his den, when a false aim is likely to be followed by certain death, not to the bear, but to the man.

"No branch of industry or manufacture is carried on by the Esthonian with a view to commerce. Each man makes for himself every thing he needs. In their houses the men employ themselves in making sledge-runners, staves, hoops for casks, wooden plates, dishes, and spoons, or in preparing their sheepskins. The women, meanwhile, are employed in weaving, spinning, sewing, and bleaching; in cutting torches out of birchwood, and in plaiting its bark into sandals. Thus have they gone on for a thousand years.

"In the year 1804 Alexander issued an imperial edict, which materially changed and improved the condition of the peasantry of Livonia and Esthonia. Courland remained in the same condition as before, until 1817, when by the praiseworthy exertions of the governor of the provinces, General Paulucci, Courland also was brought under the influence of the new law, and the emperor received at Mitau the thanks of the nobility and peasantry of Courland.

"The serfs were not, however, at once placed in the possession of their liberty; fourteen years of a state of transition were to prepare them for emancipation. The whole enslaved population of the country was divided into certain classes according to ages, and every year a fourteenth of each class was emancipated. In 1831 it was completed, the year 1817 was taken as the normal year, by which future years were to be governed; that is, the labours performed by the peasants for their masters during that year were set down in each estate as measures for their future labours. Inventories were taken of the stock and implements belonging to each *gesinde*. These were declared fixtures on the *gesinde*, and were to be delivered to the farmer upon entering upon his farm, and delivered up on the expiration of his lease. The punishment which the master might inflict, as well as the labour he might exact, were distinctly fixed, and tribunals of the peasants themselves were established. The condition of the peasant of the Baltic is thus: he is no longer bound to the soil, but may, after half a year's notice given to his lord, quit the estate. In the same way his lord, by giving him half a year's notice, may force him to leave. A peasant's situation must, however, become intolerable, before he leaves the spot where he has been born. They are continually in debt to their lords, who can by this means prevent their departure should they think fit, so that their emancipation has hitherto been but of little benefit to the peasants. Nor can any good effects be produced until the peasant has a right of acquiring and holding landed property.

"This, however, they have little chance of obtaining, as the government dare not, if they would, on account of their other enslaved provinces, yield *full* freedom to the peasants of the Baltic."

AGRICULTURE OF THE KINGDOM OF POLAND.

Our information relative to the agriculture of the kingdom is chiefly from Mr. Jacob's reports, and we have added such further information as we have been enabled to procure.

The country which is now concentrated within the vice-regal kingdom of Poland is level, with scarcely an undulation, except where the courses of the rivers have formed channels below the general level of the country.

In summer these rivers are but small streams; but when they are swollen by the rains of autumn, and the melting of the snow on the Carpathian mountains in the spring, they form large channels, extending on both sides to a great distance; and their deposits, in many parts enriches the land, and it presents in summer the aspect of verdant and luxuriant meadows. In other parts the periodical swelling of the streams have formed morasses, which, until reclaimed, are not adapted for agriculture.

"The plains," says Mr. Jacob, "which extend from the borders of one river to another, are open fields, with scarcely any perceptible division of the land, and showing scarcely any trees, even around the villages. The portions of woodland on these plains is very extensive; but they are in large masses, with great intervals of arable land between them.

"The soil is mostly sandy, with occasional mixture of a sandy loam; it is very thin, resting chiefly on a bed of granite, through which the heavy rains gradually percolate. Such a soil is easily ploughed; sometimes two horses, or two oxen, and not unfrequently two cows, perform this and the other operations of husbandry.

"This description of the kingdom of Poland is strictly applicable to six of the eight *waiwoodships* or provinces into which it is now divided.

"To the south of the river Pilica, which comprehends the two provinces of Sandomir and Cracow, the appearance of the land, and the face of the country improve; and in proceeding south to the banks of the Vistula, there is to be seen a more undulating district, and a more tenacious and fruitful soil. Much of the land is a clayey loam, requiring three or four horses to plough it, yielding when tolerably managed, crops of excellent wheat and oats; and where the husbandry is so good as to have adopted the practice of sowing clover between the two corn crops, the produce is very abundant.

"The southern point of this district forming now an independent republic, called, from the name of its capital, Cracow, is very fertile. It extends along the Vistula about 20 miles, and contains in 500 square miles, or 320,000 acres, about 100,000 inhabitants.

"Some of the estates in Poland, belonging to the nobility of the highest rank, are of enormous extent; but owing to the system of dividing the land among all the children, unless a special entail secures a majorat to the eldest son, which is in some few instances the case, much of it is possessed in allotments which we should deem large; but which, on account of their low value, and when compared with a few others, are not so. Of these secondary classes of estates, 5000 acres and 6000 acres would be deemed small, and 30,000 acres or 40,000 acres large. There are besides these, numerous small properties, some of a few acres, which by frequent subdivisions, have descended to younger branches of noble families.

"The present owners are commonly poor, but too proud to follow any profession but that of a soldier, and prefer to labour in the fields with their own hands rather than to engage in trade of any kind. As titles descended to every son, and are continued through all the successors, the nobility have become very numerous; but since the Emperor of Russia has gained the dominion over Poland, the use of titles has been restricted. No one can assume that of baron, unless his clear income from his estates exceeds 1000 guldens, or 25*l.*; none that of count whose rents are less than 3000 guldens, or 75*l.*; and none that of prince, who has less than 5000 guldens, or 125*l.*

"The whole of the lands are made alienable, and may now be purchased by persons of any rank, and are actually held by some who are burghers or peasants; the Jews alone are prohibited from becoming proprietors of the soil, though they have very numerous mortgages upon it. When they foreclose, the lands must consequently be sold; and as these Jews, who are the monied capitalists, cannot become purchasers, the prices they bring are very trifling.

"The most numerous class of cultivators are peasants; they have a limited property in the lands which they occupy and the cottages in which they live, under the condition of working a stipulated number of days in each week, on their lord's demesne, and paying a specified quantity of produce, such as poultry, eggs, yarn, and other things, in conformity with ancient usage.

"The extent of these holdings vary, according to the quality of the land, and the quantity of duty work, or of payments in kind which are to be fulfilled.

"On a large property which I examined, the peasants had about forty-eight acres of land each, for which they were bound to work for two days in every week with two oxen. If their labour was further required, they were paid threepence per day for two other days, and if beyond that number, sixpence per day. On another property, I found the peasants had about thirty-six acres, for which they worked two days in each week, with two oxen; when called upon for extra labour, they are paid sixpence a day for themselves and oxen for the next two days; or, if they work without their oxen, threepence. If their labour is demanded the remaining two days in the week, the sum to be paid is made the subject of a special agreement. On one estate the peasants had but twenty-four acres, and did one day's work themselves with one horse; the rest of their labour was paid for in money, by agreement made at the time it was required. Another proprietor, on land somewhat exhausted, granted to each of his peasants more than fifty acres of land, for which they worked with two horses three days in the week. There are several other instances of various rates of duty work, and the quantity of land which is appropriated for its performance. Some are of a luxurious kind. I was told that the inhabitants of two whole villages, near a princely domain, hold their lands on condition of employing a certain number of days in each week in cleaning the walks, and keeping in good order the pleasure-grounds which surround the vast castle of their benevolent and hospitable landlord.

"In general, this peasantry is in a condition of great distress, and involved in debt to their lord. They are legally no longer slaves, or *adstricti glebæ*, but *de facto* they are both.

"By the constitution promulgated in 1791, they were declared free, and that part of the constitution suffered no alteration under the dominion of the Russians and Prussians; was confirmed when the King of Saxony became sovereign, and was again assured in 1815, when the Emperor of Russia was enthroned as King of Poland.

"The peasants can leave their land, but must first acquit the pecuniary demands of their lords. Few are able to do this, as most of them are in arrears. The lords must supply them with their oxen in case one dies; their ploughs and other implements must be furnished to them by him, and in years of scarcity they become involved in debt for the requisite subsistence of themselves and cattle. This, together with local attachments, and the habit of respect for their feudal superior, has in general prevented the peasants from wandering away from the houses of their fathers, and from the protection of their chiefs. It thus rarely happens that the peasant quits the estate on which he has been born, although occasionally it may occur when a declining property produces a necessitous peasantry.

"When a transfer is made, either by testament or conveyance, the persons of the peasants are not indeed expressly conveyed, but their services are generally the most valuable part of the property.

"These people live in wooden huts covered with thatch or shingle, consisting of one room with a stove, around which the inhabitants and their cattle crowd together, and where the most disgusting filthiness prevails. Their common food is cabbage, potato, sometimes, but not generally, peas, black bread, and soup, or rather gruel, without the addition of butter or meat. Their chief drink is water, or the cheap whiskey of the country, which is the only luxury of the peasants, and is drunk, whenever they can obtain it, in enormous

quantities. They use much salt with their vegetable food, and in spite of the heavy tax on that commodity can never dispense with it at their meals. I was informed, and saw reason to credit the account, that when the peasants brought their trifling quantities of produce to the market-towns, a part of the money was first used to purchase salt, and the rest spent in whiskey; and a state of intoxication ensued, that commonly endured till the exhaustion of the purse had restored them to sobriety. In their houses they have little that merits the name of furniture, and their clothing is coarse, ragged, and filthy, even to disgust.

"*Mode of Cultivation.*—The common course of cropping is the old system of a whole year's fallow, followed by winter corn, and that by summer corn, and then a fallow again. Thus one-third of the land bears nothing. The winter crop in the northern part of Poland, consists of wheat and rye; the proportion of the latter to the former is nearly as nine to one, and the wheat enjoys what little manure is preserved. Thus the wheat actually cultivated does not occupy more than one-thirtieth part of the arable land.

"In the southern part of the kingdom the wheat bears a large proportion to the rye, amounting, on the more tenacious soils, to a fifth; and even in some cases to a fourth part of the rye.

"The statements I could collect, and my own observations, led me to conclude the stock of cattle to be very small in proportion to the extent of land, and to the number of the inhabitants.

"No country can be much better adapted for the breeding of sheep than the greater part of the kingdom of Poland. Wherever it is attended to with due skill, it is found to be beneficial; but the poverty of the landholders, and their want of knowledge of the advantages to be derived from that kind of live stock, keeps them from devoting their land to their propagation.

"Of the sheep in Poland, the best are those in the province of Lublin; but they are very inferior to the breed of Saxony. The cows are a smallish race, and generally kept in bad condition, both as to food and cleanliness. They are for the most part stall-fed, but from negligence yield very little butter and no tolerable cheese.

"With the exception of a part of the two southernmost provinces, the soil of Poland is of such a thin nature, that where it is moderately farmed it can scarcely be made to bear a medium crop of wheat more frequently than once in nine years. I examined a farm in the province of Lublin, the proprietor of which is in easy circumstances, and possesses several other estates. The extent of this farm is about 5500 acres. The live stock consisted of sixty milch cows, which are let to a dairyman at about nineteen shillings per year each; some few young cattle, eight or nine horses, and between 500 and 600 sheep.

"The ploughing is performed by two oxen, for which and for his own labour, two days in each week, the peasant has a house, firing, and about forty acres of land, to which the manure made by his oxen is applied. About 2000 acres is in this way in the occupation of the peasants. The manure, therefore, of the cows, sheep, and horses, is applicable to the lord's portion of somewhat more than 3000 acres, and supplies it with more liberality than is practised on any other land near it. The whole is under the plough; there is neither meadow nor permanent pasturage. The rotation of crops is as follows:—The first year a clean fallow, three or four times ploughed; the second year potatoes are planted; the third year wheat is sown, and in the following spring clover amongst it. The fourth and fifth years, the clover is either made into hay, or used for the stall-fed cows and the horses, or fed on the land by the sheep; the sixth year peas, or buckwheat are grown; then it is fallowed for a year; and the eighth year a crop of rye is grown; and the ninth, or last year of the course, the land is sown with barley, oats, and buckwheat.

"On this, which is considered a pattern farm, the seed and produce is as follows:—Potatoes, 20 bushels to the acre gave 200; wheat 2, gave from 16 to 20; rye 2, gave from 12 to 15; buckwheat 3, gave 10 to 15. The barley and oats scarcely yield four times the quantity sowed.

"This farm is one of the few in which all the labour, except that of the oxen and their drivers, is paid for in money and not in produce. The common plan of thrashing is to give the thrasher a certain proportion of the corn. This varies with the productive nature of the soil and the season, from the fourteenth to the eighteenth bushel. Here it was paid for at the rate of a florin, a trifle less than sixpence, for the korzec, a Polish measure somewhat

more than 3¼ bushels; the mowing, reaping, and other kinds of labour, were agreed for at proportionably low prices.

"In the generality of farms, which are under inferior management, the production would not be so great. If I were to generalize the whole of Poland, except the southern parts of the province of Sandomir and Cracow, I should not estimate the produce of grain to be more, if so much, as two-thirds that of the estate in question.

"Having noticed the two provinces which yield the best wheat, it may not be useless to observe in addition, that but some small portions of each are highly productive, and those at that extremity of the kingdom which is the farthest removed from the ports in the Baltic, at which alone their corn can be shipped for this country.

"The territory of the republic of Cracow is like the province of the same name in the kingdom. The marks of more freedom allowed to exertion are visible in the extensive fields of flax, and the enclosures with tobacco, maize, and a great variety of garden vegetables; a part of it is likewise rich in mines of coal and calamine; and great quantities of zinc, made from the latter, have been beneficially exported to England, since the passing of the late law, by which the duty on it was reduced. I was informed that some of the northern divisions of this province were poor in its agriculture, but rich in its mines of iron, coal, and calamine.

"The province of Galicia, a part of the ancient kingdom of Poland, but now added to the dominions of the Austrian empire, which stretches along the right bank of the Vistula, is, I believe, nearly as fertile as the southern part of the present kingdom of Poland, or the territory of the republic of Cracow. I found by the accounts I obtained at Thorn, that very little wheat from that rich and extensive province had been conveyed down the Vistula to the Baltic, though the access to the sea is as easy as it is from the south parts of the kingdom of Poland, or from Cracow; yet the trade in corn is impeded by transit duties both in Poland and in Prussia."—*Jacob's Report.*

A Russian official report on Poland for 1840, states, "in addition to corn, &c., must be included Merino wool, of which the following quantities were exported by Poland in the year 1840 to neighbouring countries, notwithstanding that a severe murrain prevailed in many provinces:

"To Russia, 1016 qntls. 74 lbs.; Austria, 23 qntls. 26 lbs.; Prussia, 29,994 qntls. 29 lbs.; Cracow, 4502 qntls. 87 lbs. Total, 35,537 qntls., value 8,881,608 florins.

"In the preceding year (1839) Poland exported to foreign countries, 42,489 quintals, 10 lbs. of wool, valued at 10,890,224 florins, being a falling off in 1840 of 6951 quintals, 96 lbs. of a value of 2,008,616 florins.

"The following quantities of various kinds of grain, &c., were exported in 1840:

"Wheat exported—

To Russia	135	korsecs.		
Austria	868	,,		
Prussia	842,409	,,		
Cracow	28,231	,,		
Total	871,643	,,	valued at	25,326,368 florins.
,, in 1839	629,783	,,	,,	16,358,017 ,,
Increase in 1840	241,860	,,	,,	8,968,351 ,,

"Rye—

To Russia	916	korsecs.		
Austria	14,201	,,		
Prussia	316,776	,,		
Cracow	31,646	,,		
Total	363,539	,,	valued at	4,096,059 florins.
,, in 1839	443,125	,,	,,	4,692,546 ,,
Decrease in 1840	79,586	,,	,,	596,487 ,,

"Barley—				
To Russia . . .	13 korsecs.			
Austria . . .	6,284 „			
Prussia . . .	29,775 „			
Cracow . . .	15,659 „			
Total . .	51,733 „	valued at	498,100 florins.	
„ in 1839 .	39,539 „	„	340,097 „	
Increase in 1840	12,194 „	„	158,003 „	
"Oats—				
To Russia . . .	413 korsecs.			
Austria . . .	33 „			
Prussia . . .	32,762 „			
Cracow . . .	5,953 „			
Total . .	39,161 „	valued at	247,694 florins.	
„ in 1839 .	39,549 „	„	250,708 „	
Decrease in 1840	388 „	„	3,014	
"Colewort—				
To Austria . . .	80 korsecs.			
Prussia . . .	25,619 „			
Cracow . . .	358 „			
Total . .	26,057 „	valued at	660,371 florins.	
„ in 1839 .	25,428 „	„	509,925 „	
Increase in 1840	629 „	„	150,446 „	

"The cultivation of colewort has made rapid progress, considering that it has only been lately introduced into Poland, and doubtless this new branch of agricultural industry will be of still greater importance hereafter.

"The total value of articles exported in the years 1839 and 1840, was as follows:

In 1839	37,189,887 florins.
1840	44,608,644 „
Increase in 1840 .	7,418,757 „

"The immense advances made in agriculture in the last twenty-five years, in the kingdom of Poland, is worthy of being noticed. The population of Poland has increased since the year 1815 by 1,500,000, being more than 50 per cent; and considering that the quantity of corn annually consumed by each individual amounts to 2 korsecs, it follows that there is an additional consumption of 3,000,000 korsecs per annum, over that in the year 1815. Prior to this year Poland was never able to export corn to this amount, even in the most favourable seasons, after providing for the home demand. At present, on the contrary, Poland is enabled, even in bad seasons, to export corn to foreign countries in large quantities, after supplying the home market."

AGRICULTURE OF THE POLISH PROVINCES, EXCLUSIVE OF THE KINGDOM.

LITHUANIA, comprising *Wilna, Minsk, Grodno.* The area of Wilna is about 38,500 square miles, or 24,640,000 acres, population said to be 1,357,000. Its soil, climate, and productions are similar in many respects to those of Courland.

GRODNO.—The area is about 14,700 square miles, or 8,788,000 English

acres; and the population about 600,000. The surface is an alluvial and sandy plain, broken only by a few undulating chalk-hills.

The principal agricultural product is rye, about 6,825,000 hectolitres of which are said to be produced annually, a third part of which is exported.

Few other kinds of grain or vegetable are grown for food, but flax, hemp, and hops, are raised in considerable quantities.

There is a large extent of pasture; cattle-breeding is pretty well understood; and the sheep yield good wool, which is a principal article of export. Iron, lime, nitre, and building stone are found. The manufactures are not worth noticing, being a little woollen cloth and leather.

The exports consist of corn, flour, cattle, and wool; much of the produce is sent to Memel, Konigsberg, Vindau, Riga, &c.

Minsk.—A government of Russian Poland. Area about 42,000 square miles, or 26,280,000 acres; population (1838) 1,034,800. Though one of the poorest and worst cultivated parts of the empire, Minsk produces more corn, principally rye, than is required for home consumption. Hemp and flax are important products, as are potash and tar. The rearing of live stock is mostly ill-conducted; pasturage is good in some parts, but the sheep yield only inferior wool. A great many bees are reared.

Mohilef.—Area about 17,500 square miles, or 11,136,000 acres; population (1838) 846,600. The soil is generally fertile; and though agriculture is extremely backward, nearly 4,000,000 chetwerts of corn are annually grown, a quantity considerably exceeding the home demand. Rye, barley, oats, hemp, and flax, are the principal products; and in the gardens, hops, pulse, &c. Cattle and horses are very inferior, but latterly the sheep have been improved by crossing with the breed of Saxony. This is one of the most richly wooded of the Russian governments.

Witepsk.—Area 16,500 square miles, or 10,560,000 acres; population (1838) 717,700. Notwithstanding the soil is of medium fertility, and agriculture in a very backward state, more corn is produced than is required for consumption. Hemp and flax are grown on a large scale, peas, beans, hops, fruits, &c., in the smaller enclosures. The grass lands are extensive, and a good many cattle and horses are reared, though of inferior breeds. The sheep yield coarse wool, and the honey is inferior.

Tchernigoff.—Area about 28,000 square miles, or 17,920,000 acres; population (1838) 1,300,000; surface flat, and the soil fertile. All sorts of corn are produced, but principally rye, barley, and oats. The total produce of the harvest is estimated at about 4,000,000 chetwerts. Flax, hemp, tobacco, hops, &c., are also cultivated. Oxen of a very fine breed are raised, and fattened to a great size. Free cultivators are common in this and the other governments of Little Russia.

BIALYSTOCK.—Area 3436 square miles, or 2,199,040 acres; population about 260,000; surface flat, with some slight undulations; soil generally sandy, but not unfertile. Agriculture is almost the only employment; and considerable quantities of corn (especially rye and wheat) with linseed, hops, and timber, are sent to Dantzic and Elbing. This province is only considered a sub-government.

VOLHYNIA.—Area 22,750, or 14,348,000 acres; population (1838) 1,314,100. In general the land is fertile, producing at an average a considerable surplus of corn above the consumption. A good deal of flax and hemp is also grown. The climate, though comparatively mild, is not warm enough for the vine. The pastures are excellent. A good many sheep, hogs, and poultry are kept.

The ANCIENT UKRAINE contains *Poltawa, Kief, Kharkoff, and Podolia.*

POLTAWA.—Area estimated at 22,500 square miles, or 14,200,000 acres; population (1838) 1,622,000; surface flat; soil excellent: in some parts there is a scarcity of wood. This and the surrounding governments constitute what may be called the granary of Russia. It is one of the best cultivated districts of the empire: the return of the corn crops is said to be as 6 to 1; the total produce being about 6,506,000 chetwerts, of which about 1,500,000 are exported. The grazing grounds are excellent, affording pasturage for large herds of the fine Ukraine breed of oxen, and for immense flocks of sheep, the breed of which has been latterly much improved. Some peasants have above 100 beehives.

KIEF.—Area about 20,000 square miles, or 12,800,000 acres; population, in 1838, 460,000. Principal rivers—Dnieper, by which it is bounded all along the East Pripet, which traverses its north division, and other affluents of the Dnieper. The surface is flat; soil fertile; so much so that, though agriculture be very indifferent, the return to most sorts of grain is said to be 6 to 1. Cattle numerous and of a fine breed. Horses small; forests extensive. Manufactures, exclusive of those carried on in the houses of the peasantry, can scarcely be said to exist. Commerce is trifling, and mostly in the hands of the Jews. The principal town is Kief. In 1798 a fair, formerly held at Dubno, was transferred thither. It takes place during January, and is attended by all the surrounding nobles, and numerous merchants. Provisions of all kinds are abundant and exceedingly cheap.

KHARKOFF.—Area 17,400 square miles, or 11,136,000 acres; population 1,334,000. This, like the other governments of Little Russia, has a flat monotonous surface, and a very fertile soil. It has nearly 470,000 deciatines of forests. All sorts of corn are raised, the produce in ordinary years amounting to about 5,000,000 chetwerts, of which about 1,000,000 are exported. Flax and hemp, tobacco, hops, and potatoes are also grown. Cattle are excellent, and there are few peasants without bees. With the exception of distilleries, which are numerous, and some tanneries and establishments for the preparation of tallow and saltpetre, manufacturing industry can scarcely be said to exist.

The capital, Kharkoff, is the seat of a considerable commerce. Four fairs are held each year. If dependance can be placed on the official accounts, merchandize to the amount of 31,544,774 roubles was brought in 1833 to the first of these fairs, above two-thirds of which was disposed of. One of the other three is exclusively or principally for wool.

Podolia.—Area estimated at 12,000 square miles, or 7,680,000 acres; population (1838) 1,548,000. The climate is healthy, and mild enough for the vine and mulberry to flourish in the open air. Soil stony, but in general very fertile. Corn is produced in abundance; the produce of wheat, in 1820, was estimated at 6,000,000 chetwerts, a quantity exceeding the home consumption by one-third. Hemp, flax, tobacco, hops, beans, and various fruits are grown. The culture of the vine is not yet of any importance, and orchard and garden husbandry is conducted in a negligent manner. The pastures are luxuriant. Cattle-rearing is an important business, and many head are sent into Germany, where they are much prized for their beauty and excellence. The sheep yield but indifferent wool. A good many hogs are kept, as well as poultry and bees.

AGRICULTURE OF THE PROVINCES OF CENTRAL RUSSIA.

Moscow.—The area of this important province is stated to be 10,300 square miles, or 6,419,200 acres; population about 1,250,000. We have been unable to procure any satisfactory account of the agricultural produces of this government.

Kostroma.—Area 38,400 square miles, or 24,576,000 English acres; population 1,063,800. Surface generally flat, and soil in most parts not fertile, marshes predominate in the north, and sand and clay in the south. The principal grain grown is rye, and the quantity is insufficient for the consumption. Flax and hemp are extensively produced. The cattle are few in number, and of indifferent breeds.

Vladimir.—Area 17,600 square miles, or 11,274,000 English acres; population 1,133,200. Surface generally extensive plains, watered by numerous streams. The soil is not generally fertile, and a large portion of the province is occupied by forests, marshes, ponds, and heaths. Rye, barley, oats, summer and winter wheat, millet, peas, hemp, and flax, are grown; but the corn produced is insufficient for the consumption. The gardens, and the apple and cherry orchards are numerous. Cattle-breeding is neither generally nor well attended to.

Jaroslaw, or Jaroslav.—The area of this government is estimated to be about 14,000 square miles, or 9,040,000 English acres; and the population 916,000. The surface is nearly altogether flat, and not very fertile. It is interspersed with lakes and marshes, and the Wolga and some of its large tributaries flow through this province. It produces hemp and flax of good and excellent quality. Rye, barley, wheat, oats, and peas, are grown, but not in sufficient quantity for

its population. The annual produce of corn is estimated at about 2,000,000 of quarters; the live stock of all kinds are described as inferior. Cherry and apple orchards are numerous. Timber is now becoming scarce.

Riazan.—Area 14,988 square miles, or 9,667,000 English acres; population 1,309,000. The surface generally flat, and more corn is said to be grown than is consumed by the population. The average produce of all kinds, but chiefly rye, is estimated at about 3,800,000 quarters. Hops, tobacco, and several kinds of vegetables are produced. The pasture-lands are extensively let to graziers from the Ukraine, who drive their large herds from the latter to fatten in Riazan. The horses are of a good breed. Bees are generally reared.

Toula.—Area about 12,000 square miles, or 7,680,000 English acres; population 1,040,000. This province is tolerably fertile, and produces a surplus of rye and some good wheat over the consumption of the inhabitants. The accounts given of the corn grown in Toula, as stated in the subjoined tables, are, considering the more limited extent of this province, more highly exaggerated than even those of the corn grown in Tamboff.

Kaluga.—Area 8500 square miles, or 5,440,000 English acres. The population 915,000. The surface is generally an uninterrupted plain, through which numerous streams flow. The soil is clay or sandy, and requires annual manuring; forests cover half the whole area, and the arable lands rather more than one-third. The produce, chiefly rye, is not sufficient for the consumption of the inhabitants. Some oats, wheat, barley, hemp, and flax, are also grown; the horses and horned cattle are inferior and scarce.

Orel, or Orloff.—Area about 16,000 square miles, or 10,240,000 English acres; population about 1,300,000; surface undulating, and the soil naturally rich and productive. The forests occupy more than one-fourth of this province. Agriculture is the principal pursuit of the inhabitants. The soil yields wheat, rye, and other grain. (See Agricultural Tables hereafter.)

Voroneje, or Woronetz.—The area of this province is estimated at 31,000 square miles, or 19,840,000 English acres; population (1838) 1,507,200. The surface is diversified by undulations. The soil is generally fertile, and it is probably the most productive government in Russia. It is watered by the Don and several lesser rivers. It is stated that a good crop of corn of all kinds will yield about 1,000,000 quarters over the consumption of the inhabitants. Wheat, rye, barley, peas, beans, poppies, tobacco, hemp, flax, apples, cherries, melons, and vegetables, are all grown. The number of horned cattle, in 1839, was estimated at 580,000 head; sheep 1,100,000; and 12,500 horses were kept in studs, exclusive of many kept by the serfs. Bees form an important branch of rural industry.

Koursk.—The area of this province is estimated at 115,000 square miles or 9,600,000 English acres, and the population at 1,700,000, of which 300,000 are free peasants. The surface is flat and occasionally undulating. The soil is re-

markably fertile but not generally well watered, and no navigable rivers flow through the country. Agriculture is in a barbarous state, yet Hassel states that wheat and rye yields 9 for 1. We doubt this. (See tables of agricultural produce hereafter.) Corn of which there is at all seasons a surplus over the consumption is preserved in caves (selos), for 2, 4, 6, or even 10 years. Hemp, flax, tobacco, hops, &c., are also produced. The pastures, which are rich, maintain large herds of tolerably good breeds of oxen, horses, and sheep.

AGRICULTURE OF THE PROVINCES OF THE PLAIN OF THE WOLGA.

TAMBOFF, or TAMBOV.—The area of this province is estimated by some Russian authorities at 21,000 square miles, and by Kortsakoff at nearly 25,000 square miles, and the population 1,422,000. The surface is generally a vast flat plain. In some parts undulations occur, and towards the north, sandy, boggy, forest, and marshy lands: a great proportion of the province is covered with fir and other trees. The *Steppe*, towards the east, has no wood of consequence, and the black mouldy soil is generally fertile. As not only the productive powers, but the actual produce of this province, have been held forth as alone sufficient to overwhelm all Europe with corn, and at the same time, ruin, if admitted at a low duty, the farmers of England, we shall detail at some length the information we have collected.

An official account by Kortsakoff, formerly the lieutenant-governor of Tamboff, distributes the area in 1832 and 1833 as follows:

		Deciatines.
Cultivated and cultivable lands		2,226,177
Meadows and pasture grounds		1,513,388
Forests of the crown	153,768	1,035,640
Forests of individuals	881,673	
Towns and villages, with their dependancies		95,186
Communal properties		726,549
Roads, marshes, and waste lands		315,260
Total		5,912,200
Or, in English acres		15,689,200

It has been declared officially, and it has been repeated, and reprinted, frequently, for the purpose of showing the danger of allowing the importation of foreign corn, that the province of Tamboff alone yielded 39,000,000 quarters. Now if we take M. Kortsakoff's statement of the area, the greatest given by any one,—say at 15,689,200 English acres, 39,000,000 quarters would be about 20 bushels per acre: that is supposing the province of Tamboff were one great cornfield, without any part of it occupied by towns, buildings of any kind, roads, forests, swamps, heaths, marshes, pine barrens, or waters. The facts, however, are, that the soils, the seasons, the weather, and the crops, according to the official accounts of this, as has been described, the most fertile

province of Russia, are all remarkably variable; and, that great scarcities of grain, for food, has frequently occurred. Of the annual produce of corn, we have for different periods the following official statements, or rather estimates. In 1802, 9,294,827 chetwerts, or rather more than 6,000,000 quarters. In 1821, only 5,223,796 chetwerts. In 1833 the crop was stated as abundant, and 800,000 chetwerts, or 560,000 quarters were exported to Moscow and St. Petersburg. We then have an account of 10,000,000 chetwerts, being the produce of an ordinary crop; and 17,000,000 chetwerts, that of a good harvest. Finally, a consular account is transmitted to England, stating that the province of Tamboff produces 39,000,000 quarters of corn, and the word *corn* is at once translated into the word WHEAT.

The greater portion of the corn produced in Tamboff, as well as in all Russia, is not *Wheat*, but *Rye*. Some little wheat, however, is grown in Tamboff: from 21,000 to 35,000 quarters. Oats, and buckwheat, a black poor grain, which grows on sandy soils, constitute, next to rye, the principal grains grown. Hemp is cultivated to an important extent. The cattle pastured and fattened for Moscow and St. Petersburg are numerous, but are chiefly driven into Tamboff, for pasturage, from the steppes of South-Eastern Russia, and even from the Caucasus. The horses, excepting those belonging to the nobility, are wretchedly inferior. There are about 1,140,000 sheep, and 700,000 swine in the province.

The more recent exaggerations respecting Tamboff are contained in a work entitled "Materials for a Statistical account of the Russian Empire," published in the Russian language, by imperial permission, at the statistical department of the council of the ministry of the interior, St. Petersburg, 1839.

The following extracts from that work were translated at St. Petersburg from the Russian.

"The government of Tamboff contains within its limits 5,912,222 deciatines,* of which, at the time of the general survey (1784) 1,700,000 were covered with woods; 600,000 in steppes; 100,000 occupied by towns, villages, &c.; 300,000 in waste lands; and the remaining 3,212,222 deciatines were arable, and under cultivation by 417,772 peasants, so that for each of these there were 7½ deciatines. Since then more than 50 years have elapsed; the number of the male peasantry have increased to 850,000; and nearly all the steppes and waste lands, and most of the woodlands, have been brought into cultivation. We can, therefore, without exaggerating, say, that at present the quantity of arable land in the government amounts to 4,500,000 deciatines, so that there are about five and one-third to each peasant

"The system pursued in this government, is to leave one-third of the ground fallow; thus about 3,000,000 deciatines† are annually sown with different sorts of grain. Four-fifths of the fields are of a rich black mould which, without the assistance of manure, yields in ordinary years 8 chetwerts, and in years of abundance (such as 1834, 1835, and 1836), not less than 10 chetwerts per deciatine.‡ It is, therefore, to be believed that the quantity of grain, produced in the government during the last 3 years, was from 80,000,000 to 90,000,000 chetwerts.§ Let us suppose that from this quantity the consumption was—1st

* 1 Deciatine = about 2.70 English acres.

† 8,100,000 acres.

‡ 100 chetwerts = about 70 quarters.

§ 56,000,000 to 63,000,000 quarters! or 18,666,666 to 21,000,000 quarters per annum.

for seed, at 12 measures per deciatine, 4,500,000 chetwerts annually, or 13,500,000 in the 3 years; 2d, for the support of 1,800,000 inhabitants, at 2½ chetwerts a year each, 13,500,000; 3d, for the distilleries, 750,000; 4th, for feeding cattle, 5,250,000; and 5th, for reserve, 1,000,000; in all 34,000,000 chetwerts.

"The principal mart for the grain of this government is St. Petersburg, by the navigable river *Tma*. To the ports of this river there arrived in 1834, 465; in 1835, 490; and in 1836, 560 boats; and as each of these vessels takes from 3000 to 5000 chetwerts, the exportation of grain for the three years by that channel (not from Tamboff only, but also from Penza and Saratoff) could not have exceeded 7,500,000 chetwerts; but at the end of 1834 and beginning of 1835, an equal quantity may have been conveyed overland to the neighbouring northern and southern provinces. At any rate we think that, altogether, not more than 15,000,000 of chetwerts can have been exported from the government of Tamboff during the three years; and allowing as much for the damage caused by animal, insects, &c. we are convinced that in the government of Tamboff, towards the summer of 1837, there remained from 16,000,000 to 26,000,000 chetwerts, which are nearly sufficient for the consumption of *three years*.

"Nor will these quantities appear exaggerated to those who remember that the government of Tamboff easily passed the three consecutive years of failure, 1830, 1831, and 1832, and not only supported itself during that period, with the reserves of former years, but exported to the north and south of the empire, about 10,000,000 of chetwerts,* at high prices, which improved the condition of the proprietor, enhanced the value of land 50 per cent, gave great profit to the second and third hands, and to the peasantry a handsome recompense for their agricultural labour."

Extract from a Report presented to his Imperial Highness the Hereditary Grand Duke, on the occasion of his visit to Tamboff in July, 1837.

[Translation from the Russian.]

"The government of Tamboff contains 1,700,000 inhabitants, nine-tenths of whom are entirely occupied in agriculture. The extent of land under cultivation (arable) is from 4,000,000 to 4,500,000 of deciatines; and as, according to their practice, one-third lies fallow, two-thirds of this land is annually sown with grain and oleaginous seed.

"*Rye* occupies nearly one-half of this space, and produces on the average the tenth grain. The government produces annually from 8,000,000 to 12,000,000 chetwerts of this grain; whereof about 4,000,000 are consumed on the spot for food and seed; 3,000,000 distilled and transported by the Okat and the Volga, and the remainder is according to circumstances kept in granary. The price of rye in years of abundance, at the bazaars and places of embarkation, is from 3 to 4 roubles, B.N., per chetwert; in ordinary years from 5 to 7 roubles, B.N.; and in 1833, a year of scarcity, it rose to 28 roubles, B.N.

"*Wheat*, winter-sown, is produced to the amount of from 30,000 to 50,000 chetwerts; little of which is consumed in the provinces, the greater part being ground on the spot for the supply of the capitals. Its price varies from 10 to 15 roubles, B.N. per chetwert.

"*Oats.*—About 4,500,000 to 6,500,000 chetwerts are grown annually; the greater part of which is consumed in the provinces, a small portion going to the capitals. The price varies from 2 to 4 roubles, B.N., per chetwert.

"*Buckwheat.*—From 3,500,000 to 5,500,000 chetwerts are produced; it forms the principal food of the inhabitants; a considerable quantity goes to the capitals, and to supplying the army. The price is always the same as that of rye.

"*Peas* from 200,000 to 400,000 chetwerts are produced; the greater part is conveyed to Moscow and to the southern provinces, and for supplying the fleet. The price of small peas varies from 6 to 8 roubles, B.N., per chetwert, and of large peas from 10 to 15 roubles, B.N., per chetwert.

"*Millet* is produced to the amount of from 50,000 to 100,000 chetwerts; but as it

* 7,000,000 quarters.

requires virgin land, the produce diminishes every year. It is principally consumed in the capitals.

"Very little wheat is sown in summer, and it is worked up with the winter corn.

"*Hempseed, Linseed,* and *Poppyseed,* are produced to the amount of from 20,000 to 50,000 chetwerts.

RECAPITULATION of the foregoing statement in British measure and money. Average exchange 11*d.* per rouble, B.N.

GRAIN.	Quantity in Quarters.		Prices per Quarter at the Bazaars and Places of Embarkation.
	From	To	
	quarters.	quarters.	
Rye	5,600,000	8,400,000	In years of abundance, 3*s.* 11*d.* to 5*s.* 2½*d.* In ordinary years, 6*s.* 6½*d.* to 9*s.* 2*d.* In 1833, which was a year of scarcity, it rose to 36*s* 8*d.*
Wheat	21,000	35,000	13*s.* 1*d.* to 19*s.* 7½*d.*
Oats	3,150,000	4,550,000	2*s.* 7½*d.* to 5*s.* 2½*d.*
Buckwheat	2,450,000	3,850,000	The same price as rye.
Peas	140,000	280,000	Small, 7*s.* 10½*d.* to 10*s.* 5½*d.* Large, 13*s.* 1*d.* to 19*s.* 7½*d.*
Millet	35,000	70,000	
Other grains	14,000	35,000	
Total	11,410,000	17,220,000	

Now it is equally evident that the above statement is also greatly exaggerated. In the first place the extent of land under cultivation is stated above to be 4,000,000 to 4,500,000 of deciatines. M. Kortsakoff, who allows a greater surface to the province than any other writer, estimates the whole extent, including water, marshes, forests, meadow and pasture, &c., at 5,913,222 deciatines; and the arable land at 2,226,177 deciatines.

The above account of 4,500,000 deciatines being solely under corn culture, is a palpable exaggeration; for, if the forests, marshes, and waters alone, were deducted from the largest estimate of the area of Tamboff, the remaining part would not exceed 4,500,000 deciatines; and M. Kortsakoff allows about 1,500,000 for pastures and meadows. So that taking the highest estimate there could not have been more than 3,000,000 deciatines left for arable cultivation, and from this quantity must be deducted the spaces occupied by towns, roads, &c. Allowing as a mere basis of valuation that 3,000,000 deciatines of Tamboff were *one vast cornfield,* without any deduction for separations between inclosures, or any space left for other divisions, paths, &c., and deducting the one-third left fallow, according to the above statement, then the extreme quantity left for sowing would be 2,000,000 deciatines, or 5,400,000 acres. The produce, at the lowest quantity given above, 11,410,000 quarters = 18⅔ bushels per acre: taking the highest quantity 17,220,000 quarters, the produce would be about 25½ bushels per acre. All the accounts of the produce of corn, in the province of Tamboff, must, therefore, to those who will examine the foregoing statements, prove to have

been the most extraordinary exaggerations that could have been used, for the purpose of misleading the statesmen, and terrifying the landlords, and farmers, of other countries. After a careful examination of all the statements, and all the information, which we have been able to procure, we feel convinced *that the province of Tamboff*, instead of producing 39,000,000 quarters of corn, or the quantity since diminished to 17,220,000 quarters, and in the worst seasons to 11,400,000 quarters, has never during the most plentiful harvest yielded above 10,000,000 quarters of all kinds of grain.

Nijnei-Novgorod.—The area of this province has been variously stated at from 19,000 to 20,400 square miles: 20,000 square miles, or about 12,800,000 English acres, is probably near the true extent; and the present population is estimated at 1,100,000 inhabitants. The surface is flat, with occasional undulations: the soil which consists chiefly of fine black mould, mixed with sand, is in general fertile; it is better cultivated than most other parts, and is one of the most productive provinces of Russia. The corn produced exceeds the consumption. Hemp and flax are extensively cultivated; and various other crops and fruit are grown. Cattle, horses, and sheep are bred with care.

Timbirsk.—The area of this province is estimated by some authorities as low as 24,200, and by others as high as 30,000 square miles; 24,500 square miles, or 15,760,000 English acres, is probably near the true surface; the population is estimated at 1,200,000. This country is a great plain, diversified with undulations. Its soil is black and generally very fertile. Rye, wheat, and other grain, are raised in more than sufficient quantities for home consumption; and some is exported.

Hemp and flax are extensively cultivated: tobacco, poppies, and various other articles are grown. The Calmuck Tartars are those who chiefly rear cattle.

Penza.—The area of Penza is about 14,400 square miles, or 9,016,000 English acres; population, 988,000. The surface is flat, and but partially undulated. The soil is fertile and the climate more mild and settled than is common to most other Russian provinces. Corn is exported. The forests are of considerable extent and value. The rearing of cattle, sheep, and horses, especially the latter, is attended to with tolerable care.

Saratof.—The area of this extensive province is estimated at about 73,600, and as high as 112,700 square miles. Its probable limits include about 70,000 square miles, or 44,800,000 English acres; population, 1,564,400. Salt lakes, and steppes occupy a great portion of Saratof. Agriculture is the chief pursuit of the inhabitants of the northern part of the country, west of the Wolga. The South-eastern division is a wide steppe extending to Astrakan and Orenburg. The Wolga flows across the whole province. The salt lakes are numerous, one of which yields, it is said, 10,000,000 poods of salt annually.

Rye, wheat, oats, millet, and peas, are generally grown.

The average crops of Saratof, after supplying the home demand, leaves a considerable quantity for exportation. Flax and hemp, peas and other vegetables are also grown. The culture of tobacco, hops, madder, and woad, is attended to chiefly by German colonists. Various fruits are raised: in some situations melon and grape thrive; mulberries also ripen; silk worms are bred, and bees form a branch of general economy. Live stock is reared on a large scale, merino sheep have been introduced in considerable flocks.

KASAN.—The area of this Tartar province is estimated at 22,000 square miles, or 14,080,000 English acres. The surface is generally flat, but diversified with undulations and hills. The soil is described as generally fertile, producing, with very rude culture, abundant crops of rye, wheat, hemp, flax, &c. The forests are extensive, and covering nearly half the province. Pasturage is now little understood or attended to.

ASTRAKAN.—The agriculture of this large province, the area of which is estimated at 83,000 square miles, or 51,480,000 English acres, is unimportant, owing to the barrenness of its soil, which, with the exception of the skirts and Delta of the Wolga, is occupied by two great steppes, one extending north-east, and the other south-west of the Wolga. These steppes are flat, and, with the exception of the sandhills, the soil consists of mud, salt, and sand, intermixed, and in some parts of extensive salt bogs. The heats are oppressive in summer, and the frosts severe in winter. Fruits, corn, &c., are cultivated in the Delta, but the agricultural produce of the province would not maintain the population. The breeding of horses is of considerable value; and the fisheries of the Wolga and the Caspian, especially the sturgeon fishery, afford, with various other employments, the means of subsistence to the people.

ORENBURG.—This province lies chiefly in Europe and partly in Asia. Its area is estimated at about 112,000 square miles, or 72,280,000 English acres; population, 1,771,000; soil very various. It is in some parts mountainous; in others there are saline steppes, or marshes; the larger portion is, however, naturally fertile. The forests are very extensive. Agriculture is in a rude state; and the chief wealth of the inhabitants consists in their horses, cattle, and sheep. They have also camels, swine, &c.

AGRICULTURE OF SOUTHERN RUSSIA.

The region which lies between the Ukraine and the Black Sea and the Sea of Azof, and extending from Moldavia east to Astrakan, and the Caucasus, or the country conquered from the Turks, and from the Zaparog, and Don Cossacks, has been called by German geographers, and after them by the English and French, New Russia. The Russians themselves use no such designationfor these conquered countries.

The country called New Russia, comprehends *Bessarabia, Kherson, Taurida,*

and *Ekaterinoslaf*. The Russian cabinet includes in its administration the country of the Don Cossacks, as under the government of Ekaterinoslaf.

EKATERINOSLAF.—The area of this province is uncertain, but estimated at 35,000 English square miles by some, and by Schnitzler at 25,500 English square miles, or 16,326,000 acres, and the population at 700,000. Other authorities estimate the population, as far back as 1827, at 826,000. The greater part of the province is one vast steppe. (See account of the Steppes hereafter.) It is not generally fertile; and grazing is the principal occupation of the inhabitants, who possess great herds of horses, cattle, sheep, hogs, goats, &c. Bees and the silkworm both thrive well.

KHERSON.—The area of Kherson is variously estimated at from 25,000 to 36,000 square miles, or from 14,080,000 to 21,120,000 acres; population in 1838, including the military colonies, 765,000. In the northern part the country is diversified with small hills and undulations, which are chiefly covered with forests; the remaining and most extensive part consists of a wide steppe, without wood, and nearly all covered with high grass. Agriculture is in a very backward state. The rearing of cattle and sheep constitutes the chief business of the inhabitants. The breed of sheep has been much improved. Corn, flax, hemp, tobacco, liquorice, saffron, &c., are all, however, to some extent grown.

TAURIDA, including the Crimea, comprises an area estimated at 42,000 square miles, or 26,380,000 acres, with a population estimated under 400,000. The Crimea is united on the north to the mainland by the isthmus of Perekop, 5 miles broad. Its estimated area is about 15,000 square miles.

The portion lying north of the highlands of the Crimea consists chiefly of steppes, nearly without trees, and affording rich pasture, except where heaths, salt-lakes, and marshes occur. The climate is cold and damp in winter, and oppressively hot, and unhealthy in summer, especially towards the Putrid Sea. The aspect and climate of the other, or southern portion of the Crimean peninsula, presents lofty mountains, rich slopes and valleys; and the climate, of the valleys, and of the brows of the mountains facing the sea, is described as equal to that of the finest parts of Italy. The soil and climate ripens in perfection the usual crops of wheat and other grain, flax, and hemp; also tobacco, grapes, olives, figs, mulberries, pomegranate, oranges, lemons, &c. in great abundance wherever cultivated. It wants, however, a much greater population. The present inhabitants are far from industrious, and this rich land, consequently produces, comparatively, little corn, or any other crop. In the *steppe*, of the north portion, some of the *Nogaï Tartars* are said to possess as many as 50,000 sheep, and 1000 horses; and the poorest possess generally 1000 sheep, and 10 horses. The breed of horses is improved by crossing with Arab horses. The sheep are chiefly of the large-tailed Kirghis breed. Camels are numerous. The buffaloes are domesticated like the common ox or cow. Bees are generally

reared. The Nogaï Tartars of the Crimea are not now migratory, but they still dislike agricultural labour. Exclusive of the milk of the buffalo cow, and animal food, they live chiefly on millet. They grow some little wheat which is sent for sale to the southern part of the country. Wine of bad quality is produced in the southern Crimea. Corn, flax, fruits, honey, wax, timber, &c., are the other products. Sufficient corn is not grown for consumption.

DONSKAGO.—The country of the Don Cossacks, or *Donskago*, extends, south and west from Saratof, and west from Astrakan, to the frontiers of Voroneje and Ekaterinoslaf, and south to the Caucasus and the Sea of Azof: the portion surrounding the bottom of that bay and the town of Taganrog being taken from the Don Cossack's country, and placed under the governor of Ekaterinoslaf. The area is estimated at 48,000 square miles, or 30,720,000 acres. The population, including the Zaparog Cossacks, who were allowed after their dispersion to settle in the southern parts, near the Caucasus, and the whole of the Don Cossacks, is not estimated at more than 400,000. The German colonists in the western division are, however, rapidly increasing the population. The Don Cossacks, who still consider themselves in a great degree independent, and have recently given uneasiness to the Russian government, inhabit the vast country north and east from Voroneje to Saratof and Astrakan. They give little attention to agriculture, and their country, according to the authority of Plescheyeff, is little better than a dry desert, interspersed with salt lakes. There must, however, in a country watered by the Don and some of its chief tributaries, be many exceptions to this general rule.

The country extending from the Sea of Azof, to the Doneis, or principal western branch of the Don, and from the lower Don west to the frontiers of Ekaterinoslaf, is settled chiefly by German colonists. The following is an account of these colonists written during the early part of 1843, at Taganrog. It is very interesting, but we take it as we do nearly every statement drawn up in Russia, as being, to say the least, somewhat exaggerated:

"The progress which cultivation has made in Southern Russia is extraordinary. With the exception of North America there is not perhaps a country in the world where the efforts of an active and industrious population have produced such brilliant results in so short a space of time. It is not yet fifty years since the German Mennonists, having been compelled to expatriate themselves from Prussia, on account of their having been subjected to military service, arrived in Southern Russia. The Emperor Paul granted them valuable privileges, which were confirmed by his successors. A vast territory was distributed amongst those colonists (who were quickly followed by a crowd of other families from Wurtemberg, Baden, and Switzerland), on the left bank of the Moloschna, a small river which traverses the steppes to the north of the Sea of Azof. Each family of Mennonists received sixty-five measures of

good arable land, and several other advantages were granted them. The Mennonists in Russia are exempt from military service, and appoint their own judges. They are even permitted to distil brandy for their own use, which is considered an immense favour in Russia, where the monopoly of the fabrication of spirituous liquors produces an enormous revenue to the crown. The arrival of the members of this sect, who each brought a handsome fortune in ready money, was an excellent acquisition for an uncultivated though fertile country, which only required active arms to metamorphose it in a short time into a vast garden. It comprises at present about fifty villages upon the left bank of the Moloschna, which are in a most flourishing condition. Nothing is more agreeable for a traveller who has traversed the immense and monotonous steppes inhabited by Nogayz Tartars than the appearance of those charming Mennonist villages, whose white houses covered with tiles are surrounded with gardens planted with fruit trees, and acacia-trees, not to be seen amongst the steppes. When one enters the dwellings of the Mennonists, it is easy to perceive that they live comfortably. Extremely simple in their dress, the Mennonists display a certain degree of luxury in the interior of their houses which is nowhere to be found in the Russian villages. The cleanliness of their habitations is extreme, and cannot be surpassed even by the Dutch. I am acquainted with a Mennonist named John Corneis, who resides in the village of Orloff, and whose private fortune may be estimated without exaggeration at more than 2,000,000 roubles of assignation (about 100,000*l.* sterling). It was at his house that the Emperor Alexander lodged when he visited those countries, and where he was superbly feasted. John Corneis, who, though very devout, is considered as extremely sharp in money matters, took the opportunity of the emperor's visit to obtain many advantages. The German colonists on the right bank of the Moloschna, who are almost all Lutherans, have not been so highly favoured as the Mennonists. Having arrived without any capital, and possessing no resource but that generously afforded them by the Emperor Alexander, their present condition cannot be compared to that of the Mennonists. They live comfortably, however, and contribute much by their activity to the rapid colonization of the vast territory which was formerly occupied by hordes of roving Nogayz. Those barbarians were compelled by the Russian government to fix themselves in villages, and to abandon their vagabond life, and addict themselves to labour. They have built houses after the model of the German colonists, and have learned from them different branches of industry. The cultivation of wheat is the most profitable branch of agriculture in the steppes. The annual amount of wheat exported from the ports of the Sea of Azof is estimated at 300,000 chetwerts (9,600,000 lbs.), and if the colonization of the steppes proceeds with an equal rapidity, a double quantity may be exported in ten years hence. The new port on the Sea of Azof, called Perdjausk, which has existed but six years, is

already a handsome town, and contains 2500 inhabitants: its situation, in the neighbourhood of the colonies on the Moloschna, is so favourable that it may soon rival Taganrog. The population is composed of Greeks, Italians, and Russians, who have established themselves there to deal in corn. The port of Perdjausk is much better than that of Taganrog, where ships cannot anchor nearer than at a distance of six versts. Merino wool is, after wheat, the next most important article of produce in the steppes. This article, however, begins to diminish, as the price of wool has fallen considerably since the year 1831. At that period fine wool sold for 60 roubles assignation (2*l.* 10*s.* sterling) the pois (a weight of 40 Russian pounds). At present the price has fallen to 1*l.* 5*s.* British for the same weight. The Mennonists, who possess immense flocks of sheep, now sell their wool at an inferior price. Many fortunes in Southern Russia have considerably suffered by the fall in the price of wool, which has been experienced during the last four years."

STEPPES OF NEW RUSSIA.

M. Kohl supplies the best information we have been able to procure relative to the population, colonization, and agriculture of the Steppes of Southern Russia; he says—

"For the population of this country the Russian government has scraped together fragments from half the nations of Europe, besides offering an asylum to the Jews, and forcing gipsies and Tartars, both equally averse to the labours of the field, to assist in forming the agricultural colonies. Large tracts of land have been granted to the German, Hungarian, and Bulgarian colonists, and estates have been given to the Russian and Polish nobles on condition of bringing them into cultivation. In some places sanctuaries have been created, where runaway serfs from the interior of Russia or Poland may settle as freemen. The main body of the population is, however, everywhere Malorossian."*

"All the Jewesses in New-Russia and in Little Russia, as far as Galicia, wear a huge, stiff, and very unbecoming cap, of which the foundation is usually of black velvet, over which is formed a complete network of pearls, and this ornament they call *mushka*. With rich and poor the *mushka* is always nearly the same in form, the only difference being in the quantity of pearls attached to it. A girl in this way often carries half her fortune on her head, for these caps are generally worth from 500 to 1000 roubles, and some of them are even valued at 5000 or 6000.

The *mushka* is worn alike on holidays and working days, in the kitchen and the promenade, and the head is often resplendent with pearls, when all the rest of the costume consists of mere rags. This fashion gives rise to a very extensive trade in pearls at Odessa, Taganrog, and other ports of the Black Sea. Within the geographical limits of the *mushka* there are supposed to be about 2,000,000 *Jews*. Now, supposing that among them there are only 300,000 adult women, and that only half of these wear *mushkas*,—though, in point of fact, none but the very poorest, and the few that affect an aristocratic tone, are ever to be seen without the distinguishing ornament,—and supposing that, on an average, each is only worth 500 roubles. This calculation alone will give an amount of 76,000,000 roubles, about 3,100,000*l.* sterling invested in the Jewess's caps.

"The military colonies of South Russia, which furnish the cavalry with both men and horses, contain about 60,000 men. Their villages are very regularly built, all on the

* See brief account of the races in Russia hereafter, which we find necessary to introduce in illustration of the power and resources of Russia.

same plan; the streets planted with rows of trees; the houses of officers and soldiers simple but extremely clean, containing nothing more than what is strictly necessary. The dwellings of the generals and superior officers are sometimes oddly contrasted with their high-sounding titles; but it is interesting and curious to see hussars and cuirassiers in full uniform, with their sabres at their sides, labouring behind the plough, or driving their wild herds over the grassy steppes."—*Kohl's Russia.*

The Agricultural Military Settlements of Russia, established in 1818.—The first expense of these colonies was enormous. Two large tracts of country were appropriated to them. One for the infantry, on a plain in the province of Novgorod, in Northern Russia, was distributed among two divisions of the line, under Prince Schahofskoi. The second, or cavalry settlement, was established in South Russia, on crown lands, where five divisions of cavalry were placed under General De Witt, and divided into brigade, regimental, company, and individual allotments. Each of the last was appropriated to a military agricultural family, consisting of an old soldier of good conduct, as the head; a comrade of middle period of service, as his assistant; and a recruit. The first was exempt from heavy duties; the others were regularly trained and exercised. The effective companies for immediate service were composed of soldiers of the middle series, and the reserve of the two others. A general inspection annually takes place after harvest. They are allowed to marry, and the children are instructed to read and write, and learn some kind of trade. The most efficient of the invalids constitute a police. The period of soldiers' service was fixed at 20 years; after which they may enter the reserve service for 5 more, and retire on invalid pension; or if strong and healthy, and remains, he may receive a badge and double pay. The occupants received, in the first instance, a complete outfit of agricultural implements. Villages, with neat churches, suitable houses, and hospitals, were built for them in central situations. Seed, and materials of various kinds were provided at first. Eventually, each settlement was held to provide for its own subsistence, and to have a considerable store of provisions ready for any emergency, or on being called on active service. These settlements were exempted from taxation. The officers, according to their rank, were charged with the government of the settlements; and were made responsible for divisions, brigades, or regiments, being able to take the field, mounted and accoutred, whenever ordered to be called out. All the duties are the same as in cantonments. Officers of the day are regularly appointed; and punishments for offences are the same as in the regular army. Each regiment has its loan fund. The cavalry have a great advantage in the men having been made to ride from boyhood. There is an establishment belonging to each division for the breeding of horses; and each regiment has a stud of not less than 30 stallions and 300 mares: as much as 200*l.* sterling has been paid for the stallions. The effective duration of a troop horse is 8 years.

"In the neighbourhood of *Yelisabethgrod*," says M. Kohl, "there are several German colonies which thrive and fatten visibly in the steppe, and yield every year a number of

superfluous young people who find employment in the neighbouring towns as mechanics, innkeepers, &c.

The *brittle* limestone which lies everywhere beneath the mould and clay of the steppe, forms the principal building material from this part of the country to the shores of the Euxine, wood being excessively scarce. This stone is so soft and crumbly, that it can be worked like wood with the saw and hatchet. The towns of Odessa, Nikolayeff, and the villages of the German colonists are built of this stone. It looks well when new, but its beauty and durability lasts but a short time, for the stone, in reality, is so soft, that one can bore a hole into it with a stick, and so porous that it sucks in moisture like a sponge, and lets in wind through walls three feet thick. Of course all edifices constructed with it go rapidly to decay, and the steppe villages and towns are covered with new ruins.

"Sebastopol, Nikolayeff, and the suburbs of Odessa, are full of such ruins.

"The fertility of the country decreases as we approach the Black Sea; for, though the soil is as rich and deep as ever, the entire nakedness of the ground is unfavourable both to the garden and the field, and renders it only fit for pasturage. In the immediate vicinity of Odessa and the other large towns, indeed, large tracts are kept under the plough, but this is simply owing to the demand created by those towns; the real granaries of Odessa are in Bessarabia, Podolia, and Little Russia.

"This whole region, it cannot be denied, must be tedious to travellers in general, but I cannot say, for my own part, I experienced much weariness. The mere consciousness of finding myself at last on the genuine steppes, those immeasurable grassy fields, where, for hundreds of miles, no break occurs in the uniformity of the verdant ocean, where a calf that began to graze at the Carpathian mountains, might eat its way to the wall of China, and arrive there a full-grown ox. This mere consciousness, I say, occupied my imagination so much as to exclude all thought of ennui. The mighty movements of nations that have taken place here in past ages, the singular lives of its present inhabitants, their vast herds of cattle and horses, their countless flocks of fat-tailed sheep, the apparent boundlessness of the steppe,—nay, the very rapidity of our own movement, sufficed to keep off every thing like a feeling of weariness, although the extreme uniformity of the scene made us feel as if we were on a treadmill, and were never really stirring from the spot.

"At those villages which belong to one landlord, we were always sure to find a quantity of fine large greyhounds. They are almost the only dogs used for the chase on the steppe.

"The rich lords of the steppe also keep other dogs, and sometimes carry on hunting expeditions on a large scale.

"The wolf-chase on the steppes is peculiar. A thicket, in which wolves are supposed to lie concealed, is surrounded by nets. In front of these nets the hunters station themselves with their fowling-pieces, and behind them stand the peasants with spears and pitchforks. The drivers and dogs then enter the thicket to scare the wolves into the plain. Those wolves that escape the tubes of the hunters, entangle themselves in the nets, where they are speared or pitchforked by the peasants, and sometimes taken alive. The genuine Cossack of the steppe, however, uses neither musket nor pitchfork, but mounted on his trusty steed, depends only on his well-plaited *nagaika* or whip, with which he rarely fails to cut down a wolf as with a sabre.

"The roads from station to station are in their best condition during the months of April and May. In the beginning of the spring, on the melting of the snow, the steppe is absolutely pathless and impassable, for the whole of its deep rich soil is changed into a tough miry paste. Art has done but little for these roads, except digging small ditches, thirty-six fathoms from each other. Besides this, on the great roads, small pyramids have been erected at certain distances to mark the way which would otherwise be lost in winter. So imposing a breadth is given to these roads on account of the great herds of cattle which pass through them to the slaughterhouses of Moscow and St. Petersburg, and to the great *Salgans* (establishments for the boiling of tallow) at Odessa, Kherson, and Taganrog. The road serves at the same time as a pasture-ground, the cattle eating their way as they go. The trading caravans, which travel to and from the Black Sea, also camp out upon these roads. They mostly consist of from 30 to 40 waggons drawn by oxen, but sometimes amount to 300 or 400. It is singular that in rainy weather the skins of the oxen become sore when drawing, so that the caravans cannot proceed until the rain is over.

"Throughout the whole of Southern Russia the summer is the principal time for trade and commercial intercourse. In the north exactly the contrary takes place.

"We visited *Adyamka*, a military colony of lancers near Nikolayeff. The men lived like genuine Troglodites, in houses dug in the earth, but for their horses a very handsome range of stables had been erected. An imperial stud was connected with the colony, and in the stud we were assured, there were English stallions that had cost as much as 20,000 roubles. These horses are not turned out into the steppe like the others, nor were we admitted into the stables to see them. Wood, we were told, cost here from 50 to 60 roubles the cubic sash (7 English feet), and at Odessa it is often 80. Firewood is often brought to Odessa by land-carriage, a distance of 30 German miles."—*Kohl's Russia.*

BESSARABIA.—The most south-westerly province of Russia in Europe. The area of Russian Bessarabia is estimated at 12,000 to 16,000 English square miles, or at 7,680,000 to 10,040,000 English acres, and the population at 600,000. The part extending towards Galicia is hilly and wooded; the remaining part is nearly all a level country; the soil is generally fertile, and, with the exception of marshes and level places covered with reeds, extending along the Danube, is generally well adapted for agriculture. The cultivation is rude; yet Malte Brun says, "The lakes or stagnant waters are covered with reeds, and in the plains between the marshes, the ox, buffalo, and bison, wander among pastures where the herbage rises to the height of their horns. In the cultivated land millet yields 100 and barley 60 fold! (10 fold would be nearer the truth.) The horse and the sheep exist in a wild state."

Wheat, barley, and millet, are grown.

By the official accounts of the quantity 139,141 chetwerts (sown in 1829,) the produce was no more than 651,320 chetwerts, or about 5 to 1. Hemp, flax, and tobacco, are grown in considerable quantities. The breeding of cattle is, however, the chief pursuit of the inhabitants, both for exportation alive, as well as for their hides, tallow, &c.

AGRICULTURE OF THE REGION OF THE CAUCASUS.

THE soil and vegetation of the region of the Caucasus appears to be generally rich and luxuriant. Spencer says, "However high the ascent, we see luxuriant vegetation mingling even with the snow of centuries." To every production, whether corn, trees, shrubs, fruits or flowers, grasses or roots, of the warmest latitudes of the temperate zone to those of the highest Alps, the soil and climate of the Caucasus are adapted. The ill-cultivated arable land of the northern lower districts, and the meadows are all of the most fertile character, and as the ascents increase, the mountain sides are covered with luxuriant wood.

The table-lands and brows of the southern parts are luxuriantly rich and varied in their productions. The low boggy and marshy borders of the Caspian and Black Seas are covered with rank and generally almost impenetrable vegetation. The forest trees are oaks of different kinds, cedars, beeches, cypress, junipers, boxwood, spruce firs, hazels, alders, walnut, &c. Dates, palms, jujubes, quinces, cherries, olives, wild apricots, apples, pears, vines, pomegranates,

mulberries, and figs, grow wild in all the warmer valleys; and vines twine round the trees, to a considerable elevation up the mountains.

Rye, barley, oats, wheat, and millet, may be plentifully raised, even as high as 7500 feet above the sea; the southern plains and valleys produce cotton, rice, flax, hemp, tobacco, and indigo, with every variety of fruit, cucumbers, melons, &c. Bears, wolves, lynxes, jackals, foxes, wild-cats, deer, weasels, polecats, ermines, and moles abound. Hares, partridges, grouse, and various kinds of game are abundant. Wild cattle, goats, chamois and sheep with peculiarly long wool are numerous. The bee and silkworm also thrive, and honey once formed a valuable branch of export to Turkey.

CIRCASSIA is the most extensive and important region of the Caucasus, of which it occupies nearly the whole northern slope, for a length of about 480 miles, and a breadth of from 40 to 100 miles: area about 34,000 miles. On the south and west a ridge of the mountains separates Circassia from Mingrelia Georgia, Imeritia, and Abchasia. The north limit is bounded by the rivers Kuban and Terek, which separates Circassia from the lowlands, of the Black Sea and lands of the Zaparog, and Don Cossacks. The Russians have colonies in the Caucasian steppe.

The Circassian horses are highly famed, and equal to the best Arabian. Live stock are remarkably abundant. Agriculture is in a rude state, though the country is remarkably fertile, and capable of yielding all kinds of grain and fruit. Lead and copper are found; and saltpetre is very abundant.

GEORGIA, the next great division of the Caucasus, is about 175 miles long; its average breadth from 100 to 110 miles. The area is estimated at about 18,000 square miles, or 11,520,000 acres, and the population at between 300,000 and 400,000. The soil is very fertile, and agriculture and rearing of cattle are the chief employments of the inhabitants. Wheat, rice, barley, oats, maize, millet, lentils, madder, hemp, and flax, are generally cultivated articles; cotton grows in a wild state, and is also cultivated. Georgia is noted for the excellence of its fruits, especially its melons and pomegranates; and many kinds of fine fruits grow wild. Vineyards are very generally extended, and the production of wine is one of the principal sources of employment. It is strong and full bodied, with more *bouquet* than port or madeira; but from having very little care bestowed in its manufacture, it keeps badly, and casks and bottles being for the most part little known, it is kept in buffalo-skins, smeared inside with naphtha, which gives a disagreeable taste, and causes it to become acid.

The Georgians have the reputation of being great drinkers: the daily allowance of a labourer is four bottles, and an inhabitant of Tiflis drinks daily a *tonk* of between 5 and 6 bottles. The heavy plough used requires six or eight buffaloes to draw it; the harrow is a felled tree, and a great quantity of the corn is wasted, owing to its being trodden out by buffaloes. The horses and horned cattle equal

the best European breeds in size and beauty, and the long-tailed sheep afford excellent wool. Game of all kinds is plentiful.

The houses of the peasantry, even in the most civilized parts, are nothing more than slight wooden frames, with walls made of bundles of osiers covered over with a mixture of clay and other matter, and a roof of rush—the fire is in the middle, and the smoke escapes through the ceiling, roof, or the door. In the houses even of the nobility, the walls are sometimes built of trunks of trees cemented with mortar. The roads, except that across the Caucasus to Tiflis, are in a wretched condition. The vehicles in use are of the rudest kind, and all commodities, except straw and timber, are conveyed upon horses, mules, asses, or camels. The inhabitants never ride except on horseback. The Russians have, however, introduced many improvements into Georgia, as well as into the country east and north-east of the Caucasus along the Caspian.

AGRICULTURE OF SIBERIA.

SIBERIA, exclusive of *Kamtschatka* (to which we have in another part briefly alluded), is divided into three extensive governments; viz., *Irkoutsk*, comprising an area of 1,250,000 square miles, or 800,000,000 acres; estimated population, only 210,000. *Tomsk*, area 225,000 square miles, or 143,900,000 acres; estimated population, only 215,000. *Tobolsk*, area 55,000 square miles, or 35,200,000 acres; estimated population, in 1838, 685,000. Kamtschatka has an area of 250,000 square miles, or 160,000,000 acres. The whole of Asiatic Russia, including Siberia, Kamtschatka, Astrakan, and the Circassian States, comprising a surface of 1,878,000 square miles, or 15¼ times as great a surface as the United Kingdom, has only a population estimated, at the most, not to exceed 3,823,000 inhabitants. This being probably near the fact, the agricultural infertility of the country may be easily admitted. *Tobolsk* is by some authorities estimated to comprise a much more extensive area than the estimate we have given. In the south-west and southern parts of this government there are large districts of good pasture-lands, and considerable quantities of oats, barley, and buckwheat, are raised. There are also many extensive forests in Tobolsk.

TOMSK.—The southern parts of this government has forests, extensive pastures, and the same productions are raised as in Tobolsk.

IRKOUTSK.—There are many parts of this vast region capable of cultivation; and it affords in most of its southern districts good pasturage. The district of Krasnojarsk, is the most productive in corn, horned cattle, horses, beef, flour, fish game, &c., which are stated to be remarkably good and cheap at the capital of the district. There are extensive forests of timber. Hunting wild animals for their skins is, however, the chief pursuit of the inhabitants of the whole region of Irkoutsk, as well as of the scattered inhabitants of Kamtschatka.

TABULAR STATEMENTS OF THE PRODUCE OF RUSSIAN AGRICULTURE.

ESTIMATE of the produce of Grain in the whole empire of Russia, according to Weydemeyer's General Statistical Tables, published in the year 1828.

Average quantity sown, more than 60,000,000 chetwerts.

Average produce, 5 for 1 sown.

Total average produce, about 300,000,000 chetwerts, or about 210,000,000 quarters.

ESTIMATE of the Produce of Grain in Russia in Europe (not including Poland, the grand duchy of Finland, and the provinces of Bialystock and Bessarabia), according to Schnitzler's Statistics of Russia, 1829 and 1835.

Average quantity sown, 50,000,000 chetwerts.

Average produce, $3\frac{1}{2}$ for 1.

Total average produce, 181,000,000 chetwerts, or about 126,500,000 quarters.

Total average consumption, including seed and the supply of distilleries, 141,000,000 chetwerts.

Total average disposable surplus, 40,000,000 chetwerts, or about 28,000,000 quarters.

ABSTRACT of the Produce, Consumption, and Surplus, of Grain in Eleven Provinces of Central Russia, from which St. Petersburg draws Supplies; founded on Estimates given by the Russian Corn-merchants.

EXTRACTS FROM CONSULAR REPORTS.

"*St. Petersburg, September* 25, 1841.—The great corn-growing country of Russia is situate east of longitude 38 deg. 2 min., and south of latitude 54 deg.: the accounts from which districts are miserable, and caused by a continuance of dry weather to such an extent as not only to decrease materially the yield of the crops and burn up the grass on the pasture-lands, thereby rendering it necessary to adopt grain for the feeding of the cattle, and at an unusually early period begin upon the small supplies of fodder which, in ordinary seasons, are reserved for the winter and spring keep; but the drought has also parched the land to that degree that no sowing can take place before the spring, which is dangerous, and a great disadvantage to Russia, from the soil being so long in an unfit state to receive the seed after the melting of the snow."

"*Riga, November* 18—30, 1841.—With the exception of barley and oats, the crops of grain this year have averaged very indifferently, and in so far as the question bears on the exportation of grain from the port of Riga, I must remark that Livonia seldom furnishes for exportation any quantity of corn worth mentioning, and never wheat. The soil in general is not adapted for wheat. Rye is the article chiefly grown and almost entirely appropriated for the numerous distilleries, and the consumption of the province.

"The barley grown is also chiefly consumed by the former, especially this year, owing to the scarcity of rye, and for the same reason barley bread is, in some districts, becoming a substitute for rye bread. Oats as well as barley have, in point of abundance, proved good crops, yet as there are no old stocks left they will not more than suffice for the home consumption, until the next harvest, whilst of wheat and rye there is, as before observed, a scarcity.

"Riga, in the first instance, obtains its grain from the neighbouring province of Courland, and likewise from Lithuania; but in case of a demand for exportation, principally from the provinces of Smolensk and White Russia; and if the demand is very encouraging, additional supplies may be expected from those of Orel and Kalouga.

"The harvest in Courland and Lithuania, where the soil is more especially favourable for the growth of wheat, has only turned out satisfactory with regard to the spring corn, whilst the wheat and rye crops have not yielded even a middling average; so that but little rye, and no wheat, can be looked for from these two provinces for next year's exportation. The millers are buying up the latter at from 170 roubles to 175 roubles per last, the highest

notation would be about 52*s.* 10*d.* to 54*s.* 4*d.* per quarter free on board. Courland wheat and barley are considered the best."

"*St. Petersburg, December* 11, 1841.—No regular official returns of agricultural produce are published in Russia, and such is the scarcity of statistical records, and such the discrepancy of individual opinion, that it is quite impossible to found an estimate on any satisfactory basis. Under these circumstances we can only have recourse to the Russian 'Journal' of the Ministry of the Interior, upon which the subjoined return is grounded. But it is necessary to observe, that the statements contained in the official publication are held in no great repute for accuracy, because avowedly derived from approximative notions furnished by local authorities, whose reports are notoriously compiled from the loose and frequently deceptive declarations of the growers.

"Neither the quantity sown nor that produced is in the Journal of the Ministry of the Interior. It is simply remarked that the harvest, though not absolutely bad, fell considerably short of that of the preceding year."

RETURN of the Quantity of Corn raised in Russia from 1835 to 1840; viz., in Europe the whole of Russia Proper, which does not include the Kingdom of Poland, nor the Grand Duchy of Finland; in Asia, Siberia, and Georgia.

Summary of the Answers to Questions relative to Corn, received from her Majesty's Consuls.

ANSWERS.	QUERY 1.				QUERY 2.				QUERY 3.	QUERY 4.	QUERY 5.
From Her Majesty's Consuls at	What Quantity of Grain, of each kind, could be exported to England, from the Country or District in which you reside, if the Trade in Corn in England were made constantly open, at a moderate Duty?				What would be the Average Prices free on Board? Per Imperial Quarter.				What would probably be the freight per quarter to England?	Would the exportation be subject to any other charges?	Whether if there were a regular and steady demand in England for foreign corn, the quantity of corn produced in the said country or district would, without much difficulty, and in a short space of time, be materially increased?

* In the answers from St. Petersburg, Liebau, and Hamburg, the gross amount that could be exported to *foreign countries* seems to have been given, not the quantity which might be shipped to England.

† The probable freight of wheat only per quarter to England has been stated in this Table; the freight of rye, barley, and oats, would be proportionably lower.

‡ The remunerating price of wheat at Warsaw is 24*s.* The expenses of water-carriage from thence to Dantzic may be taken at 12*s.* per quarter.

§ The return from Hamburg includes those from Lubec, Bremen, Rostoc, &c.

‖ This quantity could be exported in years of abundant harvest *only*.

Note.—The freight to the west coast of England would be about 6*d.* higher.

CHAPTER XXVI.

PRODUCTIONS OF RUSSIA EXCLUSIVE OF CORN.

THE tabular statements which we have given of the export trade of Russia exhibits the articles produced for interchange with other countries: of these, *timber, hemp, flax, tallow, corn,* and *linseed,* are the principal.

Timber.—We have described the timber trade of Russia in the general account which we have given of that important branch of commerce under the head of the States of Germany.

Although the Baltic provinces are still covered to a vast extent with wood, there is but little remaining fit for the markets of England, France, or Holland; and the square timber, the masts, and the wood sawn afterwards into deals, is brought by expensive and tedious water carriages, on the rivers and canals, from a great distance in the interior, and from the provinces which we have described as abounding in wood. The price of timber, of deals, and especially of masts, must, therefore, increase instead of diminishing; and the timber of the British North American and of other British possessions will continue to compete successfully in the British markets with that of any foreign country. The greatly increased cost of Riga masts will cause them to be supplanted, for the use of the British navy, by the more durable masts of New Zealand; and various East Indian and African woods, and lately mahogany, now used in the construction of ships of war and merchant ships and admitted at low duties, places England in a position of perfect independence of Russia, for timber of any description. At the same time we shall continue to import timber from Russia, although the policy of that country prohibits the legitimate use of our manufactures. One of the glaring examples of the folly and blundering commercial legislation of Russia was, at one time, prohibiting the exportation of timber.

"Notwithstanding," says Mr. Oddy, "such apparently inexhaustible supplies of wood in Russia, and the regulations which even before existed for its preservation, yet we find at the close of the year 1798, from the mistaken notions of the proprietors of the iron mines in Russia, that they succeeded in procuring a prohibition, to the exportation of timber in toto, which they afterwards modified, with a view of benefiting themselves. This measure was the means of raising the price of iron, in consequence of the additional freight the English were obliged to pay, because they could not get deals as usual to load their ships; this operated to the prejudice of the Russians, and diminished the exportation of iron, besides depriving the government of an annual revenue, from wood, of considerable amount, and the proprietors of the forest of a permanent resource.

"In 1740 deals sold, at St. Petersburg, by the hundred, for 7 roubles, and in 1790 they cost from 16 to 18 roubles; and just before the prohibition took place, they were selling from $2\frac{1}{2}$ to $3\frac{1}{2}$ roubles per dozen, reduced to standard measure, that is, 12 feet long, 11 inches broad, and $1\frac{1}{2}$ inch thick (let the length, breadth, and thickness, be

what it might); but the effect of that prohibition immediately put a stop to the saw mills working, the cutting of timber in the country, and the bringing of any supplies of wood down the rivers; the consequence was, that, for ordinary purposes, at St. Petersburg, the price rose to 8, 9, nay even 10 roubles per dozen, and scarcely any could be got even at that price, as no person chose to bring supplies down, owing to the export trade being stopped, and the sale uncertain. This produced a fresh regulation; perhaps partly through the influence of the iron proprietors, who maintained that if the English must have deals, they ought to be proportioned to the quantity of iron they took, which was therefore regulated, at 284 standard dozen of white wood deals for every 100 tons of iron exported. By an ukase, in the spring of 1804, half that quantity of red wood was allowed in addition to the white wood, for the same quantity of iron; but this privilege of exporting red wood deals was only granted to a few people, and therefore the proportion was perhaps exceeded; and those who exported iron only did not themselves exercise the privilege of exporting the deals, but sold it to others interested in that trade.

"The cause of the prohibition of wood, originated with the proprietors of mines, who represented that, from the great quantity exported, they could not work their foundries; notwithstanding the price of iron had risen, on account of the high price of wood. Although this was in Siberia, from whence no supplies of timber can come to any shipping ports; and the evil complained of by the proprietors of the mines, arose from their not taking measures, in due time, to preserve a constant supply. Nor is it attended to more now than formerly; young trees being very frequently cut down for making roads, laid horizontally, and covered with sand. The prohibition to the export of wood had, in effect, no salutary end. The manufacturing of pitch, tar, and potashes, was still carried on; and the young linden is yet sacrificed for making mats, and even shoes, for the poor peasantry. Whole balks are used horizontally, in building the peasants' houses, and for many purposes; and entire districts are in devastation, by cutting down every thing indiscriminately; so that every year, as the distance becomes farther and farther, they have to obtain supplies from a more remote quarter.

"The indiscriminate destruction of wood may easily be conceived in the neighbourhood of the mines, from the situation many furnaces are in, by being obliged occasionally to suspend their works. In the government of Perm alone, it is supposed that betwixt 300,000 and 400,000 tons of charcoal is consumed, to smelt and work iron and copper; what an immense quantity of timber must be cut to produce so great a quantity of charcoal; particularly where there is no management or care in the forests, and where all is cut down as it comes, without a consideration to the future!"

From the various accounts which we have received, the destruction of the forests appears to be still in full progress, and the fact is well known, that timber and masts are now brought from the interior, in many cases more than twice the distances that both were when Mr. Oddy wrote. For the exports of timber, deals, masts, spars, balks, battens, and staves, from Russia. (See tabular statements under the heads of St. Petersburg, Riga, Archangel, Onega, and also tables of trade between the United Kingdom and Russia.)

"*Beet-root Sugar.*—According to the 'Journal de St. Petersbourg,' the number of the beet-root refineries in Russia at the beginning of the current year was 174, of which 29 were in the government of Toula. And in the 'Gazette of Commerce,' published at the department of foreign trade, the total produce is rated at 125,000 poods, or about 2009 tons English. The average annual import of colonial sugar during the years 1837, '38, and '39, is stated in the same official paper at 1,675,806 poods, or about 26,932 tons.

"*Tobacco.*—Tobacco is extensively cultivated, chiefly in the southern provinces, and particularly in the Ukraine.

"The leaves of 'Sarepta,' a Moravian colony on the Larpa, near its confluence with the Wolga, and those of the Ukraine, are esteemed the best.

"There are no returns of the quantity raised, but the following official statement will show the quantity manufactured, imported, and exported, in 1839.

"In 1839 the quantity of tobacco manufactured in Russia, including the remains of 1838, was—

	Poods.	Cwt.
Pipe tobacco	3,800,000	
Snuff	2,200,000	
Cigars	62,500,000	
Rolls	800	
Total	68,500,800	=550,453
Imported	84,112	= 27,036
Exported	50,647	= 16,280

"*Hemp.*—It does not appear that any sensible increase has taken place in the culture of hemp.

"The following is a table of the average annual exportation from Russia, at different periods, from 1758—1837:

Years.	Poods.
1758—62	2,010,933
1763—77	2,159,737
1800—14	2,945,328
1814—24	2,656,919
1828—32	2,341,128
1833—37	2,874,189

"The surplus produce of the province of Vologda and the surrounding country is exported from Archangel.

"The best quality is produced in the governments that supply the port of Riga; viz., Vitepsk, Smolensk, Mohileff, and Tchernigoff.

"The greatest quantity is raised in the governments of Koursk, Orel, Kalanza, and part of Tchernigoff; and the exportation takes place through St. Petersburg, Narva, &c.

"The subjoined statement will show that the exportation from St. Petersburg has decreased since 1798.

Exports.	Poods.
Ten years before the war with England, 1798—1807	2,094,143
First ten years after the peace, 1813—1822	1,848,051
Second ten years after the peace, 1823—1832	1,761,911
Ten years ending with 1840	1,961,750
Exported in 1841	1,446,410

For the exports of flax, oil, seeds, and tallows, see the tables of exports.

Burning Wood.

* A very coarse cloth, of a darkish colour.

List of Articles which can be imported, from Sweden and Norway to Finland, without Certificates of Origin.

Alum, white.
Buoys of wood.
Filings, of copper, brass, wood.
Bark of oak-tree.
Steelyards, Swedish, stamped.
Beehives.
Fresh flowers, green trees.
Shingles of beech.
Pulleys for the use of ships.
Bread of wheat or of rye.
Compasses.
Beer-casks, of oak or beech.
Flints, common.
Amadou.
Fruit and vegetables: Plums, potatoes, dried and fresh, cherries, epines vinettes et suc d'icelle, rubus chamæmorus, mulberries and rob of mulberries, rubus articus and the sirup of this berry, pears, cucumbers, horseradish, asparagus, beans, cabbages, white, and cauliflowers, nuts, and nut-trees.
Garden seeds, of herbs and flowers.
Lobsters.
Iron in bars, iron for bolts, iron bent, nails, cannons, forged plates, anchors, grapnels, spades, shovels, iron wire, coarse work in blackened iron, cast work, such as plates (iron), anvils, fleshpots, stoves, grinding mortars, clocks, &c., coming from Sweden. Casting iron, and iron ore, imported from Sweden to Finland by the proprietors of the Finland forges, for the use of these forges.
Cards, stamped, of every kind.
Copper, worked and not worked.
Salmon, smoked or salted.
Tobacco-pipes of clay.
Brass, worked and not worked.
Bronze, common and cast, clocks, cannons, fleshpots, grinding mortars, &c.
Flour, of wheat and rye.
Tiles and bricks.
Oysters.
Ploughs, and irons for ploughs.
Silver, worked and stamped, of Sweden.
Sieves, for sifting corn or earth.
Hones, stones for floors and stairs, millstones, squares, tombstones, fleshpots, grinding mortars, stones from Oeland and Gottlande.
Steel, not worked.
Starch, white.
Sulphur.
Materials in wood, in blocks, or not worked, for furniture, of beech, of oak, of alder, of birch, of aspen, of juniper, of elm, of ash.
Alder, split, with Swedish stamp.
Staves and bottoms of casks of oak and beech.
Pigeon peas and others.
Vitriol.

CHAPTER XXVII.

RUSSIAN MINES AND MINERALS.

The Ural mountains and Siberia are the principal regions of Russian mineralogy. Old Russia and Poland have also mines of iron, coal, &c. As far back as 1596, the Tzar Ivan Vasselievitsch granted an English company the privilege of mining and smelting iron ore near Moscow, on condition of paying the Tzar one farthing per pound, and of teaching the Russians the art of making iron. The Siberian iron mines were first worked in 1703, and in 1726 about 25,000 tons of bar iron were made in the government of Perm. The absurd policy of Sweden in keeping up the price of iron, and the backward state of the English iron mines at that period enabled the Demidoffs, Woronzows, Tverdechoffs, Shojonvros, and other great proprietors, to realize large fortunes from their iron mines, before the close of the last century.

The Uralian, Altaic, and Nertschinskew mountains yield iron, copper, silver, &c. In the year 1779, there were 100 smelting furnaces in the Uralian mountains, 34 of which were for copper, the remainder for iron. About 80,000 tons of iron were produced annually in the years 1790 to 1794. During the latter year, the proprietors complained of great distress, and received aid from government.

Copper abounds most plentifully in the governments of Olonetz, and in the Ural and Altaic chains above 60,000 tons are annually stated to be extracted from these mines.

The lead-mines of Kholivan and Nertschink yield about 12,000 tons annually.

The salt-mines of Hetsk, in Orenburg, yield nearly 5000 tons annually, and these and the salt springs of Taurida, and the salt *limans*, or lagoons, of the Black Sea, yield annually above 250,000 tons of salt. Salt is, however, imported into the Russian Baltic ports from England, and into Poland and the Ukraine from the Austrian salt-mines of Wielicska.

Mr. Oddy states that "the exportation of iron from Russia after the year 1784, but particularly since 1794, has been upon the decline; for the last year, the export to Great Britain was not a third part of any of the previous three years. In the year 1784 the whole export from Archangel and the Baltic was about 50,000 tons, of which Great Britain alone took above 40,000; and in the year 1781, she imported 50,000 tons from St. Petersburg alone; whilst the whole exportation from thence for the last four years, was, on the average, only about 40,000 tons, of which Great Britain has taken 30,000, and in 1804, only 5848 tons.

"Gold has been found in considerable quantities in Russia. The first mine of this valuable metal was discovered in the mountains of Olonetz in 1739, and one for silver in 1704. Many other discoveries have been made of gold and silver mines which are worked; but the most considerable is that of Kholivan, which had been worked by Demidoff, the rich Russian iron-master, from its discovery till 1745, when the crown took possession of it. The whole of the native produce of Russia has been estimated at

Gold about . . . . . 42,675 pounds weight.
Silver . . . . . 1,564,750 „ „

"In the Uralian mountains alone, there were, 25 years ago, 60 smelting houses, which produced about 6,200,000 pounds weight. The whole annual produce of the empire has been about 7,350,000 pounds weight; but, as the produce of the mines is decreasing, the whole cannot be reckoned at present at more than 7,000,000; which is chiefly coined for circulation.

"The whole quantity of iron shipped from Russia in 1793, was as under:

PLACES.	IRON.		ARTICLES.	IRON.	
	roubles.	roubles.		poods.	roubles.
St. Petersburg	4,745,648		Bar iron	2,503,757	4,258,228

Kherson	13,254		Assorted iron is		
Theodosia	12,490		only exported from		
Eupatoria	7,740		St. Petersburg, Riga,		
Otchakoff	150		and Archangel.		
Yenicale	54	145,517			
Total	.....	5,204,125			

"The exportation of iron throughout the whole empire, in 1802, amounted to 4,617,989 roubles."—*Oddy's European Trade.*

About 54,000 miners, &c., are stated to be now annually employed in the Ural and Siberian iron-mines: which, together with the iron-mines of Altai and

Valdai, are said to yield about 170,000 tons of iron per annum. Iron is also found in the Caucasus. Wood only is used in smelting in Russia.

Antimony, cobalt, mercury, zinc, &c., abound in Siberia, and spelter in Poland. We have alluded briefly to the mineral productions of Poland. An official account published in the Journal of the Minister of the Interior, (for April, 1839,) gives a most glowing account of the mines and forges of that kingdom, and of the rock salt-mines of Cochochink, in Plask. There were smelted in 1833 about 3000 tons of iron. In 1836, about 5000 tons. The coal-mines are also described as capable of being profitably worked, but the quantity, produced annually, is as yet comparatively very trifling.

The following is a statement of the produce of the Polish mines for 1833 and 1836, and the estimated produce for 1840, as stated in that report:

ARTICLES.	1833	1836	1840

Gold extracted from the Ural Mines, and coined in the above years, quantity, 117,564 lbs. value	7,143,499
Platina " " " " quantity, 28,125 lbs., value	393,737
Total apparent increase of circulation	£18,410,786

Count Krankin informed Baron Humboldt that the Ural chain of mountains yielded, in 1838, 298 poods of gold, 1 pood = $16\frac{37}{100}$ kilogrames = $69\frac{9}{10}$ Cologne marks.

The mines of Ural yielded the following quantities of gold: viz.—

	pds.	liv.	zol.
In 1839—Mines of the crown	142	25	$82\frac{84}{92}$
Mines of individuals	170	22	39
Total 1839	313	8	$25\frac{84}{92}$
In 1842—Mines of the crown and of individuals	309	32	14
1843—Mines of the crown	137	27	70
Mines of individuals	175	43	20
Total 1843	313	30	90

In 1842 the silver mines of Kolyvano and Nertchinsk yielded 32 poods of gold; and in 1843 = 48 poods.

Quantity of plantina yielded by the mines during the year 1839:

	pds.	liv.	zol.
Mines of the crown	0	8	$76\frac{32}{92}$
Mines of individuals	91	27	$66\frac{36}{96}$
Total 1839	91	36	$47\frac{53}{92}$
In 1843—Mines of the crown	0	27	20
Mines of individuals	127	29	35
Total 1843	128	16	55

The richest platina mines are those of MM. Demidoff, which yielded 90 poods, 25 liv. $95\frac{1}{2}$ zol.

EXTRACTS from the "Journal Officiel de St. Petersbourg" of the 28th—16th of December, 1841; 10th March, 1844, and from the "Journal de l'Interieur" of 1842 and 1843.

"The sands, carried along by the waters, exhibit an uninterrupted presence of gold over the surface of many square versts: as for instance in the basin of the river Grande Birussa, on the confines of the districts of Yenisseisk and Irkoutsk, and in the basins of the Upper Tongouska, Oudérei, and Pitz, which water the former of these districts. Though these riches may be spoken of with satisfaction, it is not easy to get at them, much expense being necessary, and workmen being obstinate.

"The washings of the gold sands in Siberia, which are here spoken of, have been extended by individuals, following the example practised by those employed by the crown. With the exception of the territories belonging to the imperial mines of Kolyvano-Voskressensk and Nertchinsk, and the country beyond the Baïkal, the search for gold in all the remainder of the vast extent of Siberia has been abandoned by the crown, under certain conditions, to individuals. The speculators had long wandered in the deserts of that country, had long embarked their capital, and lost their health there; but at length their perseverance triumphed, gold was discovered, and operations commenced in 1829."

The following table shows the quantities of this precious metal discovered in each year from 1329 to 1840:

	poods.	liv.	zolot.		poods.	liv.	zolot.
1829	1	10	11 48/96	1837	132	39	5
1830	10	22	39	1838	193	6	47
1831	10	4	2 15/96	1839	183	8	16
1832	21	37	40 72/96	1840	255	27	26
1833	36	18	81 90/96	1841	358	33	14
1834	65	19	58 36/96	1842	631	5	21
1835	92	19	10 17/96	1843	933	2	10
1836	105	9	4 1				

The total produce of gold in Siberia, and in the Ural, Kolyvano and Nertchinsk, during the year 1843, (according to the "Journal of the Interior" St. Petersburg, 10th March, 1844,) amounted to 1294 poods, or about 334 poods more than in 1842: in which year the total produce amounted to about 970 poods, or about 42,530 lbs. troy, in value=1,980,203*l.* sterling; and the 1294 poods in 1843, to the value of about 2,633,645*l.* sterling, exclusive of the amount concealed, which is estimated at from one-sixth to one-fourth of the whole, on account of the seigniorage of from 20 to 25 per cent exacted by the crown.

Russian Coal Mines.—In a report published in the "Official Journal of the Interior," it is stated that several of the most extensive coal fields in the world have been discovered in various parts of the interior of Russia, between the Dnieper, and the Upper Don, at Kaluga; also in the Crimea.

REMARKS ON THE PENINSULA OF APCHERON ON THE CASPIAN.

Sacred Fires, Wells of Naptha, Lakes of Salt, extracted from an official Russian Report.—The environs of Bakou, on the Caspian, the ancient fortress and capital of the Ghebers, and the rocks of the Peninsula of Apchéron, are remarkably interesting.

This peninsula is formed by the most eastern branch of the Caucasus: its heights and cliffs are composed of chalky rocks, upon which here and there repose masses of a sort of brown freestone. The chalky rock must have been of a recent formation, as there are discovered, among the petrifications, species of the same kinds of fish in great numbers, which still exist in the Caspian Sea.

"About 1000 poods of prepared saffron are annually exported from this country, and the profits are about 360,000 roubles. The culture of madder has been of much less importance, very seldom exceeding annually a total of 300 poods.

"But notwithstanding the bare look of this peninsula, covered with rocks, it has been celebrated for many centuries, in all the eastern countries, as a sacred soil, and to which the disciples of one of the most ancient worships still make pilgrimages, to adore the sacred fires, which issue from the earth.

"The consecrated sanctuary of worship, called Ateschga, is at the north of Bakou, at a distance of 12 versts from the town, near the village of Bakahany. One sees a kind of small temple in the middle of a quadrangular court, surrounded by a wall; the sacred fire, worshipped for so many centuries, appears without interruption, from the top of four chimneys, built at the four corners of the edifice: through these tubes it comes from the earth. A certain number of small cells are placed against the wall; in each is a small altar, upon which burns the flame given out by small tubes from the earth. Some small idols of metal, some shells, and some stones placed near the altar, are the objects of veneration of the believers; but furniture is nowhere to be found, except a few old carpets. Anachorets, holy men in the eyes of the professors of their religion, inhabit these cells, and their whole life is given to prayer and meditation. They impose upon themselves every privation, and their only garment is a piece of cloth, in which they wrap themselves up; solitude is their first duty, and they do not even assemble at the hours of repast, except at the sound of a

trumpet, or rather, a large shell used instead of that instrument; they quit their cells only to offer up their prayers together.

In 1836 the number of these anchorets or hermits amounted to 11; when one of them dies they have great care in placing the body of the deceased immersed in butter, (which is well known they only use for religious ceremonies) in a kind of shallow well, dug in the court, and to put therein the inflammable gas of which the well is soon filled, the body is thus consumed in a very few instants, and the remaining ashes dispersed in the air.

"The nature of this gas which escapes here and in other parts of the globe has been the subject of much discussion. It is generally supposed to be proto-carburated hydrogen, and it is effectively of this compound, at least as concerns that of Bakou; according to the analysis of our learned chemist, Mr. Hess, of the Academy of Sciences of St. Petersburg, this gas is composed of 75.4 of carbon, and 24.6 of hydrogen, and is mixed with a little vapour of naphtha.

"Not far from the village of Bakahany there have been worked, for a number of years, inexhaustible naphtha pits, which must be ranked with the most remarkable objects of the peninsula. The soil secretes in many places sources of black and white naphtha, several similar sources are found on the sides of mountains; others bubble out not far from the shore, from the bottom of the sea. The pits of Bakahany are the most important. In the neighbourhood of the village the soil is composed of a stratum of clay partly impregnated with naphtha, under which is successively a stratum of brown freestone, containing petrifications, one of bitumen schiste, then one of sand, and under this a stratum of bituminous schiste, laying on a mass of white clay, which forms the veins of naphtha.

"On an extent of land of 2 versts 200 sagènes of length, and of a breadth of 1 verst or 1 verst 200 sagènes; there have been excavated 6 *large* pits and 76 lesser ones, several of these are not deeper than 1 sagène, 3 feet: whilst others, on the contrary, are not less than 13 sagènes, 6 feet, or 97 English feet deep. These latter are the most rich; one single pit produces sometimes 140 poods of black naphtha in 24 hours, whereas one can scarcely get 6 or 8 lbs. of naphtha from the other pits which do not reach the strata of white clay. All of them are covered with timber or mason's work, and have the form of a truncated cone.

"One of the many sources now worked, is remarkable on account of its having its entrance through the sea. But the point where it opens is not far from the shore, and the depth of water does not exceed $1\frac{1}{2}$ foot. It is surrounded by a drum of woodwork, six feet above the level of the sea; and it produces up to $1\frac{1}{4}$ khalvar ($22\frac{1}{2}$ poods) per 24 hours. This source is the only one belonging to a private individual, all the others belong to the government.

"The 16 pits of white naphtha, at $1\frac{1}{2}$ verst from the village of Sourakhany, resemble those already described, only the openings of the pits are narrower, having but 1 foot in diameter, and great care is taken to cover them when they are not worked, to prevent the evaporation of the naphtha.

"In general these sources are a great deal more abundant in the fine season, and in dry weather: in winter, at the time of the rainy season, and particularly when the north winds blow with violence, they furnish less naphtha.

"The total annual produce amounts to 237,600 poods of black naphtha, and 864 poods of white naphtha.

"We cannot finish this article without mentioning the salt lakes of the peninsula of Apcheron, which are of great importance to this part of the empire. They are ten in number: the most considerable of which, that of Masyr, is $3\frac{1}{2}$ versts by 2 and $2\frac{1}{2}$ of breadth, and is 15 versts from Bakou, and entirely surrounded by mountains. The water, particularly that portion of it which extends south-easterly, deposits beds of salt from 2 to 3 inches deep. Up to 7500 khalvars of salt is yearly taken out; the lake of Tsyk furnishes near 1000 poods; as for the others, they have not yet been explored, so that the annual quantity of salt produced in the peninsula does not amount to more than about 150,000 poods; but it is certain, that if necessary, they could furnish up to 550,000 poods."

CHAPTER XXVIII.

CRACOW.

AGRICULTURE, TRADE, &c.

THE position of this small republic renders it convenient to introduce here all that we can say of it in this work. The surface of Cracow is generally undulated, and its high parts are small ramifications of the Carpathians. The Vistula bounds it on the south, along which it receives small rivers from the north; one of these streams bounds Cracow on the west. The climate is healthy and temperate. The soil is fertile and produces sufficient corn, vegetables, and fruit, for home consumption. In 1834 there were, in the republic, upwards of 50,000 head of cattle, and 100,000 hogs. There are no serfs, and the land is becoming more and more subdivided among small proprietors. The country contains mines of coal, zinc, alum, marble, and some iron; and there are quarries of marble and building stone.

The mines of Jaworzno furnished, in 1831, upwards of 128,660 korsecs of coal, 1794 quintals of alum, and 8744 quintals of zinc. The manufactories of Cracow, with the exception of breweries and distilleries, are not worthy of notice. In 1831 there were produced 1,660,000 litres of beer, 529,000 litres of brandy, 1914 quintals of tobacco, 920 pieces of woollen cloth, 12,800 reams of paper, 13,032 yards of linen cloth, with some minor articles.

The average annual exports amount to 1,340,000 florins (33,500*l.*); imports to 2,200,000 florins (54,400*l.*). Next to Cracow, the principal towns are Chrzanow, inhabited chiefly by Jews; and Krzeczowie, famous for its mineral baths. The city of Cracow contains an university, a college, a school of arts, an academy of painting, a public library, &c.

The budget voted for the three years, from 1838 to 1841, fixed the annual revenue and expenditure at 1,812,224 florins (45,300*l.*). The state coins its own money. Its armed force consists of 410 infantry and 40 mounted *gendarmes*. The population of the city in 1837 was 37,027, of whom 11,453 were Jews. It is divided into three sections: one of which is the Jews' quarter.

REMARKS on the Commercial Relations between the Kingdom of Poland and the Free State of Cracow.

"The first commercial treaty between the present kingdom of Poland and the free state of Cracow was signed in 1822, and remained in force during the 10 years immediately succeeding. In virtue of this treaty, almost all the raw produce of the free state was admitted into Poland free of duty, and most of its manufactures, on payment of various sums (by weight) fixed by the tariff published at the same time. This treaty also guaranteed to Cracow a bonus of 300,000 Polish florins (about 700*l.*) annually, on condition of granting to the government of Poland the monopoly of the sale of salt within the limits of the free state:

—all imports from Poland were received duty free, of course, the same as from all other countries. The kind of customs union thus established had been most anxiously sought after by Poland, in order to put a stop to the surreptitious introduction of salt, for which illicit trade the vicinity of the celebrated mines of Wieliczka gave the inhabitants of Cracow great facilities, and rendered almost nugatory the lucrative monopoly in that article possessed by the government of Poland in its own territory.

"But besides the important advantage of preventing such losses, the Russo-Polish government also derived considerable direct benefits from the exercise of the salt monopoly within the free states, and from the duties levied on the imports from Cracow; and it is affirmed that these sources produced a sum considerably exceeding the bonus annually paid to Cracow, even after deducting the expenses of a central bureau at Cracow charged with the despatch of all business connected with the commerce between the two countries, —which expenses Poland had offered to bear alone for the benefit of the smaller and poorer state, but, doubtlessly also for the advantage of her own political relations. Notwithstanding the essential advantages which this treaty ceded to Poland, it appears to have stimulated business at Cracow, and the annual exports from thence to Poland are estimated at about 1,000,000 Polish florins, or about 25,000*l.**

"Upon the expiration of this treaty, in 1832, the then president of the senate of Cracow endeavoured to obtain more favourable terms for his country; but after nearly two years' negotiations, he was at last obliged to yield to political intrigues. A new treaty, signed in June, 1834, to remain in force for 8 years, was merely a transcript of the former one, with the addition of a clause for the surrender of all persons accused of smuggling, to be tried and punished by the Russo-Polish tribunals, which condition has always been felt by all persons in the free state to be highly derogatory to its own supposed independent government.

"Scarcely had this new treaty been concluded, when an augmentation of 6⅔ per cent on the amount of all imports levied in Poland was decreed by the government of this country, in order to cover the extraordinary expenses caused by the insurrection of 1830-31; and this augmentation was most unjustly extended to the duties agreed upon, by formal treaty, with another state. All remonstrance on the part of Cracow proved vain; and in 1840 a fresh injustice was arbitrarily inflicted, whereby the commerce of Cracow with this country has been almost annihilated, although Poland still vigorously maintains the exercise of the salt monopoly in the free state. In the year just mentioned, the mode of levying the internal tolls in Poland was changed, and, instead of the previous mode of collection at various points, an additional duty (by weight) was laid upon all merchandize on their passing the frontiers, or on their arrival at Warsaw. Some few articles of the first necessaries of life pay only a trifling toll; but almost every thing else, and amongst them all the most important articles of commerce between Poland and Cracow are taxed at the rate of 3 florins (about 1*s.* 6*d.*) per Polish quintal, or about 89 lbs. British—a sum which in many instances is out of all proportion with the prime cost of the articles themselves. Thus all ores (except lead), and almost all other mineral products (including coal, alum, fuller's earth, pipeclay, &c. &c.), which in virtue of the existing treaty ought to be admitted free, now pay a duty of 1*s.* 6*d.* per quintal;—packing-paper, and other coarse papers, which formerly paid only 15 groschen (1½*d.*) per quintal, now pay 1*s.* 7½*d.*, and wrought stone, and carpenters' and cabinetmakers' work—all of which are important articles in the list of Cracow exports—now pay 4 florins 2 groschen (upwards of 2*d.*) per quintal, instead of 6*d.*, with which they were formerly charged.

"This arbitrary increase of the duties on merchandize, under the pretext of its being an equivalent only for the tolls formerly paid, is doubly unjust towards Cracow, because almost all the goods sent from that state to Poland come down the Vistula to Warsaw, and cannot, therefore, injure the *chaussées* of the country; but hitherto the merchants of Cracow have not been able to obtain any redress of these grievances, and they fear that, even upon the expiration of the existing treaty (on 31st of May next), no substantial relief will be afforded them, because, neither the immediate sufferers, nor the government which ought

* The whole public revenue of the free state is under 50,000*l.* The population is stated at 126,433 souls.

to protect them, can make their cause known to those who might be willing as well as able to assist them, by countenance, in obtaining justice from the too-powerful opponent they have to encounter."—*Warsaw, March* 2, 1842.

CHAPTER XXIX.

TAXATION AND REVENUE OF RUSSIA.

THE taxation and revenue of Russia, as far as published accounts enable us to judge, are exceedingly obscure.

The revenue is derived chiefly from the following sources: viz.—

1. A capitation tax, charged on all male serfs and certain classes of freemen.
2. The *obrok*, or rent paid by all male serfs on crown estates.
3. A tax of 1¾ per cent on the declared capital of the merchants.
4. The customs duties.
5. The excise on spirits sold. In old Russia the government reserves to itself a monopoly of distilleries, but in other parts of the empire the produce of the distilleries is under an excise duty. The nobility may distil all the spirits required for their establishments, free of duty.
6. The salt-mines and brine-springs monopolized by government, which sells their produce at the rate of a rouble or more per pood.
7. The revenue from crown mines, and the duties exacted from the proprietors of private mines.
8. The seignorage on coin.
9. Stamps, licences, &c., and the tax laid on the sale of immovable property.
10. Miscellaneous items, such as the sums paid by the nobles to be exempted from furnishing recruits for the army; the rent of crown property, let on lease; the profits of crown manufactures, &c.

The taxes are partly farmed and partly collected by government officers. There is in every government a council charged with the administration of the finances.

According to the Report of the minister, M. Kankrin, the public debt amounted, in 1837, to 956,333,574 roubles.

There must be other revenues to a great amount paid to the emperor from domains, and also provincial revenues and expenditure: but the actual imperial revenue, taking the five years ending 1839, has been given as follows—calculating the silver rouble at 3*s*. 2*d*. sterling:

Customs	£5,430,833
Revenue on spirituous liquors	3,319,166
Commutations paid in lieu of excise on brandy	1,137,500
Poll-tax* on peasants	3,097,500
Ditto on merchants and burghers	1,125,833
Revenue of crown lands	1,443,753
Salt, and gold and silver mines	1,020,833
Stamps and passports	1,432,083
Post-office	255,214
Average total	£18,262,715

The expenditure during the peace is supposed not to exceed the income.

The revenue, as stated above, derived from salt, and from gold and silver mines, is supposed to be greatly underrated. See Gold and Silver Mines.

The total revenue for the year 1843, including an increase of 4,250,000 sterling by the new contract for the distillation of spirits, is estimated by the minister of finance at 500,000,000 roubles, or 28,000,000*l.* sterling.

STATEMENT of the amount of Customs Revenue received by the government of Russia on Imports into, and Exports from, that country, distinguishing the Trade with Great Britain, in each Year from 1826 to 1835.

STATEMENT of the National Debt of Russia at the commencement of the Year 1839, and of the Transactions of the Imperial National Loan and Commercial Banks, in the Year 1838.

AMOUNT OF NATIONAL DEBT ON 1ST JANUARY, 1839.

1. TERMINABLE DEBTS.

(*a*) Foreign—Dutch:—

The first loan of 78,600,000 guilders = at 1*s.* 10*d.*, £7,205,000, of which the portion of Russia was—

Dutch guilders	40,100,000	= £3,675,833
The second loan „ „	37,091,000	= 3,400,008
Total	77,191,000	= £7,075,841

* The poll-tax is rated as follows:—Peasants, each, 3*s.* 2*d.*; burghers, 9*s.* 6*d.* Merchants, 1st class, a per centage, equal to an average of about 165*l.* per annum; 2d class, 42*l.*; 3d class, 20*l.*

(*b*) Home:—

Silver roubles	1,851,856 60 cop. =	£ 308,643
Bank notes	140,692,712 28 „ =	6,669,653
Total		£6,978,296

2. INTERMINABLE DEBTS.

6 per cent in gold roubles .	14,220 . . =	£ 2,441
„ silver „ . .	6,921,452 93½ cop. =	1,153,575
„ bank notes, roubles .	230,267,871 . . =	10,965,136
5 per cent in silver „ .	105,046,720 . . =	17,507,787
Total		£29,628,939

Total of terminable and interminable debts—

Bank notes, roubles . . .	935,146,592 60 cop. =	£44,530,790

INTERMINABLE DEBTS REDEEMED BY THE COMMISSION UP TO 1839.

Of the 6 per cent gold roubles . .	8,700 =	£ 1,493
„ silver „ . .	2,974,700 =	495,783
„ bank notes, roubles	61,651,980 =	2,935,808
Of the 5 per cent silver „	18,059,280 =	3,009,880
Total		£6,442,964

VARIATIONS IN BALANCES DURING THE YEAR 1838.

RECEIPTS.

THE commission for the discharge of debts assigned for the payment of debt in 1838—

Bank notes, roubles . .	68,948,597 99 cop. =	£3,283,266
Deduct again on the estimated rates of exchanges . . .	2,368,857 95 „ =	112,803
Amount actually received, which was left in the imperial national treasury .	66,579,740 4 „ =	£3,170,463

This sum, after exchanging portions of it for specie, and adding the balance from 1837, and various other sums, consisted of—

Ducats	793 . . =	£ 396
Gold roubles . . .	1,959 20 cop. =	338
Silver „ . . .	10,243,738 98½ „ =	1,707,290
Bank notes, roubles . .	45,144,478 22 „ =	2,149,737
Total		£3,857,761

DISBURSEMENTS.

From these amounts the commission employed in 1838—

In the discharge of terminable debts, foreign and home, silver roubles	120,960 =	£ 20,160
Bank notes, roubles	18,559,205 =	883,772
Total		£903,932

On interminable 6 per cent and 5 per cent debts, as well as perpetual income paid to the bearers, and transferred to the redemption capitals—

Gold roubles	1,596 20 cop. =	£ 274
Silver „	8,124,950 67½ „ =	1,354,158
Bank notes, roubles . .	17,428,700 73 „ =	829,938
Total		£2,184,370

Paid off of various debts, in ready money, capital and interest—

Silver roubles	370,847	19½ cop.	= £ 61,808
Bank notes, roubles	2,015,793	58 „	= 95,990
Total			£157,798

Deducted for the expenses of the commission—

Bank notes, roubles	400,000	= £19,047

After all these disbursements there remained, for 1839, of the various sums—

Ducats	793		= £ 396
Gold roubles	363		= 62
Silver „	1,354,056	48½ cop.	= 225,676
Bank notes, roubles	6,652,361	47 „	= 316,779
Total			£542,913

CAPITAL FOR REDEEMING INTERMINABLE DEBTS OF THE 6 PER CENT, AND THE FIRST AND SECOND 5 PER CENT LOANS.

This capital for 1838, consisted, with the balances from former years, with the perpetual income on the capital redeemed, and with the sums returned from various places on the debt of the war department, not called for by the creditors—

Gold roubles	5,283,455	9 cop.	= £ 883,217
Silver „	8,727,526	67¼ „	= 1,454,588
Bank notes, roubles	21,519,757	49½ „	= 1,024,750
Total			£3,362,555

Of these, after deducting the disbursements and exchanges in 1838, there remained in cash for 1839—

Gold roubles	5,282,187	9 cop.	= £ 883,005
Silver „	7,961,577	58¼ „	= 1,326,929
Bank notes, roubles	19,201,683	48½ „	= 914,365
Total			£3,124,299

Which includes the following amounts transferred to a separate account:

Gold roubles	1,188,305	20 cop.	= £198,645
Silver „	1,073,206	8½ „	= 178,867
Bank notes, roubles	12,743,538	55 „	= 606,835
Total			£984,347

CAPITAL FOR REDEEMING THE THIRD 5 PER CENT LOAN.

This capital was formed in 1838, in the following manner:—(*a*) Balance remaining from 1837; (*b*) one per cent for discharging the capital; and (*c*) perpetual income from the capital redeemed; amounting in the aggregate to—

Silver roubles	369,081	50 cop.	= £61,513

Paid from this for capital of billets, drawn by lot—

Silver roubles	285,500		= 47,583
Balance to 1839 „	83,581	50 cop.	= 13,930
Total			£61,513

CAPITAL FOR REDEEMING THE FOURTH 5 PER CENT LOAN.

This capital was formed in the same manner as shown in the third 5 per cent loan, and amounted in all to—

Silver roubles	288,675	47 cop.	= £48,113

Paid from this sum for capital of billets, drawn by lot—

Silver roubles	262,500		= £43,750
Balance to 1839 „	26,175	47 cop.	= 4,363
Total			£48,113

THE SEPARATE AND DISTINCT CAPITAL.

This capital was formed from the sums which were ordered to be burnt in 1822 and 1823, and from bullion received on the loan of 1822 in London; and consists of—

Gold roubles	2,621,614	48½ cop.	= £	450,036
Silver „	1,905,971	78¼ „	=	317,662
Bank notes, roubles	5,313,010	59 „	=	253,000
Total				£1,020,698

IMPERIAL NATIONAL NOTE BANK.

THE total amount of bank notes in circulation in 1838 was the same as in the preceding years, and remained unaltered on the 1st of January 1839, being—

Bank notes, roubles . . . . 595,776,310 = £28,370,300

CAPITAL OF THE BANK ON 1ST JANUARY, 1829.

Available capital—

National gold roubles	12,425	24 cop.	= £	2,133
„ silver „	540,812	56¼ „	=	90,135
„ bank notes, roubles	17,186,345	41¼ „	=	818,397
Provisionary „ „	1,000,000		=	47,619
Total				£958,284

Reserve capital, formed from the residues of profits since 1832—

Gold roubles	549	70 cop.	= £	94
Silver „	195,981	46¼ „	=	32,664
Bank notes, roubles	8,303,872	55 „	=	395,423
Total				£428,181

Total capital—

Gold roubles	12,974	94 cop.	= £	2,227
Silver „	736,794	2¼ „	=	122,799
Bank notes, roubles	26,490,217	90¼ „	=	1,261,439
Total				£1,386,465

DEPOSITS.

Amount remaining (in circulation) from 1837:

1. From various government offices—

Silver roubles	2,162,953	21 cop.	= £	360,492
Bank notes, roubles	258,619,255	78½ „	=	12,315,202
Total			£	12,675,694

Of this the following sums were from the commercial bank:

Silver roubles	2,162,951	76 cop.	= £	360,492
Bank notes, roubles	184,275,006	49 „	=	8,775,000
Total				£9,135,492

2. From private individuals—

Silver roubles	11	75 cop.	= £	2
Bank notes, roubles	136,712,144	1 „	=	6,510,102
Total				£6,510,104

Amount received during 1838:

1. From various government offices—

Silver roubles	889,105	65 cop.	= £ 148,184
Bank notes, roubles	46,009,782	63 „	= 2,190,942
Total			£2,339,126

Of this the following sums were from the commercial bank:

Silver roubles	889,100	.	= £148,183
Bank notes, roubles	14,500,000	.	= 690,476
Total			£838,659

2. From private individuals—

Bank notes, roubles	35,411,671	64 cop.	= £1,686,270

Amount returned during 1838:

1. To government offices—

Silver roubles	207,498	25 cop.	= £ 34,583
Bank notes, roubles	22,900,018	42 „	= 1,090,477
Total			£1,125,060

Of which belonged to the commercial bank—

Silver roubles	207,496	80 cop.	= £ 34,582

2. To private individuals—

Silver roubles		90 cop.	
Bank notes, roubles	40,676,099	52¼ „	= £1,936,957

Amount of interest paid on deposits returned and added to the capitals remaining at the expiration of the year—

Silver roubles	98,529	95 cop.	= £ 16,421
Bank notes, roubles	18,060,355	52¾ „	= 860,017
Total			£876,438

AMOUNT OF DEPOSITS REMAINING IN CIRCULATION ON 1ST JANUARY, 1839.

1. Belonging to government offices—

Silver roubles	2,941,681	71 cop.	= £ 490,280
Bank notes, roubles	321,029,975	20¾ „	= 15,287,141
Total			£15,777,421

Of which belonged to the commercial bank—

Silver roubles	2,941,676	6 cop.	= £490,279
Bank notes, roubles	207,067,381	31 „	= 9,860,351
Total			£10,350,630

2. Belonging to private individuals—

Silver roubles	10	95 cop.	= £ 2
Bank notes, roubles	136,267,672	19½ „	= 6,488,936
Total			£6,488,938

LOANS ON SECURITIES.

Amount of outstanding claim on 1st January, 1838:

On government offices—

Silver roubles	2,618,037	96 cop.	= £ 436,339
Bank notes, roubles	286,056,792	79 „	= 13,621,752

On private individuals—

Amount of reserve capital on 1st January, 1839—

Roubles	2,284,042	76 cop. =	£108,764

Remarks on the Loan Banks instituted in favour of the Crown Peasants. Extracted from the *St. Petersburg Journal.*

"Among the dispositions made by the administration of the land, which, belonging to the crown, are distinguished by the name of *appanaged land*, for the purpose of securing the wellbeing of the peasants placed under its direction. The establishment of several loan banks, destined exclusively to offer to this class the succour which it may want for the interest of its industry, and the organization of a fire insurance office, merit to be cited, on account of the results obtained in a very short period.

"Since some years, the loan banks, to which the administration had assigned a capital of 300,000 roubles paper money, were in activity, among the appanaged lands situated in the governments of Saratoff, Simbirsk, Vladimir, and Viatka, in 1841: the capital already mentioned, having augmented by 74,142 r. 85¾ cop. sil. taken, as the first sum, on the capital of the peasants. Similar establishments were organized in the governments of Kostroma, Nijnei-Novgorod, Vologda, and Archangel, and everywhere the transfers of these banks have become so active, that the total of the sums confided to them increased the interests of several years, and are constantly in circulation.

On account of a wise disposition of the rules, by which it is not allowed to advance more than 150 r. silver to the same person; the terms offer no difficulty whatever, and in order to render these establishments still more useful, it was decreed, in 1842, that in future the peasants will have the privilege of placing their disposable capital at interest. It might have been expected that some time would be necessary before these facilities would be appreciated by the peasants: but a beginning was made; and in four villages several peasants deposited in the bank sums which amounted together to 1430 r. silver.

"As to the fire insurance, it has taken a rapid development. At the end of 1841, the number of peasant houses insured amounted to 23,000; in the course of the following year it increased to 40,450, valued at 1,436,000 r. silver, so that in several villages more than one-half of the habitations are insured. The premiums for insuring amounts to 18,000 r. silver, whereas the indemnities paid for 313 burnt houses amounted to only 11,000 r. It has also been remarked that fires become less numerous in proportion as the villages are better disposed, and provided with implements necessary in case of accident. In the villages of the government of Archangel especially, where there are counted 7736 peasant farms, not one of them had been burnt in 1842."

Extract from an Ukase for issuing Bank Notes in Russia, to the Amount of 30,000,000 silver roubles.

"Nicholas, by the grace of God Emperor and Autocrat of all the Russias, &c. &c.

"Wishing to facilitate the transactions at the several banking establishments of the empire, and at the same time to concentrate and render more intelligible the various denominations of paper money easily transportable, and that is at present in circulation; and judging it advisable, in lieu thereof, to create such a new description of the like money as may bear accurate and complete guarantee for its respective values; in conformity with the advice of the council of the empire, we have ordained as follows:

"I. Within six weeks from the date of this manifesto, the deposit banks at the Foundling Hospital (*Hospice des Enfans Trouvés*) and the Imperial Loan Bank, shall be authorized to make, under security of mortgages upon fixed property, advances in '*billets de credit*' (bank notes of the value of 50 silver roubles each). These notes are to be of a certain form. The minister of finance will submit model notes to the directing senate, and will also forward similar models to all the ministers, as well as to the chief departments of the empire, and to the finance chambers. These model notes shall be exhibited and placarded in all the commercial exchanges.

"II. The value of these notes to be brought into circulation shall amount to 30,000,000 silver roubles; of which 15,000,000 are allotted to the treasury of the Foundling Hospital at Moscow, 8,000,000 to the Deposit Bank at St. Petersburg, and 7,000,000 to the Loan Bank.

"III. The payment of these notes, and their ready conversion into bullion, in confor-

mity with Art. V. of the present manifesto, shall be guaranteed by all the banking and credit establishments in the empire.

"IV. They shall be circulated throughout the empire on the same terms as silver money.

"V. The exchange of these notes for metallic currency, at the discretion of the bearers, shall take place either at the bank of the Foundling Hospital, or at the Loan Bank, without any restriction as to the amount presented, or distinction as to the establishment from whence the notes presented have issued. Moreover, to ensure a punctual performance of such obligations, both the Deposit Bank and the Loan Bank, whenever they issue these notes, shall place, in a special chest for this purpose provided, an amount of metallic currency, equal in value to at least one-sixteenth part of that of the paper money issued.

"VI. And in order still further to facilitate the payment in bullion of such paper money, all the district treasuries shall be obliged to exchange these notes for metallic currency, up to the value of 100 silver roubles.

"VII. The funds of exchange and the amount of notes, whether in circulation or not, are placed under the control of the council of establishments of credit. Besides a monthly revision of its concerns, which each bank is obliged to make, there shall be twice in the year a general revision, by the same authorities, of such accounts; viz., at the Deposit Bank of St. Petersburg, at the Loan Bank, and also at the Moscow Bank. At the latter by three senators nominated by the minister of justice, acting in concert with the maréchal of the nobility of the government, and the mayor of the city. The accounts, after being revised by these functionaries, shall be forwarded to the beforenamed council.

"VIII. The exchange of old notes, out of use, for new ones, shall be regulated according to established custom.

"IX. These '*billets de credit*' may be transmitted by post, in the same manner as other notes (*billets de la caisse de dépôt*), *i. e.* by paying the requisite security and the price of postage.

"X. The exportation and importation of these '*billets de crédit*' is prohibited by the custom-house regulations now in force with respect to the '*billets de la caisse de dépôt.*'

"XI. Forgery of the above will be by law punished in the same manner, and attended with the like penalties, which attach to the counterfeiting any state papers.—*Done at Peterhoff, 1st July*, 1841."

An increase of the duties on stamps was promulgated at the same time.

In 1842 the contract for the brandy monopoly, which has always been farmed, was about to expire; and there being a great deficiency in the revenue, the minister of finance turned the circumstance of the nearly expired contract so far to account, by competition for it, that a sum has been agreed to for its renewal, which will, it is said, yield the Russian treasury about 7 millions sterling annually, instead of $1\frac{1}{4}$ millions sterling.

Banks.—During the reign of Catherine the Second three different banks were established at St. Petersburg; and during the reign of the Emperor Paul, the Aid Bank and Bill Discount Office were instituted.

1. *The Loan Bank or Lombard, or Russian, Mont de Piété*, was established on the ground that the profits of it should belong to the St. Petersburg Foundling Hospital; and, according to an ukase of the empress in 1772, to prevent the usury and oppression to which the poor were exposed. By its constitution it was to lend on gold and silver, three-fourths of the value, on other metals half the value, and on jewels as much as the circumstances of the times would allow, an estimation being made by sworn appraisers. The rate of interest was regulated and established in 1786 throughout the empire at 5 per cent. One year's in-

terest being taken in advance; pledges forfeited to be publicly sold, and what they produced more than what the capital advanced, the interest due, and the charges amount to, to be returned to the owners. Money might also be deposited in this bank for which no interest was to be received, and on two days' notice it could be withdrawn. If monies were paid into the bank, and a declaration made that the same should remain a year or longer, and that three months' notice would be given when intended to be taken out, then the lawful interest on the capital is allowed, payable in the same sort of money as that which was put into the bank, as is likewise the capital when withdrawn. With various modifications this great pawning depot still carries on its operations.

2. *The Imperial National Note Bank.*—This was originally called *The Assignation Bank*, and was established by the empress in 1768 for St. Petersburg and Moscow, which was opened in 1770; afterwards, in many government towns bank-comptoirs were established, where, likewise, on paying copper money, assignations were issued of 25, 50, and 100 roubles, paying the assignations, when presented again with copper money.

In 1786 this bank was changed into a Reichs (imperial) Assignation bank at St. Petersburg. The notes issued were decreed to be on white, red, and blue paper, manufactured for the purpose; the blue for 5, the red for 10, and the white for 25, 50, and 100 roubles each. The colours were to enable the great body of Russian subjects and serfs who could not read, to know the value of the notes by the special colour of each. When this bank was converted into an imperial establishment, the former old assignations were all called in and exchanged for new ones.

The Loan Bank, for the nobility and the towns, was established by Catherine the Second also, in 1786. Its purpose is to lend to the nobility on landed property, or on male peasants (serfs), according to the revision-register of 1781, taking each head at 40 roubles. Its intention was for assisting the nobility and promoting payment of debts, and the improvement of their estates: the emission, for this purpose, was limited to 22,000,000; and a sum of 11,000,000 was appropriated for lending on stone and brick houses in towns, and grounds adjacent; the loans were made in bank assignats, which very much encouraged their circulation. To this bank was annexed an assurance against fire, for the houses, &c., on which it made advances, and on other property.

The Aid Bank was established by the Emperor Paul, by an ukase, dated the 27th of December, 1797, commencing its operations on the 1st of March following: it was rather novel in its nature, and not very satisfactory in its operations.

Discount Office.—A discount office, for the advance of money upon bills and Russian products; and also of an insurance office (exclusive of the Imperial Assignation Bank), for the purpose of insuring such goods upon which advances must be made, were established by an ukase of 18th of December, 1797.

College of Commerce.—On this principal, the Russian government have, at St. Petersburg a college of commerce, consisting of a certain number of directors, with a president, who take into consideration, and under their direction, every thing relating to the trade of the empire; and to that board applications were at all times to be directed. It has the control of the brackers, brokers, and every department connected with commerce; in matters of dispute, it acts, likewise, in a judicial capacity; and the only appeal from its decision, in case of the dissatisfaction of either party, is to the senate, where 200 roubles must be deposited: a certificate being produced from the secretary of the senate, that the deposit is made, when the requisite documents are given from the college of commerce, and proceedings commence in the superior court.

It is through this college, that the English have the privilege, specially provided for by treaty, to appeal in cases of dispute, or for redress from the Russian subject; and through this channel only it is, that the native subject must apply for redress against the British merchants; amongst whom, if any disputes or controversies arise, the directors of the college of commerce, very wisely order it for arbitration among the British merchants, who are selected for that purpose.

The Brackers.—" The principal articles of Russian exportation, must be examined or bracked by competent sworn brackers. For this purpose, in 1790, sixteen Russian and fourteen foreign brackers for hemp, five Russian and three German for tallow and oil, four Russian and three German for herrings (the Russian herring-brackers also brack caviare and isinglass), one Russian and two German for tobacco, five Russian and three German for yufts, two Russian and one German for horsehair and hogs' bristles, one Russian and two German for hareskins, were appointed.

" Such are the excellent regulations relating to the brackers, that if, through any neglect or fraud, an inferior quality is passed which ought not to be, the bracker, whose name is affixed on some articles, and especially appointed for others, is liable to a very severe punishment as soon as the proof is produced, so that a precaution like the one mentioned prevents the possibility of an inferior article being substituted for the real one, and every merchant is sure that what he purchases is the very article he agrees for.

" The merchant, in his purchases, has only to settle with a broker, who is likewise approved by the college of commerce, and who makes a contract betwixt the buyer and seller. The goods are received and the business is despatched.

" The articles subject to brack are *

" Hemp, flax, tallow, hides, yufts, isinglass, glue, caviare, hareskins, bristles, wax, cowhair, horsehair, linseed, hempseed, and train-oil, tobacco, rhubarb, masts, pot and pearl ashes, saltpetre, castor of beaver, &c. &c.

" A certain rate is fixed to be paid to the bracker by the purchaser which is very reasonable."—*Oddy's European Commerce.*

* Some articles are stamped; for instance, the casks with tallow and oil; flax with a leaden tally annexed by a string; hemp in the inside of the bales by a wooden tally, with the bracker's name written thereon.

CHAPTER XXX.

MISCELLANEOUS STATEMENTS.

New Change of Currencies.—In virtue of an Imperial Ukase, issued under date, 1st June, 1843, the old bank notes shall, from the 1st November next, be gradually exchanged against new notes stipulated in silver roubles, at the rate of $3\frac{1}{2}$ roubles paper for 1 silver rouble; and for the redemption in specie of these new silver notes at any time, a cash fund of at least one-sixth part of the amount of new silver notes circulating will be assigned.

Additional Charges on Ships at Cronstadt.—The following tax has been laid on all shipping, both foreign and Russian, for the use of the cook-house, applying the amount to the profit of the town of Cronstadt:

"Every vessel trading to this port is to be charged 3 copecs silver per last each voyage. Every coaster, with one mast, 2 roubles silver; and with two or three masts, 3 roubles silver, for one summer.

"Every vodovick, or decked boat, employed in carrying iron and deals, 50 copecs silver each voyage.

"Every cutter employed in transporting goods, $1\frac{1}{2}$ rouble for one summer.

"Every ship proceeding on to St. Petersburg, without entering this harbour, is exempted from paying.

"Taking the tonnage of last year as a criterion, the British ships (74,238 lasts) would produce, at 3 copecs, 2227 roubles 14 copecs silver, or 7794 roubles 99 copecs copper, equal to 360*l.*"—*Cronstadt, 17th July*, 1841.

THE BRITISH RUSSIAN COMPANY.

A Russian company was first projected towards the end of the reign of Edward VI. Its charter was confirmed by act of parliament, under Queen Elizabeth, in 1566.

It had its rise from adventurers, who were sent in three vessels to discover new countries, and to find out a north-east passage to China; these falling into the White Sea, and entering the port of Archangel, were well received by the Moscovites, and on their return solicited letters patent to secure the commerce of Russia, for which purpose they had formed an association.

A charter was first granted by Mary, in 1555, in which the association was declared a '*body politick*,' under the name of the 'Company of Merchant Adventurers of England, for the Discovery of Lands, Territories, Islands, &c., unknown or unfrequented.'

This charter was altered and confirmed by Elizabeth, on the ground that it was not sufficiently guarded.

This company existed with reputation for nearly a century, till the time of the civil war in England, when it is said that the Czar, hearing of the death of Charles I., expelled all the English from his dominions. After the restoration, the company re-established part of their commerce at Archangel; but in the interim the Dutch had obtained a footing in the country. It then continued, and still exists, as a regulated company; that is, each member trades on his own account, only paying an admission fee; and maintaining certain regulations for managing the trade at St. Petersburg, &c. &c.

TABLE of Duties, payable to the Russian Company, on Goods imported from the Ports of St. Petersburg, Cronstadt, Narva, Onega, and Archangel.

THOMAS COPE, Secretary.

FOREIGN AND RUSSIAN MERCHANTS IN RUSSIA.

Manifesto of the Emperor Alexander in regard to Merchants.—"THE annals of our country testify how highly the body of Russian merchants, while enriching the empire with the fruits of commerce, have adorned themselves with the characteristic virtues of good citizens. Since our accession, we have observed with satisfaction the meritorious examples their conduct has afforded. We have observed through every mercantile class, proofs of noble liberality, of patriotism, and of particular attachment to our person; we have derived the most heartfelt joy from the sentiments with which they have shown themselves inspired; and upon the most eminent of their order rewards have been conferred from the throne, and distinctions proportioned to their deserts. But these distinctions, however honourable to individuals, do not suffice for the exaltation of their whole order.

"The general character and title of this order merit from us some general mark of respect; some general advancement in the scale of public estimation. A fresh memorial is required, to define its existence in the constitution of the empire.

"Steady in this persuasion, we now grant and confirm for ever to our faithful body of merchants, new privileges and distinctions, and new means for the extension and consolidation of their commercial undertakings, on the principles established below:

I. OF MERCANTILE PARTNERSHIPS OR COMPANIES.

"Art. 1.—It is our wish that the faithful body of merchants should (principally with a view of increasing their consequence in foreign trade) hereafter carry on business under the forms of partnership. No person, however, is compelled thereto by law, which only recommends this new line to notice.

"The form of partnership shall by law be twofold. 1st, full partnership; 2d, a partnership in trust. There is, besides these two, a kind of partnership by shares, composed of several persons singly contributing certain sums, a fixed number whereof constitute the joint stock. But as its object is to promote important schemes of public establishments, this sort of company must be confined to the sovereign, not directly appertaining to the mercantile world.

"Art. 2.—A full partnership consists of two or more partners inscribed in like guilds, agreeing to trade in common, under their common names. This is denominated a mercantile house, under their names or firm; the partners in this house answer for all its debts, jointly and severally, to the full extent of their fixed and moveable property. The mutual conditions between the partners, their engagements with others under their common firm, the term of continuance and of the dissolution of their partnership, are all left to be settled by mutual contract.

"The contract concluded between the partners in the commencement of their concerns, if not incompatible with any fundamental principles here established, or with the civil and commercial rights of the public, shall have the force of law.

"Art. 3.—A partnership in trust, consists of one or more partners of the same guild, with the addition of one or more *subscribers*, who intrust the former with certain sums out of their own property, to be employed in trade in a greater or less proportion. This is denominated a mercantile house, under the name of Partners and Co. The partners in this kind of house are subject to the same rules laid down for full partnerships by Art. 2. In regard to subscribers, the two following are added:

"*a.* A subscriber who gives his capital in trust, answers, in case of failure, only for the amount of his subscription.

"*b.* A subscriber can, in that capacity, make no engagement for the trading firm.

"Although partners ought to be severally inscribed in the same or like guilds, yet father and son, or grandson in the male line, and two brothers with one another, may open a joint commercial house, provided one of them, the eldest, pays the tax on the capital to the guild. Other children and relations who cannot be partners in the same house, without being individually inscribed in the same or like guild, may be subscribers to the house, but the quality of subscribers does not determine the nature of their possession or calling.

"A partner in one mercantile house cannot become a partner in another; because, by Art. 2, a partner is responsible with his whole property, for the debts of one house.

"Art. 5.—A mercantile house, of either description, dates its civil and commercial existence from the time of presenting an extract of its copartnership terms to the magistracy and dome, and of notifying its establishment to its commercial friends, by printed circulars. The said extract must specify—

"*a.* The nature of the partnership, whether full, or on trust.

"*b.* The Christian name, country, family name, habitation and occupation, of only the actual partners.

"*c.* The signature and seal of the partners empowered to direct and conduct the concerns.

"*d.* The amount of capital brought in by the partners, and by the subscribers, and to name the latter or not at their option.

"The dome reports to the minister of commerce, for his information, every new partnership, with all the particulars stated to it. It is to be observed, that the declaration of capital to the dome, in no case implies an obligation to pay tax on that amount. A trading house, of either description, enjoys the commercial privileges of the guild to which its partners belong.

II. OF THE ADMISSION OF THE NOBILITY TO TRADE.

"Art. 6.—The tenour of the preceding section implies of itself that the Russian nobility are admitted to share in mercantile partnerships. Such is expressly our wish, and such it was, when, on the 4th of November, 1802, we granted to the nobility the right of foreign trade.

"Our motive is to strengthen the bond of union betwixt the two orders in the empire, and to afford the nobility, not serving in military or civil posts, an opportunity of promoting the public good through the channel of commercial industry.

"In pursuance of this, every nobleman is now authorized (if not in the service of the crown or on duty in his government), to inscribe himself in a guild, on the principle of the municipal code, in the following manner:

"He is allowed to be inscribed in the first or second guild, but excluded from the third, as avowedly of no advantage.

"When inscribed in a guild, he pays the tax on capital, and is liable for town dues and other charges, both personal and real. He then enjoys all the privileges of the guild. He is authorized either to open a mercantile house in conformity to Articles 2 and 3, or to join as partners in any such house.

"Art. 7.—It is understood, that his becoming liable for dues in the body of merchants, on the footing of a merchant, does not exempt him from the obligations and dues of the body of nobility. He is personally eligible to the offices of the town, and when he serves in them is exempt for those three years from serving in the government. Serving amongst the merchants exempts him from serving in the capacity of a nobleman; but serving as a nobleman does not exempt him from serving in the body of merchants. It is further understood that, in regard to mercantile transactions or disputes, he is amenable to the higher and inferior courts as a merchant, excepting in cases of high misdemeanor or capital crimes, in which he is subject to trial as a nobleman.

"In his mercantile engagements he is allowed to employ bills, conformably to the first part of the statutes of bankruptcy, and in cases of failure, to settle his affairs according to the regulations there laid down. But in engagements and differences relating merely to his estates, he is again subject to the regulations of the second part of the statutes of bankruptcy.

III. OF FOREIGN MERCHANTS IN RUSSIA.

"Art. 8.—The civil and commercial rights of foreign merchants, who, in times of peace and war, have enjoyed in former reigns, and continue to enjoy in ours, particular favours, are from henceforward established on the following principles:

"1st. The right of being inscribed in a guild of Russian merchants shall be confined to real Russian merchants.

"2d. No foreigner has a right to be inscribed in a Russian guild, unless he, or a wife after the decease of her husband, should be thought worthy to become a perpetual subject of the Russian empire.

"3d. No foreigner, who does not become a perpetual subject, can enjoy the rights and privileges attached to the guild; still less can he claim any sort of exclusive preference, in point of civil rank, in the exercise of a profession, in trade or in shipping. These regulations are from henceforward to be considered as general, fundamental, and irrevocable.

"Art. 9.—From the special attention of the sovereign to the privileges of foreign merchants, the following temporary exceptions are admitted. Foreigners already inscribed in the guilds may remain upon their present footing for six months from this date; in the course of which, it is left at their option to become perpetual subjects, or at the expiration of this term to take the rights belonging to foreign merchants, as they are clearly defined below in Article 13 and the following.

"Merchants of Armenian extraction, and domiciliated in Russia, to whom, on the part of the public, exclusive exceptions, suitable to the particular circumstances, were granted, must in the course of six months take their own measures in conformity to the ordinances of the manifesto, enjoying in other respects the benefits of the legal forms established in their behalf.

"We should wish that this race, so devoted to the Russian throne, might enjoy all the rights of the municipal code, and the new immunities, which so essentially augment and surpass all exclusive privileges hitherto granted.

"To those foreigners who are inscribed in the guilds of the maritime towns of the Black Sea, and Sea of Azof, is allowed the right of continuing in the guild till revisal. To prevent all doubt, it is hereby declared, that foreigners at the ports of the Black Sea and Sea of Azof, enjoying the rights of guilds, only in the governments of Cherson, Ekaterinoslaf, and Taurichesky, do not carry the rights of the guilds further, and cannot transfer their inscriptions to the guilds of other towns on the borders or island, except those only on the said

coast, neither are they allowed anywhere, but in those particular governments, the rights of foreign guests.

"Art. 10.—The commercial rights belonging to foreign merchants in Russia are comprehended under two descriptions: That of guest, or that of itinerant merchants."

"*Penalties on Foreign Mechanics Resident in Russia, for dealing in Articles not appertaining to their Craft.*—By virtue of an ukase of the imperial senate of the 21st of June last, in answer to a question put by the St. Petersburg court of exchequer, as to what fine should be levied upon foreign tradesmen (mechanics) for dealing in articles not appertaining to their craft, the minister of finance represented it to the committee of ministers. By the resolution of the committee, his Imperial Majesty was pleased to command that foreign mechanics convicted of dealing in articles not of their craft, not by their nature belonging to the traffic of citizens,* shall be subject to a penalty, for the first offence, of 90 roubles (at 11*d.* per rouble, = 4*l.* 2*s.* 6*d.*), and for the next, of 120 roubles (equal to 5*l.* 10*s.*), in proportion to the annual tax for a certificate for a citizen trading in† the two capitals.

"This imperial command was promulgated by an ukase of the senate, the 21st of September this year."—*Translated from the St. Petersburg Commercial Gazette, No.* 116, *Sept.* 27, 1838.

"*Documents of Russian Vessels sold to Foreigners to be given up to the Custom-house.*—In the 5th volume of the Compilation of Russian Laws, in the Regulations for Custom-houses, sec. 903, it is decreed that custom-house authorities shall not allow any Russian vessel, sold to foreigners, to leave any port, without taking from the buyer all documents belonging to the vessel. It has happened that the owner of a Russian vessel, after receiving passport and documents of clearance for the ship in his own name, has sold the vessel to a foreigner, giving up all the documents, and that consequently the custom-house authorities could not even know of the sale, much less act according to the above law. Such a sale may also remain a secret from the Russian consul; for, on the arrival of the ship at a foreign port, it will always depend upon the master to appear at the Russian consulate, or, as he may think better, at the consulate of that nation to which the buyer belongs. As this may injure the interest of Russian trade and navigation, it behoves all public officers by whom the documents for such sales to foreigners shall be registered, not to do this until all the documents belonging to the ship are given up, which are to be sent to the custom-house of the port where the ship is sold, according to the 11th volume of the Compilation of Laws, in the Regulations concerning Commerce, sec. 550, and continuation of 551. The minister of finance has represented this to the senate, which, confirming the representation of an ukase of the 17th of September, has given the needful orders for its fulfilment."—*Translated from the St. Petersburg Commercial Gazette, Sept.* 22, 1838.

MERCHANT-SHIPS BELONGING TO RUSSIA.

We have no special account of the merchant shipping of the empire, but if we divide the vessels cleared outwards by the average number of voyages in the year, the number of vessels, exclusive of coasters, does not probably exceed 250 ships, and the tonnage about 45,000 tons, and when the two following tables are compared, it will be seen that the Russian ships engaged in the foreign trade do not amount to much more than one-eighth of the whole number.

* *Citizen* (meshtshavin) is a class of tradesmen, next in order after the three classes of merchants.

MERCHANTS AT ODESSA.

The subjoined account of the number of merchants belonging to Odessa inscribed in the different guilds, affords an additional illustration of the progress of its commerce since 1808.

	1st Guild.	2d Guild.	3d Guild.	TOTAL.
In 1808	39	30	135	204
1813	53	13	190	256
1823	57	11	213	281
1828	64	34	302	382
1838	67	54	644	765

A *Tribunal of Commerce* was established at Odessa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions, except to the senate.

"There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They register all transactions, and receive a half per cent from each party as commission. There is a discount or loan bank, established in 1828, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which costs next to nothing, is excellent. Fuel, however, is scarce and dear."

DUTIES PAYABLE BY VESSELS IN THE PORT OF ODESSA.

"*Tonnage Duty.*—Every vessel pays, for the benefit of the crown, a tonnage duty of 50 paper copecs per ton, on entering and on leaving the port.

"Every foreign vessel arriving laden from foreign ports, pays moreover for the benefit of the city 50 copecs on each last, or 120 poods weight of her cargo.

"*Anchorage Money.*—Foreign vessels pay 50 copecs per ton, Russian vessels 25 copecs per ton, for the benefit of the city.

"*Light Money.*—Every vessel pays 25 paper roubles for the support of the lighthouse.

"*Quarantine.*—Every vessel coming from a foreign port, is furnished by the quarantine officers, with a quarantine flag, for which 5 roubles must be paid, and a set of printed regulations, the price of which is one rouble.

"*Chalk Buildings in the South of Russia.*—In many districts of Southern Russia, where the materials usually employed in building, such as freestone, timber, and bricks, are difficult to be obtained, the price of these materials is very high, compared with that of agricultural produce; and as the population of these districts is increasing very rapidly, the result would appear to produce great inconvenience, at least to the inhabitants of the country.

"Fortunately, however, immense beds of chalk are situated in these districts, and in many places, especially in the government of Kharkoff, the peasants have employed it for their cottages; and on the borders of Aidar and Krasnaia, buildings, barns, stables, &c., have been long built of blocks of chalk. These erections last much longer than would have been supposed; chalk being a bad conductor of heat, they are warm in winter, damp cannot penetrate through the walls, and they are solid enough to support even heavier roofs than are usually used for the cottages of the peasantry.

"Experience having shown that this kind of building might be conveniently adopted, even for houses of considerable size, the government caused 4 boarding-schools and 6 stables to be erected in the military settlements in the district of Kharkoff. Very little expense was necessary, as one man furnished with an iron lever could easily detach three cubic *sagènes* of chalk from the bottom of the quarry in one day; and after being exposed to the air for some days to dry, the blocks are easily hewed into shape; and as they can be made of a large size, the building of the walls advances rapidly. The abovementioned erections have their foundations, projecting angles, and the coatings of the doors and windows made of freestone. The peasants generally fill up the interstices between the blocks of chalk with clay, while in the government buildings, lime slacked with water was used.

"Several churches in the villages of these districts have resisted the action of time and the effect of the air for more than forty years, without the slightest symptom of decay becoming apparent.

"This method of building is likewise being introduced into the district of Voronège, which also possesses large quarries of chalk."—*Translated from St. Petersburg Gazette.* 1843.

RACES IN RUSSIA.

THE different races which inhabit Russia, are much divided in their associations and sympathies. These races are classed by Balbi, Cannabich and Galletti, as follows:—1. The SLAVONIAN, which comprehend a majority of the whole population; while at the same time this race is divided into branches which have no sympathy for each other; viz., Great Russians, *Ruski*, or the Ancient Moscovites: the little Russians, or *Malorossians*; the *Rusniaks*, the *Poles*, the *Lithuanians*, the *Servians*, the *Bulgarians*, and the *Cossacks*. 2. The *Finns*, who call themselves in their own language *Suomalainen*, or *swamp-dwellers*. The *Laplanders*, who, as well as the *Esthonians* and *Liefianders* are considered akin to the *Finns*. The *Samoiedes* and *Kamtschatdales* of the arctic region; the *Tchermessians*, on the left bank of the Wolga, near Nijnei-Novgorod; the *Morduanians* on the Wolga and Okka, and also in Nijnei-Novgorod; and the *Zyrjanians* and *Permians* of Vologda, are also considered akin to the Finnish races. 3. The *Lettes* and the *Kourish* race of Courland are classed under the Slavonian race, by Galletti and by Balbi. But there appears no affinity whatever between the Lettes and Moscovites. (See account of them and the people of Courland and Esthonia, in a preceding part of this work.) 4. The *Tartar* or *Tatar* race, which Balbi calls, as more properly, the *Turkish race* (*Souche Turque*). This race includes the *Nogay Tartars*, the *Tartars* of Kasan and Astrakan, the *Turkomans* of the Caucasus, the *Baskires*, *Tchuwasks*, the *Metcherisks*, *Teptiers*, &c. 5. The *Mongolian*, to which belong, according to *Cannabich* and *Balbi*, the *Cossacks* of the *Don*, and the *Kalmoucks* of *Taurida*, *Kherson*, *Astrakan*, and the Eastern and Northern *Caucasus*. 6. The *Zigains* or *Gipsies* of Bessarabia. 7. The *Semetic race*, or *Jews* of Poland and other parts. 8. The *Circassians*, or the *Tcherkesses*, *Abassians*, *Lesghiens*, &c., of the European Caucasian region. 9. The *Armenians* of the Caucasus, and who are also found in various parts of Southern Russia. 10. The *Georgians*. 11. The *Greco-Latin* race, which includes the *Moldavians* and *Walachians* in Bessarabia, and the *Greeks*, *Italians*, and *French*, who have resorted to and settled in various parts of the Russian dominions. 12. The *German race*, inhabiting St. Petersburg and the Baltic provinces, and the colonies of Southern Russia. Exclusive of the foregoing races, there are several thousands of Swedish race in Finland, and a few Danes and English settled in the commercial towns of the empire, and also a few thousands of Arabs and some Persians who inhabit the Southern Caucasus. All the foregoing races, except the Great Russians, who are estimated at 28,000,000 of the whole, and the German colonists, and other people who have voluntarily resorted to Russia, consider themselves as conquered nations. The following extract is translated from Kohl—we doubt, however, the correctness of what he says respecting the Cossacks:

"The natives of Little Russia are called *Malorossiani*; those of Great Russia call

themselves *Ruski*, or Russian *par excellence*. These are the two principal sections into which the Russian nation is usually divided; but when the emperor is called the emperor of all the Russias, Russia includes likewise White Russia, comprising a great part of Lithuania, on the Upper Dwina and the sources of the Niemen; Red Russia, of which a large portion at present does homage to the Austrian sceptre; and Black Russia, the exact locality of which it is difficult to define. The *Ruski*, or Great Russians, inhabit the central provinces of the empire, the ancient Moscovy, where they have extended themselves over the lands inhabited by the Finns to the Baltic and the Arctic Ocean, and among the Tartars and Mongolians, over Siberia as far as the Pacific. In numbers they are supposed to be about 28,000,000, and constitute, therefore, by far the most important portion of the 60,000,000 of human beings ruled by the Russian emperor. They are to all intents the ruling race in Russia, they occupy the most important offices, and their language is the official language of the state. The *Malorossiani* inhabit the southern part of European Russia, particularly the provinces watered by the Dnieper and its tributaries. The *Malorossiani* are almost exclusively an agricultural people, and have spread themselves over the country reaching from the Carpathian mountains to the Lower Volga. The Cossacks on the Euxine and the Aral, the Caucasus and the Ural, the Don and the Volga, are all descended from military colonies originating among the *Malorossiani*. The whole race comprises about 12,000,000 of souls. The natives of Great and those of Little Russia differ as much as it is possible for two parts of the same nation to do. They differ from each other morally and physically, and in many points there exists a remarkable contrast between their characters and habits.

"The serfs in Little Russia are much more obsequious than the serfs of Great Russia. Serfdom, in fact, is an institution of much more ancient date in Great Russia than in Little Russia, where it is said never to have existed till after the subjugation of the country by the Moscovites. The serf in Great Russia calls his lord "father," treats him with a respectful familiarity, and stands to him in something like a patriarchal relation. He is generally well-informed of the family affairs of his lord, takes a lively interest in them, and will not hesitate to volunteer good advice when he thinks it called for. In Little Russia, on the contrary, the serf neither loves his lord nor troubles himself about his concerns. The most romantic attachment is often shown in Great Russia by the serfs to their lords; in Little Russia, the murder of a lord by his serf is by no means an unheard of occurrence. Nevertheless, the serf of Little Russia is much more humble and submissive in his outward deportment, endeavouring, apparently, by an obsequious demeanour, to atone for the total absence of real affection. On these points, there is much resemblance between the serfs of Little Russia and those of Poland."—*Kohl's Russia.*

The space of Country formerly inhabited by the Zaparog cossacks, was along that part of the banks of the Dnieper (Boristhenes), where that river is obstructed by rocks, called in Russian, *parog*, or cataracts. *Za* is the word for "beyond;" so that the two joined together form the phrase "beyond the cataracts," which has since become the denomination of the people inhabiting the southern banks of the Dnieper.

The country occupied by this people extended to the river Bug (Hypanis, or Bogus), and had no fixed limits; they have therefore received four different classifications; viz., the Tartars of Oczakoff in the west, the Polish Cossacks in the north, the Little Russians in the east, and the Crimean Tartars in the south.

Originally, women were rigidly excluded from their republic; notwithstanding which, their number increased. Unmindful about their means of subsistence, not having any domestic cares to trouble them, Ukrania, and other adjacent provinces, were constantly exposed to their brigandage: cattle, corn, and all the productions of these provinces generally became their prey. Frequently

they would set fire to villages, in order to drive the women out of the recesses of their habitations, and satiate their brutal passions by force. All the male children under the age of twelve, who fell into their hands, were brought up to their roving and desperate habits, and young idle peasants frequently joined them. Criminals, outcasts, and adventurers from every part came and associated themselves with this commonwealth of freebooters.

"Whenever a foreigner was admitted a member of the commonwealth, he was compelled to relinquish his own name, his former habits, and his religion, and to adopt the usages and customs of the Zaparogs.

"A long novitiate was to be submitted to, preparatory to being received, in order that the requisite qualities of firmness and courage might be fully acquired.

"They lived under temporary tents, made of light matting, which were easily carried. They attached a high value to the breed of horses.

"The number of these Cossacks was never fixed; 30,000 or 40,000 of them were exclusively devoted to arms, and frequently took service under foreign states. Those who were rich in cattle of various kinds, and had become tired of the excursive life, remained on the lands they had acquired, and cultivated them through the aid of young Ukraine peasants, who aspired to the honour of being received as members of the Zaparog republic.

"Besides these, there were forty *bourgades*, each consisting of one thousand *kirinni*, or subterraneous habitations, large enough to contain only one individual, where the active members of the republic repaired for rest after the fatigues of a marauding campaign. The only article of furniture used in the *kirinni* was a bearskin, stretched on the ground, which served the purposes of a sofa and bed. In the centre of the thousand *kirinni* was a larger one for the leader of the *bourgade*, who was himself subordinate to the chief of the republic called the hetman. Every member was required, on his admission, to select a brother-at-arms, and to take oath that he would defend him against every peril. They were obedient and devoted to the chief they had chosen; and in their manner of living they were sober, vigilant, and hospitable: the last was considered a sacred duty. They had no written laws; usage was their only code, and common sense its only guidance. But he who deviated from the established custom was punished with extreme severity. Murder was punished by a horrid death: the murderer was buried alive alongside of his victim. Robbery, committed within the limits of the republic, was punished by a kind of pillory and the knout. The hetman was chosen from among the most valorous Cossacks, and elected by the majority. His attributes were those of a sovereign and military leader. In the execution of his authority he exercised an absolute authority, but only in unison with established usages. After returning from their predatory excursions, the Cossacks were bound to take the whole of their booty to the hetman, who divided it equally among them, and even those who had not aided in its capture. Those who were convicted of concealing any part, were punished like other thieves, by exposition in the pillory. The hetman was entitled to a tithe of all that was taken. They professed the Greek religion, and had a few priests among them, who, as in Russia, were called *papa*.

"They were remarkably active, and well skilled in horsemanship. Their days of rest after an excursion, were spent in horse-racing, hunting, wrestling, &c. Their festivals were generally closed by inebriation.

"As they only served as auxiliary troops in the wars between the neighbouring powers, they always sided with the party which appeared the strongest, and was most disposed to allow full scope to their marauding propensities. Sometimes the allies of the Poles, the Russians, and occasionally the Turks, they always managed, at the close of each war, to carry immense riches back to their own camp. This republic was a perfect scourge to all its neighbours. They never fought in a line; and it was their practice to fall upon their enemy unawares. Their superior skill in managing their horses and using their arms, gave them great advantage. Their long lances, which were little known among other troops, made them formidable pursuers in a flight.

" These ferocious marauders formerly rendered some important services to the czars of Russia, and formed a useful barrier at the time the southern provinces were little better than deserts. But so soon as it was determined to people the latter, the Zaparog Cossacks could no longer maintain their independence. Unwilling to submit to the terms proposed to them in the year 1768, they were surrounded by a numerous Russian army, well provided with artillery. They defended themselves with desperate bravery and perseverance ; but, finally obliged to yield to numbers, many surrendered, and others fled to the shores of the Black Sea, the banks of the Danube, and even so far as Asia Minor. The extent of country formerly occupied by them, has since been called Ekaterinoslaf; a name which, from its meaning—*glory to Catherine*, was intended to perpetuate the memory of the reign under which its conquest was achieved.

" Several years after their dispersion, while Prince Potemkin was conducting the siege of Oczacoff, he was informed that Sider Bialy, their late hetman, was residing on one of the islands of the Dnieper, and living on fish caught by his own labour, determined never to quit the scenes of his former greatness. The prince sent for him, and he appeared soon after, almost covered with his white beard, from which he derived his surname of Bialy. This Nestor of the Cossacks was a cunning old man, who resolved to do his best for the re-establishment of his tribe. Finding the prince disposed to listen to him, he ingratiated himself into his good graces, and before the close of the campaign so far succeeded, that a regular corps of militia was formed from among the remaining portion of the Zaparog Cossacks; to which, however, the name of Czarno-Morski (Black Sea) Cossacks was given in lieu of their former one. Many of them were admitted among the troops of the line, and some corps of light cavalry were formed of the most able horsemen. These regiments are armed in the same manner as the Zaparog Cossacks ; but they are better disciplined, and wear a uniform similarly to the Cossacks of the Don. In the year 1800 there were about 10,000 of these Cossacks in the service of the czar.

" Those who had not emigrated, and were not admitted into the Russian service, were allowed to settle in the space of country which extends from the Kuban to the frontiers of the Caucasus.

" Some, however, preferred spending their days on the lands to which they were used, and have exchanged their former roving habits for more sedentary and peaceful occupations.

" Joined by colonists from other parts of the empire, their country, which was formerly little better than a wilderness, soon improved, and it is now flourishing under a numerous and industrious population, who are fast spreading over it the blessings of civilization.

" Such were the existence and dispersion of the tribe of brigands, who had acquired a great celebrity in the annals of Ukrania."—*Journal of a French Traveller.*

RUSSIAN ARMY.

A SERIES of retreat and discomfitures, in 1812, taught the Russians a lesson which they have turned to gigantic military account. The Russian is a soldier by compulsion, and his feudal chief cannot use a greater threat, than of having him sent to the army. He however becomes attached to the profession. The peasants and serfs are taken as conscripts, and their term of servitude is 22 years. When they leave their home their minds are made up never to see it again, and few ever have the opportunity; custom gradually reconciles him to his situation, and he becomes loyal to his colours with the same degree of attachment he previously entertained for his hut. The colours henceforward become his home. He seldom asks for permission or furlough, and while in Russia or in Russian grounds never deserts. When his time of servitude has expired he rarely returns home. The term of servitude used to be 25 years, but in 1827 it was reduced for the guards to 20 years; for the line to 22 years; with double pay should they serve after that period. This long absence from home has made him a stranger and unfitted him for domestic avocations. He therefore is contented to be draughted into some garrison regiment where he ends his days. The common soldier seldom rises beyond the ranks, but the moment he enters the army he becomes free, and is relieved from all allegiance as a serf.

There are special seminaries for rearing officers in St. Petersburg, Moscow, Oremburg, &c.; the number of cadets are generally 8000, and their system of education and organization is admirable; promotion generally in time of peace is by seniority, except by removal to or from the guards; the officer in the latter ranking two grades higher than those of the line. Of all European soldiers the Russians pay is the lowest, consequently peculations and various malpractices, during the recent wars, took place. In time of war, and when from home, they are paid in silver roubles, which is better than three times their usual pay.

The military colonies, which we have already described, form a peculiar feature in their system. The emperor by these means created an armed middle class, making himself more independent of the nobility. The nobles have always opposed these establishments, and of late years not unsuccessfully, taking advantage of some disturbances at Novogorod, they got their further prosecution postponed until 1837, when the emperor not only extended and reorganized them, but created others in the Caucasus. We however doubt the permanence of these colonies. Agricultural and military habits can never, we believe, assimilate on a durable basis; one of the two must in time supplant the other.

In 1833 he remodelled the army on a basis laid by his father. The recruiting is placed upon a more regular footing, the pay has been increased and measures adopted in order that the regiments shall always have their full numbers complete.

There now exists an active army of operation, consisting of 6 corps of infantry. Each corps is divided into 3 divisions of 2 brigades. A brigade consists of 2 regiments, each containing 6 battalions; these again are divided into 4 companies, each with a captain, 1 first, 3 second lieutenants, 15 non-commissioned officers, and 230 men; thus a battalion contains 1000 men. Of the 6 battalions composing the regiment only 4 take the field, two remaining in reserve in the depot. A regiment is, therefore, 4000 men, a brigade 8000, a division 16,000, and an army corps 48,000. To each army corps is attached a division of artillery consisting of 3 brigades each, possessing 3 batteries of 8 guns. To be added to these is a reserve battery, 3 sapper and pioneer battalions, besides train and working companies, together with 6000 men, of whom 5000 are combatants, besides a division of light cavalry of 2 brigades, a brigade of hussars and lancers, each of 2 regiments, which consist of 9 squadrons each, of 160 horses which in war time, in consequence of the depot squadrons, is increased to 180; only 8 of these 9 squadrons take the field, the 9th remains in reserve in depot. A regiment of 8 squadrons, therefore, is 1280, a brigade 2560, and a division 5120 horses, to which belong 2 battalions of horse artillery. An army corps represents 60,000 men with 120 pieces of cannon, allowing for sick and those detached as non-combatants, we may calculate in the field of battle 50,000 fighting men. The whole active army, therefore, of operation fit for the field of battle will be 300,000, with 720 pieces of artillery perfectly equipped. This portion of the military force of the empire may be assumed as ready for any operation at a moment's notice.

To this active army belong further—1st, the guards, consisting of 43,000 infantry, 11,600 cavalry, and 120 pieces of artillery; 2d, a grenadier corps of the same strength as an army corps.

Two reserve corps of cavalry, each corps consisting of a cuirassier and Uhlan division each of 2 brigades, these consist again of 2 regiments of which the cuirassiers have 6 and the Uhlans 8 full squadrons, also each regiment a reserve squadron. To these are attached 2 brigades of horse artillery; 4th, a dragoon corps of 2 brigades of 2 regiments, each containing 8 dragoon and 2 Uhlan squadrons with artillery and reserves as before, as well as 2 squadrons of pioneers. These 3 cavalry corps have, therefore, in reality a force of 30,000 horses, and, therefore, the active army of operation consists of about 500,000 fighting men, with 75,000 horses, and 1000 pieces of artillery complete.

In the above number the irregular cavalry is not taken into account, this we may calculate at 50,000 horse, the Caucasian army of 80,000 men are likewise excluded, as well as a separate army corps in Siberia and neighbouring districts.

This active army of operatives is regularly recruited from the reserve battalions, who receive and exercise the raw recruits, and form an internal army of 200,000, the garrisons and invalided detachment and marine regiments are not included in this statement.

GENERAL RETURN OF THE RUSSIAN FORCES.

Infantry, including guard and corps in agricultural settlements	450,000
Garrison battalions	50,000
Invalid ditto	50,000
Artillery, including garrison companies	40,000
Engineers and artificers	18,000
Cavalry, including guard and corps in agricultural settlements	95,000
Train	10,000
Cossacks and irregulars	90,000
Total	803,000

RUSSIAN NAVY.

TOWARDS the navy the present emperor has devoted particular attention. In less than 15 years he has remodelled and created two large fleets, one in the Baltic, the other in the Black Sea, and immense labour and expense has been incurred to form and fortify good harbours. In 1836 the fleet at Cronstadt consisted of 27 sail of the line, 12 frigates, 4 sloops of 24 to 28 guns, 6 brigs of 18 guns, and 10 floating batteries, besides gun-boats and other smallcraft. It now consists of 30 sail of the line, besides those laid up, 20 frigates, 4 of which are of 60 guns each, and about 40 sloops, brigs, and gun-boats, as well as several powerful armed steamers, chiefly built in England. In the Black Sea there are likewise 17 ships of the line, among which are 2 of 120 guns; 10 frigates, 5 of which are of 60 guns each; 12 gun-brigs of 10 to 20 guns each; besides 18 cutters, luggers, and armed yachts, mounting together 158 guns, and 6 armed steamers. Each sail of the line has a complement of 1100 men.

The Baltic fleet has a complement at present of 35,000 men, and costs the government upwards of 28,000,000 of silver roubles. The Black Sea fleet has a complement of 24,000 men, and is sustained at an expense of between 16,000,000 and 17,000,000 roubles. Russia has also a great naval force on the Caspian.

However formidable the Russian navy may be as regards numerical strength and the apparent efficiency of its equipment, there is still wanting a most essential qualification ere they could cope, with the least chance of success, with Great Britain; and that is the "morale," in which they are, as compared with our seamen, and particularly officers, deplorably inferior. The acquisition of Finmark, and Nordland would give great additional naval power to Russia, the harbours of Finland never being closed by ice.

KINGDOM OF POLAND.

TRANSLATION of Ukases changing the Money System, Banks, and further altering the Constitutional and Administrative Laws of Poland.

Ukase of the 3d—15th—September, 1841.—Nicholas I., by the grace of God, Emperor of all the Russias, King of Poland, &c. &c. &c. In order to place definitively the monetary system of the kingdom of Poland upon the same system with that of the empire, we, upon the representation of the Administrative Council, have decreed and do decree as follows:

I. The Russian pound shall be the unit of weight for money in the kingdom. For this purpose the Mint of Warsaw shall use in weighing gold, silver, and copper, the Russian weight called "pood," which contains 40 pounds; each pound 96 zolotniks, and each zolotnik 96 dols. In the assaying of gold and silver, the Mint shall use the standard pound, which, according to the scale in use in the empire, is divided into 96 zolotniks, and the zolotnik into $\frac{5}{6}$, $\frac{2}{3}$, $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{6}$ of a zolotnik.

II. The unit of all money circulating in the kingdom shall be the silver rouble.

III. The Mint of Warsaw shall strike pieces in gold, to be called 'half-imperials,' each of the value of 5 roubles; and pieces in silver of 1 rouble, of a half rouble, and of 25, 20, 10, and 5 copecs—all with the die that has been approved by us.

IV. A pound of gold ought to produce 68 $\frac{4}{15}$ pieces of half-imperials, equivalent to 341$\frac{3}{3}$ silver roubles; and a pound of standard gold, of 88 zolotniks, will produce 62$\frac{3}{4}\frac{6}{5}$ pieces of half-imperials, equivalent to 312$\frac{8}{9}$ silver roubles. According to this scale, each half-imperial will contain 1 zolotnik and 39 dol of pure gold, and will weigh in gross 1 zolotnik and 51$\frac{3}{1}$ dol.

V. An allowance in the weight, either above or below the standard of the gold coins, is permitted in the following proportions: upon one piece, 1 dol; and upon every pound gross weight of coins, 12 dols of the normal pound (or pound adopted as the unit of weight).

VI. A pound of pure silver ought to furnish 22$\frac{3}{4}\frac{4}{3}$ pieces of roubles; and a pound of standard silver, of 83$\frac{1}{3}$ zolotniks, will furnish 19$\frac{6}{8}\frac{4}{1}$ pieces of roubles. Consequently 100 roubles will contain 4 pounds, 37 zolotniks, and 84 dol of pure silver, and will weigh in gross 5 pounds and 6 zolotniks. The gross weight of each of the different larger descriptions of coined pieces, and the quantity of pure silver contained in each will be as follows:

	Gross Weight.		Pure Silver.	
	zolotniks.	dol.	zolotniks.	dol.
Piece of one rouble . .	4	82$\frac{2}{2}\frac{2}{5}$	4	21
Piece of half a rouble . .	2	41$\frac{1}{2}\frac{1}{5}$	2	10$\frac{1}{2}$
Piece of 25 copecs . .	1	20$\frac{1}{2}\frac{6}{5}$	1	5$\frac{1}{4}$
Piece of 20 copecs . . .	0	93$\frac{3}{1}\frac{0}{2}\frac{0}{5}$	0	81
Piece of 10 copecs . .	0	46$\frac{8}{1}\frac{2}{2}\frac{2}{5}$	0	40$\frac{1}{2}$
Piece of 5 copecs . . .	0	23$\frac{4}{1}\frac{1}{2}\frac{1}{5}$	0	20$\frac{1}{4}$

VII. An allowance in the weight, either more or less, of each of the various large silver coins, is permitted in the following proportions: upon the rouble pieces, 4 dols; upon the half-rouble pieces, 3 dols; upon the pieces of 25 and of 20 copecs, 2 dols; upon the pieces of 10 and of 5 copecs, 1$\frac{1}{2}$ dol; upon 100 pieces of each of the abovementioned coins, weighed at once, the allowance in weight is 1$\frac{1}{2}$ zolotnik; upon 1000 roubles, it is 7 zolotniks of the normal pound.

VIII. The gold coins shall be received and shall be issued by all the public departments, at 3 per cent above the nominal value of such coins; that is to say, the imperial at the value of 10 roubles 30 copecs, the half-imperial at 5 roubles 15 copecs.

IX. Foreign coins of a high standard, at present used in the country in payments between private individuals, may be received at the rate fixed by the treasury; but after having been received in the public departments, they shall be sent to the Mint to be recoined with the die of the kingdom.

X. The purchase in foreign countries of gold and silver in bars for the use of the Mint at Warsaw, shall be regulated as to price by the state of commerce, care being taken that the expense of coinage be covered.

The purchase of other metals, not brought from abroad in bars, shall be made at the prices fixed from time to time, according to circumstances, by the administrative council.

XI. The purchase of copper shall be made by contract.

XII. The ukase dated 19 November—1 December—1815, in so much as it is affected or modified by the present ukase, and also the ukase of the 1st of May, 1834, shall cease to be obligatory.

XIII. The execution of the present ukase, which shall be inserted in the *Journal of Laws*, and shall come into force from the 20 December, 1841—1 January, 1842,—is intrusted to our administrative council, and more especially to the commission of the treasury and finance.

Given at Warsaw, this 3d—15th—September, 1841. (Signed) NICHOLAS.

By command of the Emperor and King: the Minister-Secretary of State.

(Signed) TURKULL.

Ukase of the 3d—15th—September, 1841.—Nicholas I., by the grace of God, Emperor of all the Russias, King of Poland, &c. &c. &c.

In reference to the clauses of the 4th Article of our ukase of the 21st January—2d February, of the current year, by which we have decreed that the notes of the Bank of Poland shall be changed into notes representing silver roubles, We, at the request of our Administrative Council of the Kingdom, have decreed and do decree, as follows:

I. The Bank of Poland will cause to be prepared, and, as soon as they shall be ready, will issue bank notes representing silver roubles of the value of one rouble, of 3, of 10, of 50, and of 100 roubles each; withdrawing at the same time an equivalent number of the florin notes now in circulation, so that the total amount of notes in circulation do not exceed the sum permitted by the 23d Article of our ukase of 17th—29th—January, 1828.

II. The nominal value of each of the beforementioned notes shall be printed, in figures and in words, on one side of the note, in the Russian and Polish languages; and on the other side the same value shall be printed, in figures and in words, in German, French, and English.

III. The said notes shall all be marked alike with the stamp of the empire: this stamp is to bear the arms of the kingdom, with the inscription "Bank of Poland," and shall be affixed, as heretofore, under the strict control of the commission of the sinking fund of the national debt.

IV. Upon each note shall be inscribed in Russian and in Polish "the Bank of Poland will pay to the bearer (here insert the quantity of) silver roubles in hard cash at the rate of $22\frac{3}{4}\frac{1}{2}$ roubles to the Russian pound of pure silver."

V. The colour of the paper, the water marks, the typographical ornaments, the shape and size of the said notes, as well as all matters of detail relative to the printing, the issuing, and the exchange against coined specie, shall be decided, at the request of the commission of the treasury and finance, by our administrative council of the kingdom. The models of each description of note, previous to their being definitively put in circulation, shall be presented to our administrative council.

VI. All ordinances which have been decreed by our previous ukases, relative to the bank notes at present in circulation, shall remain in force in so far as they are not affected by the present ukase.

VII. The execution of the present ukase, which shall be inserted in the *Journal of Laws* is intrusted to the director-general presiding over the commission of the treasury and finance.

Given at Warsaw, this 3d—15th—September, 1841. (Signed) NICHOLAS.

By command of the Emperor and King: the Minister-Secretary of State.

(Signed) TURKULL.

UKASE of the 6th—18th—September, 1841, abolishing the Council of State of Poland.

Nicholas I., by the grace of God, Emperor of all the Russias, King of Poland, &c. &c. &c. To our Lieutenant of the kingdom of Poland.

Having judged fitting, in 1832, to establish in our imperial council a special department for the affairs of the kingdom of Poland, to the jurisdiction of which belong the most important affairs concerning the kingdom, We consider the further existence of a distinct council of state in the kingdom as being no longer in accordance with the actual position of the country; and as it is necessary to fix at the same time the superior court of justice on a more solid basis, we have decided to suppress the council of state of the kingdom, and the superior court; and in place thereof, to create in Warsaw, for the entire kingdom of Poland, two departments of the directing senate, which shall be called the 9th and 10th departments, and to institute a general assembly of the Warsaw departments of the directing senate.

In consequence of which, by our ukases to the directing senate, issued this day, we have ordained, and do ordain by these presents:—

SECTION 1. The general assembly of the Warsaw departments of the directing senate shall take cognizance of all the matters which, up to this day, were under the jurisdiction of

the council of state of the kingdom, with the exception of the budget of receipts and expenditure. This budget and the reports of the directors-in-chief of the different branches of the administration, of which the revision was confided to the administrative council, shall henceforth be submitted directly for our sanction, by the department of the imperial council for the affairs of the kingdom of Poland.

The order of the sittings of the general assembly, its relations with the other authorities, and the regulation of its affairs, shall be precisely the same as those prescribed for the council of state of the kingdom.

2. The heraldic chamber of the kingdom, which retains its present internal organization, is attached, as a special institution, to the general assembly of the Warsaw departments of the directing senate, and it shall maintain, with those departments, the same relations which it held with the council of state of the kingdom.

3. The 9th department of the directing senate shall have the powers of the superior court. Therefore, all the matters which were within the jurisdiction of that court, shall henceforth be decided in the last instance by the department, according to the laws and regulations prescribed for the superior court.

It follows, therefore, that the judgments pronounced by this department shall not be subject to any revision, and that no appeal, relief, nor complaint, can be received against its judgments.

4. The 10th department of the directing senate shall take cognizance of all criminal matters. Its functions and the extent of its powers shall be regulated in the new penal code. But all the regulations at present existing on this subject shall, in the mean time, remain in force.

5. The general assembly of the Warsaw departments of the directing senate is under the presidency of our lieutenant of the kingdom, and is composed of 5 senators, named by us, from the members of the three first classes.

6. All the members of the administrative council, and the military governor of Warsaw, shall have the right of sitting in the general assembly of the Warsaw departments of the directing senate.

7. The Warsaw departments of the directing senate shall be composed of senators, and, for this time only, of the other persons summoned by us to discharge the duties of that office. Their distribution in the departments shall be made each year, according to our decision, upon the recommendation of the lieutenant of the kingdom.

8. The Warsaw departments of the directing senate may be divided into 2 or more sections, if necessary. The organization of the sections, and the mode of proceeding, shall be the same as those of the departments.

9. We will name each year, on the recommendation of our lieutenant of the kingdom, a president for each Warsaw department of the directing senate, and for each section of the departments.

10. In the absence of the lieutenant of the kingdom, from illness or from other causes, the functions of president of the general assembly of the Warsaw departments of the directing senate, shall be filled by one of the presidents of the departments or of the sections, or by the president of the heraldic chamber, who shall be named by the lieutenant of the kingdom.

11. The senators of the general assembly of the Warsaw departments of the directing senate, shall enjoy all the rights and privileges which are accorded to the other senators of our empire. The persons discharging the functions of senator shall have a deliberative voice in the decision of matters, equally with the senators of the Warsaw departments of the directing senate.

12. At the expiration of each year there shall be presented to the minister of justice, as attorney-general, statistical summaries respecting the administration of justice of the kingdom; and also an account of the service of the functionaries composing the establishment of the Warsaw departments of the directing senate, and of their general assembly.

In confiding to you the execution of our present ukase, and its publication in the *Journal of Laws*, our pleasure is, that the drafts of the ukases necessary for the complete development of these principal bases, shall be prepared and submitted for our sanction.

Done at Warsaw, the 6th—18th—September, 1841. (Signed) NICHOLAS.

(True translation.) The Minister-Secretary of State. (Signed) TURKULL.

ABO AND THE ISLANDS OF ALAND.

ABO, the ancient capital of Finland, lies near the end of the promontory between the gulfs of Bothnia and Finland. It formerly had an university: it has now a gymnasium, banks, some manufactures, and a considerable trade. It was nearly destroyed by fire in 1827, at which time its population amounted to about 14,000. Ship-building and the saw-mills have long given employment to the people. They have employed their ships in foreign trade, especially with French, Spanish, and Italian ports, carrying timber and deals from Finland, and proceeding from one port to another in the south of Europe, have often remained away three or four years, returning to the Baltic usually with a cargo of salt. Ths harbour of Abo is shallow at the town, but deep for large vessels three miles below.

ALAND ISLANDS are a numerous cluster of islets, lying at the mouth of the gulf of Bothnia, nearer the Swedish coasts than the coast of Finland. They were seized upon by Russia in 1809, and having excellent harbours completely command the gulf of Bothnia and the Swedish coast. The largest island, Aland, has an area of about 250 miles, and about 9000 inhabitants, and its safe and deep harbour, on the west side, is capable of containing a fleet which could blockade the Swedish shores. Several harbours in these islands have been fortified by the Russians, who have a large *flotilla* called the Skaerenflott, stationed at the most commanding ports of Aland.

These islands have still forests of beech and firs, and produce potatoes, and various kitchen vegetables. Small cattle and sheep are reared: of the former about 14,000, and about the same number of the latter. A good deal of cheese is made from the cow's milk, and the wool of the sheep is made into coarse wearing-apparel. Horses and goats are also bred. The Alanders are daring seamen and expert fishermen. The herring and seal fisheries are extensively followed. The exports of these islands are dry and pickled fish, butter, cheese, hides and skins, salt beef, and firewood (the latter to Sweden). The people are of Swedish origin, and speak the Swedish language.

THE EXCHANGE AT ST. PETERSBURG.

THE EXCHANGE, or BOURSE (*Russian Birsha*), of St. Petersburg, is a large building erected between the years 1804 and 1816. Here all merchants meet: and the English and Germans, who are, generally speaking, those who manage the foreign maritime trade of the empire, are conspicuous among the Russian and numerous other merchants who appear there in frocks and caftans. It is said that no Russian either at St. Petersburg or elsewhere engages in maritime trade. He has no patience for distant profit, and seldom engages in any but immediate dealings of little risk. M. Kohl says that "the hall of this exchange is so large that the music of all the regiments of guards might conveniently find an echo there; but it is only made for whispers. When, however, by a *nod* or whispering assent, the broker downs with his pencil a large order for tallow, sentence of death goes forth against hundreds of oxen grazing in their unconscious innocence in their *far-fatherland*. What writing and talking—what hal-

looing to herdsmen—what toil and trouble—what a waste of breath and sweat of brow—what scenes of blood and slaughter will have resulted from a simple nod, before the *doomed fat* can have found its way to the *Neva*, and from the Neva through the East, West, and North Seas to London; till, at last in Dublin or Glasgow, or heaven knows where else, the order is given to John to bring in the candles, and the product of this thousandfold turmoil wastes away in the all dissolving element!

"When a few heads are seen close together speaking piano, pianissimo, and a nod is given for 600 lasts of fine Tula wheat, 200 stone of flax, 200 lasts of the best linseed, how many burdens the order has imposed upon many a peasant family; how the argument of the stick has driven them on account of that order to the fields; how many of the hardy little race of Baku horses have sunk under hard work and harder blows! When another nod orders some thousand dozens of deals, some hundreds of masts and spars, there is not a shadow of thought of the myriads of woodpigeons or owls, which the reckless commission has driven forth nestless to the four winds of heaven; of the chorus of *hamadryads* groaning under the strokes of the pitiless axe of the peasants of Vologda or Viatka. In a year and a half the trees, which the merchant's word of power has taken from their native soil, will appear on the Neva, and after they cross the seas to England, a flag daring the breeze will wave from these lofty masts, which will traverse seas far or near, return in safety or be rent by rocks, or slowly decompose in the depths of the ocean."

RUSSIAN PEDLERS.

The Russian and the German are at the opposite extremes in their moral and physical habits and character. Neither men nor things are allowed to rest in the disposition and pursuits of the former. An active spirit of trading speculation stimulates the Russian serf and dealer onward, in every direction, to find a market for the articles in which he deals. In no country are there so great a number of wandering traders, pedlers, and artisans, as in Russia. Some attribute this spirit to the coldness of the climate, which, by requiring constant exercise, prevents languor, and to the vast extent of the Russian territories, where in distant parts the sellers must go to the buyers, in order to sell their wares, or they would not be bought at all. The dexterity and aptitude of the Moscovites enable them to turn all circumstances to account; and they are never found at a loss, in cases where it would be considered impossible by a German to succeed: although the quiet plodding industry of the latter is far more secure, and more certain in the end, than the restless adventurous intrepidity of the former.

The Russians call their pedlers, great and small, *Rasnoshtshiks*. For this species of nomade trading the Moscovites are eminently gifted, and they

accommodate themselves to every place and circumstance, so adroitly and keenly, that it is said Peter the Great warned the Jews not to enter his dominions, as they would find that the Moscovites were able to overmatch them in all the varieties of bargain-making.

The Moscovites, or natives of Great Russia, are alone the pedlers of the empire, except in Poland, where the Jews maintain equal ground with the Moscovites.

If India has been conquered by British merchants, Siberia may be said to have been subdued by the Russian pedlers. These adventurers advanced, gradually, into the vast regions of Northern Asia, for the purpose of exchanging the fabrics of Western Europe for the skins of the sable and other wild animals, much in the same way, and spirit, as the fur traders of Canada explored the north-west, and west, regions of America. The Russian merchant pedlers even assisted by force of arms, to bring Siberia and Kamtschatka under the dominion of the Tzar. The Russian *Rasnoshtshik* is found, not only in all parts of the empire, but in all the frontier countries from Walachia to Persia, Bokhara, and China.

Moscow is the great sun, or centre, from whence the pedlers and most of the Russian adventurers, radiate to every other part of the empire, and to the south and east. The manufacturers, moreover, have for their venders, actually, *hordes* of *Rasnoshtshiks*. The latter pays for part of his wares in money, and obtains also, according to his character for punctuality, what he requires on credit. He starts from Moscow with his *telega*, loaded with goods, and drawn by one horse, for the most distant parts by land, or he departs by the Wolga, or its branches. He carries his saint about with him, and proceeds on with cheerfulness, and with no care to harass him. They frequently travel in caravans, traversing the distant parts with their carts or telegas, decked with the pictures of saints, and the flowers and plants of the steppes. Where camels are the beasts of burden, they use camels: horses where horses are employed; and boats when they traffic up or down the rivers. Neither the cold of Siberia,— nor the sultry heat of Persia,— nor the heights of the Caucasus, or of the Uralian chain,—the swamps of Finland, or the vast breadth of the steppes, or of the Euxine or the Caspian, or the vast distance between Moscow and the walls of China, or the shores of the Pacific, have ever been known to stagger the resolution of the Moscovite *Rasnoshtshiks*.

RUSSIAN TRADING BOYS.

The aptitude for trafficking which characterizes the Moscovite, is conspicuous in the address which prevails for selling or buying among the very children. This spirit seems born with the Moscovite. A boy of seven years at Moscow, dressed like a regular shopkeeper in his blue frock and caftan, will persuade a customer to enter his shop, and buy holy candles, with all the address and bowing of an accomplished *boutiquier*. He will tell the capital invested in the

stock, and calculate the yearly profits. Such boys will manage skilfully the affairs of the money-table of their fathers who may be money changers, or they attend their own little shops filled with fruits, or flowers, or pictures, &c.

RUSSIAN MARKETS AND BAZAARS.

In St. Petersburg, Moscow, and every large Russian town there are huge structures, or ranges of buildings appropriated to the sale of all sorts of products and merchandize, which are deposited, or arranged, for wholesale and retail. The following brief account we have collected and condensed from several authorities, among which Kohl, and some manuscripts are our best authorities:

Gostinnoye Dvorui, or great bazaars, are large buildings consisting of a ground and upper floor. The latter is generally appropriated for wholesale trade, the former is divided into numerous small shops, in which various descriptions of goods are retailed. The shopkeepers do not live in these bazaars, except during the hours of business, after which each locks up his shop, or stall, and leaves it, and commits the whole bazaar, during the night, to the care of the watchmen and their dogs.

At these markets or bazaars, shopkeepers and wholesale dealers, not only assemble under one roof, but the persons who thus congregate, consist of numerous fractions; those who deal in similar articles being found in their respective localities.

M. Kohl says, "This holding of like to like seems almost innate with the Russians; for those articles, which on account of their bulky nature are excluded from the gostinnoi dvor, such as iron ware, firewood, furniture, &c., have each of them separate markets of their own, which are known by the generic term of *rädi*. It is the same with the *ruinoks*, or provision markets, of which there are distinct ones for meat, for fish, for hay, for eggs, and so on.

"The *gostinnoi dvor* will be found, for the most part, to occupy a very central position in a Russian city, while the secondary markets are removed towards the outskirts. The *gostinnoi dvor*, it must however be borne in mind, offers for sale only articles of domestic, or of Asiatic production. The fabrics of Western Europe seldom find a place there, but are usually retailed in shops, situated in the most frequented streets. In the great provincial cities, the private shops are completely eclipsed by the *gostinnoi dvor*; but not so in the comparatively Europeanized St. Petersburg, though even there the goods displayed in the principal market far exceed, both in quantity and in value, those that will be found in all the private shops put together."

The colossal bazaar of St. Petersburg has one front on the Nevskoi Prospekt, and another in the Bolkahaïa Sadovaïa, or Great Garden street, along which and some of the adjoining streets it extends in ramifications of shops and booths, imparting to that section of the city the appearance of a perpetual fair. The better descriptions of Russian goods are all to be found in the *gostinnoi dvor*; those of an inferior value in the adjoining markets, of the *Apraxin Ruinok* and the *Tshukin dvor*, which are situated a little farther on the *Bolkahaïa Sadovaïa*. This last street has along both sides shops and booths, up to the place called the Sennaïa Ploshtshod, or principle provision-market.

Along the *prospekt*, shops and booths present themselves, in constant succession. Such as the silver-shops, the fruit shops and stalls, the iron-vaults, the carriage bazaars, the depot for wood and coals, the furniture rooms, &c. In the vicinity of the *Nevsky monastery* there is the *SimnaïaPloshtshod*, or winter market, with, at that season, its innumerable sledges and waggons. Near this there is the horse and cattle market. There are smaller markets also in other quarters, such as the *Krugloi ruinok*, or round market.

All the alleys that intersect the *gostinnoi dvor* are during the day thronged by sledges and droshkies, in which the cook, stewards, or other servants, of the rich and noble, come to make daily purchases for their houses. Any city, with its population of 500,000 inhabitants, would naturally consume a vast quantity and variety of articles; but St. Petersburg consumes even more in quantity than the same population do in most other continental capitals.

M. Kohl observes, "There is no other European capital where the inhabitants are content to make use of goods of such inferior quality, or where consequently they have frequent occasion to buy new articles, or to have the old ones repaired. Then there is no other capital where the people are so capricious and so fond of change. The wealthy Russians are here one day and gone the next; now travelling for the benefit of their health, now repairing to the country, to re-establish their finances by a temporary retirement, and then reappearing on the banks of the Neva, to put their hundreds of thousands into circulation. A Russian seldom buys any thing, till just when he wants to use it, and as he cannot then wait, he must have it ready to his hand. Boots, saddlery, wearing-apparel, confectionary, and other articles, which with us are generally ordered beforehand from a tradesman, are here bought ready for immediate use. Each article has its separate row of shops, and the multitude of these rows is so great, that a stranger may often be heard to inquire, 'My little father, where is the row of fur booths?' 'My little mother, where is the cap row?' 'Pray show me the stocking row?' 'My little father, tell me the way to the petticoat row?' These gostinnoi dvor merchants are almost invariably flaxen haired, brown bearded, shrewd fellows, in blue caftans and blue cloth caps, the costumes uniformly worn by merchants throughout Russia. They are constantly extolling their wares in the most exaggerated terms to those passing by.

"No light or fire is allowed in the building, unless it be the sacred lamps which are kept burning before the pictures of the saints, and which are supposed to be too holy to occasion any danger. The merchants are, in consequence, often exposed to intense cold, but this they endure with admirable fortitude and cheerfulness."

Without including the peasants who bring provisions for sale, there are probably not much less than 10,000 shopkeepers, merchants, hucksters, and dealers of different kinds, who assemble daily in the *gostinnoi dvor* of St. Petersburg, and its appendant buildings.

With the exception of furs, many of which are of excellent quality, there are in the gostinnoi dvor, properly so called, few except the iron and wax shops, where the goods are purely Russian. Most of the articles consist of bad imitations of foreign fabrics.

M. Kohl says, "As the goods, so are the customers. Both are Europeanized, for there is little in the Frenchified *soubrettes*, the lackeys in livery, the *employés* in uniform, and the foreign teachers, to remind one of Russian nationality; but a little farther on, when you enter the gates of the Apraxin ruinok and the Tshukin dvor, you come to bazaars where sellers, buyers, and wares are all equally and entirely Russian; and here, in the very centre

of the palaces and plate glass of St. Petersburg, in this capital of princes and magnates, there unfolds itself to your view a motley, dirty populace, precisely similar to what may be supposed to have thronged the fairs of Novgorod in the middle ages, or may still be seen in the bazaars of any of the provincial cities of Russia.

"The population of St. Petersburg, from the highest to the lowest, is constantly changing. The stationary portion is far the least numerous; the majority look upon the city only as a temporary residence. The nobles are ever coming and going; foreigners hope to enrich themselves, that they may return to their native countries; the garrison and all attached to it must always be prepared to change their quarters; the civil servants of the government seldom remain long at one post, but are liable at a few days' notice to be ordered off to the most remote provinces; and the lower classes, such as servants, mechanics, and labourers, are for the most part serfs, who have received only a temporary leave of absence, at the expiration of which they are expected to return to the estates to which they belong. Even the *isvoshtshiks* in the streets are a nomadic race, plying for custom this year in St. Petersburg, the next in Moscow, and the succeeding one in Odessa, or perhaps in Astrakan. St. Petersburg, in fact, like most Russian cities, is a place of rendezvous, where men congregate for a time; but not like our German cities, a home in which families attach themselves, like ivy to the stone walls, and vegetate away for centuries. The mass of the population of St. Petersburg undergoes a complete change in less than ten years; and to this constant fluctuation I attribute the vast extent of the rag-fair, and the astonishing quantity of old furniture and old clothes which are sold at a low price, by those who take their departure, and disposed of again, at a handsome profit to the newly-arrived.

"Thousands enter the city daily, without knowing whether, on the morrow, they shall become cooks or carpenters, masons or musicians, or whether, on stripping off their village dress, they shall assume the livery of a lackey, or the caftan of a merchant. For all their wants the Apraxin ruinok and the Tshukin dvor are prepared: nay, should a Samoyede from Siberia, or a Huron from America, come naked into these ruinoks, he may leave them again in a few minutes, provided with every imaginable article necessary to equip him as a civilized Russian.

"These two markets occupy a piece of ground about 1500 feet square, containing therefore a surface of rather more than 2,000,000 of square feet. The whole is so closely covered with stalls and booths, that nothing but narrow lanes are left between; and supposing each booth, including the portion of lane in front of it, to occupy 500 square feet, which is certainly making a very liberal allowance, it would follow, that there must be within the two bazaars nearly 5000 booths, tents, and stalls. These form a city of themselves. The top of the booths frequently project, and meet those that are opposite to them, making the little lanes between as dark as the alleys of the Jews' quarters in some of our old German towns, or like the streets of many oriental cities of the present day. Through narrow gates you pass from the busy Garden-street into this gloomy throng, where a well-dressed human being might be looked for in vain; where all are '*black people*,' all bearded, furred, and thoroughly un-European.

"Here also, in the true Russian spirit, like has paired with like: in one corner, for instance, all the dealers in sacred images have congregated. The little brass crosses, and the virgins, the St. Johns, the St. Georges, and other amulets, may be seen piled up in boxes, like gingerbread nuts at a fair. On the wall of the booths are hung up pictures of all sorts and sizes, radiant with mock gold and silver. For village churches, for private chapels, and for devout merchants of the old faith, there are pictures of several ells square, before which a whole household may prostrate themselves with ease.

"In another part of the market will be found a whole quarter of fruit shops, in which an incredible quantity of dried fruit is offered for sale. Each of these shops is as oddly decorated as its fellows.

"Whole rows of shops, full of pretty bridal ornaments—gay metal wedding-crowns, such as it is customary during the ceremony to place on the heads of the bride and bridegroom, and artificial wreaths and flowers, of a very neat fabric, and all at very reasonable prices,—a whole garland of roses, for instance, tastefully interwoven with silver wire, at 80 copecs, or about 8½*d*.

"Whole groups of shops are filled with perfumes, incense, and various articles for fumigation. Others with honey from Kasan and Tulo, laid out in wooden vessels.

"The pastrycooks also have their quarter in this market, where they vend the oily *fishpirogas*, of which the bearded Russians are so passionately fond.

"Perhaps for a stranger, the most interesting portion of this world of markets is that of Tshukin dvor, where the birds are sold. Two long rows of booths are full of living specimens of ornithology; pigeons, fowls, geese, ducks, swans, larks, bullfinches, siskins, and hundreds of other singular birds are there collected, and form the most picturesque and variegated menageries that can be imagined.

"It is astonishing what a quantity of these birds are yearly consumed at the luxurious tables of St. Petersburg. In winter the cold keeps the meat fresh, and at the same time facilitates its conveyance to market. The partridges come mostly from Saratoff, the swans from Finland; Livonia and Esthonia supply heathcocks and grouse, and the wide steppes must furnish the geese which flutter over their endless plains, where the Cossack hunts them on horseback, and kills them with his formidable whip. All these birds, as soon as the life-blood has flown are converted into stone by the frost, and packed up in huge chests, are sent to the capital for sale. Whole sledge-loads of snow-white hares find their way to the market. The little animals are usually frozen in a running position, with their ears pointed, and their legs stretched out before and behind, and when placed on the ground, look, at the first glance, as if they were in the act of escaping from the hunter. Bear's flesh is also sometimes offered for sale in this market, and here and there may be seen a frozen reindeer lying in the snow by the side of a booth, its hairy snout stretched forth upon the ground, its knees doubled up under its body, and its antlers rising majestically into the air. It looks as if on our approaching it, it would spring up and dash away once more in search of its native forests. The mighty elk is likewise no rare guest in this market, where it patiently presents its antlers as a perch for the pigeons that are fluttering about, till, little by little, the axe and the saw have left no fragment of the stately animal, but every part of it has gone its way into the kitchens of the wealthy.

"Similar markets for birds and game will be found in every large Russian city. Indeed the habits and fashions of the Russian markets are completely national. Those of Moscow vary but little from those of Tobolsk; and Irkhutsk, Odessa, and Archangel have shown themselves equally servile in their imitation of the metropolitan bazaars."

The sledges which bring various commodities to the markets of St. Petersburg, are used as stalls to sell them. The matting is thrown aside, and the poultry and frozen carcasses are arranged so as to attract buyers. The geese are cut up, and the heads, necks, legs, and carcasses sold separately, by the dozen or half-dozen, strung on small cords. Those who cannot afford to dine on the breast of a goose, purchase a string of frozen heads, or a few dozen of webbed feet to boil down into soup. The frozen oxen, calves, and goats stand around in rows. Sucking pigs are a favourite delicacy with the Russians. Hundreds of these, in their frozen state, are seen ranged about the sledges, mingled with large frozen hogs.

The bones and meat being all rendered equally hard by the frost, the animals are sawn up into a number of slices, of an inch or two in thickness, and by this operation a quantity of animal sawdust is scattered on the snow, and afterwards gathered up by poor children, who haunt the market for that purpose. Fish, which is offered for sale, is sawn and sold in the same frozen condition.

The Simnaïa Ploshtshod, at the end of the Nevskoi Prospekt, is the market where live cattle and horses are sold, and where sledges and country waggons are constantly exposed for sale to the peasants.

There are rows of toy-shops, and book-shops for Russian literature (the German and French booksellers have their shops on the *Prospekt*).

The cloth shops and booths seem interminable.

"Every thing," says M. Kohl, "with the Russians is long. Long are the lines of houses in their streets; oh! how long are their regiments of verst-posts (*Anglicè* milestones)! their buildings are long and drawn out; and long, very long, are their caravans of waggons on the road. Breadth, depth, and elevation, indeed, are wanting. Therefore it is that every thing among them is without substance or durability; nothing is close, compact, solid, or exalted; every thing is long, flat, smooth; the whole country is stiff and sharp-cornered, and has the air of having passed through the hands of the drill-sergeant."

Wax candles are exhibited for sale in great quantities and of all forms and sizes from the thickness of a taper to that of a twelve-pounder. The demand for wax lights increases as the Greco-Russian church extends over the vast dominions of the Tzar. The nations which have, since the days of Peter the Great, embraced that faith from conviction, interest, or compulsion, require, as well as the old Moscovites, a perpetual supply to lighten up their ceremonies. The recent transfer of the whole Lithuanian Church to the Greco-Russian establishment, and the multitude of proselytes from various creeds, who are, from motives of interest, conscience, or promotion, or by compulsion, baptized in the Greco-Russian church, and the new churches which have been built, and are always building, in all the old provinces and in the steppes in Siberia, all create fresh and large demands for wax lights of the true consecrated ecclesiastical form. The wax used is brought generally in a pure state to Moscow in cakes of two poods or about seventy-two pounds weight. It is bleached there. As it has been observed that at St. Petersburg there are no wax bleachers, because the Finnish sun being itself too well bleached, it can have no effect in bleaching any thing else. The wax candles, tapers, and torches are often ornamented with gold and silver thread, and often with small pieces of coloured glass let into them, in imitation of precious stones.

Besides these markets and bazaars there is the great hay-market (Sennaïa Ploshtshod), and several other places where various articles are sold. The demand for hay, &c., to feed the 30,000 to 40,000 horses of St. Petersburg is alone very great. In summer the hay is brought down or up in fleets of large boats. There are nearly 300 spirit, wine, and beer shops and cellars in this city, and sobriety is not by any means considered a prevailing virtue. The revenue which the government derives from the monopoly of distilled spirits, and the enormous wealth of the *Otkaptshiks*, or the farmers of the spirit contract who have invariably become wealthy, have greatly, by their baneful trade, encouraged drunkenness, and ruined hundreds and thousands in Russia. The effect of drunkenness in the army is said to have been most pernicious, and the Russian spirit called *votski*, distilled from grain, potatoes, &c., is perhaps the most fiery and abominable of all liquors.

It is said that, in the countless booths and drinking-places of St. Petersburg,

spirits to the value of 9,000,000 paper roubles is consumed annually in St. Petersburg, exclusive of beer and wine; an enormous quantity, when the low price at which it is sold is taken into the account. M. Kohl says that the consumption per individual, including women and children, is equal per annum, to two and three quarters pailfuls of spirits.

In Moscow, there are bazaars, markets, and stalls in every part of the city. The centre of all its chief commerce is in *Kitai-Gorod*, where stands the great *Gostinnoi dvor* (bazaar) and the Ryädi (street of shops). The *gostinnoi dvor* of Moscow is, next to that of the fair of *Nijnei-Novgorod*, the largest in the empire. It is a vast colossal structure of three stories, with three rows of columns and three ranges of shops, one above the other, connected together by numerous passages and stairs. On the ground range are the greatest number of people; on the two upper the wholesale trade is chiefly transacted. The business carried on through the whole is like that of a continual fair. The Black Sea sends to Moscow all kinds of Levant produce. The Baltic sends to this mart the produce of Western Europe, and of America and the West Indies. Siberia sends the produce of China and Tartary. Moscow is consequently the centre of the whole interior traffic of Russia.

There are about 30 booksellers' shops in Moscow, some of whom keep a stock in hand of about 100,000 to 200,000 volumes. Those of Glasimoff and Shireinoff are the principal ones. In 1806 there were only 3 booksellers of any consequence in the city; in 1808, 4; and in 1810, 6: After 1812 the number increased rapidly. Before that year, the annual number of spelling-books sold at Moscow averaged only 10,000; the number increased soon after to 30,000, and in 1837 200,000 civil and ecclesiastical were sold. The *Viedomosti*, the celebrated newspaper of Moscow, which has been published since 1761, had 2000 subscribers in 1812; the subscribers increased soon after to 6000, and since then to 12,000. The taste for reading is greatly on the increase among the trading and lower classes. Karamsin's *History of Russia* is a book generally read by them.

The shops of the wax-light venders occupy a conspicuous place in Moscow. The inhabitants of Moscow use at least three times as many lights to illuminate their saints as the people of St. Petersburg. The bees of the Ukraine and of Lesser Russia furnish the greater part of the wax consumed at Moscow. The markets for secondhand wares are numerous and extensive in Russia. This is owing chiefly to sudden changes, both in fortune and in the place of residence. In St. Petersburg the trade in rags and rubbish is carried on in an enclosed place, the *Tshukin dvor*. In Moscow this business is established along the wall of *Kitai-Gorod*. In the middle of the street opposite the rags, there are tables laden with various eatables at each, where the long-haired Moscovites roar out the names of their viands, and call out to come and eat and pay. The booths along the wall are hung or packed with old clothes that have been worn by every class of so-

ciety: old gold and silver thread, which once formed the rich epaulets of the Russian officers: old books, and all manner of secondhand articles. There are in the same quarter wax-chandlers and picture-dealers.

Remarks upon the recent Exhibition of Russian Arts and Manufactures at Moscow, translated from the St. Petersburg Official Gazette, July 1843.

"This exhibition opened on the 11th of June, 1843, being the third which has taken place in the ancient capital of Moscow; and its results may be viewed as very favourable to national industry.

"Although Peter the Great may be considered the founder of Russian manufactures, especially those of cloths, woollens, and linens, neither of these branches of industry can scarcely be said to have fairly developed themselves prior to the commencement of the 19th century. At the latter period several establishments were formed in the government of Moscow and Vladimir. The war of 1812 had, however, a most injurious effect upon the stability of these establishments, and the greatest want of articles, both of cotton and woollen cloths, was then severely felt throughout all the provinces of the empire.

"Since that time, however, native industry has progressed rapidly under the protection, and guided by the salutary regulations, of the government.

"The first national exhibition took place at St. Petersburg in 1829, nearly 300 establishments forwarding to it specimens of their various fabrics. At the second held at Moscow, in 1831, the number exhibited had much increased; and in 1835, on the third exhibition which was also held at Moscow, the number transmitting samples of their industry reached 550. At the recent exposition there were upwards of 800 establishments (including 60 situated in Poland) which sent specimens of their productions.

"The various objects exhibited were placed in 22 large apartments, and offered a very rich and varied exhibition. The first room contained productions of rural economy, raw materials for manufacture—viz., flax, hemp, and wool; amongst the latter were some admirable samples of wool, both from the Baltic and southern provinces of the empire. These articles, from their great importance to Russian commerce, merited the first place in this exhibition; the value of their exports amounting annually to nearly 85,000,000 paper rbls. Great improvement is stated to have taken place as regards the production of linen yarns; the influence of climate may be cited as tending much to favour their superiority over those of western Europe: and the articles transmitted from the imperial spinning factory at Alexandrovsky, are considered to have shown a very rapid advance in quality At various private establishments the progress of this branch of industry is not viewed as being so satisfactory. Several specimens of silk sent from the neighbourhood of the Caucasus, and the shores of the Black Sea were here met with.

"In the same apartment were shown some specimens of tin, the produce of a mine which has only been worked since 1842. Various kinds of cotton threads were also exhibited in this division of the exposition; they are said to be of good and improving quality, considering the short time this branch of trade has been in operation in Russia.

"The two following rooms contained specimens of woollen cloths, of various descriptions, varying in price from 1 to 7 silver roubles per arshine. This manufacture is considered as having made great progress, and amongst the samples most worthy of notice, were those sent from the factory belonging to Prince Troubetskoï; the value of these samples was 3 roubles 15 copecs, silver, per arshine, and viewed as being fit for clothing for the upper classes of society.

"In the succeeding four apartments were placed various kinds of cotton manufactures; these are much improved of late, and especially cloths of an inferior description.

"Another division was appropriated to the display of silk goods, tissues of gold and silver laces, and jewelry; amongst the latter were some plated articles gilt by the new galvanic process, recently established at the school of design at St. Petersburg. Some

superb shawls, especially one of a blue colour, valued at 3000 silver roubles, may be noticed as belonging to this section. Here also were exhibited sailcloth, ropes, cables, tanned leather, and other articles highly affecting national industry.

"Various specimens of works in bronze, cutlery, and blacksmiths' wares; also articles in glass and porcelain, the produce of the imperial establishments, were placed in one of the largest of the apartments.

"In the last rooms of the exhibition, were shown various kinds of machines, and models of new machinery, both from the government institutions, especially from that at St. Petersburg, (Institut Technologique de St. Petersbourg,) and also from various private establishments.

"Some good specimens of firearms, forwarded by various artisans, established at Moscow, Toula, Reval, and Warsaw, were well worthy of remark, and various descriptions of paper plain and coloured, now produced at much reduced prices, owing to great improvement in this manufacture, deserve notice."

The following extract of a private letter from Moscow, dated August 8, 1843, gives a different colouring to the exhibition to that of the official account:

"Generally the exhibition was a wretched display of the state of manufactures in the empire,—and —— is not over proud of it. Polish manufactures showed the great development; and cotton manufactures have increased, but without any improvement as to quality. This may be accounted for by the circumstance of the peasantry now wearing more generally cotton in preference to linen stuffs. At the same time it should be observed that these articles do not at all affect English manufactures, which are entirely of a superior kind and in use among the wealthier classes, while on the other hand they prevent a decrease in the import of twist, which, were it not for the increasing consumption of the cotton stuffs would be checked by the rapid extension of spinning-mills and their production in this country. The latter increased from 70,000 poods to 130,000. Last year 280,000 poods were spun, and this year it is fully expected that 350,000 poods will be the amount.

"More capital is also being invested in machinery, now that it is admitted from England; and several of the first manufacturers are ordering machinery through the Sheffield and Bolton agents who have visited Moscow this summer, at a saving of 4 to 7 of what Cockrell's machinery had cost them.

"The Russian spinners at the exposition could not compete with the British looms but for the duty, in the proportion of 16 to 28 on the invoice—and even as it is the Russian factories work for little besides the consumption of the peasantry. With ampler means the classes above the Novgieks (labourers), adhere to foreign stuffs; and although you may hear complaints of a lessened demand for the latter, we must attribute this diminution to circumstances in the trade, and not to an established advance in the native manufactures."

MANUFACTURES AND ARTISANS OF ST. PETERSBURG.

The severe prohibitive system of Russia, and the dexterity of the Russian serfs when directed or taught by foreign artisans, who are greatly favoured by the Russian government, have induced the great landholders to embark part of their money, and the labour of their *serfs* in manufactories, which they have generally established on their own lands; and a great many articles are in consequence, manufactured in the villages which belong to the aristocracy. Some of the peasants, exclusively of working in the manufactories of their lord, carry on *spinning*, *weaving*, *&c.*, on their own account, and have in this way often acquired considerable property. The family of Sheremetieff possesses several

villages of iron forges. The greater part of iron, wood, and earthen wares, &c., sent to the fairs, are from the fabrics of the Demidoffs, Jakowsleffs, Karpzoffs, &c. These fabrics are, however, described by most persons below mediocrity in quality, although showy in appearance. The best articles are those in imitation of oriental workmanship.

M. Kohl says, "The mighty influential manufacturing aristocrats are in many cases the great obstacles to the improvement of the manufactures, by means of smaller but more skilful producers, who are now quite shut out from competition by the privileged monopolists. In this respect the Russian aristocracy stand in the same relation to the manufacturing industry as the English aristocracy to the agricultural. In Russia, where there is a superfluity of produce, but a want of manufactures, the aristocracy manufacturing for themselves, have demanded a high tax on the foreign article, and partly because their social position gives them a natural preponderance, partly because for the advancement of some peculiar branch of industry they unite to obtain monopolies from their government, a bar is placed to the invention and acquisition of other classes, who moreover must pay much dearer for the necessary manufactures on that very account."

Amongst the manufactures of St. Petersburg are the cotton-spinning, dyeing, and printing works, glass of all kinds, especially large mirrors, iron and cannon foundries, manufactures of firearms, &c.; the imperial tapestry establishment, much on the plan of the Gobelins at Paris; manufactures of cutlery and hardwares, establishments for polishing precious stones, paper fabrics, &c., most of which belong either to foreigners or the crown. They are conducted by foreigners, and are supposed to be models for those of the rest of the empire.

The *Spalernoi tapestry manufactory*, or the Russian Gobelin, is the oldest in St. Petersburg. It was established by Peter the Great, and the artisans and workmen were then all Italian and French. Within the last fifty years all except the director and designer have been Russians. The great foundling hospital supplies annually to this workshop a certain number of boys, who are taught weaving and drawing, and are gradually promoted to be sub-masters and masters.

Common carpets are made within it for general sale; but the fine carpets and tapestry are made only for the use of the court, and for presents made by the emperor to Asiatic and European princes. There are about 25 master and sub-master artisans, about 50 journeymen artisans, and about 55 apprentices, employed in this establishment.

The Russians, and especially the aristocracy and the wealthy of St. Petersburg, are as passionately expensive in having their houses adorned with mirrors as the Parisians. A great demand for glass for mirrors, and for the very large windows of the houses, arises in consequence. The mirrors and window-glass are chiefly made at the imperial manufactory, where glass of all kinds is also blown and cut. The glass-cutting section is of great extent, and there are employed within it about 300 workmen. It is said that sealingwax is nowhere out of England made so well as in Russia. The same may be said of the Peterhof paper manufactory, which was founded by Alexander, who brought paper-makers and the necessary machinery from England for the purpose in 1815. About 72,000 reams of paper of all kinds, chiefly fine paper, are annually made

in this manufactory. The coarse paper is chiefly made in the interior of Russia. The workmen are all dressed in white, and are about 800 in number. They are originally supplied by the foundling hospital. English machinery only, and that of the best kind, is used.

Under the same roof as the paper manufactory, is the imperial establishment for the cutting and polishing of precious stones. The produce of the Ural and Altai mountains, in these costly articles, is brought here to be cut and polished in order to be set in the countless orders of the nobles, in rings, bracelets, and other ornaments lavished on the ladies as marks of imperial favour by the emperor and empress. The magnificent vases of Siberian malachite are the most superb objects made in this department.

Some splendid specimens of vases are also made at the imperial porcelain manufactory situated near Alexandroosk, where there is also an ironfoundry. The latter is elegantly constructed, but the articles made are inferior to those of an establishment belonging to an Englishman of the name of Bearth, to whom the government is often obliged from necessity to intrust its most important works.

Mr. Bearth's establishment is behind the new admiralty, where he has also a sugar-refinery and steam-machine for cutting timber, &c. For the convenience of transporting raw and manufactured articles, and the accommodation of 10 iron steamboats, which belong to Mr. Bearth, and employed by him between Cronstadt and St. Petersburg, he has constructed a port or dock on his sole account. Several steam-engines are employed in cutting the timber; and in order that planks may be furnished to meet the demands at all times of the year, the canal in which the logs float is heated in winter by steam, through pipes, in order to prevent the water from freezing. The engines are consequently at work all the year round sawing trees, which probably required centuries to grow in the forests of Modwina and Viatka.

The sugar-refinery is not shown to any one, on the ground that the immense demand for Mr. Bearth's refined sugar is the result of a secret which enables him to substitute some other refining ingredient than bullocks' blood. The scruples of the Russians having been carried to so extravagant a length, that they abandoned the use of refined sugar, during their Lents and fasts, on the score of its containing, as they supposed, some portion of the blood used in the process of refining.

Sugar refined by Mr. Bearth is therefore alone used during the long and short fasts of the Greco-Russian church. Mr. Bearth has, indeed, managed to secure a monopoly; but what would the pious Russians say, if it were discovered that the substitute used was *noir animal*,—that is *animal charcoal*, or *bone charcoal*, which has long been used so efficaciously in refining sugar, especially in France, that the notorious Savary, Duke of Rovigo, has been accused of shipping whole cargoes of bones from Algiers to Marseilles, in order to be sold there for the use

of the sugar-refineries, and that those bones were the contents of the vast Mahomedan catacombs which he removed in the course of extending the roads and military works of Algiers.

The principal cotton-spinning mill in St. Petersburg, was erected by Baron Stieglitz. It has an English steam-engine of 110 horse power, said to be the largest in Russia, except those in the steam-ships. The director of this establishment is an Englishman.

There is a large cotton manufactory, chiefly for printing, on the Viborg, conducted by a German; and about 1000 workpeople are employed in adding gaudy colours to common Manchester cottons specially imported for that purpose.

Within the last 12 years, the making of mathematical and other instruments has been introduced chiefly by Germans, who have now several workshops in St. Petersburg. Platina is found, though expensive, a superior metal for fine instruments.

There are numerous establishments for the manufacturing of household and camp furniture. The largest and most perfect belongs to the Swabian family, who commenced on a very humble scale. Their portable furniture—especially their tent furniture, is considered well made, and so contrived that a tent with two chairs, table, bed, &c., and in short all that is necessary for sitting, dining, or sleeping, are packed up in a box about 5 feet in length, ten inches broad, and about 5 inches deep. These are admirably adapted for the Russians, who have often, and abruptly, to leave the luxuries of St. Petersburg for the dreary steppes of the south, or for the deserts of Siberia.

In all the upholsterers' shops, except the one alluded to, there are piles of coffins ready for all ages, sexes, ranks, and religions. Brown, purple, and light-coloured ones for the Greco-Russians; black with gold ornaments for protestants; rose-coloured ones decked with white laces for young girls; bright blue for boys.

Among the other fabrics of St. Petersburg are saddles, harness, carriages of various kinds, boats, &c.

Struse Fleets.—The small river boat or wherry of the Neva, has a low prow and high stern. Of all vessels, the long burdensome crafts, which are known by the general name of *Struse*, are the most rude in their construction. They arrive in fleets in summer, by the rivers, canals, and lakes, from the Wolga, Kama, Akka, Dwina, &c.

Timbers, planks, masts, &c., are roughly hewn with the axe, and fastened together with tree nails. The skipper or owner's cabin is constructed with boards roughly pegged or nailed together, and embellished with pictures of saints, &c.

The *struses* arrive in large *fleets*, or as the Russians call them, caravans; each having its appointed time for leaving the places in the interior from which they depart. For example, the "Iron caravan," the "Salt caravan," &c. The greater part are broken up at St. Petersburg. Not more than 600 or 700 probably return back laden.

RUSSIAN SALT DUTIES, AND SALT MONOPOLY.

One of the most oppressive taxes in Russia is caused by the high duty on salt, and by the imperial salt monopoly. This tax, which is also grievously experienced in France and some other countries, is borne with patience by the Russian serf, although the article is sold, in consequence of the duty and the monopoly, at an exorbitant price; a price that bears much the same relation to its natural value, as the British duty on tobacco does to the original price of that plant. But salt is an article of vital necessity, which should be procured at the cheapest cost: tobacco a pernicious stimulant, which should bear the highest revenue duty possible; limited only so far as that such duty would not hold out a premium for extensive contraband.

Salt is absolutely prohibited to be imported into any of the ports of the Black Sea, or Sea of Azof, or of the Danube, or along the Prussian frontiers. (See Table 2 of the Tariff.) Its importation is only allowed at the port of Archangel, on paying a duty of 2*l.* 2*s.* the ton,—at St. Petersburg on paying a duty of 4*l.* 1*s.* 8*d.* the ton,—and at the other Baltic ports of 3*l.* per ton. Central and Southern Russia is supplied from the salt-mines, and especially from the long, narrow, and shallow lagoons, or *limans*, which are at the mouths of all the rivers from the Dnieper to the Pruth. The water of these at the mouths of the large rivers is too fresh to yield much salt, and the exhalations from the limans are causes of great insalubrity in their neighbourhood: whole villages have fallen sick during one night on the wind changing and blowing from over the *limans*. Those which yield the most salt are in Bessarabia, especially that called the *Dusle-liman*. As its waters dry up with the summer heat, the salt is found in crystals, and the liman is then surrounded by the officer of the crown. Agents arrive at the same time from the nobility of Bessarabia, Podolia, and New Russia, and from the German colonists, in order to purchase from the crown the privilege of collecting the salt when it is supposed to be *ripe*, as it is termed: that is, when the waters of the liman have evaporated to the usual extent. The liman is then parcelled out to purchasers. The salt near the border is then not more than an inch and a half deep. It thickens gradually to about a foot deep in the middle. The best part is reserved for the numerous depots of the crown.

The immediate purchasers carry away their salt at once. The crown deposits it in stacks containing about 175 tons each. The labour of men and horses, in collecting the salt of the liman, is very great, and the wages paid, high for Russia, being 40*s.* to 44*s.* per month. The *employés* who guard the limans are chiefly Cossacks armed with pikes and sabres. No vessel or boat is allowed to land on the salt coast, nor is any thing allowed to be taken from the sea, not even the wood that drifts along. (See quantities of salt yielded, prices sold, &c., in Extracts from Hagemeister's Report quoted.)

LIVE STOCK OF THE STEPPES.

The *Tshabawn* is the Russian shepherd, and the *Tabuntshik* the horse herd: an *Otlara* is a flock of sheep, and a *Taboon* is a herd of horses: a *Tshereduik* is the cattle herd, and *Tshereda* a herd of oxen and cows. The chief proprietors of the *steppes* are the families of Woronzoff, Orloff, Potocki, Skarshinsky, Rasumoffsky, and a great part of their wealth is derived from their herds of horses, horned cattle, and sheep. A *Taboon* consists often of about 1000 horses. The Tabuntshik is liable to his master for all that may be either stolen or killed by the wolves. He has usually three assistants. He is paid 5 roubles per annum for each horse, out of which he has to pay his assistants and the value of the horses lost. These horses are nearly wild. Some of the landowners possess from 8 to 10 taboons, the origin of each taboon has been 1 or 2 stallions and some 20 mares. The great fairs of the South for the sale of horses are those of Balta and Berdecheff. The contractors for the army, or their agents, however, proceed to the steppes and inspect the taboons, where they buy the horses which they select. When two taboons meet, the stallions and even the mares fight furiously. They will also attack the wolves and often kill them.

Sheep.—There are proprietors in the steppes who possess each 100,000 sheep. The Walachian is the prevalent race, but the Merino breed is fast increasing in numbers. The Walachian and Kalmuk are *fat tailed.* To every 100 sheep there are 3 or 4 goats, without which as leaders, the sheep would never face the cold winds which scour the steppes.

Horned Cattle.—A *Tshereda,* or herd of horned cattle, consists of from 100 to 800 heads. With the exception of the cows introduced by the German colonies, those of the steppes yield little milk. They are reared chiefly for their tallow and skins, and partially for their flesh. When we consider that at least 250,000,000 lbs. of tallow, or that of at least 100,000,000 cattle, are annually exported from Russia, and that the quantity consumed at home must also be very great, the number of horned cattle slaughtered annually must be enormous. They are driven in herds to the *Salgans,* or places of slaughter, which are established in various parts of the steppes, and where there are enormous boilers for melting the tallow, as well as places for scalding the hides; a great number of swine are fattened on the intestines, and the flesh that is not fat is thrown away; all that is fat is melted indiscriminately.

CONSUMPTION OF FOREIGN COAL IN RUSSIA.

The consumption of coal in Russia is not for ordinary fuel, but for the furnaces of steam-engines in factories and in steam-ships.

The following quantities have been imported into Cronstadt and St. Petersburg during the 10 years, 1831 to 1840 inclusive: viz.—

YEARS.		YEARS.	
	chaldrons.		chaldrons.
1831.....	9,722	1836.....	19,818
1832.....	10,525	1837.....	21,428
1833.....	17,063	1838.....	26,315
1834.....	13,994	1839.....	29,471
1835.....	16,118	1830.....	38,068

COMPARATIVE VALUE AT DIFFERENT PERIODS OF SILVER AND PAPER ROUBLES.

THE variations of the paper money in Russia have caused great perplexity in calculating the sterling value of commodities. In the foregoing tables when the silver rouble is not expressed, as is the case in all the calculations previously to 1805, and in some cases after that period, the values are in paper roubles. Generally we have reduced the values to sterling money according to the average value of the paper rouble for the year. But even this calculation has been liable to error, from the sudden rise or depression of the paper money: often 2 to 4 per cent in the course of a day.

We hope the ukase, or manifesto of the emperor, dated 1st June, 1843, will go far to place the currency of Russia on an equitable basis.

When the bank paper was first issued, in 1769, the notes were often at a premium; they however fell soon after 1 to 2 per cent lower than silver. In 1790 the paper money was 18 per cent less value than gold, and 41 per cent in 1793, and 49 per cent in 1795-6. Soon after 58 per cent was allowed for payments in silver instead of paper roubles. In 1803 the paper money rose to nearly a par with silver, but it fell soon after to the following rates: viz.—

Twenty shillings sterling in 1803 = 7 roubles; 1804 = 8 r.; 1805 and 1806 = 8½ r.; 1807 = 8¾ r.; 1808 = 10 r.; 1809 = 11 r.; 1810 = 16 r.; 1811 = 17 r.; 1812 = 15 r.; 1813 = 16 r.; 1814 = 18½ r.; 1815 = 22 r.; 1816 = 24 r.; 1817 = 20 r.; 1818 = 19¼ r.; 1819 = 22¼ r.; 1820 = 23 r.; 1821 = 24 r.; 1822 and 1823 = 25¼ r.; 1824 = 24½ r.; 1825 = 23 r.; 1826 = 24½ r.; 1827 = 23½ r.; 1828 = 23 r.; 1829, 1830, and 1831 = 22½ r.; 1832 = 23 r.; 1834 to 1837 = 22½ r.

SECTION XIII.

SWEDEN AND NORWAY.

CHAPTER I.

NATURAL RESOURCES OF SWEDEN AND NORWAY.

The kingdoms of Sweden and Norway comprise a large peninsula, united to the continent by the isthmus which separates the Gulf of Bothnia from the White Sea.

The aspect of the sea-coast of Sweden is generally low, and greatly broken up by bays, harbours, lakes, and torrents. Of the numerous rivers, the Tornea and the Angerman are the principal. In the north-western parts bordering on Norway, the country is rugged, hilly, and even mountainous. The soil, where the surface is not occupied by rocks, is chiefly light and sandy. Rich alluvial tracks occur, and mosses and marshes are extensive. The soil and climate are ungenial to agriculture; some fertile tracks are met with, south of 61 deg. north, which produce rye, barley, a little wheat, potatoes, carrots, turnips, beet-root, and various vegetables; tobacco, flax, hemp, some hops, and some fruit, such as apples, pears, plums, currants, and gooseberries. To the north of 61 deg. a rugged, mossy, and dreary country generally prevails to the Arctic Sea. The forests of Sweden produce excellent timber of the fir tribes and good tough ash. Beeches grow as far north as 56 deg. 30 min.; beyond which, as far as nearly to latitude 70 deg. north, firs and birches are the common forest-trees. South of 63 deg. ash-trees thrive, and lindens, walnuts, maple, oak, elm, &c., all grow south of latitude 61 deg. In the southern parts there is great scarcity of wood and fuel; and the poor inhabitants of many districts are said to remain in bed, for warmth, during the greater part of the cold days of winter, merely from want of fuel. In the northern and wooded, though coldest parts of Sweden, people are found lodged comparatively in comfort, and in affluent circumstances. The horses are lively, strong, and although not generally large, much esteemed. The pastures are good in summer; and horned cattle, sheep, and hogs, are bred with care; the former are small in size. The reindeer, particularly in the north, are useful domestic animals. Bees thrive, although the climate is so very cold. Various medicinal plants

are abundant. The coasts, rivers, and lakes, swarm with fish. The lobsters and oysters are remarkably fine. Game is plentiful and excellent.

The forests, though for a long time recklessly destroyed, yield timber for exportation, and the streams afford numerous sites for saw-mills, and the means of conveying the timber and deals to shipping ports. Great care is now taken to preserve the woods from wanton destruction; and planting of oak, pine, and spruce firs, has for some time been rather extensively attended to.

The mineral riches of Sweden are, however, the most important; especially the iron-mines, which produce the best iron and steel in great abundance; gold and silver, copper, lead, alum, coal, saltpetre, porphyry, marble, alabaster, slate, asbestus, loadstones, talc, amethysts, &c., are also found in this kingdom.

The principal seaports are Stockholm, Nyköping, Nordköping, Kalmar, Carlscrona, Malmoe, Helsinburg, Halmstadt, Gottenburg, Gefle, Hudikswald, Hernosand, Umea, Pitea, Lulea, and Tornea; along the coasts there are several islands; the largest are Oeland, Gothland, and Wisby.

CHAPTER II.

AGRICULTURE OF SWEDEN.

IT has been estimated that seven-eighths of the population of Sweden are engaged in agriculture. This statement must be taken in a very modified interpretation; for though nearly that number may be occupied in agriculture, the same individuals are, the most of them, also for a greater part of their time engaged in other pursuits: such as wood cutting, fishing, common domestic fabrics, &c.

The whole surface of Sweden is computed at 171,015 English square miles, or 109,449,600 acres, or nearly one-half more than the whole surface of Great Britain and Ireland. Of the whole area of Sweden about one-half lies north of 63 deg. north latitude, beyond which little grain, except barley, will ripen. Of the whole surface 3490 square miles, or 2,233,600 acres, or about 1 in 50 is arable, and about twice that extent is under meadows and pastures. All the vast remaining regions are occupied by woods, bare rocks, marshes, bogs, and lakes.

Industry has done much in a country where the climate and the soil are both so unfavourable to agriculture; and if the extent of cultivated land is small, the population is also so limited that there are two-thirds of an acre of arable land for each individual inhabitant. This extent under cultivation, with the animal food, butter and cheese of the meadows and pastures, and the support derived from the fisheries, have rendered it unnecessary to import much corn, except after the bad harvests, which are often occasioned by frosts. Potatoes and barley are generally raised. Some hemp and a good deal of excellent flax, are raised, and used in making domestic linens. A little tobacco is grown; and on the low grounds bordering the Lake Wener, and on other places where alluvial or tolerably fertile spots of soil are found, agriculture is in a creditable state.

STATEMENT of the Average Quantity of Grain and other Produce raised in Sweden, according to Official Returns for the Five Years from 1833 to 1837, both inclusive.

DESCRIPTION.	Quantity annually sown.	Quantity annually produced, the Seed being deducted.
	Swedish barrels.	Swedish barrels.
Wheat	37,476	244,709
Rye	406,548	2,278,366
Barley	401,071	1,800,712
Oats	444,434	1,532,046
Barley and oats, mixed	192,350	774,677
Peas	65,861	299,109
Potatoes	614,396	4,113,442

Note.—Two Swedish barrels, or tunnar, may be considered in round numbers to be equal to an imperial quarter, as 100 English quarters are equal to 198 65-100ths Swedish barrels, or tunnar.

STATEMENT of the Quantities of Grain imported into Sweden, with the Average Annual Prices of Rye in that country in each Year, from 1778 to 1831.

1804	384,000	4	28	1831	90,000	10	16

The cultivated surface of Sweden is divided into 65,219½ estates, or hemmans of land, and although these originally belonged to single proprietors, they are now generally subdivided among about 150,000 individuals: exclusive of the hemmans belonging to the church, colleges, towns, hospitals, the crown, the army, sailors, &c. The value of all the hemmans was estimated in 1836 at 396,193,366 r.d. Highest annual value of the hemman, 9034 r.d. Lowest annual value, 1807 r.d. Average annual value, 4186 r.d.

STATEMENT showing the Changes that have occurred in the Proprietorship of Land in Sweden, between the 1st of January, 1822, and the 31st of December, 1837; exhibiting the Value of Estates sold by the Nobility to the Middle Classes and the Peasantry, together with the Account of Mortgages unredeemed at the end of 1837, on Estates belonging to each of those three Classes.

Lands which formerly belonged to the nobles, and since 1810 held by either nobles or commoners, are exempted from the land-tax, and also from liability to supply soldiers for the army. There is, however, an assessment of 5 per cent laid on the net annual rent or income of *all* estates. Thomson, in his travels, says: "In some extensive districts there are not more on an average than 14

acres of arable land to a farm; and in the district of Carlstadt, where farms are largest, and agriculture most advanced, the average extent of arable land in each farm may be taken at about 28 acres per farm."

The peasants, who are proprietors of the soil they cultivate, have been reckoned at 147,974; those who live on land not their own, at 1,688,717; husbandry labourers, holding houses and lands under proprietors, at 470,091; and servants living in the houses of, and with their employers, at 277,466.

The government has established model farms, some of which are directed by British agriculturists. One of these, near Linköping, comprises about 1500 acres: 500 of which are under the plough, the remainder under grass and pasture.

Generally speaking, greater labour is required in Swedish agriculture than in that of warmer climates and more fertile soils. Wages to farm labourers vary from 9*d.* to 1*s.* per day.

Puffendorff, in 1666, described—

The kingdom of Sweden as "full of great forests and innumerable lakes, and the sea-coast surrounded with many rocks. But deeper in the country there are many fertile tracts of ground, the forests furnish fuel: the lakes, with great store of fish, also contribute much to the easy transportation of the native commodities from one place to the other. The country produces corn sufficient for its inhabitants, neither is there any want of cattle or horses."

Extract from a statement dated Stockholm, March, 1842.

"The culture of beet-root for sugar is at present confined in this country to a very small quantity in Scania for two refineries; the one at Landscrona, the other at Malanio, in which some trials have been recently made, but merely as experiments. It is unlikely, however, that the culture of beet-root for sugar will ever be carried into extent in a country in which raw sugar is imported at so low a duty as $2\frac{1}{2}$ Swedish skillings banco, or about one penny English the Swedish pound (skalpund).

"Tobacco is grown in different parts of Sweden, in the neighbourhood of the towns, and even as far north as Stockholm, but it is of inferior quality. The quantity is not very considerable, but it has increased of late years.

"The quantity of hemp grown in Sweden is quite trifling, but a good deal of flax is raised of good quality.

"No official returns are taken of the quantity of tobacco, hemp, or flax raised in Sweden."

The peasants' dwelling-houses, barns, &c., are chiefly built of wood, and covered over the roof with turf and straw. The houses of the upper classes and those in the towns are generally covered with tiles. Slates are scarcely ever used.

Mr. Coxe says, "I had frequent opportunities of observing the customs, manners, and food of the peasants. On entering a cottage I usually found all the family employed in carding flax, spinning thread, and in weaving coarse linen or cloth. The peasants are excellent contrivers, and apply the coarsest materials to some useful purpose. They twist ropes of horsehair, bark of trees, and use eel-skins for bridle reins. Their food principally consists of salted flesh and fish, eggs, milk, and hard bread. At Michaelmas they usually kill their cattle, and salt them for the ensuing winter and spring. Twice a year they bake bread in large round cakes which are slung on files of sticks, suspended from the ceiling of the cottages. This bread is so hard as to be occasionally broken with a hatchet, but is not unpleasant. The peasants use beer for common drink, and are much addicted to malt liquors and spirits. In the districts towards the west coasts, and at no great distance inland, tea and

coffee are not unusually found in the peasant's cottages, which are procured in great plenty and at a cheap rate from Gottenburg.

"The peasants are well clad in strong cloth of their own weaving. Their cottages, though built of wood and only one story, are comfortable and commodious."

This account may be generally true, but we have been informed by the most undoubted Swedish authorities, that in the southern and all the unwooded parts of the kingdom, the peasants suffer greatly from want of fuel during winter, and are in most other respects poor, when compared with those of the north and forest districts.

CHAPTER III.

GOVERNMENT OF SWEDEN AND TREATIES WITH FOREIGN STATES.*

THE Swedish monarchy, comprising Sweden and Norway, includes a greater extent of territory than any other European sovereignty, except Russia.

In 1808 Sweden lost Finland, which was conquered by Russia; but in 1814, this loss was repaired by the acquisition of Norway.

The three general divisions of Sweden, viz. Gothland, Sweden Proper, and Norrland, are now divided into 25 läns, or governments; and Norway, formerly divided into the 4 dioceses or governments, of Aggerhuus, Christiansand, Bergen, and Drontheim, is now formed into 17 bailiwicks or divisions.†

Sweden and Norway have different Constitutions, though under the same king. The monarchical power is hereditary; females are excluded. The king appoints to all employments, and grants pardons. He cannot make new laws, interpret old ones, raise taxes, or declare war, without the consent of the States, which he alone has the power of convoking. The liberty of the press is guaranteed. The senate, or court of peers, is composed of 22 members, and 12 councils of the crown, form a council of state.

The legislative body, styled the Diet, or States-general, consists of four orders: 1st, nobles, in which order each noble family has its representative;

* Gustavus IV. Adolphus the deposed king, was proclaimed king of Sweden, March 29, 1792. He remained four years and a half under the guardianship of his uncle, Charles, duke of Sudermannland, then Regent, and ascended the throne November 1, 1796. In 1809 he was deposed; his heirs excluded from the throne by an act of the Diet, and his uncle, the late regent, assumed the government under the title of Charles XIII. On the 18th of August, 1810, King Charles proposed Marshal Bernadotte for his successor, who was elected August 21, by the estates, on condition that he should embrace the Lutheran religion; which having done, he was, by an act of November 5, 1810, adopted by the king, assumed the name of Charles John, and took the oath as Crown Prince and heir to the throne. In 1818, on the death of Charles XIII., the Crown Prince succeeded to the throne under the title of Charles XIV.

† See Royal Amanack of Sweden and Norway (Sveriges och Norriges Calender, 1829 and 1830). M. Hagelston thus distributes the Bailiwicks among the three geographical regions:—10 to Sonderfields, 5 to Nordenfields, and 2 to Norrlanden.

2dly, clergy represented by the bishops, and also by pastors chosen in each chapter; 3dly, burgesses who are chosen by the principal towns; and 4thly, peasantry chosen by themselves in their assemblies. Each deputy must be of one of these orders, profess the Protestant religion and be 25 years of age. Each order deliberates and votes separately. The States, which assemble every five years, except in extraordinary cases, have the right of legislation and taxation, and the superintendence of the finances; but the king has an unconditional *veto*.

Council of State.—This council is composed of the minister of justice, the minister of foreign affairs and colonies, six counsellors of state, and the chancellor, which, with the chancellor of justice, secretaries at war, of the interior, of the finances and commerce, of public worship, and the heads of the army and marine, form the ministry.

SWEDISH TREATIES WITH FOREIGN STATES.

Sweden has treaties of reciprocity with Great Britain; with Russia, giving special privileges to Finnish vessels, and of perfect reciprocity in regard to all other Russian vessels; with Prussia, Denmark, Hanse Towns, United States of America, Turkey, Belgium, Greece, States of the Church, Sardinia, &c.

BRITISH TREATIES WITH SWEDEN.

Several treaties of peace, amity, and commerce, have been negotiated between Great Britain and Sweden, and the latter has also signed a treaty similar to those which Great Britain has with France, and most of the States of Europe and America for the suppression of the slave trade. The following declarations, and treaty of commerce and navigation, are those which regulate the trade between the United Kingdom and Sweden and Norway.

Declarations of Sweden, for the Abolition of certain Dues affecting British Commerce in the Ports of Sweden.

No. 1.—(Translation.)

The undersigned, Minister of State and of Foreign Affairs of his Majesty the King of Sweden and Norway, having received the Declaration of Sir Benjamin Bloomfield, Envoy Extraordinary and Minister Plenipotentiary of his Majesty the King of the United Kingdom of Great Britain and Ireland, of this date, containing the assurance of a perfect reciprocity, declares by these presents, in virtue of the authority to that effect with which he is invested, in the name and on the behalf of the King, his most gracious Sovereign:

That English merchant-ships arriving in the ports or waters of the kingdom of Sweden, shall in future be placed upon the same footing as national vessels, with respect to pilot, lighthouse, and tonnage dues, and, in general, with respect to all those duties which are included in the denomination of port dues payable to the Crown, (*Skepps-utgålder*) of whatever description they may be.

That English merchant-ships shall be equally assimilated to national vessels, with respect to salvage dues, without any restriction or difference.

And that, as Swedish commerce is already in the enjoyment of reciprocal advantages in the ports of Great Britain, the abovementioned arrangements in favour of English com-

merce, shall be put in force, in all the ports of the kingdom of Sweden, without delay, and with as much expedition as possible.

In witness whereof, the undersigned has signed the present Declaration, and has affixed thereto the seal of his arms.

Done at Stockholm, the 24th day of April, in the year of our Lord 1824.

(L. S.) LAURENT COUNT D'ENGESTROM.

No. 2.—(Translation.)

The undersigned, Minister of State and of Foreign Affairs of his Majesty the King of Sweden and Norway, having received the Declaration of Sir Benjamin Bloomfield, Envoy Extraordinary and Minister Plenipotentiary of his Majesty the King of the United Kingdom of Great Britain and Ireland, of this date, containing the assurance of a perfect reciprocity, declares by these presents, in virtue of the authority to that effect with which he is invested, in the name and on the behalf of the King, his most gracious Sovereign:

That all articles the growth, produce, or manufacture of the kingdom of Great Britain and of its Colonies, which, according to the existing regulations, may be imported into Sweden on board of Swedish vessels, may be imported into Sweden in English ships direct from the ports of Great Britain, without being subject, on their entry, to other or higher duties to the Crown, than if imported on board a Swedish vessel.

That all articles, the exportation whereof is not prohibited, may be exported from the ports of the kingdom of Sweden on board of English vessels, to any place whatever, without being subject, on their export, to other or higher duties to the Crown, than if exported on board a Swedish vessel.

But that, as Swedish merchant-vessels do not enjoy the liberty of visiting the ports of the colonies and foreign possessions of England, it is understood that the privileges above specified are not applicable to goods imported into the ports of Sweden, in vessels belonging to the said colonies and foreign possessions, or in vessels strictly English, coming direct from the English colonies.

And finally, that the abovementioned stipulations, founded upon the promise of an exact reciprocity in the ports of Great Britain, in favour of Swedish commerce, shall be put in force in the ports of the kingdom of Sweden, from the 1st of June of the present year, 1824.

In witness whereof, the undersigned has signed the present declaration, and has affixed thereto the seal of his arms.

Done at Stockholm, the 24th day of April, in the year of our Lord 1824.

(L. S.) LAURENT COUNT D'ENGESTROM.

The same reciprocal stipulations were carried into effect in respect to Swedish and Norwegian vessels and their cargoes in the ports of the United Kingdom by orders in council, dated the 25th of May and the 23d of June, 1824.

No. 3.—(Translation.)

The king's government, having been officially informed, that, in pursuance of an order in council of his Britannic Majesty, passed the 23d of June, Norwegian merchant-vessels, have been placed upon a footing of perfect reciprocity with national vessels, in the ports of Great Britain and Ireland; the undersigned, Secretary of State, executing the functions of chancellor of the court of his Majesty the King of Sweden and Norway, has the honour to declare, officially, to General Bloomfield, Envoy Extraordinary and Minister Plenipotentiary of his Britannic Majesty, in reply to his note of yesterday's date:

That English merchant-vessels, arriving in the ports of the kingdom of Norway, or departing from the said ports, together with their cargoes, shall continue as heretofore, to enjoy the advantages granted to privileged nations, so that they shall not be subjected to any higher or other duties whatever, of import or export, harbour, light, pilotage, &c., than those payable by national vessels.

That the place of departure or of destination of the vessels, as well as the place of the

growth or manufacture of the goods (provided their importation be generally permitted) shall not occasion any restriction of the abovementioned stipulation in Norway.

And that the equality existing between national vessels and English merchant-vessels, shall extend to Norway, not only with reference to the duties payable to the crown, but also to those denominated *economical*, payable to towns and communities.

The undersigned takes the opportunity of repeating to General Bloomfield the assurance already given to him, that no new charge whatever has been imposed upon English commerce in the ports of Norway, and that the present, which have existed many years, will not interfere with or restrict the advantages above mentioned.

In requesting General Bloomfield to convey the contents of this note to the knowledge of his government, the undersigned, &c.

General Bloomfield, &c. D. DE SCHULZENHEIM.

CONVENTION of Commerce and Navigation between Great Britain and Sweden.

Signed at London, March 18, 1826.

ART. I. The several stipulations contained in the declarations exchanged between the plenipotentiaries of his Majesty the King of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Sweden and Norway, on the 24th day of April, and sixteenth day of July, 1824, shall continue in force between The High Contracting Parties, respectively, for the term of the present Convention, and shall be equally binding upon the said parties, their officers and subjects, except as far as the same may be hereinafter varied, as if the same had been inserted word for word in this Convention.

II. British vessels entering or departing from the ports of the kingdoms of Sweden and Norway, and Swedish and Norwegian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher ship-duties or charges than are or shall be levied on national vessels entering or departing from such ports respectively.

III. All goods, wares, and merchandize, whether the production of the kingdoms of Sweden and Norway, or of any other country, which may be legally imported from any of the ports of the said kingdoms into the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be so imported directly in Swedish or Norwegian vessels; and all goods, wares, and merchandize, whether the production of any of the dominions of his Britannic Majesty, or of any other country, which may be legally exported from the ports of the United Kingdom in British vessels, shall, in like manner be permitted to be exported from the said ports in Swedish or Norwegian vessels. An exact reciprocity shall be observed in the ports of Sweden and Norway, so that all goods, wares, and merchandize, whether the production of the United Kingdom, or of any other country, which may be legally imported from the ports of the United Kingdom into the ports of Sweden and Norway in Swedish or Norwegian vessels, shall, in like manner, be permitted to be so imported from the ports of the United Kingdom in British vessels; and all goods, wares, and merchandize, whether the production of any of the dominions of his Swedish Majesty, or of any other country, which may be legally exported from the ports of Sweden or Norway in Swedish or Norwegian vessels, shall, in like manner, be permitted to be exported from the said ports in British vessels.

IV. All goods, wares, and merchandize, which can legally be imported into the ports of either country directly from the other, shall, upon such importation, be admitted at the same rate of duty, whether imported in vessels of the one or the other country; and all goods, wares, and merchandize, which can be legally exported from the ports of either country, shall, upon such exportation be liable to the same duties, and be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the one or the other country.

V. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent acting in its behalf or under its authority, in the purchase of any article of the growth, produce, or manufacture of either country, imported into the other, on account of, or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the High

Contracting Parties, that no distinction or difference whatever shall be made in this respect.

VI. From and after the date of the present Convention, British ships shall be allowed to proceed direct from any port of his Britannic Majesty's dominions, to any colony of his Majesty the King of Sweden and Norway, not in Europe, and to import into such colony any goods, the growth, produce, or manufacture of the United Kingdom, or of any of the British dominions, not being such goods as are prohibited to be imported into such colony, or as are admitted only from the dominions of his Majesty the King of Sweden and Norway; and such British ships, and such goods so imported in them, shall be liable, in such colony of his Majesty the King of Sweden and Norway, to no higher or other charges than would be there payable on Swedish or Norwegian ships importing the like sorts of goods, or payable on the like goods, the growth, produce, or manufacture of any foreign country, allowed to be imported into the said colony in Swedish or Norwegian ships. And from and after the same date, Swedish and Norwegian vessels shall be allowed to proceed direct from any ports of the dominions of his Majesty the King of Sweden and Norway, to any colony of the United Kingdom of Great Britain and Ireland (other than those in the possession of the East India Company), and to import into such colony any goods, the growth, produce, or manufacture of the kingdoms of Sweden and Norway, or of any of their dominions, not being such goods as are prohibited to be imported into such colony, or as are admitted only from the dominions of his Britannic Majesty; and such Swedish and Norwegian vessels, and such goods so imported in them, shall be liable, in such colony of the United Kingdom of Great Britain and Ireland (other than those in the possession of the East India Company) to no other or higher charges than would be there payable on British vessels importing the like sorts of goods, or payable on the like goods, the growth, produce, or manufacture of any foreign country, allowed to be imported into the said colony in British ships.

VII. From and after the date of the present Convention, British ships shall be allowed to export from any colony of his Majesty the King of Sweden and Norway not in Europe, any goods not prohibited to be exported from such colony; and such British ships, and such goods so exported in them, shall be liable in such colony, to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks as would be there allowable on, Swedish or Norwegian ships exporting such goods. And the like liberty and privileges of exportation shall be reciprocally granted in the British colonies (other than those in the possession of the East India Company) to Swedish and Norwegian ships, and to goods exported in them.

VIII. In respect to the commerce to be carried on in vessels of Sweden or Norway with the British dominions in the East Indies, or now held by the East India Company in virtue of their charter, his Britannic Majesty consents to grant the same facilities and privileges, in all respects, to the subjects of his Swedish Majesty, as are or may be enjoyed, under any treaty or act of parliament, by the subjects or citizens of the most favoured nation; subject to the laws, rules, regulations, and restrictions which are or may be applicable to the ships and subjects of any other foreign country enjoying the like facilities and privileges of trading with the said dominions.

IX. The High Contracting Parties engage that all articles the growth, produce, or manufacture of their respective dominions, shall be subject to no higher duties, upon their admission from the one country into the other, than are paid by the like articles, the growth, produce, or manufacture of any other foreign country; and that no prohibition or restraint shall be imposed upon the importation into the one country from the other, or upon the exportation from the one country to the other, of any such articles, the growth, the produce, or manufacture of either of the said states, which shall not equally extend to all other nations; and, generally, that in all matters and regulations of trade and navigation, each of the High Contracting Parties will treat the other upon the footing of the most favoured nation.

X. In consideration of the advantages and facilities which the navigation and commerce of the United Kingdoms of Sweden and Norway will enjoy, under the present Convention, and the act of parliament of the 5th July, 1825, his Majesty the King of Sweden and Norway consents that, from and after this date, vessels of the United Kingdom of Great Britain and Ireland, shall be allowed to import into Sweden any merchandize or

goods of European origin, which are likewise permitted to be imported into Sweden from any port whatever, with the exception of the following articles: Salt, hemp, flax, oil of all kinds, grain of all kinds, wine, tobacco, salt or dried fish, wool, and stuffs of all kinds; which, as before, shall be imported into Sweden only in vessels of Sweden and Norway, or in vessels of the countries of which such articles are the produce.

The said excepted articles shall, however, be allowed to be imported into Sweden in vessels of the United Kingdom of Great Britain and Ireland proceeding direct from some port of the United Kingdom, provided such articles shall have been previously landed and warehoused in a port of the United Kingdom, after having been imported thither from the country of their origin.

These stipulations in favour of British commerce shall remain in force during the continuance of the present Convention, and as far as the act of parliament of the 5th July, 1825, shall continue to grant to the navigation and commerce of Sweden equivalent facilities of the same nature.

XI. His Majesty the King of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Sweden and Norway, mutually agree that no higher or other duties shall be levied, in any of their dominions, upon any personal property of their respective subjects, on the removal of the same from the dominions of their said Majesties, reciprocally, either upon the inheritance of such property, or otherwise, than are or shall be payable in each state, upon the like property, when removed by a subject of such state, respectively.

XII. The present Convention shall be in force for the term of ten years from the date hereof; and further, until the end of twelve months after either of the High Contracting Parties shall have given notice to the other of its intention to terminate the same; each of the High Contracting Parties reserving to itself the right of giving such notice to the other, at the end of the said term of ten years; and it is hereby agreed between them, that, at the expiration of twelve months after such notice shall have been received by either party from the other, this Convention, and all the provisions thereof, shall altogether cease and determine.

XIII. The present Convention shall be ratified, and the ratifications shall be exchanged at London within six weeks from the date hereof, or sooner if possible.

In witness whereof, the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the eighteenth day of March, in the year of our Lord one thousand eight hundred and twenty-six.

(L.S.) GEORGE CANNING.
(L.S.) WILLIAM HUSKISSON.
(L.S.) STIERNELD.

ADDITIONAL ARTICLE.

As it may sometimes happen that a Swedish or Norwegian vessel trading to the possessions held by the British East India Company in the East Indies, under the eighth Article of the Convention of this date, may find it expedient to dispose of the whole or part of her cargo, on her homeward-bound voyage, in other ports than those of Sweden and Norway, it is hereby agreed, that any such vessel may proceed, with such cargo, to any foreign place or port whatsoever, not being within the limits of the East India Company's charter, and excepting the United Kingdom of Great Britain and Ireland and its dependencies.

The present Additional Article shall have the same force and validity as if it were inserted, word for word, in the Convention signed this day. It shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the eighteenth day of March, in the year of our Lord one thousand eight hundred and twenty-six.

(L.S.) GEORGE CANNING.
(L.S.) WILLIAM HUSKISSON.
(L.S.) STIERNELD.

CHAPTER IV.

COMMERCIAL LEGISLATION AND CUSTOMS TARIFFS, &c., OF SWEDEN.

From an early period, the national councils of Sweden have attempted to encourage domestic manufactures by prohibitions and severe restrictions; and they have persevered in this fallacious legislation, with little deviation and without success, up to the present day; for the manufacturing population are generally poor, and manufactures have not thriven. Much of what we have stated relative to Russia, may be applied to the tariff of Sweden: yet no country could have been more unnaturally oppressed by restriction, than one like Sweden;—cold, generally barren, and having little else to export than the produce of her mines, woods, and fisheries. Her prohibitive system has been remarkably oppressive to the peasantry and labouring classes.

In addition to prohibitions and high import, export, and transit duties, convoy duties, of 5, 10, and 15 per cent, are charged on the amount of all other duties, or valuations of duties; *Town dues* of $2\frac{1}{2}$ per cent by privileged, and 40 per cent by non-privileged vessels, are charged; and tonnage duties of 12 skellings per cent on Swedish, and 36 on non-privileged vessels.

Sails, cordage, gunpowder, refined sugar, iron, steel, the greater number of articles of cottons, woollens, earthenware, &c., are prohibited.

The revenue is derived from a poll-tax of about 1*s.* 3*d.* sterling for each inhabitant, from duties on imports and exports (the former though oppressive, yet comparatively unproductive), mines, excise on spirits, monopolies, and the produce of the royal demesnes;—the whole revenue being less than one million and one-fourth sterling.

The Swedes, or their government, do not seem to comprehend that their true course would have been to purchase, in the cheapest markets, all manufactured goods, and those articles which they have not cheap at home, in exchange for their iron, deals, timber, lobsters, fish, and fish-oils. For them to attempt forcing either the cultivation of wheat in an uncongenial climate, or to raise up manufactures by the aid of prohibitions of, and high duties on, foreign commodities, is to persevere in a course the most pernicious to their real interests. The tariff now in force, promulgated the 23d of October, 1841, will be found as restrictive as, and more complex than, that of Russia. Norway, by a recent law of the Storthing, has also imposed enormous duties on foreign manufactures.

SWEDISH TARIFF OF DUTIES OF CUSTOMS ON IMPORTS AND EXPORTS.

The rates as well as the official values are in Swedish bank money, in the

reduction of which into sterling, an average exchange of 12 r.d. banco to the pound has been taken.

Besides the duties stated in the tariff, there are the following imposts levied on foreign trade: viz.—Convoy Duty, Town Dues, Tonnage Dues.

The Convoy Duty is paid only on imports, at the rate of 1 per cent on the amount of duties of customs.

The Town Dues are charged at a per centage on the official value stated in the tariff, and for Stockholm consist of $2\frac{1}{3}$ per cent on imports, with an increase thereon of 40 per cent by unfree ships—namely, such as are not by treaty on the same footing as Swedes. And of $1\frac{1}{3}$ per cent on exports with an increase thereon of 50 per cent by unfree ships.

The Tonnage Dues are levied as follows, inwards as well as outwards: viz.—at 12 sh. banco per last on Swedish ships equal to $2\frac{1}{12}d.$ sterling per English ton; and at 36 sh. banco per last on foreign ships equal to $6\frac{3}{12}d.$ sterling per English ton, unless the latter are placed by treaty on the same footing as Swedes.

MONEY, WEIGHTS, AND MEASURES OF SWEDEN.

The current rixdaler consists of 48 shillings; the shilling 12 rundstycks. Banco money is also counted in rixdalers and is of higher value than the former: often 50 per cent.

The skeppund victuallic, or commercial weight, is divided into lispunds and lbs.:—1 skep. lb. = 20 lis lb.; 1 lis lb. = 20 lbs. The skeppund metal weight is divided in the same manner, but is equal only to 320 lbs. commercial weight.

Of the commercial weight, 100 lbs. are equal to $93\frac{76}{100}$ lbs. avoirdupois English. The ell consists of 2 feet; 1000 feet Swedish equal to 975 feet English; the oxhufond, or hogshead, contains $1\frac{1}{2}$ ams, or awmes, equal to 90 kans; the am contains 60 kans; the barrel 48 kans; 100 kans are equal to $69\frac{3}{100}$ gallons; the common barrel in corn measure contains 32 kappars equal to $4\frac{1557}{1000}$ bushels Winchester measure. The barrel of rye, wheat, barley, and oats, is reckoned at 36 kappars; the barrel of malt at 38 kappars; and of salt and lime at 34 kappars. 100 lasts Swedish are equal to $239\frac{3}{4}$ tons English.

The following Tariff has been arranged according to the relative proportions of the Swedish rates and monies with the English rates and monies. But in calculating the duties two important facts must not be overlooked. The first is, that the official values are nearly all far greater than, often more than double, the real values. Consequently the real per centage duties are in the same proportion greater than the official rates. The second is, that when the values or duties are rated either by the weight, package, or measure, the duties are also unequally levied; ordinary and coarse manufactures of cotton, linen, and wool, which would be generally used by the peasantry and labouring classes, pay, in consequence, a much higher per centage than the finer woven goods which are used by the more wealthy.

SWEDISH TARIFF OF CUSTOMS DUTIES.

The reduction into Sterling calculated at the rate of 12 r.d. banco for the £ sterling.

	r.d. sh. r.	r.d. sh. r.	r.d. sh. r.	*s. d.*	*s. d.*	*s. d.*
The duty on corn, ground and unground, may be increased, diminished, or entirely repealed by his Majesty, as circumstances may require, for the good of the country. The augmented duty his Majesty may stipulate for import of grain, above what this tariff states, is to be paid for all grain from any foreign ports or place whatsoever. The rate of import and export duty on grain to be reckoned till further orders hereon.						
All sorts of grain are free from town dues on exportation.

N B. Balks and spars of fir and pine may be exported both of equal sides and flat. Their thickness is ascertained by the fourth of their girth in the middle; so that for example, a balk, holding on 2 two-sides, each 10 inches in thickness, and on the other two, each 8 inches in thickness, will be charged in duty at the rate of a 10-inch square balk.

INFORMATION relating to what is further to be observed in the Execution of the Tariff.

1. All goods, with the exception of those marked prohibited, may be imported from or exported to foreign ports at the rate of duty fixed in the tariff.

2. The official value on which the import and export duties of customs, as well as the transit and bonding duty are to be levied, is in Swedish banco.

In clearing, the duty what is under half a skilling is left out, and what is above the half is reckoned as a whole skilling.

3. The weight stated in the tariff is that by which provisions are weighed (*victualie vigt*), except any other be specified.

4. To all vessels built in Sweden or naturalized, according to the established form, and proved to belong to our faithful subjects. We grant entire franchise (*helfrichet*), both inwards and outwards, and the duty stipulated by the tariff is the rate payable on all goods imported and exported by such vessels without regard to the goods they bring being taken from the place of their production or through other channels, and with the advantage in other respects of the reduction of duty graciously granted in the trade with certain places.

5. On all goods imported in foreign vessels 40 per cent increase on the duty is charged, and goods exported by such vessels pay an increase of 50 per cent on the duty, if not otherwise provided for by special treaties with foreign powers.

6. The tonnage duties payable to us and the crown every time inwards and outwards, consist of 12 skillings banco per last (equal to $2\frac{1}{12}d.$ sterling per ton English), on Swedish vessels, and 36 skillings banco (equal to $6\frac{3}{12}d.$ sterling per ton English), on foreign vessels, reckoned after the Swedish measurement bill, except as regards the latter, when otherwise provided for by special treaties. But national vessels, or foreign vessels enjoying the same privilege, which make more than one voyage to foreign ports and back to the same custom-house district, within a calendar year, pay only the inward tonnage duties once after completion of their first voyage, on returning to a port within said district.

7. Of goods imported which agreeably to the tariff pay duty after a certain per centage on the value, or which are chargeable with different rates according to the different valuations, the proprietor is required to give the invoice cost, with the addition of insurance freight and all charges incurred thereon to the arrival at the port of discharge; and of goods exported the wholesale price at the port of shipment. The proprietor must annex, as vouchers to his entry of such imported goods, the invoice and bill of loading, as well as the account of insurance, if any be taken. In want of invoice the order in the 31st paragraph of the navigation law is to be followed, and on the placart seal being used for such goods there must be marked thereon the custom-house valuation according to which duty has been paid. 2d. The administrator of the custom-office or custom-house shall have the right to take to himself all goods entered according to value, and provided they answer to the description, at the declared valuation with an addition of 10 per cent. If he should not do so, and if there should not be reason to increase the declared value by more than 10 per cent, it shall be in the option of any other person, whoever may first present himself, to avail himself of this right of taking the goods with the addition of 10 per cent to the value, and on condition of the amount being immediately deposited with the cashier of the customs at the disposal of the proprietor of the goods, for which purpose notice of entry of such goods shall be posted up on the custom-house door. If after three working days, the day of entry included, no person should have offered to take the goods, or if the proprietor on making his entry produced proof of his having made oath before a court of law of the correctness of the declared value on the grounds stated on the preceding 1st paragraph, he, the proprietor, is then at liberty to take the goods, and the duty will be charged according to his statement; but if any other person take them, or that the value is increased as before stated, the duty will then be reckoned on the higher valuation.

8. The respective manufacturing and handicraft societies shall be allowed to appoint one or more persons in each staple town, whose business it will be to see that the goods coming under the description as they make, are entered according to their right denomination, as also to attend at the affixing of the placart seal, but the absence of the persons so appointed, shall not prevent the commencement and progress of the affixing of the stamps.

9. Foreign goods, on proof of the import duty having been paid, may be exported free of duty.

10. All goods imported as well as exported, which may have been omitted in the tariff, shall in every case be subject to payment of duty, according to the rate, we, on the report made to us from the department of the customs, may be graciously pleased to fix, keeping in view the rate paid by goods of similar species and quality.

11. On occasion of dispute as to the admission of any article of entry, or of its right quality or denomination, it shall be left to the direction of the customs, after having first taken the opinion of well-informed traders or manufacturers to decide thereon, the owner of the goods, but not the seizer, or any other person having the right to appeal to us against such

decision of the directors of the customs. When goods about which there may have been dispute have been correctly and specifically entered for payment of duty, they shall not be subject to confiscation, even if afterwards they should be considered as prohibited for importation, and the owner shall have the right of re-exporting them under suitable control.

12. All goods, imports as well as exports, whether paying duty by weight, measure, or tale, or a per centage on the value, must be entered and noted in the custom-house journals, specifying their denomination, sort, and quality, the number Swedish measure or weight, as also the value thereof. Of what is in other respects to be observed as to the entry of goods for payment of duty the navigation ordinance furnishes due information.

13. Such goods of which the Swedish measure or weight cannot be ascertained on board of the vessel, must be sent to the custom-house, or the town weighing or measuring house, in order to be weighed or measured there. On entry being made at the custom-house, the owner of the goods will receive an account of duty, on payment of which the owner may have free disposal of his goods in the manner or on condition in other respects as stated in the navigation ordinance and bonding regulation.

14. For the facility of commerce by granting delay in payment of duties on certain goods specified in a table at the end of the tariff, credit depots, for a quantity not less than therein stated, are allowed until otherwise ordered at the following places: Stockholm, Gothenburg, Gefle, Carlscrona, Carlshemn, Malmo, Nör Koping, Calmar, Wisby, Helsingborg, Westervik, Ystod, and Uddevalla, under the following conditions:

That the goods shall be deposited under the joint lock and key of the custom-house and their proprietor.

That the proprietor of the goods may take out of the credit depot a greater or less quantity at a time, not however less than the half of the least quantity allowed to be thus bonded, on payment of the whole duty taken out for home consumption, or the bonding duty if re-exported and proof be furnished thereof.

That the credit depot cannot be extended beyond 1 year reckoned from the day of entry of the goods at the custom-house, within which period they must be re-exported, or the whole duty paid up at the rate in force when the entry of the goods was made, or otherwise the goods will be sold by auction for the account of the importer, and after deduction of import duty and auction charges the residue of the auction amount will be paid to the owner.

That when goods paying duty according to value are received into the credit depot, the value of them must be previously fixed, and the duty will be reckoned thereon on taking them out, without regard to any alterations which may in the mean while have occurred in the prices of such goods.

That the goods may be passed from the credit depot of one town to that of another, but the time of credit will be reckoned from the date of the first entry of the goods.

That goods may be passed to the credit from the bonding depot free of charge, reckoning the time of credit from the entry at the credit depot.

That goods entered on the credit depot may be passed to the general bonding depot on due notification thereof being previously made to the board of customs, and on payment of transit duty as well as a recognition inwards. And—

That by the establishment of a credit depot it is not intended any alteration in the bonding privilege already enjoyed by some towns, and which may hereafter be extended to others.

15. On payment of duty on carriages used by travellers arriving in this country (from convoy duty and town dues they are free), the chamber of customs shall give a certificate stating not only the amount paid in duty, but also a short description of the carriage, by which it may be again recognised, in addition to which the custom-house seal must be affixed on the carriage. In case the same person who paid duty on the carriage should, within the space of one year, take the carriage out of the country, either from the place at which he entered, or from any other where a branch of the custom-house may be established, he shall then receive back the amount of duty paid, on returning the certificate, provided that there be no objection made to the latter, and that the custom-house seal is preserved. Swedish travellers returning into the kingdom with the carriage which they can prove to be the same they took out, are exempted from duty thereon.

16. The 13th barrel of each last of salted meat, and fish which may be required for repacking, is free of duty and town dues.

17. All white sugar, coming from any port in Europe not entered as crushed lumps or Havanna Terres, shall be subject to the survey of unexceptionable persons in the presence of the custom-house inspector. In case of a difference of opinion on the real quality of the goods the matter shall be referred to the board of customs, and samples of the sugar be laid before them.

18. On exportation of the following goods, made in this country, from any staple town where manufactories of such articles exist, there shall be granted a bounty from the funds of the customs; viz.,

On sugar in loaves, candied or in cakes, the lb. 2 sk. 11rst. (12*s.* 2*d.* per cwt. English.)

Tobacco in pound papers (*cardus*) or cut, as also pressed and rolled.

Tobacco and snuff, the lb. 3 sk. (1*s.* 3*d.* per lb. English.)

Sailcloth of hemp or flax, and of at least 50 ells in length—the piece 32 sk. (13½*d.*)

Packing cloth of hemp or flax, and of at least 50 ells in length—the piece 24 sk. (10*d.* sterling), whereby is to be observed,

1st. That in respect to sugar and tobacco, at least 100 pounds of the same goods, and of hemp and flax manufactures of at least 10 pieces must be entered for exportation, and sent off in one shipment.

2d. That on giving in the entry a certificate from the magistrates shall be produced that the manufacturer or exporter has made oath before the magistrates that the goods are of Swedish manufacture, and that as relates to manufactured tobacco, sail and packing cloth, that they are made from foreign raw materials which certificate must be annexed to the custom-house journal of the place from whence the exportation takes place.

3d. That the goods have duly stamped on them the placart seal.

4th. That an attest be forthcoming from the Swedish consul, or vice-consul, at the port of discharge, or if no such officer should be appointed there, from some other public authority, that the goods have been there discharged, in order to be entitled to said restitution of duty.

In regard to attests of such goods shipped from Stockholm to Finland, the special orders thereon are to be observed.

19. Cobalt, crude or ground, must on exportation be put in parcels provided with the stamp of the place from whence taken, on pain of penalty of one-fourth of the value and prohibition of the export thereof.

20. Vessels built in the kingdom and sold and fitted out for foreign account shall be allowed to entire franchise (*helfrichet*) on the goods exported by them for the first voyage.

21. Shipmasters, whether native or foreign, who for urgent reasons, or to receive orders as to their further destination, enter a Swedish port, where there is a custom-house, may there without payment of tonnage duty, take in refreshments or make necessary repairs, under due observance of what the navigation law prescribes, and after having given in a written declaration, as to the nature and quantity of the goods destined for other ports of this country or to foreign ports, may discharge a greater or less quantity thereof, and take in provisions or complete their cargoes without paying duty or other charges for more than what may be discharged or taken in—but the tonnage dues for the vessel must be paid in full, so soon as loading, whether much or little may have taken place, as also when more than a fourth part of the cargo is unladen, of which the custom-house officer may be able to judge from the ship's papers showing her draught.

A vessel, Swedish or foreign, having taken a part of her cargo at a Swedish port, is allowed to complete the same in any other Swedish port where there is a custom-house, the duties of customs being paid at each separate port on what might there be taken in, but the tonnage dues are to be paid in full only at the first place of loading, the receipt for which must be endorsed on the passport.

22. Masters of merchant-vessels are required, as directed by the navigation ordinance, to state exactly in their manifest the stock of provisions, their quantity and nature, under the penalty imposed by said act for non-performance, and what may thereof be required for

the subsistence of the crew whilst on board shall be exempted from duty and all other expenses at the port of discharge.

As provisions under said conditions may be stipulated the following quantities of wine, brandy, coffee, and rice: viz.—

For vessels coming from the Baltic, or proceeding to any port in the provinces of Holland, Gothenburg, and Bohus, from ports of the North Sea, Holland, England, or French ports on the Atlantic, 3 kans of wine, 2 kans of brandy, 2 lbs. of coffee, and 3 lbs. of rice, for every person of the crew and passengers, and for vessels coming from places out of the Baltic, with the exception of the above navigating to the provinces of Holland and Bohus—5 kans of wine, 4 kans of brandy, 4 lbs. of coffee, and 6 lbs. of rice, for each person as above.

It is further to be observed that wine and brandy must not be exchanged the one against the other, in a manner that he who has less of one, may think himself entitled to have more of the other,—and that, for the surplus there may be of the abovenamed provisions beyond what the captain may be allowed to have at the port of discharge, duty shall be paid on such articles as are allowed for importation. In regard to those prohibited, the existing ordinances in regard to such goods will be enforced. What may remain of the produce of the country, which according to the custom-house passport the vessel took out as provisions for the voyage, shall be readmitted free of duty.

The rest of the stock of provisions not consumed on board the vessel whilst in a Swedish port, and not being entered for importation, may be re-exported in such vessel.

23. The necessary stock of provisions for ships' crews, whether the vessel puts into a Swedish port for them, or fetches them in the ship's boat shall be exempted from duty, and all charges connected therewith. Swedish ships may also take for ships' use free of duty, what may be considered in proportion to their tonnage indispensably needful, reckoning 1 fathom of wood, 1 barrel of tar, ½ barrel of pitch, 2 oars and 4 handspikes for every 20 lasts of the ship's burden and thereunder.

Foreign vessels are not allowed to supply themselves with such necessaries not even for ships' use without paying duty accruing thereon.

24. In order that masters of Swedish gravel vessels and their crews, whether of vessels large or small, may enjoy the premium or bounty, which as an encouragement was stipulated for them by proclamation of 1748, it is hereby ordered, that whether they have goods or not, which they are allowed to take in as their sea stock, the captain and crew shall receive from the board of customs at the port of discharge, out of the duty levied on the cargo, their said premium or bounty.

From the Baltic.—The captain 14 r.d. the mate 28 sk., and each of the crew 21 sk.

From the North Sea, ports in the channel, Holland, England, France, Spain, and Portugal.—The captain 7 r.d. 9 sk., the mate 3 r.d. 28 sk., and each of the crew 2 r.d. 42 sk.

From the *Mediterranean and Levant*.—The captain 9 r.d., the mate 4 r.d. and 24 sk., and each of the crew 3 r.d. and 28 sk., all in Swedish bank money; but vessels arriving in ballast, or only with grain and wool from Pomerania and Wismar, as also clinch-built vessels, and all foreign vessels, are excluded from enjoyment of said bounty. Captains coming from the Mediterranean, but with part of their cargoes from the Western Ocean are entitled to Mediterranean bounty when the duty on the goods brought from the Mediterranean in Swedish whole-free (say gravel built) vessels amounts to one-fourth of the duty on the goods brought from the other ports. Otherwise only the lesser bounty will be granted.

25. On goods which during conveyance to their destination have by accident received damage, no reduction of duty is to be admitted, if the owner wishes to have himself the disposal of the goods. Should, on the other hand, the owner consider the damaged goods not of sufficient value to pay the duty thereon, he must bring legal proof of the damage of the goods before the custom-house authorities, who are thereon to take steps to sell the goods by public auction, in which case the duty on such goods as have in the tariff an official value fixed on them shall be regulated in proportion to the price obtained by auction, compared with said official value, and on other goods paying duty *ad valorem*, the per centage will be charged on the auction price.

The difference between the produce of the auction and the amount of duty payable thereon, shall be held at the disposal of the owner. If the owner should neglect to do what is above required of him, he will remain answerable for the full amount of duty, unless he should think fit, after previous written notice to the custom-house, to give up his right to the damaged goods, which will then be sold by auction, under the orders of the custom-house directors for the account of the crown. In respect to duty payable on goods saved from shipwrecks, the separate ordinances thereon now in force, or which may hereafter be issued, are to serve as a guide.

26. The separate impost, hitherto charged under the denomination of convoy duty, and levied according to existing regulations respecting the same, or such as may hereafter be made known, will, from the commencement of next year, go under the name of "Impost to the Trade and Navigation Fund."

27. Dues and charges on certain articles under the name of *Stadernas Tolag* (town dues), are levied by the agent appointed by the town, according to special instructions, and at a per centage granted to each town on the official value of the principal imports and exports stated in the tariff, and on the value of others ascertained in the manner prescribed by the 7th. All goods free from import and export duties are also free from town dues inwards as well as outwards, as are likewise the articles specially stated as free whether paying duty or not.

28. The exceptions from the general regulations in respect to payment of duties of customs or tonnage and port charges, which in special cases, according to privileges granted in favour of certain towns, places, works, or establishments, have hitherto existed and shall be continued till further orders thereon.

29. In regard to the commercial relations between Sweden and Norway the ordinance of the 25th May, 1825, remains in force.

30. Swedish vessels navigating to distant countries, will continue, till further orders thereon, to enjoy the advantage of the following reduction in duties of customs and convoy impost; viz., Of 15 per cent on the produce and manufactures of countries situated on the continent of America north of the 25th degree of north latitude, or of any of the foreign colonies in the West Indies, if imported direct from thence in Swedish ships, and of the like reduction on Swedish produce and manufactures exported direct to foreign colonies in the West Indies. Of 25 per cent on Swedish produce and manufactures exported in Swedish ships direct to the island of St. Barthelemy, to places on the east coast of the continent of America south of the 25th degree of north latitude, or to the Cape of Good Hope, and the like reduction on the produce and manufactures of those countries imported direct into Sweden in Swedish vessels.

Of 33⅓ per cent on Swedish produce and manufactures exported in Swedish ships direct to places on the other side of the Cape of Good Hope, as also to ports on the other side of Cape Horn,—and on the produce and manufactures of those ports and places imported from thence direct in Swedish ships.

31. The several treaties and conventions concluded with foreign powers, regarding commercial relations, serve as a guide for the charging of imposts on vessels and goods during the time of such treaties and conventions remaining in force.

According to which all whom it may concern have to regulate themselves. In further confirmation of which, we have signed this in our own handwriting, and caused our royal seal to be thereto affixed.—*Stockholm, 30th June*, 1835.

(Signed) CARL JOHAN.

The following Table, drawn up by the British Consul General at Christiana, calculated at the rate of per centage on the real value, instead of the false official value of the principal British articles which would find a market under a less restrictive system, will be found more useful to the English merchant than the General Tariff.

ARTICLES.	Duties payable in Sweden reduced to sterling at 12 rix-dollars per £ sterling.	English Weights and Measures.	Relative Proportion the Duty in Sweden bears to the Cost in England.	REMARKS.
	£ s. d.		per cent.	
Cotton goods having less than 76 threads in the warp (inch)	....	....	....	Prohibited.
—— plain having 76 threads and upwards in the inch of warp	0 2 0¾	per lb.	112	
Fustians, jeans, satin, moleskins, and velvet	0 1 6½	do.	150	An article much required but prohibited by this duty.
Quilts and quiltings	0 2 4	do.	40 to 260	All common quiltings, which are those most in demand are consequently excluded by this duty.
Half-silk goods, silk mixed either with cotton, flax, wool, or other materials, and only having the least particle of silk in them, come under this denomination	0 5 6	do.	20 to 120	Most of the Huddersfield and some of the Yorkshire goods are excluded by this duty.
Silks, figured and satin	0 13 6	do.	20 to 40	
Woollen goods, baize, casimere, white	....	do.	....	Prohibited.
—— yellow and red, under 24 inches in width	0 2 2	per yard	35 to 55	
—— all other colours				
—— drab and light, as ladies' cloth, half-dressed cloth and cords	....	....	....	Ditto.
Flannel of combed or corded wool, coloured or broader than 26 inches				
—— Frieze, duffil, pilot's cloths, &c.	0 1 4¾	per lb.	50 to 100	
—— Blankets	0 1 1½	do.	50 to 100	Common blankets can be bought in England at 1s. per lb.
Carpets	0 1 1¼	do.	48 to 105	This duty prohibits common carpets.
Flannel	0 1 7¾	do.		
Lastings and camlets	0 1 2	do.	30 to 50	
Linen goods, damask	0 4 8½	do.	50 to 100	
—— when 46 inches square, and weighs or exceeds 1½ oz.	0 4 2	do.	50 to 100	
Ribbons or tapes of cotton, wool, or flax	0 2 0½	do.	40 to 150	
Leather, corduroys, also coloured and printed skins	0 2 2¾	do.	50 to 100	
—— buckered hides and skins	0 0 11	do.	30 to 60	
—— all other sorts	0 0 6½	do.	45	
Needles	0 2 5	do.	40 to 200	
Soap, not perfumed	0 15 3	per cwt.	45 to 100	
Porter	2 0 0	per 54 gall	40 to 50	
White lead	0 10 6½	per cwt.	45	
Cast-iron gates, railings, kettles, and all other cast-iron goods, except implements of war	4 12 2	per ton	50 to 100	
Wrought iron anchors	5 3 4	do.	50 to 70	
Kedges, hammers, rudder irons, knees, &c.	11 10 0	do.	52 to 100	
Sheet-iron, each sheet not to exceed 20 lbs.	6 18 6	do.		
Wire iron in sheets	1 17 6	per cwt.		
Saw-blades	....	do.	40	
Guns, all sorts and parts thereof	....	per lb.	40	
Spring, except watch	....	do.	40	
Umbrellas and parasols	....	do.	30 to 70	
Scissors, brushes, brooms	....	do.	25 to 75	
Saddlery	....	do.	40	
Shoemakers' work	....	do.	40	
Looking glasses	....	do.	40	
Lamps of all sorts	....	do.	20 to 80	
Braces	....	do.	40	
Yarn (cotton twist) from No. 8 to 26	13 6 3	1000 lbs.	45	
—— above No. 26	12 8 2	....	20 to 40	
Shawls, cotton, under 42 inches	....	....	....	Prohibited. An article much in demand.

"To show how futile exorbitant duties are on a coast like Sweden as a protection to native industry, and the slight chance of being able to compete with the British manu-

factures, I will merely observe that no sooner were the present high duties imposed on British woollens, with a view of protecting the Norköping manufacturer, than an apparently extensive factory was established in the Categat, on the Swedish coast, but only sufficient hands were employed to keep up the semblance of a manufactory, the real object was to smuggle British woollens, and by putting a Swedish stamp on, pass them as home productions. This was carried on to such an extent, and remunerated the proprietor so handsomely, that he realized a large fortune and retired before detection took place; the fact, however, is notorious."—*June* 1, 1843.

The following calculations and statements as affecting British trade have been drawn up by the British Consul-general at Stockholm.

List of British Produce and Manufactures which are totally prohibited by the Swedish Tariff in 1842:

1. Cloth of a fine quality, ladies', and cords.
2. Cloth of a course quality, except duffil or pilot's cloth.
3. Casimere of all colours, excepting plain white, yellow, and red.
4. Cotton goods, plain, having less than 76 threads in the inch of warp.
5. Flannel of carded wool, coloured, or broader than 25¾ English inches.
6. Linen, when 3¾ square English feet, weighs 1¼ English ounces.
7. Iron, under 3-8ths of an inch thick, or exceeding 1 cwt.
8. Nails of all kinds.
9. Saltpetre and gunpowder.
10. Silks, plain, checked, or striped.
11. Shawls, half-silk, value under 16*s.* 8*d.* sterling.
12. —— of cotton, under 40¾ inches English measure.
13. —— of woollen and cotton, under the value of 11*s.* 1¼*d.* sterling.
14. Spirits, British, such as gin, whiskey, &c.
15. Printed porcelain.
16. Steel, except cast and rough.
17. Woollen baize.

In the following statement of *ad valorem* duties on goods, &c. imported from Great Britain to Sweden, the prices I have used, where they do not agree with the price current in England, are taken from the bills of lading, and they include the whole duties they are subject to, exclusive of wharfage, warehousing and other local expenses, which are, however, small. In general, the manufacturers have established prices higher (sometimes double) what they really can be purchased at in England, evidently to make the duties, *ad valorem*, appear moderate.

Statement showing the *ad valorem* Duties on Goods, &c., from Great Britain to Sweden, 1842.

MANUFACTURES, PRODUCE, &c.	Duties how charged.	Duties *ad valorem*, including Custom-house tolag and convoy.
		per cent.
1. Blankets	weight	40 to 75
2. Buttons, according to quality	do.	25 to 30
3. Carpets, according to quality	do.	75 to 110
4. Calicoes	do.	30 to 40
5. Casimere	do.	30 to 40
6. Candles	do.	56
7. Cheese	do.	45

THE GOTHA CANAL.

THE inlets, lakes, and rivers of Sweden have always afforded great facilities for the transportation of the produce of her forests and mines. A canal to avoid the long and tortuous navigation of the Sound and the Sound dues, was projected at an early period by Sweden. The Maeler, a deep inlet, enters Sweden at Stockholm from the Baltic, and branches north to Upsala, and west 70 miles amongst a multitude of islands, to within a few miles of the lake Hielmar. The Arboga canal, opened during the latter end of the last century, is navigable between the Maeler and that lake; and it was then considered that it might be continued from the Hielmar to the Wettern lake, but the project was found impracticable; the distance between the Maeler and the lake Sodree Barker, near the confines of Dalecarlia, and the mining districts was opened at the same period by means of the Stroemsholm canal and the lake Freda, and rivers.

The Gotha river, which runs from the lake Wenern (the largest in Europe, except the Ladoga) into the sea at Gothenburg, though in many parts deep and navigable, was interrupted by falls and islands. These were finally surmounted after extraordinary difficulties (the whole of the gigantic works having all been once swept off by the impetuosity of the water) by the execution of the Trollhœtta canal in 1800. It is 3 miles long, and has 8 sluices to ascend and descend 112 feet.. At one place it was cut 70 feet deep through the rocks. The whole expense was about 80,000*l.*

The lake Wenern was afterwards joined by a canal to the lake Wettern, and finally the canalization of the whole distance to Soderkoping and the Baltic was completed in 1832.

REGULATIONS for Ships passing through the Gotha Canal.

SECTION 1. Ships and cargoes from all countries, and coming from, or going to, whatsoever place or places, are permitted without obstruction to pass through the canal, unless the nation or nations, to which the ships or cargoes belong, are known to be in open hostility with Sweden; and the canal transit dues, both on vessels and cargoes, shall be equal for all nations.

2. The canal dues on all shipping are to be paid according to their tonnage, making no difference whether laden or empty.

3. The canal dues on vessels are to be paid at the rate of 12 skellings Swedish banco per last, equivalent to 10 skellings Swedish banco per commercial last of 2 English tons. In this charge is not included pilotage on the lakes, nor payment for the trailing by oxen or horses on the Gotha canal, which charges are to be specially fixed by the directors.

4. In calculating the tonnage of vessels passing through the canal, and also the quantity of merchandize, it is to be observed with regard to the first named, that such vessels as are provided with Swedish measure-bills, will pay the dues according to the burden stated in said bills; but such as are without will be charged pursuant to a table reduced, conformable to usual practice, from foreign lasts, tons, &c., to Swedish lasts; and further, as relates to goods, that the weights and measures stated in the tariff of pounds, shippounds, barrels, &c., are meant Swedish pounds and shippounds commercial or victuals weight (excepting iron, and other metals, by which are meant Swedish staple weights) and Swedish barrels,

containing 32 kapps solid measure; and further, that the foreign pounds, shippounds, barrels, lasts, &c., as may be inserted in the bills of lading and ship's papers, are to be reduced to Swedish weights and measures, in conformity with a fixed table to be made out for that purpose.

5. With respect to tare, or the weight of the case or outer covering, no charge will be made. The canal dues are to be paid, according to the tariff, only on the quantity in weight or measure as inserted in the bill of lading and ship's papers, whether specified in gross or net. A barrel of grain, salt, &c., shipped in bulk, or barrels or bags, are charged alike; pipeclay, coals, and, in bulk, or packed in casks, the same, as also wines and other liquids, whether in larger or smaller casks, and only in such cases, when the last-named are in bottles, then the additional duty must be paid for the bottles, according to the tariff, the same as if they were shipped empty for themselves.

6. If any vessel, entered at the inward custom-houses of Gothenburg or Soderkoping, only to pass through the canal from sea to sea, should discharge any part of her cargo without the most pressing necessity, either in the river Gotha Elf, any of the lakes, or on the canal, such vessel to be forfeited, and the master subjected to the penalty of the law for the unlawful importation of goods, and further to be fined, according to circumstances, in the sum of 100 rixdalers to 500 rixdalers banco. The same law will be put into execution against all vessels receiving other cargoes or more goods on board during the passage to and from one or other of the ports of Gothenburg and Soderkoping. Ships' husbands, or owners of goods, convicted of knowing, abetting, and aiding, in the illegal loading or unloading of goods as aforesaid, will be subjected to the same penalties. The value of the confiscated vessel, which shall be determined by sale by public auction, will be responsible for the full payment of all the dues, which the vessel and cargo would have been subjected to, according to the tariff, for the whole passage from sea to sea; and the surplus of the proceeds then remaining to be divided, two-fifths in equal shares to the informer, and those who prove the illegal fact, and three-fifths to the canal pension fund and the board of customs, also in equal shares.

His Majesty's Proclamation relating to certain Exemptions and Privileges granted to Vessels passing through the Gotha Canal, between the Baltic and the Northern Sea. Given at the Palace of Stockholm, the 7th of November, 1832.

We, Charles John, by the grace of God, King of Sweden and Norway, Goths and Vandals, make known:

That the Gotha canal being now completed, and an interior navigation thereby opened between the Baltic and the Northern Sea, we have thought proper, with regard to the said navigation from sea to sea, to ordain and enjoin as follows:

1. All vessels which, without landing any part of their cargoes, or taking on board any goods during their course, pass through the whole line of the canal from sea to sea, are exempt, themselves and cargoes, not only from such charges as, under the different names of toll, staple dues, recognition, &c., are otherwise payable to the crown, but also from wharfage (*tolag*) and other dues payable to the towns of Gothenburg and Soderkoping, and further during the passage, being only at their entrance and exit, subjected to pilotage, according to the respective tariff, and to such transits canal dues, as upon examination of the scheme to be humbly presented to us, we shall think proper to fix; which dues shall be paid to the Gotha and Trollhatte canal association, and the funds assigned for the improvement of the navigation partly on the lake of Wenern, and partly between the said lake and the Northern Sea, as also to such charges, as in one place or other are fixed as a compensation for the mooring, towing, hauling, &c., of the vessels.

2. Such merchant-ships as cannot, on account of their bulk, pass through the sluices of the Gotha canal, and the still narrower canal of Trollhatte, may, either at Gothenburg or Mem, where the custom-house guard for Soderkoping will be stationed, discharge their cargoes into other vessels, which latter, both for themselves and cargoes, shall be equally free from the abovementioned duties to the crown, as well as to the towns and further through the whole country.

3. If no such vessels can immediately be obtained, to receive the cargoes as aforesaid,

the goods may, without prejudice to the said privilege, be laid up at Gothenburg or Mem, until proper vessels can be procured for conveying them through the whole line of the canal.

4. The same liberty of passing through the canal, which has been granted to ships and goods coming from and going to foreign ports, shall also obtain with regard to such vessels and cargoes, as, coming from Swedish towns and harbours situated on the Baltic or Northern Sea, are bound to inland or foreign ports situated on the other side; thus the said vessels, without landing their cargoes, or discharging the goods into other vessels, may pursue their voyages without obstruction through the whole line of the canal, enjoying the same privileges and release of duties as those which pass between foreign places.

The directing board of the Gotha canal has promulgated the following instructions for the information and observance of traders:

Until new regulations shall have been made, relating to the navigation on the Gotha canal, and the protection to be granted to it, for which plans have been most humbly presented to his majesty, traders are to conform to the regulations now in force, of which copies are kept ready for the information of the seafaring, at the stations where the canal dues are received.

Whenever a vessel is entered for passing through the canal, the master must give in, at Gothenburg, if he comes from the Northern Sea, and at Soderkoping, (or rather Mem,) if he comes from the Baltic, a complete summary or manifest of the whole cargo, stating the number of his bills of lading, which he is also bound to produce.

At the same place of entrance, the canal dues are to be paid for the whole passage in such Swedish money as is received in the collection of the public taxes. If any ship's husband, or owner of goods, instead of providing the master with money, should choose to intrust this liquidation to the collectors of canal dues at those places, the said collectors are not permitted to calculate above 2 per cent commission on the amount of the dues, besides postage; but, on the other hand, they are by their instructions, forbidden to undertake any such affair, unless the necessary amount be remitted either previously or with the master of the ships.

Whenever cargoes arrive at Mem from the Baltic in vessels which, on account of their bulk, cannot pass through the canal, storehouses shall be kept ready for laying up the goods, against a moderate charge, as far as the room will allow.

The dimensions of the sluices of the Gotha canal allow vessels to pass, the breadth of which is not above 24 feet, the draught not exceeding $9\frac{1}{2}$ to $9\frac{3}{4}$ feet, except between Soderkoping and Mem, which part, on account of some uncompleted work on the banks of the canal, will not, during the first weeks of the next season, be passable for vessels, the draught of which exceeds $8\frac{1}{4}$ feet. But the canal of Trollhatte, with its present dimensions of its 8 sluices, does not allow any vessels to pass the breadth of which exceeds $21\frac{1}{2}$ to 22 feet, and the draught of $6\frac{1}{2}$ to 7 feet. There is, however, good reason to presume that this obstacle will be in future removed, his majesty having most graciously proposed to the association of the canal of Trollhatte, to enlarge the dimensions of this canal to an equality with those of the Gotha canal, by which vessels of a greater bulk may pass through the whole line of the Swedish canal. This work, however, will probably require a time of 5 to 6 years.

For the trailing of the vessels on the Gotha canal, there will be provided, at fixed stations, a sufficient number of horses or oxen, against a separate payment of 2 sk. banco, per horse, and 3 sk. banco per pair of oxen, for every 10,000 yards (*alnar*) canal length, which for the whole line of the Gotha canal amounts to 6 r.d. 44 sk. banco, for every horse, or 10 r.d. 18 sk. banco for every pair of oxen, the number of cattle depending on the bulk of the vessels and the resistance of the wind.

With regard to pilots for conducting vessels on all the lakes of this line of navigation between the Baltic and the Northern Sea, a complete regulation of piloting, both on the said lakes and on the Gotha Elf has been most graciously ordained by his majesty; but until that regulation can be effected, vessels will be conducted, against a moderate payment, by persons well knowing those passages, and acting only in quality of private pilots.

The whole length of the line of the Swedish canal between the Northern Sea and the Baltic may be calculated as follows:

	Swedish miles.	
From Gothenburg to the lake of Wenern, through the river Gotha Elf and the canal of Trollhatte	8¼	½
Across the lake of Wenern	11	
Through the Gotha canal		3½
Through the lakes of Wiken, Bottensjon, and Wettern	5½	½
From the lake of Wettern to the Baltic, and through the lakes of Boren, Boxen, and Asplangen	4½	5
Total river and lakes	29	
„ canal line		9½
Together, Swedish miles	38½	

In order to forward the navigation on the canal line with regard to a more exact calculation of time, the Direction intends to provide, on all the lakes, steam-vessels for towing the ships. One such vessel with 2 engines, each of 30 horse strength, is already going on the undermost 5 miles (Swedish) of the river Gotha Elf; and another, having also 2 engines, each of 20 horse strength, will be ready in the course of the summer, to be used on the lake of Wenern.

The towage has not been yet generally regulated, but that on the lake of Wenern is paid at the rate of 2 skellings Swedish banco for every shippound.—*Stockholm, April* 30, 1833. (Signed) THE DIRECTION OF THE GOTHA CANAL.

CHAPTER V.

MANUFACTURES OF SWEDEN.

The woods and mines of this kingdom have at all times constituted her chief sources of maintenance and wealth. Tar and pitch was formerly supplied in almost sufficient abundance for all Europe. The loss of the pine forests of Finland, deprived Sweden of the principal source of these two articles. For a long period the peasantry have been accustomed to manufacture coarse linens and woollens, as well as hardware. Various manufactures were unnaturally forced into existence before the end of the last century; such as iron works, copper and brass works, glass works, manufactories of earthenware, starch, pins, silk, &c. In 1772 the number of factories, exclusive of those in the peasants' houses, were 886,

besides building-yards, fish curing, and mining. In 1824 the number increased to 1177, but they are still considered in a sickly condition. The following statements are official, and are far more specious in their form than they are in their real value to the state or people.

NUMBER of Manufactories, Workmen employed, and Quantity and Value produced in Sweden, during the Years 1832, and 1837.

DESCRIPTION.	Number of Fabrics.		Workmen.		PRODUCTS.	QUANTITIES.		VALUE.

ACCOUNT of Cotton Goods made in Sweden, during the Ten Years ending with 1840; distinguishing those manufactured in regular Factories from those made by the Peasantry in the Government of Elfsborg.

YEARS.	Cotton Goods manufactured in regular Factories.	Cotton Goods manufactured by the Peasantry of the Government of Elfsborg.	Total of Cotton Goods produced.	OBSERVATIONS.
	alnars.	alnars.	alnars.	
1831	577,099	1,277,740	1,854,878	1st. The Swedish alnar is equal to about two-thirds of an English yard.
1832	639,406	2,040,255	2,679,661	2d. Besides the goods measured by the yard, a considerable quantity of cotton goods, rated by the piece, is annually made, such as shawls, handkerchiefs, waistcoats, &c.
1833	945,752	2,656,307	3,602,057	3d. By the Tariff of 1830, which took effect on the 1st January 1831, several articles of cotton previously prohibited, were allowed to be imported.
1834	945,192	2,464,419	3,409,611	4th. The tariff of 1835, which came into effect on the 1st January 1836, gave additional facilities for importation.
1835	999,574	2,513 805	3,513,379	
1836	953,273	3,100,666	4,053,939	
1837	820,083	4,015,503	4,830,586	
1838	1,105,883	3,831,258	4,937,141	
1839	1,218,249	4,084,526	5,302,775	
1840	1,296,822	4,653,381	5,780,203	

OFFICIAL REPORT ON THE MANUFACTURES OF SWEDEN.

"THE quantity of porter brewed at Gothenburg has been continually increasing since 1832.

"The value of earthenware manufactured in 1832, at Roxstrand, was 93,098 r.d.; at Guftasberg, 62,044 r.d.

"In 1838, Stockholm produced 316,000 lbs. of cotton thread; Stromona, 250,000 lbs.; and Raas (district of Elfsborg), 124,320 lbs.

"Machinery to the value of 55,000 r.d. was manufactured by one house at Nykoping in 1838; at Norkoping by two houses, to the value of 32,609 r.d.

"At Klippau, in 1838, 40,837 reams of paper were manufactured, valued at 168,739 r.d.; at Gruksbo, near Fahlun, 11,038 reams, valued at 64,424 r.d.; and at a new manufactory at Norkoping, 15,474 reams, valued at 52,469 r.d.

"The quantities of paper manufactured in 1837 and 1838, were as follow:

			1837.		1838.

All other kinds		lispunds	8,140	...	5,715
		sheets	1,915,992	...	3,115,996

Thus showing a small decrease in 1838.

"In the same year, the sugar refineries of Stockholm, to the number of 17, produced 4,860,920 lbs. of sugar and molasses, valued at 1,293,349 r.d.; and those of the government of Gothenburg, 3,376,023 lbs. 3234 lbs. of sugar, and 9294 lbs. of molasses were produced at a beet-root sugar manufactory at Landskrona.

"The total quantities of sugar manufactured in the years 1837 and 1838 were as follow:

			1837.		1838.
Refined	White	lbs.	4,324,528	...	4,251,509
	Double refined	„	1,199,242	...	1,254,838
	Common and brown	„	569,888	...	600,209
Candy		„	60,168	...	46,990
Sugar in cakes		„	624,490	...	610,852

"In the year 1838, notwithstanding the bounty on refining, only 15,894 lbs. of sugar were exported from Sweden. In 1837 the exports amounted to 37,607 lbs.

"The manufacture of soap and tobacco has been continually increasing since 1832.

"The manufacture of leather, which fell off in 1836, increased again in 1837 and 1838. Two tan-houses at Stockholm alone delivered for consumption 228,106 lbs. of shoe leather and 2250 prepared hides.

"The manufacture of morocco leather in 1838, was only half that of 1837.

"There are many tan-houses in Sweden which are independent of the control of the committee for trade, the number of which, in 1832, was 263.

"Of thread 90,000 lbs., valued at 30,000 r.d., were prepared at one single dye-house at Gothenburg.

"Ribbons to the value of 24,167 r.d. were produced by one house, being half the total produce, which was less than in 1837.

"There was an increase in 1838 in the manufacture of printed linen, compared with 1837, especially in handkerchiefs. The manufactory in the government of Gothenburg produced printed linens to a value of 20,890 r.d., and one at Stockholm, 10,041 r.d.

"The manufacture of sailcloth was a little increased in 1838. Two-thirds of the whole came from the government establishment at Gothenburg. The exports of it exceeded 35,321 ells.

"The manufacture of tissues other than the above was greater in 1838 than in the preceding year, especially in the government of Elfsborg, where one house produced 177,954 ells of fine cambric muslin, and 260,208 ells of demi-fine ditto, and other tissues. At Stockholm, 24 manufactories delivered for consumption 478,260 ells of cotton and flax tissues, and 9975 handkerchiefs.

"Of 15,921 ells of damask linen and diaper, manufactured in 1838, 9282 ells came from Gêfle.

" The manufactures of cloth in 1838 were as follow :

Cloth, fine	306,207 ells.
„ demi-fine	221,846 „
„ common	104,675 „

" The above were manufactured at the following places :

	Ells.		Value.
Norkoping	441,093	...	2,942,294 r.d.
Stockholm	60,984		
Nykoping	31,605	...	128,798 „
Alingtoes	16,737	...	75,919 „
Halmstadt	35,340	...	50,786 „
Ostrogothic, government of	14,425	...	72,687 „
Elfsborg, government of	11,247	...	30,021 „

" At Norkoping, in 1838, there were 70 cloth manufactories, employing 356 machines and 2160 workmen. At Nykoping there were only 4.

" At Halmstadt nothing is manufactured but a coarse kind of cloth, like swanskin.

" There are only 4 manufactories in Ostrogothic.

" The tissues of wool other than cloth, manufactured in Sweden, consist chiefly of *étamine* and flannel. In 1838 the produce was 42,721 ells, valued at 20,405 r.d.

" In the same year, Sweden exported 7640 ells of cloth and other stuffs.

" All the manufactories of silk tissues are at Stockholm. The produce of the two most important were, in 1838, one 28,622 ells of miscellaneous tissues, and 15,312 handkerchiefs ; the other 24,368 ells of tissues, and 9807 handkerchiefs.

" The value of glasswares manufactured in 1838, at Bromo, was 59,835 r.d. ; at Reymira, in Ostrogoth, 41,706 r.d. ; and at Johannisholm, in the Kopparberg, 40,996 r.d.

" The above returns refer only to the produce of manufactories, &c., and not to that of the peasants in their own cabins.

" The following is a statement of the quantities of woven goods in pieces sent, in 1837 and 1838, from the places of production to other parts of the kingdom :

		1837. Ells.	1837. Ells.	1838. Ells.	1838. Ells.

Total			8,003,048 ells.		7,345,050 ells.

" These figures, however, are only approximative.

" In the government of Elfsborg, in the year 1838, 63,705 pairs of cards for wool-carding were made in the cabins, and of this number 48,000 in the single parish of Gallstad. Those otherwise made amounted to only 22,800 pairs.

" Hatchels, or combs for weaving, have been established in several places.

" Shoes to the value of 3000 r.d. were, in 1838, exported from the bailiwick of Albo, in the government of Kronoberg to the neighbouring provinces.

" Landralta and Haryda provide Gothenburg, &c. with turnery."

THE following is a Statement of the Number of the Working Population enrolled in Sweden in the Years 1828 and 1838.

DESCRIPTION.	1828			1838		
	Stock-holm.	Other Cities.	TOTAL.	Stock-holm.	Other Cities.	TOTAL.
Masters	1081	4,953	6,034	1004	4,938	5,942
Companions and apprentices	4195	7,447	11,642	3979	8,981	12,960
Total	5276	12,400	17,676	4983	13,919	18,902

" The contribution paid in 1838 by the workmen was estimated at

Workmen of the cities . . . . 103,709 rix-dollars.

Other workmen . . . . . 27,502 „

" *Cloth and Tissues of Wool.*—The quantity manufactured in 1839, in 114 manufactories, employing 605 machines and 3642 workmen, amounted to 672,116 ells of cloth, and 57,887 ells of other woollen stuffs, as well as 1037 felts, of a total value of 4,045,989 r.d., being 182,550 r.d. more than in 1838; and the quantity of cloth (properly so called) manufactured was 39,388 ells more in 1839 than in 1838. This increase has been chiefly in coarse cloths.

" The quantity manufactured at Stockholm in 1839, amounted to 98,745 ells of cloth and other woollen stuffs, valued at 509,490 r.d., exceeding the produce of 1838 by 9880 ells.

" In the other cities of the kingdom, where there are cloth manufactories, the produce amounted in 1839 to 127,272 ells of cloth and other woollen tissues. Nykoping produced 29,334 ells; Wexio, 30,183 ells; and Halmstadt, 44,451 ells, the greater part of which, however, consisted of swanskin.

" *Linen Cloth and Tissues of Cotton and Flax.*—The quantity produced in 1839 in the manufactories, of which there are 44, amounted to 1,218,246 ells of tissue, properly so called; consisting principally of cotton cloths and calicoes, and 78,107 handkerchiefs, of a total value of 465,580 r.d.; being an increase over 1838, in quantity, of 112,363 ells, and 15,823 handkerchiefs; and in value, of 38,999 r.d.

" *Cotton Yarn.*—The manufactories, the number of which is 9, produced in 1839 1,138,797 lbs. of cotton yarn, being 168,787 lbs. more than in 1838. The greatest quantity was produced by the firm of Bohnstedt and Bergman, at Stockholm, being 361,000 lbs.

" *Sail and Tent Cloth.*—The manufactories, to the number of 10, produced in 1839 434,738 ells, consisting chiefly of sailcloth, of a value of 250,912 r.d. The produce of 1838 amounted to 270 ells less. In a manufactory situated at Carlshamm, where the produce amounted to 19,468 ells, cotton is chiefly employed as the raw material, instead of hemp.

" It may be observed, that very little sailcloth was exported, while the importation was prohibited from all foreign countries, excepting Finland. Since this prohibition has been taken off, a great increase has taken place.

" *Silk Manufactures.*—The number of manufactories amounted in 1839, as in 1838, to 16, and the quantities manufactured to 137,001 ells of silks of all kinds, and 106,627 handkerchiefs, veils, and caps, valued at 494,431 r.d.; being 3990 ells of tissues, and 8195 handkerchiefs, &c., valued at 26,926 r.d. more than 1838. There were only 650 ells of velvet and 162 ells of plush manufactured in 1839.

"*Ribbon Manufactures.*—The produce of these manufactories, the number of which was 11, was of a value of 45,194 r.d., and consisted chiefly of silk ribbons.

"*Printed Calicoes.*—The produce of the 9 manufactories in 1839 amounted to 37,636 ells of chintz, and 144,770 lbs. of shawls, handkerchiefs, and gowns; exceeding that of 1838 by 8262 ells of calico, and 67,562 handkerchiefs, &c. The total value is estimated at 76,094 r.d,, or 34,915 r.d. more than in 1838.

"*Dyestuffs.*—In the 317 manufactories, the value of tissues and thread dyed in 1839 amounted to 437,524 r.d., exceeding the produce of 1838 by 36,755 r.d. The chief seats of the trade are at the cities of Norkoping, Boras, and Stockholm, and the firm of Röhs and Bruservitz, in the provinces of Gothenburg and Bohus.

"*Sugar Refineries.*—The number of these amounted in 1839 to 25. The produce amounted to 7,303,421 lbs. of sugar, and 3,150,188 lbs. of molasses, of a total value of 2,625,763 r.d. The quantity of sugar refined was 539,023 lbs. more than in 1838; that of molasses much the same.

"The quantity of raw sugar imported in 1839 amounted to 13,611,870 lbs., being 496,046 lbs. more than in 1838.

"Although a considerable repayment of the customs duties is made on the export of refined sugar from the kingdom, the quantity exported in 1839 amounted to only 3495 lbs. In 1831 it amounted to about 600,000 lbs., since when it has been continually decreasing.

"*Tobacco Manufactories.*—The number of these amounted to 81 in 1839, and the quantity of tobacco of all kinds manufactured to 3,490,574 lbs., of the value of 1,003,036 r.d., being less than in 1838 in quantity, by 104,366 lbs., and in value by 15,492 r.d.

"The quantity of tobacco manufactured in the kingdom and exported, on which there is a repayment of the customs duties, amounted in 1832 to about 200,000 lbs.; since when it has been continually diminishing, and amounted in 1839 to 65,308 lbs., being 32,243 lbs. less than in the preceding year.

"*Tanneries.*—The number of these establishments amounted to 258 in 1839. The produce consisted of 772,645 lbs. of prepared and sole leather, and 105,441 hides, valued at 529,728 r.d.; and was less than in 1838 by 175,341 lbs. of prepared and sole leather, and 13,443 hides, of a total value of 148,348 r.d. The above statement, however, does not show the total produce, as the trade is carried on in all the towns of the kingdom, by many manufacturers who are not compelled to make returns of the quantity or value of their produce.

"*Morocco Leather Manufactories.*—The produce of these, to the number of 5, amounted in 1839 to only 5752 hides, being 3316 less than in 1838. This trade has been latterly continually decreasing.

"*Glass Manufactories.*—The produce of these glass manufactories, the number of which was 13, amounted in 1839 to 3618 cases of stamped and window glass, valued at 162,526 r.d.; and glass of various kinds, valued at 192,074 r.d., making a total value of 354,600 r.d., which is 11,627 r.d. less than in 1838. The chief manufactory is at Bromo, in the province of Skaraborg, where the produce in 1839 amounted to 738 cases of stamped glass, valued at 54,053 r.d.

"*Paper Manufactories.*—The number of these establishments amounted to 87 in 1839, and the produce to 228,358 reams of paper of all kinds; 196,534 sheets of paper tarred for roofs, &c., 668 rolls of paper hangings, 6373 lispunds of sheathing and pasteboard, and a large quantity of paper for the new bank notes; making a total value of 803,494 r.d. The quantity of paper, properly so called, manufactured, exceeded the produce of 1838 by 10,398 reams, and consisted chiefly of writing, printing, &c., paper; while in royal paper, vellum, and pasteboard, there was a small decrease. The total value was 46,616 r.d. more than in 1838.

"*Oil Manufactories.*—The produce of the 48 manufactories of the kingdom amounted in 1839 to 99,752 cans of linseed and rapeseed oil, and 2069 skeppunds of torteaux, of a total value of 138,905 r.d. The produce of 1838 was 897 cans more, and 14 skeppunds of torteaux less.

"*Pottery.*—This trade is only followed in Rorstrand, Stockholm, and Gustaefsberg, in the province of Stockholm. The exports of the first in 1839 were valued at 96,169 r.d.

and of the two others, 80,123 r.d., being, for both together, 176,292 r.d., or 21,150 r.d. more than in 1838.

"*Soap Manufactories.*—These, to the number of 17, produced in 1839 18,243 barrels of soft soap, valued at 114,054 r.d., being 1522 barrels in quantity, and 13,791 r.d. in value, less than in 1838.

"*Machinery.*—The value of the machinery manufactured at the various establishments, to the number of 19, in 1839 amounted to 120,342 r.d., or 22,043 r.d. more than in 1838. Besides the manufactory at Motala, which is not, like the others, subject to the tribunal of manufactures, or placed under the inspection of the Board, the total value of mechanical instruments constructed in the year 1839, amounted to 187,307 r.d.

"*Breweries.—Porter.*—This article is manufactured only at a single brewery, near Gothenburg, the produce of which, in 1839, amounted to 1300 casks of porter, 514,500 bottles, and 282,000 half-bottles of porter and ale, of a total value of 173,437 r.d. The quantity brewed was greater than in 1838; but the declared value was less by 9042 r.d.

EMPLOYMENT OF WORKPEOPLE IN SWEDISH FACTORIES.

"There are only two legislative enactments, relating to persons employed in Swedish factories. The one requires that the term for which a workman may be engaged, shall be settled by an agreement entered into and signed before a magistrate, by the master and the workman; and the second declares, that a master, who may take a workman from another master, must himself become answerable for any sums which that workman may be indebted to his former employer.

"No circumstances have hitherto occurred to render other legislative regulations necessary, touching the relations between masters and workmen.

"With regard to the usual duration of the term for which persons are engaged to work in the factories—boys are frequently indented from two to five years, and females are engaged either by the day or by the week; but men are usually engaged for a fixed period, in the manner above described, subject however, generally to the stipulation, that a fortnight's or a month's warning may be given by either the master or the man, if either party may wish the engagement to cease at any time previous to the expiration of the agreed term of service.

"At Norkoping, which is the chief seat of the Swedish cloth manufactories, the work begins at 6 o'clock in the morning, and is continued till 7 in the evening, with intervals of rest, from 8 to 9 o'clock, from 12 to 1 o'clock, and from half-past 4 to 5 o'clock. At Stockholm, the workpeople are engaged during 14 hours in the factory, having nearly the same intervals of rest. Much work is done at both places by the piece; but for the workmen who have fixed wages by the day, the work is rated by the hour, and a deduction is made from the day's sum due, for every hour of absence from work.

"In summer, extra labour is executed from 4 to 6 o'clock, and from 7 to 8 o'clock in the evening, and paid for separately by the hour.

"The children are regularly kept to Sunday schools, or are instructed by their parents, so that ignorance of reading, writing, and religion, are rare exceptions.

"Wages are universally paid in money, and not in kind, and with few exceptions, weekly. At Norkoping many manufacturers pay their workmen every Friday evening, in order that the wages may be laid out in the purchase of provisions on the subsequent Saturday, which is market day, and not be mis-spent on the Sunday.

"At some factories wages are paid every Monday for the passed week. In the cotton mills, established at Stockholm, they are paid only once a fortnight—that is, every second Saturday.

"A workman in Swedish factories may earn, on the average, from 8*s.* to 12*s.* sterling a week; a female from 3*s.* to 4*s.*, and children, between ten and twelve years of age, 2*s.* sterling, and from twelve to sixteen years, about 3*s.* Workmen of particular skill, of course, obtain higher wages.

"The workmen generally find themselves in food, clothing, and lodgings. But in some instances, as at M. Bolmstell's cotton mills, at Stockholm, it has been found advantageous to give the persons employed, the option to receive their meals from the factory, for which they are charged at a low fixed rate.

"The lower classes in Sweden usually live on rye cakes, or rye bread, milk, coffee, of which they make frequent use, potatoes, saltfish, and occasionally salt meat, or bacon; but very rarely, if ever, touch fresh meat; and the workpeople, in the factories, who find their own food, may be considered to live in this manner.

"But at M. Bolmstell's mill, where the workpeople are supplied with dinner by the proprietors, they live better. They bring with them in the morning rye bread, or rye cake, and this, with a large cup of coffee, with sugar and milk, which they receive from the establishment, constitutes their breakfast.

"The dinner consists during 9 days: twice of 8 ounces of fresh meat, salt and potatoes, 1 pint of soup, and 1 pint of porridge with a little milk. Twice of 6 ounces of bacon, 3 pints of peasoup, salt and pepper. Twice of $1\frac{1}{2}$ salt herring, 8 ounces of potatoes, and $1\frac{1}{2}$ pint of peasoup. And 3 times of fresh meat and bacon. Every day at dinner they receive a cake of rye. The women have about a pint, and the men a pint and a half of small beer.

"The workpeople are not supplied with supper, but provide themselves with that meal. Many go home to supper after their work is finished.

"Some masters have built houses for their workpeople, and allow them fuel, making however a proportionate deduction in their wages, unless, as at some factories, free lodgings be given as a premium for regular habits, and long continued exertions in the service of the same master.

"The number of workpeople employed in factories in the whole of Sweden does not, however, exceed 15,000. No inconveniences have arisen from the introduction of machinery. No combinations have occurred amongst the workmen, nor have complaints of ill treatment or insufficient wages ever been heard of.

"The corporation of manufacturers of Stockholm and Norkoping, maintain their disabled and aged workmen, by regular contributions independent of the respective parishes to which they may belong.

"In conclusion, I have the honour to annex a copy, together with a translation of the rules adopted by the owners of the principal cotton mills at Stockholm, in which there are employed 175 women and girls, from 10 years of age upwards, and 30 men and boys. No persons can be employed in the factory, unless they accede to these regulations. The cotton factory at Carlshmun, which was lately destroyed by fire, was also under the same rules." —*Stockholm, 20th September*, 1841.

Rules for Work at the Cotton-spinning and Weaving Factory at Stockholm.

"The proprietors of this factory, which gives employment to a great number of girls of from 10 to 15 years of age, hereby announce the regulations which are to be followed with respect to labour in the establishment. It is their object, by unceasing care, by moderate demands on the capabilities of the young workpeople, and by constant attention to their morals and dispositions, to direct their minds to industry and propriety of behaviour, by which means, they, on leaving the factory, may lay claim to be preferred for employment, in such social occupations as suit their riper years, before those who had spent their time in idleness, and often under no kind of guidance.

"The conditions for being received and retained in the factory are:—good morals, industry, obedience, and cleanliness. Those are preferred for employment, who can produce testimonials of having obtained some instruction, or that they continue to visit some Sunday school. On reception, the girls' names and ages, together with the occupation and residence of their parents, are entered on the muster-roll of the factory.

"When in the factory, the girls are treated kindly by the foreman and inspectors, but with proper strictness, though never with unsuitable severity. No other punishments than fines are allowed. Should any girl be convicted of a really serious offence, her parents are informed thereof, and she is dismissed the factory.

"The employment of the girls in the factory is of such a nature as never to press on their strength or health, and principally consists in order and attention, and a certain degree of cleverness in attending to the machines.

"Work commences at six o'clock in the morning. At ten minutes before that hour the bell begins ringing and the gates are opened. At six precisely the bell stops, when the gates are shut; after which time no one is admitted till after the breakfast hour at nine o'clock.

"After the dinner hour the bell rings at five minutes before two, and stops at two precisely, after which time no one is admitted till after the supper hour at half-past five.

"For absence from work pay is stopped as follows:

"For the time from morning till breakfast one-third part of a day's wages.

"For the time from breakfast to dinner half-a-day's wages.

"For the time from dinner to supper one-third part of a day's wages.

"For the time from supper to the close of work at eight o'clock, one-third part of a day's wages.

"Should any one, without having obtained permission, or without a certificate of hindrance from sickness, be absent from her work one whole day or more, a sum will be ducted from her pay equal to 1½ day's wages for every day's work so neglected.

"Wages are at least 1 r d. banco per week, and are increased to double or more in proportion to the docility and consequent skill of the workpeople, and are reckoned at 12 hours' work per day, Saturday's excepted, when work ends at six o'clock.

"Wages are paid for two weeks together on every other Saturday.

"No one may leave the factory except during the dinner hour. Breakfast and supper must be brought with them by the girls and be eaten in the room of meeting, where proper drawers and cupboards are provided for this purpose, each marked with a girl's name.

"If any of the workpeople fall sick, medical attendance and medicines are provided for them, and separate maintenance is granted where circumstances call for it.

"Mistakes and faults resulting from carelessness or disobedience are punished by fines, which are deducted on each pay day, and in the presence of the girls are deposited in the reward box to be kept till the close of the working year, and are exacted in the following manner.

"She who treats the orders of the foreman or inspectors with impudence or obstinacy will be fined 4 skillings banco.

"Those who use indecent expressions or quarrel among each other will be fined 2 skillings banco.

"She who takes meat, drink, or bundles into the working room, will be fined 2 skillings banco.

"She who presents herself at work with unclean hands or face, or with uncombed hair, will be fined 2 skillings banco.

"She who neglects to keep the machine at which she is at work clean, and free from dust and waste cotton, and to keep the floor around swept, will be fined 2 skillings banco.

"She who leaves her machine, without first stopping it, will be fined 2 skillings banco.

"They who maliciously, or through wantonness, meddle with the wheels, straps, or screws, which they are forbidden to touch, will be fined 4 skillings banco.

"She who hides cotton or yarn in her clothes or pockets, will be fined 4 skillings banco.

"The above fines can be levied only by the foreman or the inspectors, for no girl is permitted to accuse another, nor can any money be stopped for fines, until a girl has been employed one month in the factory.

"The amount of fines deposited in the savings box, during the course of the working year, will be applied in rewarding such as may deserve it, as follows:

"The greatest reward will be given to those who have not paid any fine during the working year, and who present certificates of a careful attendance at the Sunday school.

"A less reward to such as have been seldom fined, and then for minor offences; and—

"The least reward to those who have been often fined at the beginning, but have shown improvement during the course of the working year.

"Every girl who has worked at the factory for five years, and each year received some of the abovementioned rewards, will receive besides from 10 to 25 r.d. banco, as a reward of industry.

"Before admission into the factory, each applicant will receive a copy of these regulations, in order that she may show the same to her parents or guardians, so that ignorance of the rules of the factory may never afterwards be pleaded."

Persons employed in the Stockholm Cotton Factory.

"*Number.*—Employed 200, of which 30 are men and boys, and 170 women and female children.

"*Wages.*—The lowest, 1 banco r. = 20*d.*; highest, 3 banco r. = 2*s.* 6*d.* per week.

"*Age.*—No children received under 10 years of age, and there are now very few under 13; in order that labour may not be too severe on the children that are under 15, double the number required to keep the machinery at work are hired, that a relief may take place every 4 hours in the works where children are employed.

"*Working Time.*—They begin work at 6 in the morning, and leave off at 8 in the evening, summer and winter.

"*Breakfast.*—In the morning they bring bread (rye) with them, and at 8 are served, a large cup of coffee (including milk and sugar) for which they are charged 1 skilling banco = half a penny. They are not allowed to leave the factory during the whole day but breakfast and dine in three divisions. Twenty minutes being allowed for breakfast, and half-an-hour for dinner which begins at noon.

"*Dinner* consists of during 9 consecutive days:—Twice, 8 ounces fresh meat and potatoes, 1 pint of soup, and 1 pint of porridge and milk. Twice, 6 ounces of bacon, 3 pints of pea-soup. Twice, 1½ herring, 8 ounces of potatoes, 1½ pint of soup, and three times, fresh meat with bacon, and of *bread and beer.* Every day a cake of rye bread, value ⅔ds. of a halfpenny; the females have a pint, and the men ¾ of a ½ gallon of small beer.

"*Admission.*—No person can be employed in this factory unless they consent to the above regulations which were established about 6 months ago, because the parents of the children, who receive their wages gave them only a little bread and water, which was found to be insufficient and injurious to their health, and since these regulations have been put in practice, the health of the children has manifestly improved, and this method has been found in every way beneficial. The large cotton factory at Carlshamn lately destroyed by fire, had the same regulations where they were found also to be beneficial."—*Stockholm, 24th of August,* 1841.

CHAPTER VI.

NAVIGATION AND TRADE OF SWEDEN.

The fisheries, the mines, and the forests of this kingdom were the early sources of Swedish trade. In 1680, Puffendorff, who was then one of the councillors of state to the king of Sweden, says, "Sweden produces more copper and iron than any other kingdom in the world, and the mines are fitted by nature for that purpose, being surrounded by woods and rivers. There is a silver mine in Westmanland. Finland brings forth pitch and tar and deal; and Wermanland good

store of masts. The native commodities of Sweden are *copper, iron, tar, pitch, masts, deals, boards,* &c. In lieu of which Sweden receives from abroad, *wine, brandy, salt, spices, cloth, silks, and woollen stuffs, fine linen, French manufactures of all sorts, furs, paper,* and such like: all which in some years surpasses in value the commodities exported hence. To recompense this, navigation and commerce has been encouraged of late years among the natives, and several sorts of manufactures are made, whereof those made of copper, iron, and brass, would questionless turn to the best account, if these artists were duly encouraged to settle in this kingdom." Oddy, in his work on European Commerce, describes the products and trade of Sweden previously to the year 1805 as follows:

"The produce of Sweden generally, for exportation, consists of iron, wood, tar, pitch, and a little copper. Its produce in other articles is scarcely sufficient for its own consumption. The principal source of the wealth of Sweden is its mines, of which there are a great variety, of gold, silver, and copper; but the iron is of all others by far the greatest.

"The progress made in the establishment of iron-foundries in Russia (which country used to have her iron from Sweden) has been so rapid that the mines of Russia are fast rivalling those of Sweden. We find by a manuscript register taken of all the mines by the government, in 1748, that, in the latter kingdom, there were no less than 496 foundries, with 539 large hammers, 971 smaller ones, for making bar iron, and other manufactures of iron which produced, in that year, 304,415 skeppunds, or 40,588 tons English. The present produce of all the Swedish iron-mines is about 400,000 skeppunds, or about 53,330 English tons; and this increase, notwithstanding the great quantity made in Russia, may be attributed to the superior quality of the Swedish, which is esteemed all over the world; as well as to their making different sized bars, square and flat, which are more easily converted into the general uses for which they are required, than that which is shipped from Russia. Great Britain takes about half, or rather more, of the whole quantity which Sweden exports.

"The Swedish government established an office, in 1740, to promote the production of iron, by lending money on the ore, even at so low a rate as 4 per cent. A correct register was then made of the mines, which is still continued. The latest statement of them is a manuscript account, which the author saw in the end of the year 1804. Their foundries are now above 500; each foundry has its particular mark stamped on the bars of iron it produces, which is likewise correctly copied into the manuscript; likewise the name of the place where the establishment is situated; the names of the proprietors of the work; the commissioner or agent for the sale of the iron; the assortment each makes, and to what country it is generally shipped; the quantity annually made by each work; the quantity which each work delivers to the government (which is about 1 per cent on the quantity of the iron produced); the estimation of the quality of the iron of each work, which is variable; the place and province in which the works are situated; the place from whence the iron is generally shipped; and how many hammers each work has; all which are regularly and alphabetically described and arranged.

"Each furnace, upon the average, makes but about 80 tons of iron in the year, with 1 large hammer, and 2 smaller ones. There are some small works, or little forges and smithies, however, which make only from 10 to 30 tons the year; others from 100 to 500 tons. But the mine of Dannemyra, which was established in 1527, produces from 13,000 to 20,000 tons annually, it has the richest ore, and its iron is of a superior quality, and preferred amongst the steel manufacturers in England.

"Of the next importance to Sweden, after the iron, are the copper mines, which have undergone a variety of changes in their produce, and that chiefly in the principal one of Fahlun; the richness of the ore, in that mine, has considerably fallen off; in 1650 its produce was 20,321 skeppunds, or near 3000 tons; in 1690 it fell to 10,000 skeppunds; in 1751 it was only 4938 skeppunds; but since that period it has improved a little, and its an-

nual produce at present is betwixt 6000 and 7000 skeppunds. Otevidberg, a copper-mine, has lately been reopened, and others worked, so that the whole aggregate quantity of copper produced in Sweden, at the present time, is estimated at about 10,000 skeppunds, or near about 1400 tons.

"In the year 1738, a gold-mine was discovered at Ædelfors, in Smoland; but its annual produce not exceeding from 500 to 600 ducats, it has of late years been entirely abandoned.

"The silver-mine of Salberg, in Westmanland, is the most ancient and the richest of all, having continued upwards of 300 years. In the fourteenth century, it is reported to have produced nearly 24,000 marks per annum, or, according to others, about 18,000, when silver was three times the value that it is now; but in latter years the quantity is considerably diminished; so that, at the conclusion of the last century, the produce amounted only to from 1600 to 1800 marks. The lead-mines averaged, in the year 1751, 44½ skeppunds; and from 1763 to 1770, only 9. In consequence of the great falling off of the produce, the lead-mine in Finland was at last entirely abandoned, and lead is now one of the imports from England into Sweden.

"The next article of the produce of Sweden, for reputation, is tar, from whence all Europe was formerly supplied for a considerable time; and had it not been for the spirit of monopoly in Sweden, arising from the idea then entertained, that it could not be had elsewhere, this branch of their trade might have been preserved exclusively to them to this day, instead of Russia participating in it, and Great Britain being driven to her colonies, to manufacture and procure it from thence in such quantities as even to supply other nations at a cheaper rate; but the Swedish tar is certainly of a superior quality to any other.

"The tar exported from Sweden is principally produced on the east side of the Gulf of Bothnia; the west side produces some. There are only 4 principal places in the gulf from whence considerable quantities are sent to the staple ports for exportation, and those which chiefly collect and send off the tar are, Wasa, which produces about 10,000 barrels, besides pitch and deals; Jacobstaat, 20,000; Gamla Carleby, 30,000; Brahestadt, from 8000 to 10,000; Uleaborg, from 50,000 to 60,000; Sweden, producing for her own consumption and exportation, from 100,000 to 130,000 barrels of tar, besides pitch.

"The tar from Calmar and Westervik is in very small quantities, and inferior to the tar of the Finnish ports. Archangel is the only Russian port from which tar is exported to England. Swedish tar and crown pitch is higher in price than any other; as the pitch which is sent from Russia and America to England is inferior to the Swedish.

"A considerable quantity of timber is now shipped from Sweden, chiefly to Great Britain; the prohibition to the exportation of that article, from Russia, threw a share of this branch to Sweden as well as to Denmark. The Gulf of Bothnia produces the most considerable quantity; but the ports therein not being staple towns, the principal exportation, it will be observed, is by the ports of Stockholm, Gottenburg, Gefle, and Abo.

"In general, the produce of a country which furnishes the inhabitants with food is first described; but the natural situation of Sweden reverses that system, and therefore we have rather described the means which enable them to purchase food (their mines). The climate of Sweden is unfavourable for the production of grain: *it is very common, that in* 10 *years there are only* 2, *and at the most but* 3 *ripe crops.* In the same period there are but 4 or 5 crops middling, and the remainder wholly bad. Sweden reaps only two-thirds of what is necessary for the inland consumption. The deficiency is imported from the Baltic ports. The corn brandy, of which the Swedes are very fond, consumes a large quantity of grain. It is said, that in years of scarcity the Swedish poor in some provinces in the interior, distant from the sea-coast, make a composition of bark, or roots, with coarse meal, to preserve existence by this miserable food; yet Sweden annually imports grain from the ports of the Baltic: a stipulation existed betwixt Russia and Sweden, that a certain quantity of grain should always be allowed to be exported from Riga. Swedish Pomerania principally produces wheat; but as rye is the grain chiefly used for food in Sweden, she goes to other ports, whilst Swedish Pomerania exports her produce to foreigners.

CORN imported and exported into and from Sweden in 1802.

"The Swedish herring-fishery is chiefly carried on at Marstrand Skiären (the shoals of Marstrand), where herrings were caught not only by the Swedes, but also by the Dutch and Scotch, till the year 1679, when the fishery ceased; but it was renewed in the year 1753, and at present is carried on with such success, that 300,000 barrels of herrings, and 20,000 barrels of their oil, are frequently produced in the season, but the fish are not all cured. (See decline of this fishery hereafter.)

"In the year 1803, the custom paid in Sweden was only on 1764 acums, or barrels, of train-oil; 2637 barrels of smoked or red herrings, and 203,209 barrels of salted herrings.

"Though there are a few manufactories of paper, soap, glass, sugar refineries, &c. &c., in Sweden, yet none of them are carried to great perfection; so that the imports of Sweden consist in those manufactured goods which nations, whose capital is more abundant, and the arts further advanced, produce, and its exports consist of its natural produce, chiefly iron, timber, copper, tar, and pitch."

SHIPPING OF SWEDEN.

IN the year 1800, the number of merchant-vessels belonging to Sweden amounted to 956, total burden 63,534 tons, and navigated by 9929 men. Of these ships, 526 were out or on the passage, and 430 at home, at the close of the year: 118, new built, are included in that statement. Stockholm possessed 234 ships of 20,085 tons; Calmar 43; Gottenburg 168; Gefle 54; Helsingfors 25; Norkoping 22; Westervik 24; Wisby 55; Carlscrona 33; Carlsham 40; Malmo 31; Uddevalla 24; Abo 16, &c. &c.

In the year 1801, the shipping of the whole kingdom consisted of 974 vessels, total burden 62,751 tons, and manned by 9689 seamen; new-built vessels 105; at the end of the year, 493 were at sea, and 481 at home.

In the year 1802, Sweden possessed 946 ships, their total burden 62,294 tons, including 127 new-built vessels,—the whole manned by 10,185 men.

CHAPTER VII.

TRADE OF THE PRINCIPAL SEAPORTS OF SWEDEN.

STOCKHOLM is built upon several islands and two peninsulas, betwixt the Maeler Lake and the Baltic Sea, which properly here forms the harbour in a bay. The largest ships can come alongside the quays, which are commodious, and lined with warehouses and other structures for the accommodation of trade.

The entrance into the harbour from the Baltic is rendered intricate for shipping, by the rows of rocks and the numerous rocky islands of the Upland Shallows; between these are four passages, two of which are for large ships. Pilots are indispensable; and ships sailing to Stockholm are compelled to take the first pilot on board six leagues and a half from Dalerön. Here again they receive a second pilot, who conducts the ship to Stockholm, which is eleven leagues and a half distant from Dalerön. The buildings, parks, and environs of Stockholm have been greatly improved, and its streets exhibit great activity.

Stockholm being the capital of the kingdom, and also the first staple town in Sweden, has the most extensive trade to foreign parts and with the interior. In the inland trade it has the most convenient intercourse by the numerous lakes which are connected by canals. Exclusive of these advantages, and being possessed of nearly one-half of the trade of Sweden, its importance is increased by the circumstance that it is the central point of all the different commercial establishments, such as the College of Trade, the Commercial College, Bank, &c. &c.

Population in 1840, 83,885. It has long been stationary, and the deaths

exceed the births; the country annually supplies the town with about the difference of decrease caused by the deaths. The proportion of legitimate births is less than $2\frac{1}{2}$ to 1. Formerly there was scarcely an inn in this capital, now there are some tolerably good, and numerous eating-houses.

Its manufactures are woollen cloths, stuffs, as camlets, shalloons, &c., ribbons stockings, and silk handkerchiefs; some silk and cotton goods; leather and sailcloth; tobacco manufactures, and sugar refineries: several iron-foundries, a cannon-foundry, some manufactures of china and earthenware, a glass-house, looking-glass manufactory: some few and valuable articles in steel are also made here, clocks and watches, mathematical and optical instruments, &c. &c. There is also a steam engine manufactory, conducted by a Scotchman from Glasgow.

In the shipyards a number of ships are annually built of oak and fir for the foreign as well as coasting trade.

IMPORTS and Exports of Stockholm at different Periods.*

* The number of smelting furnaces in Sweden is stated to be, great and small, under 350. The annual produce is variously estimated at from 85,000 to 95,000 tons of pig iron, which when converted to malleable iron is calculated to yield from 60,000 to 66,000 tons. The working of the mines and smelting of the iron is in Sweden subjected to the most pernicious restrictions. The iron-masters are compelled to make annual returns of the products of their mines and furnaces, and of the quantity which exceeds the privileged quantity licensed, the overplus is liable to be confiscated.

The college or court of mines grant those licences, and there is a minor court of mines with inspecting officers in each mining district. The iron sent to a port for transport or export must be carried to the public weigh-house, where the agent of the college enters all the iron which is weighed, and transmits a quarterly account of the same to the college. An iron-master cannot, therefore, send more iron to market than the quantity which he is licensed to produce. This is, to a small extent evaded, by selling iron to be consumed in the interior. Each furnace and forge pays a certain annual tax fixed by the college of mines. No licence is granted to any one who has not a forest sufficient to supply the necessary charcoal.

Copper and lead mines, &c.—The average quantity of copper produced annually at from 800 to 900 tons; lead 40 to 50 tons; silver about 3000 lbs. Manganese 300 to 350 tons; alum 1750 tons; cobalt 45,000 lbs.

RETURN of the Foreign Trade at the principal Ports within the Consulate of Stockholm in 1840.

During the year 1841 there arrived at Stockholm 405 vessels, of 51,408 tons, 3512 men; value of cargoes, £811,915; and there departed 491, of 61,009 tons, with 4258 men; value of cargoes, £558,219. Of these arrivals 11 were British; viz., 4 vessels had coal and coal tar, 1 vessel coals, 2 vessels coals and cotton yarn, 1 vessel clay and stone, and 3 vessels in ballast. Of those departed 5 vessels had iron and bones, 2 vessels iron, bones and cobalt, 2 vessels iron, tar, pitch, and deals, 1 vessel tar, &c., 1 vessel in ballast.

The importation, chiefly in manufactured goods, from Great Britain has increased by 5738*l.* during the year 1840, as compared with the preceding year, but it is believed that a much greater quantity has been smuggled into Sweden.

The exportation to Great Britain has decreased by 16,952*l.* in the year 1840, as compared with the preceding year. This decrease has been attributed to the low prices of iron in the United Kingdom.

The commerce of Sweden with foreign nations continues to be carried on chiefly in Norwegian vessels. In the ports to the northward of Stockholm, not one vessel of any other nation has been employed in carrying timber to foreign countries, although there has been a very considerable increase in the exportation.

The speculation which excites most interest at Stockholm at present, is that of sending out furniture and even ready-made houses to the British colonies in Australia, in the anticipation that the British government will extensively encourage emigration. Cargoes of that description for several large vessels are now in preparation, Sweden having great advantages in preparing these articles of good materials and at a comparatively moderate expense. These wooden houses can be delivered at Australia at from 30*l.* to 90*l.* sterling

each, by which the merchant will gain from 50 to 75 per cent. Those of 90*l.* (one of which I have seen) contain one sitting-room, 21 feet by 10; three bedrooms, a kitchen, pantry, and hall, all on one floor (of wood) having glass windows in the English style. The area occupied by this house will be about 70 square yards; it is very comfortably and substantially fitted with deal floors and every convenience for fire and cooking included. A ship can carry out about 60 of these houses, so that her cargo, exclusive of other furniture, would be in value about 3500*l.* sterling.

The returns of the manufactures of this country cannot be depended on, as it is well known that the greater part (in value) given in as Swedish manufactures, is in reality smuggled. The great cotton manufactory of Stockholm actually imports from England the greater part of the fine cotton twist sold there.

The quantity of iron exported to foreign countries from Stockholm, during 1841, is about 304,701 skeppunds = 40,289 tons; value at 1*l.* 10*s.* per skeppund 456,256*l.* 10*s.* To the north of Stockholm, 80,000 skeppunds = 10,915 tons, value 120,000*l.*, making the whole quantity 51,204 tons, and value 576,256*l.* 10*s.*

The quantity of wood exported is nearly the same as last year.

The royal navy is nearly in the same state as last year, the projects for reducing and increasing, having been severally rejected by the Diet.

For the merchant navy a number of ships and brigs have been built at the ports in the Gulf of Bothnia, 4 at Stockholm, and 3 at Calmar; but they are generally sold soon after launching, and therefore the tonnage has only increased 15,000 tons, nearly half the amount of tonnage launched, while 10 vessels are at present on the stocks, making 3000 tons more. Two post-office steamers have been built, one of which is of iron, but they are small vessels, with only 60 horse power.—*Stockholm, 31st Dec.* 1841.

TABLE of Port Dues at Stockholm.

DESCRIPTION.	Money. Of the Country.	Money. Of France.
	r.d.sk.	fr. c.
DUTIES PAYABLE TO THE CROWN.		
Every vessel in ballast or laden, pays on arriving and departing,		
Tonnage Duties.		
For Swedish and privileged vessels, 4 skillings banco per last.—*Vide* Table No. VI.	0 51,3	0 22
Vessels not privileged pay treble of the duty above mentioned, viz. per last.	0 16	0 66
Vessels entering voluntarily, or on account of stress of weather, and which do not lade or unlade, are exempt from this duty which is paid to the crown, but they pay pilotage and light duty, as well as other duties due to the town or other authorities.		
Certificate of Draught of Water of the Vessel.		
For each document	0 24	1 0
Duty of Expedition.		
Foreign decked vessels pay for this duty from 1 r.d. 16 sk. (2 fr. 66 c.) to and including 7 r.d. 24 sk. (15 fr.) per last; viz.,		
Vessels under 4 unto and including 5 lasts	1 16	2 66
—— above 5 do. 10 do.	2 0	4 0
—— do. 10 do. 15 do.	3 0	6 0
—— do. 15 do. 30 do.	4 0	8 0
—— do. 30 do. 50 do.	4 32	9 32
—— do. 50 do. 100 do.	5 16	10 66
—— do. 100 do. 150 do.	6 0	12 0
—— do. 150 do. 200 do.	6 32	13 32
—— do. 200	7 24	15 0
This duty augments by one-half of the sum being added to the whole, for Stockholm and Gothenburg.		
Vessels in ballast, and vessels whose cargo does not exceed 4 lasts, or even vessels in harbour, which neither load nor unload, pay but one-third of the duty.		
DUTIES PAYABLE TO THE TOWN.		
Anchorage Duty.		
Swedish and privileged vessels pay per last, on arriving and on departing	0 8	0 33
Non-privileged vessels pay, per last, on entering	0 16	0 66
And on departing	0 8	0 33
Tonnage Duty,		
Called also wharfage duty, port duty, and signal duty, is paid by the privileged lighter or praam-built vessels, per last, on departing	0 41,2	0 18
By the privileged vessels, with side-planks, per last, on departing	0 3	0 12
By every non-privileged vessel, per last, on departing	0 8	0 33
Cuddy Duty.		
Privileged vessels pay on departing, per last	0 0½	0 2
Non-privileged ditto, per last	0 1	0 4
Duty for Discharging of Ballast by means of a Lighter.		
This duty is paid according to where the vessel is situated in the river. At a point called Pierre Rouge, outside of the suburb of Klippa, it is divided into three stations, all vessels pay at the 1st station, per last	0 22,12	0 92
Ditto, at the 2d	0 27	1 12
Ditto, at the 3d	0 33,34	1 39

(*continued*)

DESCRIPTION.	Money. Of the Country.	Money. Of France.
	r.d. sh.	fr. c.
But when the ballast is discharged at the ballast-quay, and without a shallop, a vessel pays from	2 0	4 0
To	4 0	8 0
Duty to the Commander of the Fort Ny Elfsborg.		
Every vessel pays on entering and on departing, per last	0 1	0 4
Port-Guard Duty.		
Swedish vessels pay, per last, on entering	0 0½	0 2
All foreign, ditto, ditto	0 1	0 4
Port Regulations.		
Every vessel pays this duty	0 8	0 33
Certificate of Weight for Iron, Copper, &c.		
This duty is imposed per skeppund, which weight, for metals, is equivalent to 135 kil. 5 hect., and for merchandize, to 191 kil. 465 gram., it is paid for up to and including 300 skep., or 40,650 kil.	1 0	2 0
And for every weight of 100 skep., or 19,146 kil., and above	0 16	0 66
All merchandize, such as alum, which pays the custom-duty, by the weight, pay a duty for every species of merchandize, of	0 16	0 66
Gauge Duty.		
Swedish and privileged vessels, per last	0 3	0 12
Non-privileged ditto	0 4	0 16
All vessels pay for the boat of the gauger	1 0	2 0
And the registering of the gauging at the custom-house	1 0	2 0
The certificate of gauging is paid by the privileged vessels	2 12	4 50
And by non-privileged ditto	2 24	5 0
Stamped Paper for Gauging Certificate.		
This paper is paid for by Swedish and privileged vessels	0 24	1 0
And by non-privileged ditto	1 0	2 0
Foreign vessels must be gauged every year, but Swedish and Norwegian vessels once every 10 years.		
Muster Duty.		
At the sailor's office, privileged vessels pay per last	0 2	0 8
And non-privileged, ditto	0 3	0 12
To the poor, by the captain	1 0	2 0
Ditto by every master, steersman, gunner, and carpenter	0 24	1 0
Ditto by every sailor and novice	0 12	0 50
Ditto by every cook and cabin-boy	0 8	0 33
To the secretary of the magistrate for the master of the crew.		
By privileged vessels	1 12	2 50
N. B. If the crew, including the captain exceed 11 men, upon the whole is added, for the muster duty	1 0	2 0
And if it exceeds 17 men, the duty is besides the above	2 0	4 0
Stamped Paper for Muster of Crew.		
Privileged vessels pay it	0 16	0 66
Non-privileged ditto	0 32	1 32
Stamped Paper for Certificate of Custom-house.		
Specification of cargo.		
Privileged vessels pay it	0 16	0 66
Non-privileged vessels	0 32	1 32
Seal to the said Certificate.		
Is paid to the town besides the above-mentioned duties from	0 24	1 0
To	2 32	5 32
Certificate of Measure.		
This document is necessary for the merchandize which is measured, as grain, salt, &c., and is paid separately by every exporter	0 32	1 32
Broker's Tax.		
Tonnage upon vessels,		
From 1 last unto, and including 30 lasts { Swedish ves. / Foreign do.	4 0 / 10 0	2 0 / 20 0
Ditto 31 ditto, 50 ditto { Swedish do. / Foreign do.	5 16 / 13 16	10 66 / 26 66
Ditto 51 ditto, 70 ditto { Swedish do. / Foreign do.	6 32 / 16 32	13 32 / 33 32
Ditto 71 ditto, 100 ditto { Swedish do. / Foreign do.	8 16 / 20 0	16 66 / 40 0
Ditto 101 ditto, 150 ditto { Swedish do. / Foreign do.	10 0 / 23 16	20 0 / 46 66
Ditto 151 ditto, 200 ditto { Swedish do. / Foreign do.	11 32 / 26 32	23 32 / 53 32
Ditto 201 ditto, 250 ditto { Swedish do. / Foreign do.	13 16 / 30 0	26 66 / 60 0
Ditto 251 ditto, 300 ditto { Swedish do. / Foreign do.	15 0 / 33 16	30 0 / 66 66
Ditto 301 ditto, & above { Swedish do. / Foreign do.	16 32 / 33 16	33 32 / 66 66
At the office of Klippa, a place at the entrance of the river, where the verification of the papers of vessels and their cargo is made.		
Tonnage upon Vessels.		
From 1 last, unto and including 20 lasts { Swedish ves. / Foreign do.	1 0 / 2 0	2 0 / 4 0
Ditto 21 ditto, 30 ditto { Swedish do. / Foreign do.	1 16 / 2 32	2 66 / 5 32
Ditto 31 ditto, 50 ditto { Swedish do. / Foreign do.	1 32 / 3 16	3 32 / 6 66
Ditto 51 ditto, 70 ditto { Swedish do. / Foreign do.	2 0 / 8 0	4 0 / 16 0
Ditto 71 ditto, 100 ditto { Swedish do. / Foreign do.	2 24 / 5 0	5 0 / 10 0
Ditto 101 ditto, & above { Swedish do. / Foreign do.	3 0 / 6 0	6 0 / 12 0
This last tax, although imposed by the brokers, is not for them, but they transmit it to the custom-officers of the government at Klippa.		
To procure freights and to prepare charter-party of a vessel, the broker exact from the proprietors of the vessel, per last	0 8	0 33
Custom-house Guard, placed on board the Vessels.		
For every hour exceeding the time fixed for the lading and unlading of the vessel	0 8	0 33
Custom-guard, for merchandize in magazine, per day	1 0	2 0
Packing of Freight.		
For this ½ per cent of the amount of the freight, is paid.		
Augmentation of the Custom Duties which have reference to merchandize imported by non-privileged vessels.		
These merchandize pay 40 per cent more than is marked down in the tariff of the custom-houses. These vessels pay also 40 per cent more than privileged vessels, for convoy duty, and for the duties due to the town.		
Augmentation of custom-duties upon merchandize exported in non-privileged vessels; which merchandize pay 50 per cent more than is marked down in the tariff of the custom-houses.		

GOTHENBURG is situated in the Cattegate, nearly opposite to Skaw, at the mouth of the Gotha, and in 57 deg. 42 min. N. latitude. Population formerly said to have exceeded 95,000. It decreased to less than 25,000. Since 1830, the population has so far increased as to be now estimated at nearly 30,000. It is the second trading town in Sweden.

In winter, vessels must take pilots on board.

Large vessels cannot come up to the city of Gothenburg, but are obliged to remain at a small distance from thence in the roads, whence the goods are conveyed to the warehouses, by means of canals. In this town are manufactories of cloth, and other woollen articles, particularly of the coarser kind. Three or four cotton mills, linen and canvass fabrics, &c.

There is an Exchange, East India house, docks for ship building, &c.

As far back as 1798, there arrived 652 foreign and 688 Swedish ships, &c.

The following goods were exported from Gothenburg to foreign places in the year 1804.

77,303 shippounds, iron.
7,401 ,, fine forged work.
2,813 ,, steel.
28,114 dozen boards or deals.
79,512 barrels salt herrings.
28,589 lispounds mountain moss.
1,266 barrels smoked herrings.
556 barrels of cod.
12,378 ells Swedish linen.
10,662 ,, sail duck.
2,679 barrels tar.
730 ,, pitch.
Window glass for 13,263 rix-dollars.

There were imported into Gothenburg, in the year 1804, 55,503¼ tons, or barrels of salt, being 29,000 less than in 1803. 148,494 tons, or barrels of grain, or 54,200 less than in 1803.

Of East India articles in that year there were exported only to the value of 4964 rix-dollars: of fish oil scarcely any. To inland parts there were exported 26,304 barrels of herrings.

EXPORTATION of the principal Articles from Gothenburg in the following Years.

Return for 1842, of British ships arrived from Great Britain, there were in ballast 2, from Hamburg in ballast 5, from Altona in ballast 1, from Wiburg in ballast 1, from Riga in ballast 1. Total 10. Of the 27 British vessels there arrived from Great Britain in ballast 26, with wine and hops 1.

Of British vessels departed for Great Britain there were with oats 8, wood 2. Total 10. 21 of these vessels departed for Great Britain with lobsters, 3 with oats. Total 27.

* The 10 British vessels arrived from Great Britain with coals, and departed in ballast for the Baltic.

† The 1 vessel arrived with coals from Great Britain, and departed in ballast for St. Petersburg.

CHAPTER VIII.

NORWAY.

NATURAL RESOURCES OF NORWAY.

Norway has nearly the same natural advantages as Sweden; the forests perhaps yield, from the country being much more mountainous, more durable timber; the soil is richer, but less of it, in proportion to the surface, is arable; the climate, from being washed by the Atlantic, is much milder, and the harbours are but little obstructed with ice.

The breeding of horses, sheep, goats, and reindeer, and cultivating small spots, yielding tolerable crops, are, with the timber-trees, minerals, fisheries, seaports, and a favourable position for commerce, the natural resources and advantages which Norway affords to its inhabitants.

Norway is remarkably picturesque and romantic in scenery; perhaps no country is more diversified with rocks, dark green forests, torrents, waterfalls, lakes, fiords, or lochs, cliffs, bays, and islands; nor anywhere are wild-fowl and good fishing more abundant. Bears, wolves, foxes, wild cats, beavers, and otters, are also met with in the forests.

The seaports, or at least harbours, are almost innumerable. The principal are Bergen, Trondheim, Christiana, Hammerfest, and Ward 'Oehms.

Agriculture and pasturage, especially the latter, are followed by about three-fifths of the inhabitants, yet there does not appear to be more than one acre in twenty under cultivation or pasturage; rocks, woods, mountains, heaths, and morasses, occupying the remainder. The lands are generally cultivated by the proprietors, or *udalmen*, who hold their lands under no feudal tenure whatever, and are subject to neither suits, service, fines, escheats, nor forfeitures. The eldest son does not succeed: all the children are *odelsbaarn*, and succeed as such to a certain interest in it, by the *odelsbaarn-ret*. If the Udalman sells his land, the next of kin, one after another, may redeem it, by paying, within five years, the money which it was sold for.

Farms generally, according to Mr. Laing, comprise three divisions; the enclosed or infield, for the grain, potato, and best grasses; the pasturage *mark*, or outfield, and the detached *seater* pasture-land, which appertains to the farms; but which is sometimes thirty or to forty miles distant; on the latter *chalets* are erected much in the Swiss manner, and the cattle are pastured on the *seater* for three or four months in summer. A farm of average

size comprises about 290 acres, exclusive of the *seater*. About 148 acres of which are enclosed as infield, and one-third may be said to yield corn and potatoes, the remainder being under grass. The outfield is usually but in part cleared of wood, fenced off, and ploughed only in plots. The housemen or cotters, paying from three to four specie dollars each of rent, and working for about eight skillings (threepence) a day and their food, have their houses and spots of land in the outfield. On such a farm, there are about twenty cows, seven horses, and twenty to forty sheep and goats. The cattle are well sheltered in winter, the cow-houses are floored with wood, and even lighted by glass windows: the cows were attended to by women. The rent value was stated at 200 specie dollars a year; the taxes comprising tithe, poor-rate, and other direct assessments, but exclusive of the excise, amounted to about thirty-six rix specie dollars. The value of ordinary estates varies from 2500 to 4500 specie dollars, or 565*l.* to 1065*l.* sterling. The dwelling-houses of all classes are generally built of wood, comfortable, and well adapted to the climate.

There are in most of the inhabited districts public granaries, in which the farmers may deposit their surplus corn. In case of need they are also supplied with a loan of grain. Those who deposit grain receive 12½ per cent of increase over the quantity of corn deposited for a twelvemonth, on the corn being redelivered. Those who borrow are made to replace the quantities lent, with the 25 per cent in addition at the end of the year.

QUANTITIES of Seed-corn used, Produce of Corn, and the Number of Stock of various kinds, in each Country or District of Norway.

In some parts of Norway, the inner rind of the fir-tree is kiln-dried and ground, mixed with meal, and made into bread.

The horned cattle of Norway are small. The cows yield rich milk, which constitutes, with its butter and cheese, much of the food of the people.

Goats are bred in considerable numbers, and are said to be more numerous than sheep. Hogs are not generally reared. The horses are of an inferior breed, but hardy.

GOVERNMENT.—The constitution of Norway combines the principles of monarchy and democracy. Nobility was abolished in 1821, and the legislative body or Diet, called the *Storthing*, consists of two houses: the *Laything* and *Odelsthing*, or upper and lower houses.

The Council of State forms the ministry of the kingdom of Norway. The Secretaries of State are not members. A Minister of State and two Counsellors of State, who change alternately every year, reside at the Royal Court at Stockholm: the others compose the Regency at Christiana. Although the King of Sweden is King of Norway, the latter is perfectly independent of the former.

The Council of State at Stockholm consists of a Minister of State, two Counsellors of State, and a Secretary of State.

The Council of State at Christiana consists of the Governor-general of the kingdom: the head of the departments of Finance, Commerce, and Customs; the head of the department of Religion; the head of the departments of the Navy and the Army: the head of the department of Justice and Police; and the head of the department de la Revision.

POPULATION of each County or District of Norway, in the Years 1825 and 1835.

CHAPTER IX.

COMMERCIAL LEGISLATION AND CUSTOMS TARIFF OF NORWAY.

The fiscal and commercial legislation of Norway has been maintained on fallacious principles which owe their origin, in a great part, to the special privileges formerly granted to traders in the towns of Bergen and Trondheim, which once belonged to the Hanseatic league. Those privileges were afterwards obtained by traders in Christiania and some other towns; and the merchants and shopkeepers all over Norway are obliged to be licensed burgesses of Bergen, or of other privileged towns. These monopolists pay a tax to these towns, by which means each trader, or shopkeeper, secures within the circle attached to his shop, or trading-place, the sole right of buying or selling.

Another cause of unsound commercial and fiscal legislation, arose not so much for protection to home-made manufactures, for these, except the coarse articles worn in the farmers' houses, but from the fallacious idea that the best way to raise the revenue and relieve the landowner was to levy high duties on all goods imported into the country, and upon timber, and some other articles when exported.

The rates of duty in the several tariffs passed during the sittings of the Storthing; which both in the *Laything and Odelsthing* consists chiefly of the owners of the soil, have always been disproportionately high.

The members of the Storthing are not, however, more in error than the members of other legislative assemblages; for they quote in defence of their tariff those of England, France, and America. The tariff lately passed by the Storthing of 1842, will remain in force for two years from the 1st of January, 1843. By this tariff the following articles of British manufactures have been all subjected to greatly increased, and on many to prohibited duties: viz.—

Bobinets, lenoes, gauzes, &c., calicoes unbleached, to above 25 per cent; cotton braces to above 75 per cent; braziers' and coppersmiths' wares of all descriptions to 150 per cent; hardware, Birmingham and Sheffield wares of all descriptions from 20 to 100 per cent; iron wares, of all kinds unpolished to from 100 to 125 per cent; iron wares of every description polished or cast 150 to 300 per cent; pewter and Britannia metal wares of all descriptions to various and much higher duties than formerly; woollen manufactures of all descriptions to above 25 per cent; writing-paper to above 50 per cent; paper-hangings to above 60 per cent; buttons, horn and bone, to above 100 per cent; needles to above 25 per cent; teas black and green to above 45 per cent; all articles manufactured, to various higher duties than those of any previous tariff; china wares, various higher duties; rum and spirits of all kinds to above 25 per cent.

Among those, which chiefly affect British manufactures, on which the duties have been so much enhanced as to amount in most cases to a prohibition, with a table of the old and new duty, showing the relative increase, are the following.

LIST OF ARTICLES.	Per Centage which the duty bears to the Invoice Value.	Old Duty in Norway Currency.	New Duty in Norway Currency.
	per cent.		spd. sk.
Robinets, laces, gauzes, &c. ..... per lb.	....	0 40	1 0

Ditto		ditto	do.	12	0 14 0	1 2 0

The foregoing is a list of British manufactures most saleable in Norway, showing the relative proportion which the present duties bear to the cost price of the article in England.

The light dues have at the same time been increased 15 per cent, and the tonnage dues 17 per cent.

GENERAL NORWEGIAN TARIFF OF IMPORT DUTIES.

ARTICLES.	Import Duty.

Bones, of animals	free	
Bone, coal (ivory black) .....lb.	0	1
Bonemeal, or powder..... do.	0	1-20
Bone (whale) split .....do.	0	6
Books, printed, bound, or unbound.....	free	
—— account-books .....lb.	0	9
—— pocket, of leather.....do.	0	48
Borax.....do.	0	3
Bouillon cakes .....do.	0	18
Boxes, not otherwise enumerated	25 per cent	
Boxwood	free	
Box, work-boxes, ladies' etuis, &c.....lb.	0	72
Braces, of all sorts .....do.	0	52
Brandy, of corn, and all other sorts whatever, pure or mixed, without reference to strength .....qt.	0	18
Brass, bronzed, gilt, varnished or plated buttons, as polished brasswork.		
—— other work, as plated coppersmiths' work, manufactures, combined with zinc or tin, pay duty as if brass alone.		
Brass or brasswork unwrought, or old and only fit for resmelting .....lb.	0	1
—— plates and wire (not plated) .....do.	0	4
—— plated or gilt, as plated copper plates.		
—— netting .....do.	0	10
—— manufactures:		
—— bells, bearers, and other parts of machinery, door plates, kettles and pans, cocks, hinges, mortars, Jews' harps, swivels for furniture, nails, cast whole as well as with iron handles &c. ....lb.	0	8
Brass polished, as thimbles and sewing rings, buttons, with or without stones, snuffers, candlesticks, trays, knobs with screw, hooks with screw, rings with screw, &c. &c. .....do.	0	12
Bread, of wheat, or mixed with other grain, either hard or soft.....do.	0	1½
—— rye or other sorts .....do.	0	0½
Bricks, common, as well as double, fireproof bricks, clinkers, &c. 1000	1	24
Bristles.....lb.	0	3
Brooms of birch.....do.	0	3
Bronze powder. .....do.	1	0
—— work.—See Brasswork.		
Brushes or brushmakers' work, set in unpolished or painted wood or iron ....lb.	0	9
—— polished or lackered wood .....do.	0	30
—— in bone, horn, or other material, excepting fine pencils or paint brushes ..do.	0	60
—— pencils or paint brushes, set in quills, &c. .....do.	1	96
Butter .....do.	0	2½
Buttons of horn, bone, cocus, or wood ....do.	0	9
—— glass .....do.	0	2
—— iron or steel, all kinds .....do.	0	3
—— covered with silk thread, cotton, wool, or camel's hair as fringework.		
Cacao .....do.	0	3
Canes, rushes, bamboos .....do.	0	0½
—— cleaned .....do.	0	3
—— twisted or plaited work .....do.	0	32
Camphor .....do.	0	8
Candles, stearine, not tallow, wax, and spermaceti, and other kinds .....do.	0	8
Canary-seed .....do.	0	2
Capers, in casks .....do.	0	10
—— in glass .....do.	0	28
Cards, playing, prohibited.		
Cardamoms .....do.	0	20
Caraway-seed .....do.	0	1
Carriages and wheelwrights' work:		
—— children's carriages ..... each	0	90
—— working cart of four wheels	3	0
—— ditto of two wheels	1	60
—— other carriages four-wheeled.		
—— carriage or landau	50	0
—— basket and other seat carriages, with caleche .....each	15	0
—— without caleche .....do.	10	0
—— four-wheeled		
—— others with caleche, and either loose or fast front .....do.	30	0
—— without caleche .....do.	20	0
—— two-wheeled of all kinds.....do.	8	0
—— sledge carriages .....do.	15	1
—— sledges.....do.	2	60
—— other wheelwrights' carriage work....do.	25	0
Castor .....lb.	0	60
Catechu.....do.	0	0½
Cattle, horned, large and small, alive ....each	2	0

Timber and wood of all kinds, when a full treelast is exported:		
—— in pieces over 20 inches in length, per treelast	0	72
—— in smaller pieces	0	36
If it is exported in open boats, the duty on each last is to be doubled.		

ARTICLES.	Rate of Duty. spd.	sk.
Timber and Wood, when the amount shipped in a decked vessel does not in the whole make a treelast, then ..cubic foot	0	0⅔
If the cargo taken in the whole does not amount to ¼ of the ship's tonnage, the duty is to be levied on the quantity taken in; the same is to be the case if the quantity taken in does not exceed 5 treelasts, even should that amount to ¼ or more of the ship's tonnage.		
In all other cases the duty on the wood is to be levied on the full tonnage of the vessel, making however an allowance for the space any other goods shipped at the same time may occupy. For a less space or any unoccupied room in the hold of the vessel no allowance is to be made; the duty to be paid will be on the whole ship's tonnage. Wood or timber taken on the deck of the vessel is only to be rated when the quantity in the hold or under the deck, does not amount to ¼ or more of the vessel register tonnage.		
In the event of other wood or timber being shipped on board at the same time, subject to higher duty, then the duty on the whole will be calculated according to the highest rate, except the quantity on board is intended, and is only sufficient for the vessel's own use.		
Goods intended for exportation, and not enumerated in this tariff, are not to be subject to duty.

DECREE FOR LEVYING THE CUSTOMS DUTY IN NORWAY.

I. From the 1st January, 1843, to the 1st January, 1845.

The following duties on goods and vessels shall be paid to the Treasury:—Import duties, bonding duties, export duties, tonnage dues, light dues, duties on foreig vessels that have become Norwegian property.

On the other hand, during the same period shall be taken off:—

1. Those dues which have hitherto been paid to the treasury by all vessels coming from abroad, and not subject to quarantine for their clean bill of health (Sundhead's pass),

in conformity with the regulations of the 26th June, 1813, and law of the 26th October, 1815, and the regulations of the 16th July, 1816.

2. The following special dues on vessels hitherto paid to the treasury: viz.—

Ring Money in Bergen, in conformity with a royal resolution of 9th April, 1697.

Ring Money in Drontheim, Christiansund, and Moulde, in conformity with the royal resolutions of 17th May, 1772, 15th February, 1792, and the 16th May, 1806.

Custom-house harbour dues in Bergen, in conformity with the royal resolution of the 17th April, 1810.

Ballast money in Drammen, in conformity with the royal resolutions of the 13th April, 1740, and 5th June, 1809.

And the surveying duty on goods imported into Tromso, in conformity with the royal resolution of the 4th January 1804.

II. The import duties are calculated according to the tariff to be paid on all foreign goods entered for consumption, without reference to whether imported for public or for private account. The following only are exempt:

All goods on which an exemption from duty has been or may hereafter be specially obtained, either with reference to raw materials or other articles for use in the erection of manufactories, &c.

Ships' inventories, such as anchors, chains, sails, cordage, &c., which Norwegian vessels may be furnished with abroad, so far as the said inventory is used by the same vessel in which it is brought from abroad. Similar articles of inventory taken out in bond and exported, but used by the same vessel, before her return to the country, will likewise be exempt from duty.

Ships' provisions and other necessaries which vessels may bring from abroad, and which remain on board the vessel, but not more than the custom-house inspectors may deem needful with reference to the size of the vessel, number of crew, and length of voyage and time the vessel may be detained at the port of discharge.

Wearing apparel belonging to travellers, in as far as the quantity and nature may not be more, or other, than the custom-house officers consider necessary for their use.

Mechanics' tools, travelling equipages, either for driving or riding, instruments, furniture, bedding, and bedclothes, and other household goods and chattels, when these are clearly proved to have been used abroad by any person who now intends to settle in the country and to apply them to his own, and the same use again.

Bottles and glass (with the exception of common bottles), casks, jars, bags, mats, &c., which contain goods, and which are clearly and solely used for the package or emballage.

III. With the exception of those instances in which the tariff specially provides that the import dues shall be levied on the goods and their emballage without any deduction or allowance for the latter, in that case the importer is to have the liberty to separate his goods from the packages; without such a separation no allowance can be made for emballage or package excepting. When any fixed allowance is specially provided for in the shape of tare, by the tariff; likewise when no tare for the goods or emballage is fixed by the tariff, and it is impossible to ascertain what amount it really is, inasmuch as the goods cannot be unpacked, the customary tare allowed in trade may be taken as a guide.

When the custom-house officers find a number of bales in which the packages appear to be the same nature and quality. They may take away any package as a guide to calculate the tare on the whole.

For casks with fluids which pay duty according to weight, when there is an ullage double tare may be allowed if it is half, and 1½ allowance for tare, if only a quarter ullage.

For accidental dampness, or moisture which the goods may have absorbed, no allowance will be made.

When the custom-house deem it necessary to unpack the goods for inspection, the net weight is to be taken and no allowance is then made for tare.

IV. A binding duty of 1 per cent monthly is to be paid on goods which are landed in the custom-house warehouses, when they lay for 1 calendar month or more from the day they were landed in the warehouse, on the amount of the import duties according to the nature of the goods and the amount of the duty, but only 3 quarters of a shilling monthly for every cubic foot of goods which are exempt from duty, or on packages, of which the contents are not declared.

For a less period no bonding dues are to be paid.

In calculating the dues, a period of 15 days or less above the 1st month, are not to be paid for, but 16 days or above will be considered as 1 month. Therefore, if the goods remain for 1 month and 15 days, the duty is only calculated for 1 month, but if for 1 month and 16 days, then for 2 months and so on.

If the goods remain above 3 months, the dues are doubled for the remaining term.

V. The duties on exportation of home produce, as well as such Swedish produce, as in conformity with existing regulations, and with the reciprocal trade, between Norway and Sweden, and are admitted into the country, duties are to be levied according to the rates fixed by the tariff B. without reference to whether that exportation takes place for private, or for public account.

Ships' provisions and other necessaries for ships which are taken out by them are exempt from the export duty, but not in greater quantities than the custom-house officers may deem requisite, taking into consideration always the length of voyage, number of crew, &c.

VI. Goods found at sea, or picked up along the coast in the Polar Regions, and from thence imported in Norwegian bottoms, are to be considered, either on importation, or exportation, as internal produce.

VII. The tonnage and light dues are to be levied according to the annexed tariff C. and D., on vessels either entering or leaving the country with goods, the following regulations are to be observed.

The dues are to be levied when the vessel enters for unloading, or on loading and clearing outwards, so that they have to pay, both on entering and clearing, either for loading or unloading.

In case of vessels loading or unloading, one quarter the amount of the vessel's tonnage or more, they are to pay the full tonnage dues, according to full register tonnage; if less, only such an amount of tonnage dues are to be paid, as the vessel may have unloaded or taken goods on board.

If the amount of goods landed or taken on board do not exceed a ton, no tonnage or light dues are to be levied. Vessels which, on the same voyage, load or unload in more than one Norwegian port, pay the duties at each custom-house according to the number of tons they have loaded or unloaded, provided the total amount loaded or unloaded does not amount to one quarter of the ship's tonnage; on the other hand, the dues on the whole register tonnage is to be paid at that custom-house where the goods loaded or unloaded, including any that may have been previously landed or taken on board, amount to one quarter or more of the ship's tonnage, deducting at the same time any proportion of these dues that may have been levied, during the same voyage, at any of the other custom-houses.

When a vessel clearing outwards on the same voyage, takes part of the goods she had previously landed, or that had been laid up on transit, the dues are only to be levied in proportion to the amount of the goods that have remained in the country.

The proportion of room in vessels clearing outwards, filled either with ice or common stone, or on entering inwards, with hay or straw, is not to be charged with the dues, or be considered as forming part of the ship's tonnage.

Vessels proceeding on the fishery, or to the banks, at sea, or to uninhabited districts in the polar regions, are to be considered with reference to the dues, as proceeding on a coasting voyage.

VIII. The above dues, as specified in the several divisions of the annexed tariff, are fixed for Norwegian vessels, and in conformity with the law of the 4th of August, 1827, for Swedish vessels, and for all goods imported or exported in Swedish or Norwegian bottoms.

With respect to the ships of all other nations, and the goods that may be imported or exported in them, the special orders communicated to the several custom-houses, pointing out those nations which are entitled, with regard to the customs, to the same privileges as national vessels, as well as those which are to pay higher duties, and ships' dues, are in such cases to be followed.

IX. Such vessels as are not built in the United Kingdom, but obtained by Norwegian subjects, and employed by them as Norwegian vessels, are once for all to pay a duty of 8 skillings for every commercial last.

From these dues are exempt steamboats, as well as those vessels which may once have paid that due; although they may have in the mean time again become foreign property.

X. With respect to the dues to be levied as above, in East and West Finmarken, as well as in the trade between Sweden and Norway, the special rescripts now in force are still to be followed.

XI. Import duty, bonding duty, and naturalization dues, of foreign ships, when once paid, cannot be reclaimed or returned. On the other hand, the export duty, tonnage and light dues, may be reclaimed and received back, when the intended voyage has not been completed and the goods are again landed in the kingdom.

We hereby command that the foregoing tariff and laws of the *storthing* shall be put in force from the Stockholm Palace, the 23d of September, 1843.

(Signed) CARL JOHN.

CHAPTER X.

NAVIGATION AND TRADE OF NORWAY.

THE navigation and trade of Norway is described by historians as having greatly flourished in the twelfth century, when its towns joined the Hanseatic league. According to Rymer's "Foedra," the first treaty of Amity and Trade made by England with a foreign power, was in 1217, with Haguin King of Norway, in which it was stipulated "that both countries be free for merchants and others on both sides;" and we find in Dumont's "Collection," that, by a treaty of amity and commerce between Henry III. of England and Magnus King of Norway, agreed to in 1269, it was provided "that the merchants of either kingdom might freely resort to each kingdom, to buy and sell their merchandize, but not to carry away their goods till they were paid for: that those who should happen to be shipwrecked might freely save and carry away all that belonged to them out of such wreck, and should be assisted therein by the magistrates and officers of the respective kingdoms." We have few wiser provisions in any modern treaty.

In 1280 the Hanse Towns, in order to force the continuance of their privileges in the ports of Norway, blockaded them: on which the Norwegians, who were accustomed to exchange their dry fish for the corn and ale of other countries, compelled their king to re-establish, through the mediation of the King of Sweden, the ancient privileges of the Hanse Towns. It is stated that there was about this period a considerable trade carried on between England and Norway.

The trade of Norway has always consisted chiefly in the interchange of the wood of her forests and the produce of her copper and iron mines and of her fisheries, for the articles required by her from foreign countries. An account of her exports of timber, fish, iron, and copper, will be found detailed hereafter. Of her direct trade with foreign countries, and with England, we have no tabular accounts to be depended upon except for recent years.

STATEMENT of the Amount of Goods imported into Norway for the Seven Years, ending the 31st of December, 1841.

Weights and measures which occur in the annexed tables, are—
lb.—Norwegian pound, which for all practical purposes may be taken as 12 per cent heavier than the avoirdupois.
Skpd.—A skippound is 320 Norwegian pounds, or 358 pounds English.
Quart is equal to one quart imperial measure.
Barrel, liquid measure is 120 quarts.
Ditto dry measure, is 144 quarts.

The Norwegian mercantile navy, in 1838, consisted of 2427 vessels, great and small, of a total burden of 212,242 tons, and navigated by 12,935 men and boys.

CHAPTER XI.

TRADE OF THE NORWEGIAN SEAPORTS.

CHRISTIANIA, now the capital of Norway, is a deep seaport; there being six to seven fathoms depth of water close to the quay. Population said to be at the present time about 24,000. It has some trifling fabrics of woollens, glass, hardwares, soap, leather, cordage, tobacco, &c. The deals of this port have always been celebrated. As far back as 1792, when its population amounted only to about 10,000, the number of ships arrived was 521; departures, chiefly with deals, 518.

The following tables will serve to illustrate the present state of the Navigation and Trade of Christiania, and the dependant outports, for the year 1812.

(*continued*)

* The one British vessel arrived in ballast, and departed with wood, value 203*l*. Of the arrivals, the majority, as respects Norwegians, the vessels were in ballast; some were loaded with salt, coals, wine, and spirits; others imported more or less of colonial produce and manufactures. The Danes and Swedes imported corn and provisions.

Of the departures, the Norwegian were almost, without exception, loaded with wood. The Danes and Swedes returned in ballast, or took home deals, iron, or fish. Of the vessels under other flags, most arrived in ballast, and departed with wood. This remark applies equally to the other ports in this consulate, with the addition, that on the western coast, the exports consist, in part, of fish, train oil, and lobsters.

* The 4 British vessels arrived from Great Britain, 3 in ballast, and 1 with coals, and returned to Great Britain, 3 with lobsters, and 1 in ballast to Elsinore.

† The 1 British vessel arrived from Great Britain in ballast, and returned to Great Britain with horses.

‡ The 13 British vessels arrived from Great Britain, 2 with coals, and 11 in ballast, and returned to Great Britain, 11 with lobsters, 1 salmon and iron, and 1 in ballast.

BERGEN was at an early period amongst the first towns of the Hanseatic league; in the years 1767 and 1768, both inclusive, its exports were 2,758,944 rix-dollars; it increased to 3,939,385 rix-dollars in 1787 and 1788. In 1792 this port owned 113 ships; its exportation consisted then, as it does still, of fish, wood, and some oil. Its imports were then a few luxuries, and some of the necessaries of life. The harbour is safe and deep close to the town, but a pilot is necessary for vessels entering or departing, on account of the numerous rocks. Besides a college and other schools, it has a good naval academy. It has a few manufactories of tobacco and earthenware, several ropeworks and distilleries, ship-building yards, and the works of smiths and other ordinary handicrafts. The fisheries are its principal resource, and fleets of small vessels sail and return periodically to and from the northern coasts, for fish, skins, feathers, &c. Hamburg is one of the principal foreign ports with which the vessels of Bergen trade, and from whence the merchants, several of whom are said to be wealthy, import woven and other manufactured goods, sugar, coffee, spices, tobacco, &c.

A division of the treasury, and the bank of Norway are established at Bergen.

DRONTHEIM is the next place in importance to Bergen. As far back as 1758 its exports amounted to 266,557 rix-dollars, and its imports 264,697 rix-dollars. The number of ships which arrived in 1792 were 149, and 137 sailed. In 1793, 39 vessels belonged to this port. Its exports have always been principally wood and some fish. The trade of this port is carried on much in the same articles and in the same way as at Bergen.

The following tables will serve, as far as the returns we possess enable us, to show the present state of the trade and navigation of Bergen and its outports.

RETURN of British and Foreign Trade within the Consulate of Bergen, during the Year ending 31st December, 1842.

The British trade in 1841 was carried on with 45 vessels of 3182 tons with 354 men, exclusive of the port of Drontheim, from whence no return of the British trade has been forwarded by the vice-consul; and the trade to and from Great Britain in Norwegian and foreign bottoms with 58 vessels of 10,200 tons, with 409 men. The failure of the lobster fishery, during the season, has occasioned a decrease of the trade as to the number of vessels and tonnage this year, compared to that of 1840, when the number of British vessels entered, amounted to 62 of 4763 tons burden, with 511 men. Of the 4 British vessels, 2 arrived with coals, 1 with assorted goods, and 1 in ballast, 1 sailed with lobsters, 1 with deals, 1 with an assorted cargo, and 1 in ballast.

The British trade has been carried on in the above ports, during the year 1842, by 64 vessels of 5334 tons, with 475 men, and the trade to and from Great Britain in Norwegian and foreign bottoms, by 59 vessels of 7163 tons, with 382 men.

Of the British ships which arrived in 1842, 49 were in ballast, 3 imported iron and iron rails, 7 coals, 1 coals and iron, and 3 manufactured goods. Of the departures, 7 were in ballast, 6 were loaded with herrings, 2 with stockfish, 39 with lobsters, and 2 with wood.

HAMMERFEST, or ALTEN HAMMERFEST.—This is the principal port of Finmark. It is remarkable that the waters along the coast of Finmark are so mild in temperature, that the fishery is carried on in boats during winter, although the sun disappears for so long a period in the latitudes of this country. The following notice of the trade and resources of Hammerfest and Finmark, we have condensed from the consular returns:

"The British trade has been gradually increasing: in 1835 there were only 9 vessels, of 1636 tons; in 1836 they increased to 12, forming a tonnage of 1748 tons; this year the number has increased to 19, and the tonnage has nearly doubled. It is susceptible of still further advantageous increase. The Russian trade has declined for these last two years; but solely owing to the failure of crops in Russia, and to the late pecuniary crisis, which extended its influence even to the traders in the White Sea, by the check it gave to credit. The vessels which departed to the coast of Spitzbergen from Hammerfest were 9 in number, forming a tonnage of 480 tons, employing 80 men; their catch can be estimated at about 3000*l*. There are two similar expeditions from Tromsoe, and two from Wardoë; the particulars, however, have not been received. A portion of the Russian vessels which visit Wardoë and Wadsoë are merely large boats, from 10 to 15 tons burden.

"About 6000 tons of British shipping arrived in Finmark in 1841, exclusive of the vessels which put into ports on their way to and from Archangel.

"In 1842 an increase in the amount of British shipping has taken place, but as the vessels are chiefly employed in the transport of coal, it is problematical whether this can be maintained, as the duty which has in future to be paid on export, is likely to lessen the consumption.

"The consumption and consequent sale of British manufactures, which are almost exclusively imported from Hamburg, by Norwegian, Hamburg, and Bremen vessels, have declined considerably, owing to the almost prohibitory duty which, with few exceptions, is levied on every article of that description.

"About 20,000*l*. worth of cake copper has been exported from Finmark, for British account.

"Four vessels were despatched to Spitzbergen for walruses, which made each an average catch.

"The staple articles of export have been, about 3800 tons of dried stockfish, 12,000 tons of salted fish, 7000 barrels of oil, besides reindeer-skins, buck-skins, walrus-hides, teeth, feathers, and fox and otter skins, &c.

"The salmon-fishery in the district has, during the present season, been more abundant than can be remembered for the last twenty years: about 100 tons of fish, it is estimated, have been taken during the season.

"For several years salmon formed an article of export, but of late years the catch has not exceeded the demand for home consumption. The decrease in this valuable article has been attributed to the swarms of sharks that have of late years retained possession of the banks lying off the coast. This fact was only accidentally discovered last year, by the circumstance of two small vessels being fitted out as an experiment to try the bank fishery for cod, which had not previously been attempted; where, instead of finding the object they were in search of, these voracious animals were met with. This year eight vessels have been fitted out from Hammerfest, expressly for the purpose of shark-fishing; and no less than 20,000 of these animals had been taken, without any apparent diminution in their numbers. The shark oil produced was about 1000 barrels.

"The produce of the fisheries for the last five years, of cod, seth, and halibut, according to the official returns, is about 500,000 tons, and 20,000 barrels of oil, independent of

what is caught by the Russians. A portion of this fish is prepared for the Spanish and Mediterranean markets, but the greater proportion is still for the Russian market.

"The wealth and prosperity of Finmark depends mainly on the fisheries; it is, however, a source of wealth which never fails: for centuries back, not a single example can be given of a total failure.

"This country is in a prosperous state—the revenue exceeds the expenditure by near two millions of dollars. The exchange on foreign countries has been gradually improving, until it has reached par, at which it steadily remains, a proof of the prosperity of the country.

"The British cottons and woollen goods imported into this country, are best adapted for consumption in a country like Norway, and pay a duty of from 50 to upwards of 100 per cent on the cost price. The consequence is, that the consumption of British manufactures has fallen off considerably, while those of Russia have proportionably increased, particularly in Finmark, where Russia linens, ravenduck, and various other articles are admitted duty free. Were cottons and woollens admitted, even at a moderate, instead of the prohibited duty, the trade would soon recover itself, and ultimately supersede the now almost general use of Russian linens.

"The chief proportion of British goods now brought to the country, still go by the way of Hamburg, and are imported either in native, Hamburg, or Bremen vessels."

The Russian trade from the White Sea, and especially along the coasts of Finmark, are both described as of considerable importance. The vessels which leave Finmark annually for Spitzbergen, go in quest of the walruses, seals, and wild fowl, which frequent that dreary coast.

Of the British arrivals 25 imported coals, and 6 imported colonial produce, salt, fire-bricks, &c.

The exports consisted chiefly of eider-down, dried stockfish, clipfish, saltfish, feathers, reindeer-horns, fox-skins, otter-skins, reindeer-skins, goat-skins, copper ore, train-oil, walrus-hides and teeth, and wool.

CHAPTER XII.

TRADE BETWEEN THE UNITED KINGDOM AND THE KINGDOMS OF SWEDEN AND NORWAY.

THE trade between Great Britain and Sweden and Norway was for a long period of considerable value. But the pernicious customs duties on timber in Great Britain, and on manufactured goods, especially in Sweden, have seriously restricted an international trade which would have naturally increased, from the peculiar wants of each country. The timber, minerals, and other products of Sweden and Norway, are such as would at all times find a remunerating sale in the United Kingdom at moderate duties: while of all countries in Europe, Sweden and Norway are the least prepared for a system of commercial restrictions which allow the people only to use at double prices, and in diminished quantities, all the most necessary kinds of manufactured articles. In order to exhibit a view of the commerce of the United Kingdom with Sweden, the former and present state of that trade will appear from the following tables:

1841												
1842												

It will be remarked that of all the countries with which the ships of the United Kingdom trade, the proportion to the number of foreign ships is smaller with Norway and Sweden, than to any other country. The Norwegians are hardy and active seamen; they construct their own ships cheaply, and the fact that British ships are not able to obtain outward freights to Norway, and that the duty on the deals of that country has been, until 1841-2, so much higher than on the deals of Prussia and Russia, will all account for the great number of British ships which are employed in the trade with the two latter countries, and the very small number engaged in the Norwegian trade.

FOREIGN and Colonial Merchandize imported into the United Kingdom from Sweden, during the following Years:

Of the above articles, those which may be in any way considered the products of Sweden, are limited to bark, iron, some of the flax and hempseed, a small portion of the tallow, tar, timber, and deals. The other articles are accidental transhipments of goods, the produce of other foreign countries than Sweden.

FOREIGN and Colonial Merchandize exported from the United Kingdom to Sweden.

Of the articles enumerated in the above table, there are very few either in quantity or value, which are of British colonial origin. A portion of the indigo, most of the pepper and the rum, comprehend nearly, if not all the articles, which were produced in British colonies. The other articles were of foreign growth, and shipped from the British warehouses, after having been first imported into England. This has been the case for many years back, in regard to articles of foreign and colonial origin which have been exported from the United Kingdom to foreign parts; especially since the period when the sugar and coffee imported from British possessions have been insufficient for the consumption of Great Britain and Ireland. The geographical position and the greater depth of water of several British ports, afford far greater advantages than Hamburg, Amsterdam, or even Rotterdam, as commercial *entrepôts* for the deposit of the merchandize of other countries, in order to be either consumed at home, or to be transhipped to other markets. But the facilities of the customs regulations and management are superior at Hamburg, Rotterdam, and Amsterdam.

British and Irish Produce and Manufactures exported from the United Kingdom to Sweden.

The above table shows how very insignificant the value is of the export trade from the United Kingdom to Sweden: as far as a market for British manufactures is in question, Sweden might be blotted out of the map of the world. Cotton twist, an article which is a mere remove from a raw material, constitutes for the above year about 6-10ths of the value of the total exports; while the value of cotton manufactures exported, has dwindled to less than 2000*l.*

British and Irish Produce and Manufactures exported from the United Kingdom to Sweden.

The above table shows the same result as the preceding table. The average annual value of total exports to Sweden was only 111,450*l.* The average annual export of cotton twist was 69,900*l.*; coal, a raw material, about 5000*l.*; machinery and millinery, 2500*l.*; tin unwrought, and other petty wrought goods, 2500*l.*; total about 73,000*l.*, being only 38,450*l.* for completely manufactured goods of all kinds. Chili, a country little heard of, consumes annually nearly two millions value of British manufactures.

STATEMENT of the Quantities of Foreign and Colonial Merchandize imported into the United Kingdom from Sweden, and exported from the United Kingdom to Sweden, in the Years 1841 and 1842.

All other articles .....do.	.....	9,684	.....	10,344
Total declared value.....	.....	197,813	.....	199,313

The above table shows a further increase in the value of cotton twist and other partially manufactured articles. The average of the whole exports for the two years, 198,563*l.*; the average value of cotton twist was 125,843*l.*; coal, tin, machinery, and millwork, 21,200*l.* Total 146,043*l.*; leaving only 52,520*l.* for all other articles.

The above only shows the trade direct from the British custom-houses to Sweden. The smuggling trade is through various channels carried on to a well-known extent, sufficient for the ample wants of the people; and it has been represented to us that the facilities for smuggling along the lengthy coasts of so thinly-settled a country are preferable to paying even a duty of 15 per cent! But advocates of the smuggling trade, however, forget its demoralizing effects.

FOREIGN and Colonial Merchandize imported into the United Kingdom from Norway, during the following Years:

REMARKS on the Trade between the United Kingdom and the kingdoms of Sweden and Norway.

The tables of imports and exports, and the British and Swedish tariffs of customs duties, are sufficient to show the state of navigation and trade between the United Kingdom and Sweden.

TIMBER TRADE OF NORWAY.

THE British timber duties previous to the Tariff of 1842 have been much heavier on the deals of Sweden and Norway, owing to the deals being shorter, than on the longer deals of Prussia and Russia. The recent changes in those duties have been far more favourable than before to the deals of Sweden and Norway, as will appear from the following calculations.

COMPARATIVE Scale of Old and New Duties on Foreign Deals; showing the advantage derived by the Norwegians, under the present amended rates.

DESCRIPTION.	Duty under the old rates.	Cubic Contents for present duty.	From and after Oct. 10, 1842.		Difference of reduction of Duty, if entered according to cubic contract.	Difference of reduction of Duty, if entered for duty by tale.
			Present Duty according to cubic contents, 1*l.* 18*s.* per load of 50 cubic feet.	Present Duty by tale.		
pieces.	£ s. d.	feet. load.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
120 Deals, 12 feet long, 3 in. thick by 9 wide	19 0 0	270 or 5 2.5	10 5 2	11 14 8	8 14 10	7 5 4
120 Ditto, 14 ditto, ditto....	19 0 0	315 „ 6 3-10	11 19 5	14 13 4	7 0 7	4 6 8
120 Ditto, 16 ditto, ditto....	19 0 0	360 „ 7 1-5	13 13 7	17 12 0	5 6 5	1 8 0
120 Ditto, 18 ditto, ditto....	22 0 0	405 „ 8 1-10	15 7 10	17 12 0	6 12 2	4 8 0
120 Ditto, 20 ditto, ditto....	22 0 0	450 „ 9	17 2 0	20 10 8	4 18 0	1 0 4

The bulk of the shipments from Norway consists of 12 feet long, 3 inches thick, by 9 inches wide deals, on which dimension the greatest advantage is reaped.

N.B.—From and after the 10th October, 1843, the rate of duty on foreign deals has undergone a further reduction, from 1*l.* 18*s.* to 1*l.* 12*s.* per load of 50 cubic feet, or nearly *one sixth* of a further *diminution of duty*.

In order to give as impartial a view as we can of the trade between Sweden and Norway, and the United Kingdom, the following extracts are given from Swedish official accounts, drawn up by the Counsellor of State, N. Vogt, and from a statement drawn up by M. Thorn, chief magistrate of Drammen, in Norway.

OFFICIAL Account of the Quantity of Wood of all kinds exported from Sweden, during the following Years:

	Lasts.		Lasts.
1815 to 1819, average exportation	161,000	1834	208,000
1820 to 1824	171,000	1835	226,000
1825 to 1829	191,000	1836	234,000
1830	195,000	1837	232,000
1831	172,000	1838	242,000
1832	181,000	1839	272,000
1833	209,000	1840	266,000

EXPORTS of Timber from Norway. In the year 1797 the exportation from all Norway was,

Destination.	Cargoes.	Lasts.	Destination.	Cargoes.	Lasts.
Batavian republic	156	14,662	Spain	1	72
Different places	15	720	Portugal	2	109
Calais and Dunkirk	16	777	Great Britain	63	2,673
French seaports	55	3,080			
Marseilles	2	248	Total	310	22,341

In consequence of the prohibition to export timber from Russia, at the close of the year 1798, the exportation in 1799 from Norway, was,

Destination.	Cargoes.	Lasts.	Destination.	Cargoes.	Lasts.
Naples	1	84	England	589	46,553
Spain	11	608	Scotland	203	9,104
France	71	3,551	Ireland	172	16,565
Batavian republic	20	2,176			
Ditto	2	127	Total	1169	86,574
Embden, and other ports	100	7,717			

Of this quantity we find no less than 964 cargoes, being 72,222 lasts, or about 144,500 tons, were exported to Great Britain and Ireland, all in British vessels.

EXTRACT of a letter from N. Vogt, Counsellor of State for the department of Finance, Trade, and Customs, at Christiania, to Charles Tottie, his Swedish and Norwegian Majesty's Consul-general, London; dated Christiania, 15th September, 1813.

"I hope very shortly to have ready a statement showing the duty upon goods imported into Norway from England, calculated so as to show the per centage duty upon the value of such goods; and also showing the import duty in England, upon goods of Norwegian production, calculated on a similar principle. I expect that it will thereby be shown that it is our produce which is unreasonably taxed in England, and not English produce in Norway; but whether the one or the other be the result, it is at least in the power of every country to levy taxes according to its own necessities, so long as it does not tax the same description of goods differently, when imported from different countries. This has not been done here, neither will it be; for example, the import duty upon cotton and woollen goods is the same, whether these goods come from England or any other country. It is a well known fact that our commerce has assumed a peculiar feature, so that English goods are imported into Norway, for the most part, from Hamburg and Altona; and why? Because England has taxed the produce of Norway (such as wood) so heavily, that the importation from Norway must be diminished.

"When one talks in England of the trifling importations into Norway of English goods, and means thereby only that which is imported direct, he overlooks the fact that the greater part is imported from Hamburg and Altona, but it is, nevertheless, English manufacture. (?)

"Our exportation of wood has been as follows, in the undermentioned years:

YEARS.	Great Britain and Ireland.	France.	Holland and Belgium.	Germany.	Denmark.	Portugal, Spain, and parts of the Mediterranean.	TOTAL.
	lasts.	lasts.	lasts.	lasts.	lasts.	lasts.	lasts.
1805.....	147,761	5,511					
1815.....	90,000	12,500	34,800	3,000	19,700	3200	172,000
1819.....	69,100	26,100	53,300	4,000	15,400	1700	170,800
1821.....	79,000	37,0 0	50,000	3,500	16,700	400	186,700
1829.....	47,700	49,000	48,700	7,100	24,000	600	177,700
1831.....	51,300	66,400	55,600	8,200	29,900	300	205,600
1838.....	64,160	72,000	68,500	8,500	27,800	600	241,500
1842.....	50,150	80,100	70,000	15,400	40,800	500	256,800

"It will be observed from the above, that our shipment of wood to England has decreased about one-half in a period of from twenty to thirty years, whilst the exportation has, on the whole, increased about 48 per cent.

"That, nevertheless, Norway takes more goods now, from England, than before, the following sketch of our importation will show:

"Of cotton manufactured goods, including unbleached cotton linen, were imported—in the year 1819, 149,000 lbs.; in 1835, 273,000 lbs.; of which 75,000 lbs. direct from England, and 188,000 lbs. from Hamburg and Altona; in the year 1841, 674,000 lbs., of which 296,000 lbs. direct from England, and 349,000 lbs. from Hamburg and Altona; in the year 1842, 880,000 lbs. of which 374,000 lbs. direct from England, and 471,000 lbs. from Hamburg and Altona.

"The import duty, until the 1st July, 1839, upon cotton manufactured goods, including unbleached cotton linen, was 40 specie skillings per lb., = 1 mark Hambro banco. In the 3 years from 1st July, 1839, until 1st July, 1842, and in the last half of the year 1842, the duty was, upon cotton manufactured goods, exclusive of unbleached cotton linen, 40 specie skillings, and upon unbleached cotton linen, 16 specie skillings, = $6\frac{2}{3}$ skillings Hambro banco, per lb.

"From 1st January, 1843, the duty upon cotton manufactured goods, excepting unbleached cotton linen, is 40 skillings specie per lb., and upon unbleached cotton linen, 20 skillings specie per lb., = 8 skillings Hambro banco.

"The importation of woollen goods was, in the year 1819, 108,000 lbs., and in 1835, 264,000 lbs.; of which 73,000 lbs. from England, and 182,000 lbs. from Hamburg and Altona; in the year 1841, 353,000 lbs., of which 93,000 lbs. from England, and 246,000 lbs. from Hamburg and Altona; in the year 1842, 394,000 lbs., of which 108,000 lbs. from England, and 270,000 lbs. from Hamburg and Altona.

"The duty upon woollen goods, until the end of the year 1842, was 20 specie skillings per lb., and it is now 25 skillings, which is equal to 10 skillings Hambro banco.

"The lists showing the importation of the present year (1843) will, in due time, exhibit the quantities imported, as well of cotton and woollen articles, as of other descriptions of merchandize. That the moderate increase of 4 skillings per lb. upon cotton linen, unbleached, and 5 skillings per lb. upon woollen goods, can operate any real diminution in the importation, is not to be expected. If, upon the goods above stated, an increase in duty has been levied from the commencement of the present year, there is, nevertheless, a reduction in the import duty upon other goods from the same period, which also come principally, or even solely, from England. Thus the duty upon undyed and unbleached cotton thread, is reduced from 10 to 6 skillings per lb.; on coloured cotton thread, from 15 to 12 skillings per lb.; coloured linens and uncoloured, unbleached linen goods, have experienced a reduction of 2 skillings per lb.; and certain descriptions of stone articles, which are imported in large quantities, of 2 skillings per lb.; and likewise the duty upon coals is reduced from 5 to 2 skillings per barrel. It was undoubtedly with feelings of satisfaction that the Norwegian government, in a recent report to his Majesty, represented that our present tariff is distinguished from those valid in all other countries, by low duties upon foreign goods, generally speaking."

Mr. Thorn says in remarking on the high British duties on timber, and the decrease of the exportation of the same from Norway to the United Kingdom,

"It is not, however, the numerical proportion of lasts that ought to be taken as a just criterion of the decline of our trade with Great Britain, but it is in particular the intrinsic value and the kind of wood now exported to your country which must be considered. In former times our most valuable timber and almost all our deals went exclusively to Great Britain. With the exception of a small quantity of deals shipped from Christiania, and merely a trifle from Dram and Schien, all our produce of this description now goes to France and the other countries, while our exportation to the United Kingdom is chiefly confined to firewood, rough timber for the use of miners, spars, &c., on which the duties in England are either pretty moderate, or subject to drawback. But it is evident that the value of these articles is but trifling, although they require a large amount of tonnage to carry them.

"It is, however, not so much the heavy rate in itself, as the present *scale* of the duty on deals in England, which operates so unfavourably upon our trade.*

"Norway deals seldom exceed eight or nine inches in breadth, and above nine inches they were never exported. The natural impediments offered by our rivers do not generally allow logs of greater length to be floated down than of twelve feet, the most common dimension.

"Since the establishment of a regular communication once a week by Hull steamers between that port and Christiansand, considerable quantities of colonial produce and of British manufactures are imported that way into this country, and it is hoped that the direct trade with England through that channel will increase, and supersede in some degree the indirect and costly traffic by way of Hamburg and Altona.

"I do not indeed know any countries in the world so well adapted for a commercial intercourse mutually beneficial to both parties as England and Norway. We are in want of the products of British industry, and many of the commodities which enter into her vast commerce. The distance between both countries is only, by steam-ships, two or three days' sail, and a common voyage in sailing vessels is generally made within the short space of a week. Notwithstanding these prominent advantages, England has been the first to throw us out of her market, thereby compelling us, much against our inclination, to look out for a connexion with France, who would admit the produce of our soil on more favourable conditions. France received the greater and more valuable part of our wood for her dockyards, and other purposes of building; but as we could make use only of very few articles the produce of her soil and industry, it became necessary to employ the agency of Hamburg for transacting our banking and insurance business, and for supplying the rest of our wants.

"Thus we have by degrees been thrown upon the continental markets for our supplies, and in lieu of the articles of British and Irish manufacture to the use of which we have been accustomed, we are obliged, by a spontaneous act of your own legislature, to use the linens, cottons, woollens, and the hardware of countries belonging to the 'German League,' and even the coffee and sugar we annually consume, and in a great measure the returns received by the Hanse Towns for *German* manufactures, consigned to the South American or West Indian markets.

"The port of Dram, before 1807, exported frequently upwards of 100 cargoes of wood to Ireland, now it rarely exports *three*, and this still depends upon the casualty of any of the few copper-mines in that country requiring a cargo or two of timber for debenture.

"The immediate consequence has been that Irish linen, which formerly was used in Norway in preference to any other, is now not imported at all."

Employment of British Capital in Norway.—"The only enterprises in Norway carried on exclusively with British capital, are the copper works at Alten Talvig, in the province of Finmarken, owned by British shareholders, and superintended by the British consul; and the saw-mills at Berregard, near Frederickstadt, on the river Glommon, the property of Sir John Henry Pelly, Bart., deputy-master of the Trinity House. British capital to some extent, though much less so than formerly, finds still some employment in the deal trade, by way of advances made by the London merchants."

* This unfair scale has been equitably altered in the New Tariff: but we admit that the duty on all foreign timber is still excessive.

CHAPTER XIII.

2,200 per cent, cobalt		7	10 0
1,000 ditto zaffer		4	10 0
20,000 ditto silver		2	10 0
Total value of the above		£	182,250
Produce of corn		£	1,315,275
General produce of all the taxes of the country		£	550,000

SWEDISH TAXES.—In 1840, revenue to be equal to expenditure until meeting of the following diet: viz.—10,742,880 rix-dollars = £895,215 sterling.

Land tax and perpetual Revenues	4,566,380
Customs, taxes, &c., voted every diet	6,176,500
	10,742,880 rix-dollars.

Value of rix-dollar about 20*d.*; value of rix gold dollar about 13½*d.*; all divided into 48 schillings.

As the land and perpetual tax is merely an ancient right which the crown has to the soil, Sweden is the lightest taxed country in Europe.

Extract—There are no taxes at present levied in Sweden which can be considered as excise, unless the following may be such: viz.—

1st. The *sale excise* (salu excisen), which is paid for the privilege of selling, in the towns, bread, meat, and beer, amounting annually to 11,285 rix-dollars; from which tax those towns are exonerated where the sale of these articles is permitted to every one.

2d The *brandy distillery tax*, which is paid according to the space of the still, but *not* according to the quantity distilled, and

3d. The retail-sale-tax upon brandy.

These two taxes are estimated in the budget as yielding together 750,000 rix-dollars banco, but have in latter years not reached this amount, and in 1839, left a deficit of 246,000 rix-dollars.—*Stockholm, 18th of April*, 1842.

LIVE STOCK IN SWEDEN IN 1837.—Horses, 385,000; horned cattle, 1,657,976; sheep, 1,412,689; dogs, 513,692.

The live stock is generally inferior, except horses. The best horned cattle are those of Dalecarlia. Some Laplanders possess as many, it is said, as 1000 reindeer.

FISHERIES OF SWEDEN.—The herring fishery of the western coast of Sweden flourished, chiefly from their commencement on a large scale in 1740 to 1798. Since the beginning of the present century this fishery has been unimportant. The *stroemling* fishery of Ocland is carried on along the Eastern Coast and Gulf of Bothnia. The salmon fisheries are carried on in several rivers, chiefly those of Gefle, Hernosand, Norkoping, and Khlasley. The lobster fishery is to some extent followed at Gothenburg for the London market. Generally speaking the herring, stroemling, and salmon fisheries of Sweden supply little more than sufficient for home consumption.

WHALE-FISHERY.—An attempt has been made to revive this fishery by forming a company at Stockholm, but there does not appear the least chance of its succeeding.

COMMERCIAL REGULATIONS BETWEEN RUSSIA AND FINMARK IN NORWAY.

LIST of articles of Russian produce admitted duty free into Finmark, and statement of the exclusive privileges possessed by the Russians trading to that province.

Articles admitted Duty Free.—Ravenduck, or coarse linens, sailcloth, sailtwine, tar, pitch, hemp, flax, rye, ryemeal, barley, oats, cordage, fishing-tackle of all kinds.

It may be argued, that these goods may be imported by any other nation, duty free; this is true, but no one can compete with the Russians from Archangel or the White Sea.

The following privileges are exclusive, and secured to them by the 5th and 6th Articles of the Treaty with Sweden:

ART. V. Russian vessels coming from the White Sea to ports in the province of Finmarken in Norway, shall be allowed as before to sell their goods on board, in towns, for the space of four weeks, not only to the inhabitants, but likewise to the Norwegian vessels; and in every other harbour, to Norwegian vessels for fourteen days.

Dry and salted fish imported into Archangel in Norwegian vessels can be sold on board, under the superintendence of the custom-house, after the cargo has been regularly entered, and the vessel has undergone the usual visitation. In the declaration the weight of the fish may be given in supposition, and without any bill of lading. The sale must take place under the immediate superintendence of a custom-house officer, who has to keep an accurate account of the quantity sold; on the whole being sold, the account is to be verified at the custom-house and the duty paid.

VI. The inhabitants of the parishes of Utsiock and Euare, in Russian Lapland, shall be allowed to trade in barter with Russian vessels, arriving from the White Sea to that part of the coast of Warangerfiord, formerly included in the joint or common territory, as likewise at the mouth of the Pasirg river, against corn, ryemeal, grits, peas, hemp, sailcloth, cordage, tar, tallow, candles, and salt, without payment of duty. The above privileges are indisputable, being secured by treaty.

They further proceed from one port to another on *payment of* ¼ *of the usual rate of pilotage. British vessels must pay the full rate.*

In order to appreciate fully the advantages which the Russians possess, by virtue of the stipulations, in the above treaty, which secures to them the privilege of trading direct with the inhabitants, and with all Norwegian vessels visiting Finmark, it will be merely necessary to state, that every other foreigner is excluded, and only permitted to trade direct with the privileged merchant, being subject to a severe penalty, in the event of his trading as the Russians do, direct with the fishermen and merchant vessels that visit Finmark for the express purpose of meeting the Russians.

Some idea can be formed of the extent of this intercourse, from the fact that no less than between 400 to 500 Russian vessels congregate in the harbours of Finmark during this period, when a very lively and lucrative intercourse is carried on.

STEAM NAVIGATION ON THE COAST OF NORWAY.—Steamboats are regularly established between Denmark and Norway, and the finance department of Norway have taken means to secure the regular transmission of the mails by steam-vessels. A steamboat traverses the coasts of Norway occasionally during summer as far as the North Cape.

PRICES of the principal Articles exported from Bergen, exclusive of Duties and Shipping Charges, during the Year 1843.

SECTION XIV.

SPAIN.

CHAPTER I.

GEOGRAPHICAL POSITION, PHYSICAL ASPECT, AND NATURAL RESOURCES OF SPAIN.

The situation of the kingdom of Spain is, in many respects, superior to that of France, Great Britain, or any other European nation. Extending north no farther than the latitude of 43 deg. 34 min., and south to 36 deg. 4 min. Its climate, tempered in winter by the waters of the Atlantic and Mediterranean, is preferable to that of Greece, Italy, or France. Yet it has been ravaged by the plague once in about every sixteen years; and not long since by the Asiatic cholera. The climate of the central *plateau*, and even of Madrid, is often uncertain and very cold. Separated from France by the Pyrenees, and traversed by lofty mountains, and difficult ravines and passes, it is naturally defended by formidable obstacles to invasion, and the most discouraging internal difficulties in the way of a hostile army. The extreme length of this kingdom is about 648 miles: its breadth about 553 miles.

The sea-coast of Spain, although less pierced with seaports than the shores of France, affords however great commercial facilities. The harbours, however, particularly those on the precipitous iron coast of Biscay, are generally intricate; and those on the western coast, and within the Mediterranean, from having sand-bars at the entrance, are mostly difficult of access. So are many of the active commercial seaports of France and England.

The rivers of Spain are numerous, watering the country in all directions; but they are generally rapid, and their navigation interrupted by rocks and cataracts. The navigation of the seaports, and the rivers, admits of great improvement by means of piers and canalization. In both less has been done than in any other country, save Portugal. The progress of canalization has been astonishingly

slow. Several canals have been commenced, and none, it may be said, finished —that began under the emperor Charles V., to improve the navigation of the Ebro, would, if completed, be of immense commercial usefulness.

The surface of Spain exhibits, generally, mountains, usually verdant, but with arid rocky exceptions; rich and broad valleys; rapid rivers, deep ravines and precipices; elevated table-lands, extensive swamps and marshes; vast pastures; few enclosures; occasionally luxuriant forests; and the picturesque beauty of the country is greatly defaced by the extensive destruction of timber trees. Some of the elevated table-lands are calcareous and steril. A great portion of the country is occupied by sheep pastures.

The most fertile parts are the valleys of the Sierra Morena, Alcarria, Guadalaxara, Toledo, the vega of Malaga, the country behind Cadiz, the valley of the Guadalquiver, various parts along the Ebro, and the valleys of Biscay and Navarra. In Andalusia and many other parts, irrigation is necessary to production. The soil, however, yields almost every known production; and there are vineyards in nearly all the provinces. Wheat, maize, rice, olives, hemp, flax, cotton, sugar, coffee, indigo and madder, are all raised, even with the most slovenly cultivation. The orange, the lime, the mulberry, the cork-tree, and many varieties of fruit and timber trees, all thrive in great perfection. The bees yield abundance of wax and honey; the sheep produce the finest wool, and the worm the best quality of silk. (See Agriculture of Spain hereafter.)

The mineral riches of Spain are very great; by many considered superior to those of any country in Europe. In gold, silver, and quicksilver they are so. They also yield salt, coal, iron, cobalt, loadstone, sulphur, arsenic, copperas, antimony, &c. in great plenty. (See Mines of Spain hereafter.)

Spain has but a few small islands along her coast; but possesses those of Minorca, Majorca, and Ivica, or the Balearic isles, the great and fertile islands of Cuba and Porto Rico in the west, and the Philippines in the East Indies.

Seaports.—The principal seaports are, in Biscay, Fontarabia, dry at low water, but susceptible of being made as good a harbour as Whitehaven; Passages, a deep, and, within, a very commodious and safe harbour, but its narrow entrance, which is a mere fissure in the precipitous cliff, is difficult to ascertain from the sea, and the generally heavy swell of the Bay of Biscay renders the approach dangerous; St. Sebastian, an intricate and small harbour; Bilboa, the commerce of which was formerly active, and still considerable, particularly in exporting wool and corn, is also an intricate port, on account of the sandbar, and can only be entered at or near high water—within it is deep and safe; Santander, an excellent and easily entered port, with rather a flourishing trade; Gijon, the entrance of which is narrow and dangerous, within it is deep and capacious; Ribadeo, for small vessels.

On the Atlantic are the ports of Ferrol, the best in the kingdom, but all ves-

sels may be said to be prohibited entering it, except ships of war; Corunna, a capacious deep port, but with an intricate entrance; Nova Santiago, a small harbour; Pontevedra, for small vessels; Vigo and Guardia.

On the south-east coast are Ayamonte, a safe port, but intricate; Moguer, a small harbour; St. Lucar, at the mouth of the Guadalquiver,—the entrance to which is dangerous, but it is much frequented as being the harbour of Seville and Cordova; Cadiz, the principal port for commerce in the kingdom, yet intricate, like Liverpool, from having sandbanks off its entrance; Tariffa, for small vessels, is an active fishing port. Within the Bay of Gibraltar, Spain has a good port sheltered by a mole at Algeciras.

On the Mediterranean coast the seaports are, Marbella, a small port; Malaga, a bar harbour, but commodious and safe, with an active trade in wine and raisins; Almeira, a safe capacious port, the bottom of a large bay; Almanacar, a small safe port; Carthagena, one of the best ports on the Mediterranean; Alicant, an active commercial port, but rather a roadstead than a harbour; Valentia, an intricate but much frequented port; Pensecola, Castillan, Gaudia, Denia, small fishing-harbours, and, except the first, little frequented by foreigners; Tarragona, a good port; Barcelona, an important commercial, deep, but not well sheltered port; Mataro, a deep, commodious harbour; and Rosas, a small safe harbour.

In the Balearic isles, Spain has the port of Palma, a tolerable harbour in Majorca; Port Mahon, in Minorca, a deep port, but of dangerous access; and Ivica, a commodious port.

In the West Indies, Spain has the port of Havannah, one of the best in the world: Santiago de Cuba, and Ciudad del Principa, both excellent harbours; St. Juan de Porto Rico, and several other good harbours, in the islands of Cuba and Porto Rico; besides those in the Canary and Philippine Isles.

It must appear, from the foregoing sketch, that Spain has all the natural elements of power: and it will appear, by comparing the brief view which we have given, in a former section of this work, of the natural resources of Holland, that the latter has, in proportion to even her present wealth, commerce, and naval power, the most limited natural advantages of any country in Europe. It will also appear that Holland, owing to a wiser government, and sounder commercial legislation, is in credit, naval and aggressive strength, a more powerful kingdom than Spain. The labouring population of Spain are, with the exception of *contrabandistas* and others, whom a vicious system has demoralized, an industrious and well-disposed people.

CHAPTER II.

POPULATION AND STATISTICS OF SPAIN.

We find in the old historians, that during the time of the Visigoths and Moors, in 1380, the population was estimated as follows:

11,000,000 of inhabitants in the states of Castile.
7,700,000 in the states of Arragon.
3,000,000 in the kingdom of Grenade.
Total, 21,700,000—or 2000 inhabitants per square league.

The various returns on record, give the following results:

In 1618—9,000,000, according to Cevallos.
„ —7,500,000, „ Ustariez.
1700—8,000,000, at the death of Charles II.
1723—7,625,000, from official recensement.
1726—5,423,000, according to the quit-rent returns, ordered by Philip V., but exclusive of privileged orders.
1769—9,301,728, under Charles II., from a quit-rent return, comprehending all the classes of the population, with the Canary islands, and the presidencies of Africa.
1770—9,307,000, ditto.
1788—10,143,000; 10,409,879, with the Canary islands.
1803—10,351,000, without, from the general recensement.
1821—11,248,000, ditto.
1826—13,712,000, ditto.
1834—14,660,000, by estimate.

"If we adopt," observes M. Moreau de Jonnès, in his work on Spain, "with confidence, the corrections made by Ustariez of the population, as stated by Cevallos, and if we throw out the vague estimate of 8,000,000, attributed to the first year of the eighteenth century, we find that for 216 years the population of Spain has constantly increased—but by a singularly slow progression, the results of which are so meager, that, during more than 100 years, from 1618 to 1723, the number of inhabitants only increased from 7,500,000 to 8,000,000. It is only during the last twenty-five to thirty years that the population has rapidly augmented."

According to the same authority, the population of towns and villages have greatly decreased; a certain sign of decline, in the same ratio, of the industry and prosperity of the kingdom. He states that,

"The three-fourths of the villages only exist in name.
"The large and secondary towns have submitted to similar effects.
"Segovia in 1525, contained 5000 families, at present no more than 2000.
"Toledo had 200,000 inhabitants, at present no more than 25,000.
"Malaga has decreased from 80,000 to 50,000; and of the villages formerly in its vicinity 16 only remain.

" In the Bishopric of Salamanca, there were formerly 127 towns; of these 13 only exist, and the cornfields once so productive have all been long transferred into sheep pastures.

" In the 17th century, the population of Seville was equal at least to 300,000; 130,000 of which were employed in manufactures. Its present population is 96,000. Merida, in the room of 40,000, has now 5000 inhabitants. Medina-del-Campo, has only 6000 in place of 30,000; and Valentia, according to the authority of Escolano, had in 1600, 100,000 houses, and between 500,000 and 600,000 inhabitants.—Its present population amounts to 130,000.

" Before the conquest in 1487, Granada had 70,000 houses, and 400,000 inhabitants; 60,000 of whom were armed. It was defended by ramparts flanked by 1030 towers and two vast fortresses, each of which could receive in garrison 40,000 men. The kingdom of which it is the capital was only 30 leagues in breadth by 70 in length, but it contained 32 large cities and 97 towns, and 3,000,000 of inhabitants. The whole population at present does not exceed 83,000.

" The city of Cordova under the Moors, occupied nearly 8 leagues of the banks of the Guadalquiver, and contained 600 grand mosques, 3837 small mosques or chapels, 4300 minauts or towers, 900 public baths, 28 superbs, 80,455 shops, 213,070 dwelling-houses, 60,300 hotels or palaces."

The foregoing account may be exaggerated. According to it, Cordova was much larger than London is at present. All accounts however agree as to the magnificence and splendour of Cordova, and the extraordinarily rapid decline in the power and prosperity of Spain, after the expulsion of the Moors and the independence of the Netherlands. The last official census states that 1511 towns and villages were then totally uninhabited and abandoned.

* Official census. † Cadastral census (official) as given by M. Moreau de Jonnes in his statistics for 1831.

STATEMENT of the Population of Towns and Country in 1826, from a Cadastral Return.

PROVINCES.	Inhabitants in the		TOTAL POPULATION.	Proportion of the Inhabitants of the Towns to the Total Population.
	Towns.	Country.		
Andalusia	608,000	935,000	1,543,000	2-5
Murcia	179,000	279,000	458,000	2-5
Balearic Isles	98,000	152,000	250,000	1-3
Malaga	300,000	808,000	1,108,000	2-7
Valencia	255,000	793,200	1,048,000	1-4
New Castile	301,000	1,314,000	1,615,000	1-4
Catalonia	219,000	906,000	1,125,000	1-5
Aragon	123,000	647,000	770,000	1-6
Biscay, Guipuscoa	45,000	300,000	345,000	1-7
Navarre	34,000	238,000	272,000	1-8
Estremadura	86,000	584,000	670,000	1-8
Leon	98,000	979,000	1,077,000	1-11
Old Castile	70,000	990,000	1,060,000	1-15
Gallicia	114,000	1,687,000	1,801,000	1-16
Asturias	22,000	398,000	420,000	1-19
Total	2,532,000	11,010,000	13,562,000	1-5
Ecclesiastics			150,000	
Total Population			13,712,000	inhabitants.

DIVISION of the Population according to the different Social Conditions in 1803.

		Inhabitants.	
Clergy of cathedrals and of parishes	86,546		
Officers of the Inquisition and of the crusade	8,659	203,298	1 in 50
Monks	69,664		
Nuns	38,429		
Nobles	.....	1,440,000	1 — 7
Civil and military employments	.....	343,047	1 — 30
Advocates, notaries, students	.....	199,566	1 — 50
Administration, army and navy	.....	590,000	1 — 18
Domestics	.....	840,276	1 — 12
Merchants	.....	103,017	1 — 100
Manufacturers	.....	119,250	1 — 90
Artisans	.....	812,967	1 — 12
Labourers	.....	2,721,291	1 — 4
Journeymen	.....	2,893,713	1 — 4
Total population	.....	10,268,000	

The foregoing returns and statements we consider as little more than very doubtful estimates. Mr. Mac Culloch allows 369,126 inhabitants to the province of Madrid, and only 276,952 to Toledo. The whole population of Spain he states at 12,168,774, which we consider as probably nearer the truth than that of nearly 14,000,000, as stated in the foregoing tables, and by M. Moreau de Jonnès. We can, however, give only such tables or estimates as exist,—and therefore do not vouch for their correctness.

The Cadastral Returns of the population for 1826 give the following results:

Householders, having the qualification of Electors.		Agricultural Population.		Merchants and Manufacturers.		Other Classes.	
Nobility, including men, women, and children	1,410,000	Agricultural proprietors	364,514	Wholesale merchants	6,824	Domestics (1 in 37 inhabitants)	276,000
		Farmers	527,423	Retail ditto	18,851	Vagabonds (1—70).	140,000
Citizens and farmers, &c.	1,560,000	Labourers	805,235	Manufacturers and labourers	489,493	Smugglers (1—100)	100,000
Heads of Families, viz.—		Proprietors of flocks and herds	25,530			Custom-house officers	40,000
Magistrates and advocates	5,883	Shepherds	113,628			Officers of the Inquisition	22,000
Notaries	9,083					Wandering beggars	36,000
Attorneys and other clerks of law courts	13,274					Convicts	2,000
Medical men	17,990						
Public functionaries and clerks	27,243						
Merchants	6,824						
Agricultural proprietors	364,514						
Heads of Families	451,310	Heads of families and others	1,836,320	Heads of families	515,168		
Women and children	1,128,275	Women and children	6,777,140	Women and children	1,803,088		
Citizens and householders	1,579,585	Total agricultural population	8,613,460	Total manufacturing population	2,318,256	All other classes, or 1 in 13 inhabitants	700,000

CHAPTER III.

GOVERNMENT AND ADMINISTRATION OF SPAIN.

THE Kingdom of Spain consists of the ancient kingdoms of *Asturias* and *Leon*, *Aragon*, *Navarra*, *Gallicia*,* the countships of *Castile* and *Barcelona*, and the Moorish kingdoms of *Cordova*, *Granada*, and *Valentia*. In the fifteenth century all were united by marriage, conquest, and the expulsion of the Moors, under Ferdinand and Isabella, who transmitted the whole, undivided, to their

* Gallicia had only a separate king for a temporary period.

heir, Charles V., in whose reign Spain first lost her freedom. Aragon and Castile were not, however, united under the same laws; each retained its particular legislation, a great misfortune to both. The ancient Cortes were, politically speaking, annihilated by him, on their refusing the exorbitant supplies demanded to carry on his wars. He excluded the nobles and prelates of Castile from the Cortes, and admitted only Procuradores, or deputies from eighteen cities of that kingdom, to form a chamber; to be made subservient use of by him and succeeding monarchs. During, however, the dynasty of her Austrian kings, the several administrative divisions of Spain,—viz., the crowns of Aragon, and Castile, the Viceroyalty of Navarra, and the *Senoria* of Biscay, retained the form, at least, of their respective *Fueros*, or constitutions. Philip II. (1592) abolished the office of Supreme Judge (*Justiza*) of Aragon, in constitutional authority pre-eminent to the monarch.

In the early part of the eighteenth century, the first of the Bourbons, Philip V., abolished the *Fueros* and *Cortes* of Aragon, Catalonia, and Valentia, by a royal ordinance, or decree, which assumed, that, *the supreme authority lodged wholly in the King;* and further, that *they*, by siding with his competitor, the Arch-Duke of Austria, placed themselves in the condition of conquered rebels, who forfeited their former privileges. The administrative laws and customs of Castile were to be, consequently, extended over Aragon, Catalonia, and Valentia. The provinces of Biscay, however, during all the assumptions of the crown, maintained most of their privileges.

The government of Spain can scarcely be considered, ever since the paralyzation of her liberties under Charles V., and the establishment of absolute power under Philip V., less despotic than Russia and Turkey. The *Cortes* were only assembled at very long intervals, not for free deliberative purposes, but for mere form. The *Council of State* and the *Council of Castile*, being under the direction of, and the members appointed by, the king, formed no obstacle to the absolute will of the monarch.* The gold of South America purchased luxurious ease at home; the first offices in the state were sold to the highest bidder; industry and enterprise languished; commerce was destroyed by barbarous restrictions; the population decreased from idleness, and from the superstition and pride of the *Grandees* and even *Hidalgos*,† who preferred their junior sons being ecclesiastics or even monks, and imprisoning their daughters‡ in convents, rather than having either the one or the other engaged in indus-

* That terrible political engine, the Inquisition, under the mask of religion, rendered the executive government of Spain omnipotent within its jurisdiction. In respect to the lower classes, and rural population, they always, in their ignorance, enjoyed at least passive security.

† The hidalgos form a species of squirearchy, and claim noble alliance.

‡ Late authorities state that there is now a general detestation of monks; and, for a long time, a decided repugnance, on the part of parents, to immuring their daughters in convents.

trious, rational, and natural occupations; agriculture was neglected;* the national power sunk; Spain lost her rank among nations, and was finally subdued by Napoleon. The old dynasty was afterwards, by the assistance of England, re-established; but the South American Colonies revolted, and, in 1820, an abortive effort was attempted to restore the Cortes, with all the privileges of that once powerful assembly. With the aid of France, Ferdinand was enabled not only to put down the popular movement, but to re-establish a sway fully as absolute as was exercised by the most despotic of his predecessors.

The constitutional party, from 1820 to 1823, were carried forward, in their views of government, to an impracticable extreme. The elements of a durable constitution, such as they conceived, neither did nor does exist in any country, far less in Spain. The adoption of universal suffrage; only one legislative (representative) house, from which the nobles, clergy, and the wealthy and influential bodies were to be excluded; and rendering the veto of the monarch temporary, formed certainly a most visionary impracticable conception in a country where the mass of the people are illiterate, superstitious, and accustomed to reverence and obey their clergy, and to respect and depend on the higher ranks.

CONSTITUTIONAL GOVERNMENT.

On the death of Ferdinand VII. the liberal party attained the ascendancy so far, under the Queen Regent, as to restore the Cortes, with power limited, and not initiative, but not yet sufficiently defined.

By the Royal Decree, published on the 13th of April, 1834:—

"The General Cortes are to be composed of two Estementos, or estates; viz., the Proceres, or Peers, and the Procuradores, or Deputies, of the kingdom.

"The Proceres is to consist of the archbishops and bishops of Spain, the grandees of Spain, the titulos of Castile, of men illustrious by the employment they have held as ministers, ambassadors, generals, judges, &c., or by their previous services to their country; of landed proprietors and great merchants and manufacturers, who have an annual income of 70,000 reals, and who have been previously deputies of the kingdom; of public teachers and professors, and cultivators of science and literature, who have acquired celebrity, and possess an annual income of 70,000 reals, whether derivable from private property, or a salary paid by the state. The Proceres are not limited in number.

* In the Cortes of 1822, there were grandees and ecclesiastics among the most patriotic members.

The degradation, and, in fact, enslavement of the grandees of Spain, began when Philip the Second established *an Escorial Attendance*, at Madrid, as the metropolis, in the most inconvenient barren portion of the kingdom. By the forms of the court, the nobility of Spain have, ever since, been chained to Madrid, while their estates have been running waste, their means diminishing, their minds debased, and enslaved to the court, and the whole country declining in its agriculture and general industry. The object of the court has always been to maintain a broad separation between the nobility and the people. It was the conviction of the degrading subjection which retained them at Madrid, far from their estates, and in comparative poverty, that induced so many of the nobility to join the liberals of 1822. The corporations of the Great Orders of Knighthood, which have long enjoyed vast possessions and great privileges, consisted, usually, of the younger sons of the nobility. The grandees, who live on their estates, rank high in mind, character, and appearance above the courtiers.

"The Estate Procuradores is to be composed of persons freely chosen, according to the law of elections.

"To be eligible, a deputy must be a native of the kingdom, or the son of Spanish parents; thirty years old; have an annual income of 12,000 reals, and must be born in the province for which he is named, or must have resided in it at least two years previously to his election; he must also possess within the province, either in town or country, property, which shall produce half the income necessary to a deputy. No proprietors, whose estates are encumbered with mortgage, are eligible.

"The right of convoking, proroguing, and dissolving the Cortes, belongs exclusively to the sovereign.

"The Cortes shall not have the right of deliberating on any subject which shall not be expressly submitted to their examination in virtue of a royal decree."*

This constitutional form of government gave no satisfaction, and was replaced by that of 1837, which is considered as now in force.

CONSTITUTION OF THE SPANISH MONARCHY PROCLAIMED IN MADRID ON THE 16TH OF JUNE, 1837.

DONNA ISABELLA the Second, by the Grace of God and the Spanish Monarchy, Queen of Spain, and in her royal name, and during her minority, the queen dowager her mother, Donna Maria Christina de Bourbon, regent of the empire, to all those to whom these presents may come. Be it known, that the Cortes-general have decreed and approved, and that We in due form have accepted the same as follows:—It being the will of the nation to revise, in virtue of its sovereignty, the political constitution promulgated in Cadiz on the 19th of March, 1812, the Cortes-general assembled for this purpose, decree and approve the following constitution of the monarchy of Spain.

ART. I. Spaniards are—1st. All persons born in the Spanish dominions.—2d. The children of Spaniards though born out of Spain.—3d. Strangers who have obtained letters of naturalization.—4th. Those persons who, without letters of naturalization, obtain a right of settlement in any part of the monarchy of Spain. The right of Spanish citizenship are forfeited by naturalization in a foreign country, and by accepting employment under any other government, without the permission of the sovereign of Spain.

II. All Spaniards may print and publish their thoughts freely, without a previous censorship, but subject to the laws. The determination of offences by the press belong exclusively to juries empannelled for that purpose.

III. Every Spaniard has the right of petitioning, in writing, to the Cortes and King, as the laws prescribe.

IV. The same code of laws shall govern in all parts of the monarchy, and in them shall be recognised by all Spaniards but one right in common trials of a civil or criminal nature.

V. All Spaniards are eligible to public offices, according to merit and capacity.

VI. Every Spaniard is obliged to defend the country with arms in his hands, whenever he may be called upon to do so by the law, and to contribute according to his abilities to the expenses of the state.

VII. No Spaniard can be detained, imprisoned, or taken from his family, nor his house entered, excepting in those cases and according to the forms determined by the laws.

VIII. If the security of the state require, in extraordinary circumstances, the temporary suspension, in whole or in part, of the Spanish monarchy, the provisions of the preceding articles are to be determined by the law.

IX. No Spaniard can be prosecuted or sentenced, except by a judge or competent tribunal, in conformity with laws enacted, anterior to the commission of the offence, and in the manner laid by them.

* This *proviso* destroyed the very spirit of legislation, and has already produced its evils and inconveniences.

X. The confiscation of property is abolished, and no Spaniard is to be deprived of his property, except in cases justified by public utility, and with a previous indemnification of losses sustained.

XI. The nation is obliged to maintain the public worship and minister of the catholic religion professed by the Spaniards.

OF THE CORTES.

XII. The power of enacting laws resides in the Cortes, in conjunction with the King.

XIII. The Cortes is composed of two co-legislative bodies, equal in powers—the Senate and Congress of Deputies.

OF THE SENATE.

XIV. The number of senators shall be equal to three-fifths of the whole number of the deputies.

XV. The senators are appointed by the king, from a triple list, proposed by the electors of each province who elect the deputies.

XVI. To each province belongs the right of proposing a number of senators, proportional to its population; but each is to return one senator at least.

XVII. To be a senator, it is necessary to be a Spaniard, to be forty years of age, and to be possessed of the income and other qualifications defined in the electoral law.

XVIII. All Spaniards possessed of these qualifications may be proposed, for the office of Senator, in any of the provinces of the monarchy.

XIX. Each time that there is a general election of deputies, whether in consequence of their term of office having expired, or of a seniority, to be renewed, those going out being re-eligible.

XX. The sons of the king and of the immediate heir to the throne, are senators of right at the age of twenty-five years.

OF THE CONGRESS OF DEPUTIES.

XXI. Each province shall appoint one deputy, at least, for every 50,000 souls of the population.

XXII. The deputies are elected by the direct method, and may be re-elected indefinitely.

XXIII. To be a deputy it is necessary to be a Spaniard, in the secular state, to have completed the twenty-fifth year, and to possess all the qualifications prescribed by the electoral law.

XXIV. Every Spaniard possessing these qualifications, may be named a deputy for any of the provinces.

XXV. The deputies shall be appointed for three years.

OF THE MEETING AND FACULTIES OF THE CORTES.

XXVI. The Cortes are to assemble each year. It is the right of the king to convoke them, to suspend and close their meetings, and dissolve the Cortes; but under the obligation, in the latter case, of convoking and reassembling another Cortes within the period of three months.

XXVII. If the king should omit to convoke the Cortes on the 1st of December in any one year, the Cortes are notwithstanding to assemble precisely on that day; and in case of the conclusion of the term of the congress holding office happening to occur in that year, a general election for the nomination of deputies is to commence on the first Sunday of the month of October.

XXVIII. On the demise of the Crown, or on the king being incapacitated to govern, through any cause, the extraordinary Cortes are immediately to assemble.

XXIX. Each of the co-legislative bodies is to form rules for its own internal regulation, and to scrutinize the legality of the election, and the qualifications of the individuals who compose them.

XXX. The congress of the deputies is to name its president, vice-president, and secretaries.

XXXI. In each legislature the king shall appoint, from amongst the members of the senate, the president and vice-president of that body, the latter appointing its own secretaries.

XXXII. The king shall open and conclude the sittings of the Cortes in person or by his ministers.

XXXIII. One of the legislative bodies cannot be convoked for business without the other being assembled at the same time, except in the case in which the senate sits in judgment on the king's ministers.

XXXIV. The legislative bodies are not to deliberate in conjunction, or in the presence of the king.

XXXV. The sessions of the senate and of the congress shall be public, and only in cases requiring reserve can private sitting be held.

XXXVI. The king and each of the co-legislative bodies possess the right of originating laws.

XXXVII. Laws relating to taxes and public credit shall be presented first to the congress of deputies; and if altered in the senate contrary to the form in which they have been approved by the congress, they are to receive the royal sanction in the form definitely decided on by the deputies.

XXXVIII. The resolutions of each of the legislative bodies, are to be determined by an absolute plurality of votes; but in the enactment of the laws, the presence of more than half the number of each of these bodies is necessary.

XXXIX. If one of the co-legislative bodies should reject any project of law submitted to them, or if the king should refuse it his sanction, such project of law is not to be submitted anew in that legislature.

XL. Besides the legislative powers which the Cortes exercise in conjunction with the king, the following faculties belong to them:—1st. To receive from the king, the immediate successor to the throne, from the regency or regent of the empire, the oath to observe the constitution and the laws. 2dly. To resolve any doubt that may arise of fact or of right with respect to the order of succession to the crown. 3dly. To elect the regent, or appoint the regency, of the empire, and to name the tutor of the sovereign while a minor, when the constitution deems it necessary. 4thly. To render effective the responsibility from the ministers of the crown, who are to be impeached by the deputies, and judged by the senators.

XLI. The senators and deputies are irresponsible and inviolable for opinions expressed and votes given by them, in the discharge of their duties.

XLII. Senators and deputies are not to be arrested or proceeded against during the session, without the permission of the legislative body to which they may belong, if not taken in the act of committing flagrant crime; but in this case, and in those in which they are prosecuted or arrested whilst the Cortes are closed, they are to give immediate information to their respective co-legislative bodies for their cognizance.

XLIII. Deputies and senators who receive from the government, or the royal family pension, employment which may not be an instance of promotion from a lower to a higher office of the same kind, commission with salary honours or titles, are subject to re-election.

OF THE KING.

XLIV. The person of the king is sacred and inviolable, and is not subject to responsibility. His ministers are responsible.

XLV. The power of executing the law resides in the king, and his authority extends to all matters which conduce to the preservation of public order in the interior, and to the security of the state abroad, in conformity with the provisions and constitution of the laws.

XLVI. The king sanctions and promulgates the laws.

XLVII. Besides the prerogatives granted to the crown by the constitution he possesses the following:

1. To issue decrees, regulations, and instructions, which may be conducive to the execution of the laws. 2. To provide that justice be promptly and efficiently dispensed throughout the kingdom. 3. To pardon criminals according to the provisions of the law. 4. To declare war and make peace, afterwards giving an account and documents to the Cortes. 5. To dispose of the military forces of the country, distributing them as may be most convenient. 6. To conduct diplomatic and commercial relations with other states. 7. To provide for the coinage of money, on which is to be impressed his bust and name. 8. To decree the application of the funds destined for each branch of the public administration. 9. To appoint public officers, and to confer honours and distinctions on all classes, in conformity with the law. 10. To name and dismiss his ministers without restriction.

XLVIII. The king is obliged to be authorized by law—1. To alienate, to grant, or to exchange any part of the Spanish territory. 2. To admit foreign troops into the kingdom. 3. For the ratification of treaties of offensive alliance, of special treaties, of commerce, and those which stipulate to give assistance to any foreign power. 4. To absent himself from the kingdom. 5. To contract matrimony, and to permit those who may be called to the throne to enter into that state. 6. To abdicate the throne in favour of his immediate successor.

XLIX. The income of the king and royal family is to be settled by the Cortes at the commencement of each reign.

OF THE SUCCESSION TO THE CROWN.

L. *Donna Isabel II. de Bourbon* is the legitimate Queen of Spain.

LI. The succession to the throne of Spain shall be in the regular order of primogeniture and representation, always preferring the ancient to the posterior line of succession; in the same line also preferring the nearer degree of kindred to the more remote, in the same degree the male to the female line of descent, and in the same sex the eldest to the younger branches of the family.

LII. The line of the descendants of Donna Isabel II. de Bourbon, becoming extinct, her sisters and her uncles by the father's side, male as well as female, and their legitimate descendants, shall succeed, if not excluded specially by the law.

LIII. If the lines of succession pointed out here become extinct the Cortes shall name the sovereign as may be best for the interests of the nation.

LIV. The Cortes shall exclude from the succession such persons as are incompetent to govern, or who have done any thing which should cause them to deserve forfeiting their rights to the throne.

LV. During the reign of a female, her husband is to take no part whatever in the government of the kingdom.

OF THE MINORITY OF THE SOVEREIGN AND OF THE REGENCY.

LVI. The sovereign is to be considered a minor, until he is fourteen years of age.

LVII. When the king is incapacitated from exercising his functions, or the crown is vacant in consequence of the minority of the immediate successor, the Cortes shall appoint a regency for the government of the kingdom, consisting of one, three, or five persons.

LVIII. Until the Cortes shall appoint the regency, the kingdom shall be governed provisionally by the father or mother of the king, and in their absence by a council of the ministers.

LIX. The regency shall exercise all the functions of royalty, in whose name shall be published all the acts of the government.

LX. The guardian of the king, while a minor, shall be the person appointed in the will of the deceased sovereign, always providing that such person be a Spaniard by birth; if the deceased king shall not have appointed such guardian of the successor, a minor, to the throne, then the father or mother living in a state of widowhood, shall be the guardian. In the absence thereof the Cortes shall appoint; but the offices of guardian and regent cannot be discharged by the same individual, except in the case of a father or mother.

OF THE MINISTERS.

LXI. All commands or dispositions issued by the sovereign, shall be signed by the respective ministers: and no public functionary is to execute such orders if not thus signed.

LXII. The ministers may be senators or deputies, and take part in the discussions of the two legislative bodies; but they are permitted to vote in that body only to which they belong.

OF THE JUDICIAL POWER.

LXIII. To the tribunals and judges alone belong the power to apply the law in civil and criminal cases, and without exercising any other functions than those of judges and ministers of justice.

LXIV. The laws are to determine the nature of the tribunals and judgments which are to exist, the organization of each, its faculties, the mode of proceeding, and the qualifications of the officers belonging to them.

LXV. Judgment in criminal cases to be public, in the form prescribed by the laws.

LXVI. No magistrate or judge can be deposed, for a shorter or a longer period, except by a written sentence, nor suspended from the discharge of the duties of his office, except by a judicial act, or in consequence of the order of the king, after he, on sufficient grounds, commands him to be tried by a proper tribunal.

LXVII. Judges are personally responsible for all infractions of the law committed by them.

LXVIII. Justice is to be administered in the name of the king.

OF THE PROVINCIAL DEPUTATIONS AND CORPORATIONS.

LXIX. In each province there shall be a provincial deputation, composed of a number of persons specified by law, and appointed by the same electors, who return the deputies to Cortes.

LXX. For the internal government of towns a corporation shall exist in each, to be elected by the inhabitants, to whom this right pertains by law.

LXXI. The law shall determine the organization of duties of the provincial deputations and corporations.

OF TAXES.

LXXII. Each year the government shall submit an estimate of the expenses of the state for the following year, and a schedule of the contributions or means of raising them, and in like manner the accounts of the collection and disbursement of the public revenues for the examination and approval of the Cortes.

LXXIII. No tax or contribution to be imposed or levied which has not been authorized by the law of the cortes or other special authority.

LXXIV. A similar authorization is necessary to dispose of the property of the state, and for raising money by loans on the public credit.

LXXV. The public debt shall be under the special protection of the nation.

OF THE NATIONAL MILITARY FORCES.

LXXVI. The Cortes, at the proposition of the king, shall each year determine the number of the permanent military forces by sea and land.

LXXVII. In each province there shall be corps of national militia, whose organization and duties are to be defined by a particular law, and the king may, in case of necessity, dispose of these forces within their respective provinces, but not out of them, without the express authorization of the Cortes.

ADDITIONAL ARTICLES.

ART. I. The laws shall define the time and manner in which judgments by juries for every class of offences are to be established.

II. The provinces beyond the seas shall be governed by special laws.

The Council of Ministers, viz.—The Minister of State and the Interior, Minister for Foreign Affairs, Minister of Justice, Minister of War, Minister of Marine, and Minister of Finances.

The Royal Council of Spain and the Indies.—Consisting of the President, who is Captain-general of the Army, and seven Presidents of Sections; viz., Foreign Affairs, Peace and Justice, War, Interior, Finances, the Indies, and the Marine.

The municipal administrations of all the towns were formerly free and elective, as they have continued to be in Biscay and Navarre. The heads of families elected the alcalde, or mayor, and the regidores, or aldermen. The alcalde, as president, and the regidores, form the town council, or ayuntamiento. The members were renewed or re-elected, from time to time, according to custom. The alcalde was officially a political as well as a judicial functionary. He received all orders from the government, and with the regidores assessed the people in their share of public contributions, or taxes, regulated the police, inspected the institutions, controlled the expenditure, and administered the communal revenues and property. The crown afterwards seized the right of appointing the alcalde and regidores; and finally sold those offices, which often, by purchase, became hereditary.

The villages and rural districts and communes have nearly all their ancient privileges, as the office of alcalde not being an object of much power or gain, remains elective.* From this circumstance, the Spanish peasant is, as is well known, a being much superior in spirit, character, and appearance to the common inhabitants of the towns. When the peasant is, by the lure of gain, tempted to become a contrabandist, he soon forgets his virtues. The former have known little of despotism. Their cura, or priest, is a sort of father and adviser in social, spiritual, and domestic matters among them; and their alcalde is one of themselves and of their own choice.

BISCAY AND NAVARRA.

The provinces of Biscay and Navarra, never yielded to the crown their old laws, customs, and fueros. The French system of centralization, which has been so long contended for in Madrid, has partially destroyed the liberties of these provinces.

Biscay, or properly speaking, Vizcaya, is the general name for the three Basque Provinces, Provincias Vascongadas; and occupies the north of Spain, from the Atlantic, along the shores of the Bay, to Navarra and the Pyrenees. Here the Vascuence, or Celtic dialect is still spoken. The land is better cultivated, the roads far better, the inns more comfortable than elsewhere in Spain, the country is studded with cottages and hamlets, and abounds with water-mills.

In 1372 a new charter, recapitulating all the fueros and laws of the country, was granted to the senorio of Biscay by the Senor Don Juan Nunez de Lara, who had previously agreed and swore to thirty-seven articles, regulating the administration of justice, and fixing the relation between the senor and the people. Charles V. conferred a general code for the Basque Provinces.

Every pueblo, village, or township, in Biscay had a vote, and sent apoderados, or deputies, to the juntas generales, or legislature, which assembled every two years, or oftener, round the tree of Guernica, near the village of the same name.

The corregidor, syndics, and permanent members take their places on a bench under the tree; the secretaries veritied the writs of each of the representatives; and then, after a short prayer they adjourn to a large hall in a neighbouring convent, in which are the portraits of the lords of Biscay, till its annexation to the crown of Castile. In the sacristy of the adjoining church are the archives. The juntas sit with open doors, and no one is refused admittance. The decorum of these assemblies, chiefly of rustics, is admirable. They enact laws for the order and welfare of the country; deliberate on all messages from the king; decide on the reply to be returned; examine the accounts, vote the supplies, and elect the officers of the state—namely, the two deputies, the regidores, and the syndics, who are generally from among the chief people of the country. The corregidor is appointed by

* The citizens of Madrid are admitted by all to be a wretched people in physical and moral character, while the inhabitants of the provinces are, generally, frank, obliging, and hospitable.

the king, and he and the two deputies and syndics constitute the permanent deputation, or the administrative and executive power, which resides at Bilbao, and forms a judicial court of appeal from the local magistrates. Each pueblo or village has its own alcalde or magistrate, appointed by the ayuntamiento, or municipal council of the place, which administers the revenues of the commune, and employs them for local purposes, laying afterwards the accounts before the corregidor or his lieutenant, on his annual visit round the country. The general accounts of the country are made out by the permanent deputation, which lays them before the next general junta examination.

The supreme tribunal is that of the Juez Mayor de Vizcaya, who is appointed by the king, and who, with his oidores or assistants, holds a distinct court in the chancellery of Valladolid, both for criminal and civil matters. The natives of the three Basque Provinces cannot be tried before any other court.

By their fueros the people are bound to pay no other taxes to the sovereign but those they paid to their former lords; viz., a small house-tax, a duty on iron wrought in the province, tithes upon certain lands,* and a tribute from the towns. No other taxes, such as excise, customs, stamps, licences, &c., exist in Biscay. *Foreign goods pay no duty on introduction*; for, except small fees levied by the consulate and municipality of Bilbao, there is no line of custom-houses between the Basque Provinces and the French frontiers; but the Spanish custom-house officers are stationed on the inner limit between the provinces and Castile. Biscay does not belong to any of the administrative intendencies into which Spain is divided for fiscal purposes. In cases of urgent request from the crown, the junta grants *donativos* for the service of the kingdom, the amount of which they raise by assessment among themselves. The Basque Provinces have their own militias, and they defend themselves, in case of war, against foreign invasion. No Spanish troops are, by law, allowed to be garrisoned in the country, and the provinces furnish no recruits to the royal army. Biscay has always supplied the Spanish navy with numerous volunteers, who were reckoned among the best seamen of Spain. In consequence of all this, there are no royal offices of administration in Biscay, except that of the couriers or mails.

In 1820 there was appointed a captain-general or military chief, residing at San Sebastian. His jurisdiction in military matters is considered to extend over all the Basque Provinces.

The government of Madrid has also endeavoured to extend its authority over all the affairs of these provinces, and to abridge their ancient privileges. These attempts at centralization formed a leading cause of their adherence to the cause of Don Carlos. The Basques, in fact, believed they were fighting for their liberties.

The sovereign bears the title of Senor, or Lord of Biscay; and the royal despatches forwarded to the states, are addressed "To my very noble and very loyal Senorio of Vizcaya."

Guipuzcoa and Alava are styled provincias, not senorio. They have each a similar junta, and very nearly the same fueros and liberties as Biscay.

Guipuzcoa is divided into universidades, townships, and alcaldias or villages, each of which sends a procurador to the annual junta. The junta appoints four general deputies, one of which holds the executive power for the year; but the four meet half-yearly, to deliberate on all general affairs. The king appoints a high official authority, with the title of corregidor, who presides over the junta, and forms the organ of communication between the crown and the local authorities.

The alcaldes are elected by the ayuntamiento, and judge cases in the first instance. Appeals may be made to the corregidor. The police is said to be superior to that of other parts of Spain, and crimes rare. The roads are maintained like those of Biscay and Alava, at the public expense.

Alava has one city (Vittoria), 72 towns and villages, and 134 townships. The whole province is divided into 6 quadrillas and 53 hermandades, each of which sends an apoderados (deputy) to the junta, which meets twice a year, and appoints an executive

* The clergy of Biscay have small incomes, the richest (the Abbot of Zenarroso) has not 200*l* per annum

apoderados general, for three years. He is military chief, superior justice, executes all the regulations of the junta, communicates with the crown, and presides without having a vote, over the junta.

Every community, or hermandad, elects its respective alcalde, for one year. Alava, by its charter, granted by Alonzo, in 1332,* cannot be taxed by the crown; they, however, are liable to the fine of about 1200*l.* per annum.

Navarra, less privileged than the Basque provinces, still retains her separate administration, and fueros. The Cortes, or legislative assembly, consists of 3 brazos (states)—viz., the nobles, clergy, and universidades (34) or municipalities.

The Cortes elect from the three estates a permanent deputation, to protect the general interests, maintain the observance of the laws, lay on, or remove taxes, &c.

The viceroy, who, on taking office, swears to maintain the privileges of Navarra, and convokes the Cortes, by custom, annually, but for several years past not so frequently.

The Consijo Real (Royal Supreme Court) sits at Pampeluna; its judges are appointed by the king.

The alcaldes ordinarios are appointed by the ayuntamientos; and the natives are not subject to appear before any tribunal out of Navarra.

Navarra does not pay the burdensome provincial taxes of Spain, but is subject to the rentas generales,—viz., customs, stamps, royal monopolies of gunpowder, salt, tobacco, &c., and also an annual amount, or fine, in lieu of the provincial taxes. From these the Basque provinces are free. The laws of Navarra are nearly similar to those of Aragon.

JUDICIARY AND LAWS OF SPAIN.

Supreme or Royal Courts, viz.—1. The Royal Chancery of Valladolid, which hears also appeals in civil and criminal matters, for final judgment from Biscay. 2. The Royal Chancery of Grenada. 3. The Royal Council of Castile; 4. Navarra, sits at Pampeluna. 5. The Royal Audiences of Gallicia, sit at Santiago; 6. Asturias, at Oviedo; 7. Estremadura, at Caceres; 8. Aragon, at Saragossa; 9. Valencia, at Valencia; 13. Catalonia, at Barcelona; 11. Majorca, at Palma; and 12. The Canaries, at Las Palmas.

There are under these judicial divisions 165 corregidorias, or seats of corregidorias (magistrates or judges); of which 126 appertains to Castile and 39 to Aragon. The alcaldes majors are subordinate to the corregidores; the regidores are aldermen, or members of the municipal councils. Alcaldes ordinarios, are the mayors of small towns and villages. The alguizil is a constable, bailiff, or huissier. The alguizil mayor is again a high officer, nearly corresponding with high sheriff in England, and at the royal audiences often a nobleman.

The laws and codes of Spain consist chiefly of —

1st. The Fuero Juzgo, chiefly an abridgment of the Theodosian code, originally promulgated by Alaric, who succeeded Euric, one of the Gothic conquerors of Spain, to which has, from time to time, been added numerous other laws.

2d. The Ley de las siete Partidas, is mostly formed of Roman, Gothic, and canon laws.

3d. Ordenamienta Real, is the law or code of Ferdinand and Isabella for Castile.

4th. The Fuero Real, or the Code of Aragon, is a compound of Roman and Gothic laws, compiled in 1248.

5th. The Novissima Recopilacion, or modern code, which enjoys almost supreme authority, consists of the occasional royal edicts.

The whole collection of laws, forms a vast incongruous body, admitting of every possible cause of delay in the administration of justice.

The Roman law is not allowed to be authority in Spain; and the old laws of Castile, except to the Justinian Pandects, as incompatible with liberty.

* Previous to the Charter of Alonzo, the Junta of Alava (*Confinan del Campo de Arriaya*) was composed of the nobles, *Ricos hombres* (gentry), and the clergy. Even the ladies had seats in the Junta. The Bishop of Calahorra presided.

Nearly all authorities agree in stating, that the administration of justice is tedious and corrupt. The mere forms of the courts resemble those of the English exchequer and chancery; but the laws are so contradictory and voluminous, as to allow the fullest scope to the chicanery of the *Escribano*, the functionary who acts the part of solicitor, notary, registrar, and attorney, and forms the only medium between the client and the advocate and judge. In civil cases, plaintiffs and defendants are usually ruined by the delay. In political cases, the prosecutions again are summary.

The judges, the bar, and Escribanos, are all, however, averse to reform:—the courts of Grenada, Valladolid, Barcelona, and Santiago, are said to be so corrupt, that their decisions are in most cases referred to the supreme court at Madrid. All the courts are quite independent of government, which should, as in England, be considered a great advantage to the people. The number of capital crimes, as stated by Dr. Faure and other authorities, appear incredible.

It is complained of that there is a dangerous preponderance of lawyers in the *Cortes*, as their practice in pleading gives them, as in France and England, advantages over those not habituated to public speaking.—See La Borde, Dr. Faure, Cook's Spain, Inglis, Joncevalles, &c.

CHAPTER IV.

SPANISH TREATIES OF COMMERCE AND NAVIGATION.

SEVERAL treaties of peace, commerce, and navigation have been ratified between England and Spain. They are all still, *de jure*, in force, but *de facto*, are almost completely unobserved by the Spanish authorities.

The treaty of peace, friendship, and commerce, between Great Britain and Spain, signed at Madrid, 13th (23d) May, 1667, consists of 50 articles, and contains several which stipulate for the security of the trade, persons, and property of the respective subjects of both countries. It confirms, also by article *Nine*, the cedulas of privileges granted by the King of Spain on the 19th of March and 26th of June, 1615, to the English residing at Cadiz, Sevilla, Malaga, and St. Lucar.

The treaty of the 8th (18th) of July, 1670, signed at Madrid, confirms all the clauses in full of the treaty of 1667, and contains further clauses and stipulations for commercial society. The two treaties signed at Utrecht, on the 13th of July, and 9th of December, 1713, between Great Britain, renew also the former treaties and cedulas. To these treaties, there is a *declaratory* article appended, signed by Queen Anne.

The treaty between Great Britain and Spain, signed at Madrid, 14th of December, 1715, confirms in full all the foregoing treaties and cedulas, excepting the 3d, 5th, and 8th articles of the treaty of Utrecht, which have been suspended by the declaration signed by Queen Anne.

The treaty between Great Britain, Spain, and France, signed at Seville, 9th

of November, 1729, contains, with its separate details, a further confirmation of all the foregoing treaties, &c., and some additional privileges.

The treaty, signed at Madrid, on the 5th of October, 1750, stipulated for equal duties to be paid by Spanish, and by British subjects in Spain.

By the definitive treaty of peace, between Great Britain, France, and Spain, signed at Paris, 10th of February, 1763, all previous treaties are confirmed.

The treaty between Great Britain and Spain, signed at Versailles, 3d of September, 1783, confirms the foregoing treaties, and defines the privilege extended to British subjects of cutting logwood in Honduras.

The treaty between Great Britain, signed at London, the 14th of July, 1786, defines further the British privileges and limits in Honduras, and the evacuation of the Mosquito Shore by England. The convention between Great Britain and Spain, signed at the Escurial, the 28th of October, 1790, provides for the settlement of the boundaries between the British and Spanish dominions in America. This convention may be considered obsolete since the independence of the United States of North America.

By an additional article to the treaty of peace, signed at London, 14th of January, 1809, it is provided that mutual facilities be granted to the commerce of both countries. The additional articles to the treaty, signed at Madrid, 5th of July, 1814, stipulate that the commerce between Great Britain and Spain shall be admitted upon the same conditions as those which existed previously to the year 1796, and rates and confirms all treaties which at that period subsisted between the two nations.

These numerous treaties are, *de jure*, as fully in force as any of those which we consider are to be most solemnly and rigidly observed, and as they are far too long to insert at full length, we have extracted from them all the articles, declarations, and cedulas, which provide for the commerce and navigation between the British and Spanish dominions; viz.,

TREATY of Peace and Friendship between Great Britain and Spain. Signed at Madrid, 13th (23d) of May, 1667.*

(Translated from the Latin.)

I. First it is agreed and concluded, that from this day forward there shall be between the two crowns of Great Britain and Spain, a general, good, sincere, true, firm, and perfect amity, confederation, and peace, which shall endure for ever, and be observed inviolably, as well by land as by sea and fresh waters, and also between the lands, countries, kingdoms, dominions, and territories belonging unto, or under the obedience of either of them. And that their subjects, people, and inhabitants respectively, of what condition, degree, or quality soever, from henceforth, reciprocally, shall help, assist, and show to one another all manner of love, good offices, and friendship.

II. That neither of the said kings, nor their respective people, subjects, or inhabitants within their dominions upon any pretence may, in public or secret do, or procure to be

* Renewed by Article II. of the Treaty of Versailles, 1783.

done, any thing against the other in any place by sea or land, nor in the ports or rivers of the one or the other, but shall treat one another with all love and friendship; and may, by water and by land, freely and securely pass into the contines, countries, lands, kingdoms, islands, dominions, cities, towns, villages, walled or without wall, fortified or unfortified, their havens and ports (where hitherto trade and commerce hath been accustomed), and there trade, buy and sell, as well of and to the inhabitants of the respective places, as those of their own nation, or any other nation that shall be or come there.

III. That the said Kings of Great Britain and Spain shall take care that their respective people and subjects from henceforward do abstain from all force, violence, or wrong; and if any injury shall be done by either of the said Kings, or by the people or subjects of either of them, to the people or subjects of the other, against the articles of this alliance, or against common right, there shall not therefore be given letters of reprisal, marque, or counter marque, by any of the confederates, until such time as justice is sought and followed in the ordinary course of law. But if justice be denied or delayed, then the king, whose people or inhabitants have received harm, shall ask it of the other, by whom (as is said) the justice shall have been denied or delayed, or of the commissioners that shall be by the one king or the other appointed to receive and hear such demands, to the end that all such differences may be compounded in friendship, or according to law. But if there should be yet a delay, or justice should not be done, nor satisfaction given within six months after having the same so demanded, then may be given letters of reprisal, marque, or counter-marque.

IV. That between the King of Great Britain and the King of Spain, and their respective people, subjects, and inhabitants, as well as upon sea as upon land, and fresh waters, in all and every their kingdoms, lands, countries, dominions, continues, territories, provinces, islands, plantations, cities, villages, towns, ports, rivers, creeks, bays, straits and currents, where hitherto trade and commerce hath been accustomed, there shall be free trade and commerce in such way and manner that without safeconduct, and without general or special particular licence, the people and subjects of each other may freely, as well by land as by sea and fresh waters, navigate and go into their said countries, kingdoms, dominions, and all the cities, ports, currents, bays, districts, and other places thereof, and may enter into any port with their ships laden or empty, carriage or carriages wherein to bring their merchandize, and there buy and sell what and how much they please, and also at just and reasonable rates provide themselves with provisions and other necessary things for their subsistence and voyage; and also may repair their ships and carriages, and from thence again freely depart with their ships, carriages, goods, merchandize and estate, and return to their own countries, or to such other places as they shall think fit without any molestation or impediment, so that they pay the duties and customs which shall be due, and saving to either side the laws and ordinances of their country.

V. Item. It is likewise agreed, that for the merchandizes which the subjects of the King of Great Britain shall buy in Spain, or other the kingdoms or dominions of the King of Spain, and shall carry in their own ships, or in ships hired or lent unto them, no new customs, tolls, tenths, subsidies, or other rights or duties whatsoever, shall be taken or increased, other than those which, in the like case, the natives themselves, and all other strangers are obliged to pay; and the subjects aforesaid buying, selling, and contracting for their merchandizes, as well in respect of the prices as of all duties to be paid, shall enjoy the same privileges which are allowed to the natural subjects of Spain, and may buy and lade their ships with such goods and merchandizes; which said ships being laden and customs paid for the goods, shall not be detained in port upon any pretence whatsoever, nor shall the laders, merchants, or factors, who bought and laded the goods aforesaid, be questioned after the departure of the said ships, for any matter or thing whatsoever concerning the same.

VI. And to the end that the officers and ministers of all cities, towns, and villages, belonging to either, may neither demand nor take from the respective merchants and people greater taxes, duties, stipends, recompenses, gifts, or any other charges, than what ought to be taken by virtue of this treaty, and that the said merchants and people may know and understand with certainty what is ordained in all things touching this; it is

agreed and concluded, that tables and lists shall be put up at the doors of the custom-houses and registries of all the cities, villages, and towns of, or appertaining to, one or the other king, where such rights and excises or customs are usually paid; in which, how much, and of what quality, such rights, customs, subsidies, and payments, either to the kings or any the aforesaid officers are allowed, shall be put down in writing, declaring as well the species of what is imported, as what is carried out. And if any officer, or any other in his name, upon any pretence whatsoever, in public or secret, directly or indirectly, shall ask or receive of any merchant or other person respectively, any sum of money or other thing, by the name of right, due, stipend, allowance, or recompense (though it be by the way of voluntary donative), more or otherwise than aforesaid, the said officer or his deputy being in such manner guilty, and convicted before a competent judge in the country where the crime is committed, shall be put in prison for three months, and shall pay thrice the value of the thing so received, of which the half shall be for the king of the country where the crime is committed, and the other half for the denunciator, for the which he may sue his right before any competent judge of the country where it shall happen.

VII. That it shall be lawful for the subjects of the King of Great Britain, to bring out, and carry into Spain, and all or any lands and dominions of the King of Spain (where heretofore they have used trade and commerce), and trade there with all kinds of merchandize, cloths, manufactures and things of the kingdom of Great Britain, and the manufactures, goods, fruits, and kinds of the islands, towns, and plantations to him appertaining, and what shall have been bought by English factors on this side, or farther on the other side of the Cape of *Buena Esperança*, without being enforced to declare to whom, or for what price they sell their said merchandize and provisions, or being molested for the errors of the masters of the ships, or others, in the entry of the goods, and at their pleasure to return again out of the dominions of the King of Spain, with all, or any goods, estates, and merchandize, to any of the territories, islands, dominions, and countries of the King of England, or to any other place, paying the rights and tributes mentioned in the antecedent chapters; and the rest of all their lading which is not brought to land, they may detain, keep and carry away in their said ship or ships, vessel or vessels, again, without paying any right or imposition whatsoever for it, as if therewith they had never been within any bay or port of the Catholic King. And all the goods, estates, merchandize, ships, or other vessels, with any things introduced into the dominions or places of the crown of Great Britain as prizes, and judged for such in the said dominions and places, shall be taken for goods and merchandize of Great Britain, comprehended so by the intention of this article.

VIII. That the subjects and vessels of the most Serene King of Great Britain may bring and carry to all and singular the dominions of the King of Spain, any fruits and commodities of the East Indies, it appearing by testimony of the Deputies of the East India Company in London, that they are of, or have come from the English conquests, plantations, or factories, with like privilege, and according to what is allowed to the subjects of the United Provinces by the Royal *Cedulas* of *Contratando*, bearing date the 27th of June and the 3d of July, 1663, and published on the 30th of June and 4th of July the same year. And for what may concern both the Indies, and any other parts whatsoever, the crown of Spain doth grant to the King of Great Britain and his subjects, all that is granted to the United States of the Low Countries and their subjects in their Treaty of Munster, 1648, point for point, in as full and ample manner as if the same were herein particularly inserted, the same rules being to be observed whereunto the subjects of the said United States are obliged, and mutual offices of friendship to be performed from one side to the other.

IX. That the subjects of the King of Great Britain, trading, buying, and selling in any of the kingdoms, governments, islands, ports, or territories of the said King of Spain, shall have, use, and enjoy all the privileges and immunities which the said king hath granted and confirmed to the English merchants that reside in Andalusia, by his royal *Cedulas* or orders, dated the 19th day of March, the 26th day of June, and the 9th day of November, 1645. His Catholic Majesty by these presents re-confirming the same as a part of this treaty between the two crowns. And to the end that it be manifest to all, it is consented, that the said schedules (as to the whole substance thereof) be passed and trans-

ferred to the body of the present articles, in the name and favour of all and singular the subjects of the King of Great Britain, residing and trading in any places whatsoever within his Catholic Majesty's dominions.

X. That the ships, or any other vessels that shall belong to the King of Great Britain, or his subjects, navigating into the King of Spain's dominions, or any of his ports, shall not be visited by the judges of contraband, or by any other officer or person, by his own, or by any other authority; nor shall any soldiers, armed men, or other officers or persons, be put on board any of the said ships or vessels; nor shall the officers of the custom-house of the one or the other party, search in any vessels or ships belonging to the people of the one or the other, which shall enter into their regions, dominions, or respective ports, until their said ships or vessels are unladen, or until they have carried on shore all the lading and merchandize which they declare they resolve to disembark in the said port; nor shall the captain, master, or any other of the company of the said ships be imprisoned, or they or their boats detained on shore: but in the interim, officers of the custom-house may be put on board the said vessels or ships, so they exceed not the number of three for each ship, to see that no goods or merchandize be landed out of the said ships or vessels, without paying such duties as by these articles either party is obliged to pay; which said officers are to be without any charge to the ship or ships, vessel or vessels, their commanders, mariners, company, merchants, factors, or proprietors. And when it happens that the master or owner of any ship shall declare the whole lading of his said ship is to be discharged in any port, the entry of the said lading shall be made in the custom-house after the usual manner; and if, after the entry made, any other goods be found in the said ship or ships, more than what are contained in the said entry, *eight working days shall be allowed them on which they may work (which shall be reckoned from the day they began to unlade) to the end that the concealed goods may be entered, and the confiscation of them prevented: and in case that in the time limited, the entry or manifestation of them shall not have been made, then such particular goods only, which shall be found, as aforesaid, though the unlading be not finished, shall be confiscated, and not any other; nor shall other trouble be given, or punishment inflicted on the merchant or owner of the ship; and when the ships or vessels are reladen, they may have freedom to go out again.**

XI. That the ship or ships appertaining to the one or the other king, or to their respective people and subjects, that shall enter into any ports, lands, or dominions of the one or the other, and shall discharge any part of their goods and merchandizes in any port or haven, being consigned with the rest to other places within or without the said dominions, *shall not be obliged to register or pay the rights of any other goods or merchandize, than of that which they shall unlade in the said port or haven*, nor be constrained to give bond for the goods they shall carry to other places, nor any other security if it be not in case of felony, debt, treason, or other capital crime.

XII. Whereas the one moiety of the custom of all foreign goods and merchandizes imported into England, is allowed and returned back to the importer, if the said goods be exported out of the said kingdom within twelve months after the first landing, upon oath made that they are the same goods which paid custom inwards, and that if they be not reshipped within the said twelve months, yet they may at all times be exported without paying any custom or duty outwards: it is therefore agreed, that if any the subjects of the King of Great Britain shall hereafter land any goods or merchandize, of what growth or nature soever they be, in any of the ports of his Catholic Majesty, *and having entered them, and paid the custom which by this treaty ought to be paid, and shall afterwards desire to transport them, or any part of them*, to any other place whatsoever, for a better market, *it shall and may be lawful for him or them so to do freely, without paying or being demanded any other custom or duty at all for the same*, he or they making oath, if required thereunto, that they are the same goods for which custom was paid at their landing: and in case that the subjects, people, and inhabitants of the dominions of either part shall unlade, or have in any city, town, or village respectively, any goods, merchan-

* All the stipulations printed in italics have, with many others, been completely violated by Spain since 1814, and especially during late years.

dizes, fruits, or estates, and have paid the customs due, according to what hath been declared, and after that, not being able to put them off, shall resolve to remit them to some other city, town, or village of the said dominions, they may not only do it without difficulty or impediment, and without paying other rights than what were due at their entry, but likewise the custom or rights shall not be paid again in any other part of the said dominions, bringing certificates from the officers of the custom-house, that they were paid before in the due form. And the chief farmers and commissioners of the King of Spain's rents in all places, or some other officer or officers to be appointed for that purpose, shall at all times permit and suffer the transportation of all such goods and merchandizes from place to place, and give sufficient certificate to the owners thereof, or their assigns, of their having paid their custom at their first landing, whereby they may be carried to and landed at any other port or place of the said jurisdiction, free from all duties or impediments whatsoever, as aforesaid, saving always the right of any third person.

XIII. That it shall be lawful for the ships belonging to the subjects of the one or the other king, to anchor in the roads or bays of either, without being constrained to enter into port; and in case they may be necessitated to enter thereinto, either by distress of weather, fear of enemies, pirates, or any other accident, in case the said ships be not bound to an enemy's port, and carrying thither contraband goods (wherein without some clear proof, they shall not be requested) it shall be lawful for the said subjects to return to sea freely when they please with their ships and goods, so as they do not break bulk, or expose any thing to sale; and that when they cast anchor, or enter the ports aforesaid, they be not molested or visited; and it shall suffice, that in this case they show their passports or sea-papers, which being seen by the respective officers of either king, the said ships shall return freely to sea without molestation.

XIV. And if any ship or ships belonging to the subjects and merchants of the one or the other, entering into bays or in the open sea, shall be encountered by the ships of the said kings, or of privateers their subjects; the said ships, to prevent all disorder, shall not come within cannon-shot, but shall send their long-boat or pinnace to the merchant-ship, and only two or three men on board, to whom the master or owner shall show his passports and sea-letters, according to the form which shall be inserted at the end of this treaty, whereby, not only the ship's lading, but the place to which she belongs, and as well the master and owner's name, as the name of the ship may appear; by which means the quality of the ship, and her master or owner will be sufficiently known, as also the commodities she carries, whether they be contraband or not; to the which passports and sea-letters entire faith and credit shall be given, so much the rather, for that as well on the part of the King of England, as of the King of Spain, some countersigns shall be given (if it shall be found necessary) whereby their authenticity may the better appear, and that they may not be in any wise falsified.

XV. If any prohibited merchandize or goods shall be exported from the kingdoms, dominions, and territories of either of the said kings, by the respective people or subjects of the one or the other, in such case the prohibited goods only shall be confiscated, and not the other goods; neither shall the delinquent incur any other punishment, except the said delinquent shall carry out from the respective kingdoms or dominions of the King of Great Britain, the proper coin, wool, or fullers'-earth of the said kingdom; or shall carry out of the respective kingdoms or dominions of the said King of Spain any gold or silver, wrought or unwrought; in either of which cases the laws of the respective countries are to take place.

XVI. That it shall be lawful for the people and subjects of both kings to have access to the respective ports of the one or the other, and there remain, and depart again with the same freedom, not only with their ships and other vessels for trade and commerce, but also with their other ships fitted for war, armed and disposed to resist and engage the enemy, and arriving by stress of weather to repair their ships or furnish themselves with provisions; so that entering willingly, they be not so numerous, that they give just occasion for suspicion; to which end they are not to exceed the number of eight, nor continue in their havens, nor about their ports, longer time than they shall have just cause, for the repair of their ships, to take in provisions, or other necessary things,

much less be the occasion of interrupting the free commerce, and coming in of other ships, of nations in amity with either king: and when an unusual number of men-of-war by accident shall come into any port, it shall not be lawful for them to come into the said ports or havens, not having first obtained permission of the king unto whom the said ports do belong, or the governors of the said ports, if they be not forced thereunto by stress of weather, or other necessity, to avoid the danger of the sea; and in such case they shall presently acquaint the governor or chief-magistrate of the place with the cause of their coming; nor shall they remain there any longer time than the said governor or magistrate shall think convenient, or do any act of hostility in such ports, that may prove of prejudice to the one or the other of the said kings.

XVII. That neither the said King of Great Britain, nor the King of Spain, by any mandate general, nor particular, nor for any cause whatsoever, shall embark or detain, hinder or take for his respective service, any merchant, master of ship, pilot or mariner, their ships, merchandise, cloths, or other goods belonging unto the one or the other, in their ports or waters, if it be not that either of the said kings, or the persons to whom the ships belong, be first advertised thereof, and do agree thereunto; provided that this shall not be construed to hinder or interrupt the ordinary course of justice and law in either country.

XVIII. That the merchants and subjects of the one and the other king, their factories and servants, as also their ships, masters or mariners, may, as well going as coming, upon sea and other waters, as in the havens and ports of the one and the other respectively, carry and use all kind of arms, defensive and offensive, without being obliged to register them, as also upon land to carry and use them for their defence, according to the custom of the place.

XIX. That the captains, officers, and mariners of the ships belonging to the people and subjects of either party, may not commence an action, nor hinder or bring trouble upon their own ships, their captains, officers, or mariners, in the respective kingdoms, dominions, lands, countries, or places of the other, for their wages or salaries, or under any other pretence. Nor may they put themselves, or be received, by what pretext or colour soever, into the service or protection of the King of England, or King of Spain, or their arms; but if any controversy happen between merchants and masters of ships, or between masters and mariners, the composing thereof shall be left to the consul of the nation, but after such manner as he who shall not submit to the arbitrement, may appeal to the ordinary justice of the place where he is subject.

XX. Declares void the restrictions imposed on English trade to the *Low Countries*.

XXI. The subjects and inhabitants of the kingdoms and dominions of the most serene Kings of Great Britain and Spain respectively, shall with all security and liberty sail to and traffic in all the kingdoms, estates, or countries, which are or shall be in peace, amity, or neutrality, with one or the other.

XXII. And they shall not be disturbed or disquieted in that liberty by the ships or subjects of the said kings respectively, by reason of the hostilities which are or may be hereafter between either of the said kings, and the aforesaid kingdoms, countries, and states, or any of them, which shall be in friendship or neutrality with the other.

XXIII. And in case that within the said ships respectively be found, by the above-said means, any merchandize hereunder mentioned, being of contraband and prohibited, they shall be taken out and confiscated, before the admiralty or other competent judges; but for this reason the ship, and the other free and allowed commodities which shall be found therein, shall in nowise be either seized or confiscated.

XXIV. Moreover, for better prevention of the differences which might arise touching the meaning of forbidden merchandize and of contraband; it is declared and agreed, that under this name shall be comprehended all firearms, as ordnance, muskets, mortar-pieces, petards, bombs, granadoes, fire-crancels, fireballs, musket-rests, bandeliers, gunpowder, match, saltpetre, and bullets; likewise under the name of forbidden merchandize are understood all other arms, as pikes, swords, pots, helmets, backs and breasts, halberds javelins, and such like armour; under this name is likewise forbidden the transportation of soldiers, horses, their harnesses, cases of pistols, holsters, belts, and other furniture, formed and composed for the use of war.

XXV. Likewise, to prevent all manner of dispute and contention, it is agreed, that

under the name of forbidden merchandize and of contraband, shall not be comprehended wheat, rye, barley, or other grains, or pulse, salt, wine, oil, and generally whatsoever belongs to the sustaining and nourishing of life, but they shall remain free, as likewise all other merchandizes not comprehended in the preceding article; and the transportation of them shall be free and permitted, although it be to the towns and places of enemies, unless such towns and places be besieged and blocked up, or surrounded.

XXVI. It is also agreed, that whatsoever shall be found laden by the subjects or inhabitants of the kingdoms and dominions of either of the said Kings of England and Spain, aboard the ships of the enemies of the other, though it be not forbidden merchandize, shall be confiscated, with all things else which shall be found within the said ships, without exception or reserve.

XXVII. That the consul which hereafter shall reside in any of the dominions of the King of Spain, for the help and protection of the subjects of the King of Great Britain, shall be named by the King of Great Britain; and he so named shall have and exercise the same power and authority in the execution of his charge, as any other consul hath formerly had in the dominions of the said King of Spain; and in like manner the Spanish consul residing in England, shall enjoy as much authority as the consuls of any other nation have hitherto enjoyed in that kingdom.

XXVIII. And that the laws of commerce that are obtained by peace may not remain unfruitful, as would fall out if the subjects of the King of Great Britain, when they go to, come from, or remain in, the dominions or lordships of the King of Spain, by reason of their commerce or other business, should be molested for case of conscience; therefore that the commerce be secure, and without danger, as well upon land as at sea, the said King of Spain shall provide, that the subjects of the said King of Great Britain *shall not be aggrieved contrary to the laws of commerce*, and that *none of them shall be molested or disturbed for their conscience*, so long as they give no public scandal or offence; and the said King of Great Britain shall likewise provide, for the same reasons, that the subjects of the King of Spain shall not be molested or disturbed for their conscience against the laws of commerce, so long as they give no public scandal or offence.

XXIX. That the people and subjects respectively of one kingdom, in the dominions, territories, regions, or colonies of the other, shall not be compelled to sell their merchandize for brass-metal coin, or exchange them for other coin or things, against their will; or having sold them, to receive the payment in other species than what they bargained for, notwithstanding any law or other custom contrary to this article.

XXX. That the merchants of both nations, and their factors, servants, and families, commissioners, or others by them employed, as also masters of ships, pilots, and mariners, may remain freely and securely in the said dominions, kingdoms, and territories of either of the said kings, and also in their ports and rivers; and the people and subjects of the one king may have, and with all freedom and security enjoy, in all the lands and dominions whatsoever of the other, their proper houses to live in, their warehouses and magazines for their goods and merchandize, which they shall possess during the time for which they shall have taken, hired, and agreed for them, without any impediment.

XXXI. The inhabitants and subjects of the said confederate kings, in all the lands and places under the obedience of the one or the other, shall use and employ those advocates, proctors, scriveners, agents, and solicitors, whom they think fit, the which shall be left to their choice, and consented to by the ordinary judges, as often as there shall be occasion; and they shall not be constrained to show their books and papers of account to any person, if it be not to give evidence for the avoiding lawsuits and controversies; neither shall they be embarked, detained, or taken out of their hands, upon any pretence whatsoever. And it shall be permitted to the people and subjects of either king, in the respective places where they shall reside, to keep their books of account, traffic, and correspondence, in what language they please, in English, Spanish, Dutch, or any other, the which shall not be molested, or subject to any inquisition. And whatsoever else hath been granted by either party, concerning this particular, to any other nation, shall be understood likewise to be granted here.

XXXII. That in case the estate of any person or persons shall be sequestered or seized on by any court of justice or tribunal whatsoever, within the kingdoms and dominions of

either party, and any estate or debt happen to lie in the hands of the delinquents belonging *bonâ fide* to the people and subjects of the other, the said estate or debts shall not be confiscated by any of the said tribunals, but shall be restored to the true owners in specie, if they yet remain, and if not, the value of them (according to the contract and agreement which was made between the parties) shall be restored within three months after the said sequestration.

XXXIII. That the goods and estates of the people and subjects of the one king, that shall die in the countries, lands, and dominions of the other, shall be preserved for the lawful heirs and successors of the deceased; the right of any third person always reserved.

XXXIV. That the goods and estates of the subjects of the King of Great Britain, that shall die without making a will in the dominions of the King of Spain, shall be put into inventory, with their papers, writings, and books of account, by the consul or other public minister of the King of Great Britain, and deposited in the hands of two or three merchants, that shall be named by the said consul or public minister, to be kept for the proprietors and creditors; and neither the crusada, nor any other judicatory whatsoever, shall intermeddle therein; which also in the like case shall be observed in England, towards the subjects of the King of Spain.

XXXV. That a decent and convenient burial-place shall be granted and appointed to bury the bodies of the subjects of the King of Great Britain, who shall die within the dominions of the King of Spain.

XXXVI. If it shall happen hereafter that any difference fall out (which God forbid) between the King of Great Britain and the King of Spain, whereby the mutual commerce and good correspondence may be endangered, the respective subjects and people of each party shall have notice thereof given them in time, that is to say, the space of six months, to transport their merchandize and effects, without giving them in that time any molestation or trouble, or retaining or embarking their goods or persons.

XXXVII. All goods and rights concealed or embarked, moveables, immovables, rents, deeds, debts, credits, and the like, which have not, with a formal notice of the cause, and by a legal condemnation, according to the ordinary justice, been brought into the royal exchequer at the time of concluding this treaty, shall remain at the full and free disposal of the proprietors, their heirs, or of those who shall have their right, with all the fruits, rents, and emoluments thereof, and neither those who have concealed the said goods, nor their heirs, shall be molested for this cause by the exchequers respectively; but the proprietors, their heirs, or those who shall have their right, shall have for the said goods and rights their action at law, as for their own proper goods and estate.

XXXVIII. It is agreed and concluded, that the people and subjects of the King of Great Britain, and of the King of Spain, *shall have and enjoy in the respective lands, seas, ports, havens, roads, and territories of the one or the other, and in all places whatsoever, the same privileges, securities, liberties, and immunities, whether they concern their persons or trade, with all the beneficial clauses and circumstances which have been granted, or shall be hereafter granted by either of the said kings, to the most Christian King, the States-general of the United Provinces, the Hanse Towns, or any other kingdom or state whatsoever, in as full, ample, and beneficial manner, as if the same were particularly mentioned and inserted in this treaty.*

XXXIX. In case any difference or dispute shall happen on either side concerning these Articles of Trade and Commerce, by either the officers of the admiralty or other person whatsoever, in the one or the other kingdom, the complaint being presented by the party concerned to their majesties, or to any of their council, their said majesties shall cause the damages forthwith to be repaired, and all things, as they are above agreed, to be duly executed; and in case that in progress of time any frauds or inconveniences be discovered in the navigation and commerce between both kingdoms, against which sufficient prevention hath not been made in these articles, other provisions may be hereafter mutually agreed on, as shall be judged convenient, the present treaty remaining still in force and vigour.

XL. It is likewise accorded and concluded, that the most serene and renowned Kings of Great Britain and Spain *shall sincerely and faithfully observe and keep, and procure to be observed and kept, by their subjects and inhabitants respectively, all and singular the capitulations in this present treaty agreed and concluded, neither shall they directly*

or indirectly infringe the same, or consent that the same shall be infringed by any of their subjects or inhabitants. And they shall ratify and confirm all and singular the Conventions before recorded by letters patent reciprocally, in sufficient, full, and effectual form, and the same so formed and made, shall interchangeably deliver, or cause to be delivered faithfully and really, within four months after the date of these presents; and they shall then, as soon as conveniently may be, cause this present Treaty of Peace and Amity to be published in all places, and in the manner accustomed.

Form of Letters which ought to be given by the Towns and Seaports, to the Ships and Vessels setting sail from thence, referred to in Article XIV.

To all unto whom these presents shall come. We, the Governors, Consuls, or Chief Magistrate, or Commissioners of the Customs, of the city, town, or province of N., do testify and make known, that N.N., master of the ship N., hath before us, under solemn oath, declared, that the ship N., of tons (more or less), of which he is at present Master, doth belong to the inhabitants of N., in the dominions of the Most Serene King of Great Britain. And We, desiring that the said Master may be assisted in his voyage and business, do entreat all persons in general and particular, who shall meet him, and those of all places where the said Master shall come with the said ship and her merchandize, that they would admit him favourably, treat him kindly, and receive the said ship into their ports, bays, havens, rivers, and dominions, permitting her quietly to sail, pass, frequent, and negotiate there, or in any other places, as shall seem good to the said Master, paying still the toll and customs which of right shall be due. Which we will acknowledge gratefully upon the like occasions. In witness whereof, We have signed these presents, and sealed them with the seal of our town.

Cedula of Privileges granted by his Majesty to the English, which reside in Sevilla, San Lucar, Cadiz, and Malaga, referred to in the 9th Article of the Treaty of 1667.

Forasmuch as on the part of you Richard Anthony, consul of the English nation, by you, and in the name of the vassals of the King of Great Britain, information hath been given to me, that by means of the peace, which between this and that kingdom is settled, those which do reside and commerce in Andalusia, principally in the city of Sevilla, San Lucar, Cadiz, and Malaga, humbly entreat me that I would be pleased to confirm to you the privileges, exemptions and liberties which appertain to you, as well by the articles of the said peace, as by the confirmations of them, and other favours and indultos, which the king my lord and father (now in glory) granted you, and all others whatsoever, that have been granted by my crowns of these my kingdoms of Castile and of Portugal, commanding that they be observed and accomplished in all, and through all, without any limitation, and that they may be of more force, to grant them anew, with the qualities, amplifications, conditions, and declarations, which may be most convenient for you, imposing punishments upon whom shall contradict them, and not observe them; and that it may be known what they are, that there be given copies of them, of what favour I have granted them, having a due regard to the aforesaid, and because that for the occasions which I have of wars, you have offered to assist me with 2500 ducats of silver, paying 1000 down, and the other 1500 remaining, in the month of April, of this present year, for which Don Francisco Moreno, with the intervention of Don Antonia de Campo-Redondo y Rio, knight of the Order of St. James, of my Privy Council, and of my Exchequer, in your name and by virtue of your power, passed a writing or obligation in form, before John Cortez de la Cruz, my notary, I have thought fit, and by these presents, of my own proper motive, certain knowledge, and royal and absolute power, which in this part I will use, and do use as king and natural lord, not acknowledging any superior in temporals, I confirm and approve the said privileges of exemptions, and liberties, which appertain to you, as well by the articles of the said peace, as by the confirmations of them, and the rest of the favours, indultos, which the king my lord and father granted you, and any others whatsoever, which have been

granted by my crowns of Castile and Portugal, to the said vassals in all, and through all, as therein, and in every thing, and in part thereof is specified, contained, and declared, that they may be firm, stable, and valid to you, and be observed to you, kept and fulfilled, because that my intention and deliberate will is, that all those of the said nation may enjoy, and do enjoy them without any limitation, with condition, that during the time they shall reside in Andalusia, the said English may not be put upon any office, or in any public post, nor made guardians, trustees, nor collectors, although they may be of the duties of Alcavalas, and Millones, or other duties which relate to my royal treasury; nor shall they demand from you loans, or donatives, nor oblige you to farm any rents, nor take your horses or slaves.

And to do you further favour in conformity of what is capitulated in the said peace, I will and permit that you may, and do trade and commerce freely, and sell your merchandizes and goods, and buy those of my kingdoms, and carry them thence, observing what is ordained by the laws and decrees that treat thereof, paying into my royal treasury the duties that ought to be paid, prohibiting as I do prohibit, and command that they do not take from you by force any merchandizes, as wheat or barley, although it be for despatch of my armadas, fleets, or galleons, neither for the Assentistas nor Estanqueros; and the said privileges shall be as to wheat and barley, according to the tax; and as to other things and merchandizes as you shall covenant and agree for, without taking them from you till they have paid you for them, and that they shall not, upon the account aforesaid, give you any manner of trouble and vexation.

And because that many of your trade in bringing to the ports of Andalusia, city of Sevilla, and other parts, a great quantity of bacallao and other kinds of fish, dry and salted, which being the most necessary provisions that can be, and creates you a great deal of cost and trouble, I will and command that you enjoy the *custom of the city of Sevilla, in which it is ordered that those which arrive with any fish, dry and salted, there may not be imposed any rate, but that they sell at the price they will, without that it be necessary that they manifest it more than to the ministers which recover my royal revenues; and that if the ships in which they bring the said bacallao be great, that they cannot come up the river, and shall unload them in barks, the judge of the admiralty or any other may not put in the said barks any guards at the cost of the owners of them.* In like sort I command that in case it appears that the said fish is rotten, and cannot be spent, it be burnt or cast into the sea, without that by reason thereof there may be made any process against the owners, or persons that sold it, or be imprisoned or informed against.

And because that the administrator of the *Almoxarifazgos*, and divers other duties, which are recovered on goods and merchandizes, have been used upon information given, to seize the person they suspect, which to men of trade occasions much discredit, costs, and vexations: my will is, and I command, that upon the said informations they only proceed against the merchandizes, and not against the persons, permitting them, as I do permit them, that they may make and do make their defences against the said vexations.

And whereas, according to one article of the said peace, which treats in matter of religion, notwithstanding that in some lawsuit it hath been endeavoured that they declare whether they be Roman Catholics, or not, excusing, giving credit to the oath *which they make, as being parties, or as witnesses, I command therefore, that in those matters they shall not meddle with the natives of the said kingdom:* but that the said condition be fully observed, without making them any such questions, and to the oath you shall tender them in court, the same faith and credit shall be given, as if they were natural Spaniards, without that upon this account they are molested or troubled, or receive any grievance.

And by reason that for justification of some causes the judges and justices pretend that the merchants should exhibit their books of trade, and thereupon they receive vexation and trouble, I command and will, that the books of the merchants of the said nation be not taken from them, but that they produce them in their own houses, to take out the article which shall be appointed, without demanding others; nor may be taken from them any other papers, upon punishment of him that shall contravene herein, to be chastised according to law.

And because likewise the merchants enter their goods in the custom-house of the city of Sevilla, of all the duties, which, because they are many, are made upon one sheet of paper, and firmed and signed by all the officers, and remain in possession of the ware-housekeeper of the custom-house, that by virtue thereof he may deliver such goods as go in bales, packs, trunks, and chests; and after they have taken them out, and put them in their houses, and warehouses, the head-waiter of the custom-house, and the officers of the half per cent shall not search your houses, nor goods, causing you trouble and vexation, asking of you the despatches, it being manifest that you cannot have them, having left them in the power of the said head-waiter. *I prohibit therefore and command, that the houses of the said merchants shall not be visited, nor be asked of them the despatches of their goods, which doth not remain in their custody; so that this is to be understood, and is understood of the houses which are within the walls of the said city.* And that it may be known, those who are of the said nation, let copies be given of the said privileges and exemptions which concern you, and were granted you as well by the articles of the said peace, as in any other manner whatsoever; and for the execution and accomplishing of all the aforesaid; I command those of my privy council, and the rest of my counsellors, juntas, and tribunals of my court, and the president and justices of my courts, as also the judges and justices of the peace belonging to my house, court, and chancery, and the regent, and judges of my court de grados, in the city of Sevilla, and the chief magistrate of the court thereof, and all mayors, governors, magistrates, and other inferior officers, as well of the said cities of Sevilla, Cadiz, and Malaga, and San Lucar de Barrameda, as of all other cities, towns, and places, of these my kingdoms, and dominions, and judges, and justices thereof, of whatever quality and condition they may be, to whom principally or accidentally it shall concern in any manner whatsoever, the accomplishing of all that is contained in this my letter; that as soon as they shall have been required herewith, or with a copy thereof, signed by a public notary (to which shall be given as much credit as to the original), each one for that part which shall concern him, observe and accomplish, cause to be observed and accomplished, in all, and through all, as is contained therein, without that in the whole, or in part, there be put any impediment, or other doubt or difficulty that shall oppose or contravene its tenour and form, nor consent, or allow that it be interpreted, limited, or suspended in whole or in part, contrary to the cedulas, provisions, or other orders for observance thereof, in that part which shall relate to each of you, and that they provide and give the necessary orders for the greater security of the favour, which by this my letter I grant you; and that at all times this favour may be certain and secure to you, that you may have a judge conservator for Andalusia, principally for the said cities of Sevilla, Malaga, Cadiz, and San Lucar de Barrameda, to whom I shall give sufficient commission for the preservation and accomplishing of the said privileges, liberties, and exemptions (which may oblige and compel all and every person whatsoever, of whatsoever condition or quality soever they be) as shall concern the said nation, as well in those in which they shall be defendants, as in those in which they shall be plaintiffs, although the person which shall sue them, and of whom they shall be sued, may have any other special judges whatsoever, as well by covenant or contract which they may have made, as by the pre-eminences or immunities which they may have, because that of the said causes only the said judge conservator may take cognizance, and no other judge or tribunal whatsoever, although it be for any excess or notorious crimes, or in any other manner and form whatsoever; and of that which shall be so determined by him, they may appeal to my council and not to any other tribunal; and because that my will is, that each judge conservator in his time may have jurisdiction and special commission to protect and defend you in all that is contained in this my letter, and that all of it may be observed and accomplished in the form that it is offered to you, I have thought fit to give charge, as by these presents I give them charge of the protection and defence thereof, and command them, that they see this my letter, and the qualities, and conditions, and pre-eminences, and amplifications, contained therein, and cause all of it to be observed and accomplished, in the form accordingly, and in the manner that is contained therein, and declared, without consenting or allowing that in whole or in part, they may put, or do put any doubt or difficulty therein; and before the said judge conservator, and not before any other special judge, the first motion shall pass, and be followed in all causes and lawsuits for what relates thereunto, and cause

the same to be executed, and a chastisement of the disobedient; for such is my will, and that the cognizance and determination of all that is contained in this special letter, shall concern them, and doth concern them, that they proceed against those that shall be guilty, executing on them such penalties as the law requires, reserving, as I do reserve to my council, the appeals, which by their acts and sentences they shall interpose, and not for any other tribunal, without that any of the rest of my councils, tribunals, courts, or chanceries, or any other judges or justices of these my kingdoms and dominions of whatsoever quality they be, may intermeddle, or do intermeddle therein, neither in the practice nor exercise of the special jurisdiction, which by this my cedula I grant them, be it by way of excess, appeal, or any other recourse whatsoever; to whom and to each of them I inhibit, and hold for inhibited their cognizance, and declare them for judges incompetent thereof, for the whole, and in each thing, and part thereof, granting them as full and complete power, and most ample commission as in law is required, and is necessary, with their incidences, dependencies, annexities, and connexities; and that after them the said English nation of the said city of Sevilla, may name in the said commission one of the judges of the said court, whom the said nation shall think fit; and I command the president, and those of my privy council, that presenting before them his name in case the said commission be vacant by promotion or vacation, or in any other manner, they shall be despatched by him that shall be named, in the form accordingly, and as by this my letter is ordained: and for the better performance hereof for time to come, I grant them power, licence, and authority, that they may substitute, and do substitute this commission for matters, and lawsuits, which shall offer in the said cities of Cadiz, and Malaga, and San Lucar de Barrameda, in the person which by you shall be proposed to them, that they may examine matters and bring them to conclusion, and remit them the lawsuits and causes you shall have, to determine them in the form they shall think fit, and see convenient, for the security of what is contained in this my letter; and I encharge the Most Serene Prince, Don Balthasar Carlos, my very dear and beloved son, and command the infantes, prelates, dukes, marquesses, counts, barons, knights, esquires, governors of castles, fo[illegible]sses, and plains, and those of my council, president, and judges of my courts, officers of my house, and court, and chancery, and all mayors, governors, deputy-governors, justices of the peace, and other whatsoever justices and judges of my kingdoms and dominions, that they observe to you and accomplish, and cause to be observed and accomplished this my letter and favour, which I do grant you, and against the tenour and form thereof, not to go, nor act now, nor at any time, nor by any manner, perpetually for ever, nor consent, or allow that they be limited to you, or suspended in whole, or in part, all its contents, whatsoever laws, or orders of these my kingdoms, and dominions, ordinances, style, use, and custom of the said cities of Sevilla, Cadiz, Malaga and San Lucar, and all others, which they have, or may have, to the contrary notwithstanding, for as much as doth concern these presents, accounting it to be here inserted and incorporated, as if it had been word for word; and of this my letter Geronimo de Canencia, my chief treasurer and accountant, and my secretary de la Media Anata, is to take cognizance, to whose charge is committed the account of the said duty; and I declare, that of this favour, you have paid the duty of Media Anata, which imports 35,000,155 maravedis in silver, which you are to pay every fifteen years perpetually; and that being complied with, you shall not have the power to use this favour without that it first appears that you have satisfied this duty, and also that you pay the judge conservator you shall name the salary which he shall enjoy by the said occupation, which is to be manifested by certificates from the office of this duty.

Given in Zaragoza, the 19th day of March, in the year 1645.

SECOND CEDULA, amplifying and confirming the Privileges granted to the English Nation.

THE KING.

To Doctor Don Francisco de Madrano, Judge of my Court of Degrees of the City of Sevilla. Know ye, that by one of my letters and decrees of the 19th of March, of this present year, I did grant to Richard Anthony, Consul of the English nation, and to the sub-

jects of the Kingdom of England, which reside and trade in Andalusia, principally in this city, and in that of Cadiz, and in that of San Lucar de Barrameda, the privileges, exemptions and licences, which appertain to them, as well by the articles of the peace, as by the confirmation, and other favours and indultos, which the king my lord and father (now in glory) granted them, and with the other qualities, conditions, pre-eminences, and amplifications in the said decree declared, for having offered to serve me with 2500 ducats of silver, according as more largely thereby doth appear, to which I refer myself; and one of the conditions which I did grant them was, that I would name and allow them a judge conservator for Andalusia, principally for the said two cities, and San Lucar de Barrameda, to whom should be given sufficient commission for the observance and accomplishment of the said privileges, liberties, and exemptions, who should take cognizance of all causes, both civil and criminal, which should be brought against them, in which they were made defendants, that before him should come all lawsuits, and causes whatsoever, which should concern the said English, or any other persons whatsoever, of whatsoever quality they may be, as well those in which they shall be defendants, as in those in which they shall be plaintiffs, although the persons that shall sue them may have special judges, as well by agreement or contract, which they may have made, by the pre-eminence or immunity which they may have, because of the said causes, only shall take special cognizance the said judge conservator, and no other judge, or tribunal, although it may be by way of excess, or in any other manner or form whatsoever, and that for the causes and suits that shall offer in the said cities of Cadiz and Malaga, and San Lucar, may be substituted their commission in the persons which by the said nation shall be proposed, that he may bring things to a conclusion, and that they be remitted to him to determine; and of that which the said judge shall so determine, they may appeal to my council, and not to any other tribunal, and that the time you shall act in the said court, you shall be esteemed as such, and in your absence, and after you, he whom the said nation, in the said city of Sevilla shall appoint; and because that my will is, that all this be observed and accomplished in the form as is expressed, I have thought fit to give charge to you, and by this present to give you charge of the protection and defence hereof, and command you that you see the said decree and the conditions, pre-eminences, and amplifications therein contained, and all of it be observed and accomplished in form, accordingly, and after the manner that in the said decree, and in this my cedula is declared, without consenting or allowing that in the whole or in part, may put or be put any doubt or difficulty; and before you, and not before any other judge, at the first instance shall be brought and followed, all causes and lawsuits which thereupon, or any other thing or part thereof, shall be made, and cause cognizance to be taken of all causes civil and criminal, in which they shall be prosecuted or against them shall be attempted; and before you shall be brought whatsoever lawsuits and causes which shall concern the said English, between whatsoever persons of whatsoever quality they may be, and the execution and chastisement of those that shall disobey; because that my will is, that the cognizance and determination of all that is contained in the said provision, and in this my cedula of amplification, specially shall and do concern you, proceeding fully against those that shall be guilty, executing upon them the punishments you shall find by justice due to them, without that of the tribunals, courts of chancery, or any other judges or justices of my kingdoms and dominions of Castile, of whatsoever quality they may be, may intermeddle or do intermeddle herein, neither in the use nor exercise of the special jurisdiction in the said first instance, which by this my cedula I grant you, be it by way of excess, appeal, or any other recourse or manner; to whom, and to each of you, I inhibit, and hold for inhibited their cognizance, declaring you for judges incompetent thereof, as for the whole, and every thing, and part thereof; and I grant you the most full and complete power, and most ample commission, as by law is required and necessary, with their incidences, dependencies, annexities, and connexities; and that after you, the said English nation of the said city of Sevilla, may have power to name in the said commission one of the judges of this court, whom the said nation shall think fit; and I command those of my privy council, that presenting before them his name, he said commission being vacant by promotion or otherwise, him who shall be named shall have his despatches in due form, according as in this my cedula is ordained: and that it may the better be accomplished all that is contained in the said decree, and in this my cedula, I grant you

licence, power, and authority, that you may substitute, and do substitute this commission for matters and lawsuits that shall offer in the said cities of Cadiz, Malaga, and San Lucar, in the person that by the said nation shall be proposed to you, that he may conclude matters, you remitting to him the termination thereof in the form you shall think fit, such as may be for the security of the said decree, and that all may be observed in the form, which by it is ordained and commanded, any laws and pragmaticas of my said kingdoms and dominions, ordonnances, style, use and custom, or any thing whatsoever, to the contrary notwithstanding: all which, and for as much as relates to these presents, I dispense with, abrogate, and derogate, make void and annul, count for nothing and of no value and force, and that these presents remain in full force and vigour for the future. Done in Zaragoza, the 26th of June, in the year 1645.—I, THE KING.

Don Philip, by the grace of God, King of Castile, of Leon, of Aragon, &c.

Forasmuch as by my letter and decree of the 19th of March of this present year, I did grant to you, the subjects of the King of Great Britain, who reside in Andalusia, a confirmation and approbation of the privileges, cedulas, and franchises which were granted you by the crowns of Castile and Portugal, and commanded that they should be kept, and observed to you the said articles of peace, made between my crowns and that of England, and that by my other cedula of the 26th of June of the same year, you may name a judge conservator, that shall take cognizance of all your causes, civil and criminal, as well in those in which you shall be plaintiffs, as in those in which you shall be defendants, with other conditions, amplifications, and pre-eminences, in the said decree and cedula contained, referring myself to the tenour thereof.

And now on your part, relation having been made to me, that having presented the last cedula in the assembly of the court of degrees of the city of Sevilla, a copy thereof was ordered to be given to Don Juan de Villalva, my fiscal of the said court, who kept it in his possession from the fifteenth of July, without having answered it till now, which hath hindered and deprived you of the benefit and performance of the said decree and cedula, to your great prejudice and detriment, although by what is ordained thereby, the judge conservator ought to take cognizance of all causes, civil and criminal, as well being plaintiffs and defendants, with any person whatsoever you shall trade with, your intent being only to enjoy the said privileges and judge conservator, when there should be any lawsuits between those of your nation, whether you be plaintiffs or defendants, and whether the causes be civil, or whether they be criminal, and when the suits shall be with Spaniards, or with other persons of different nations, the conservator is to take cognizance so far only of the causes in which you shall be civilly or criminally prosecuted as defendants, and not in which you shall be plaintiffs, humbly entreating me, that whereas in this particular you have waved and desisted from the said privilege before Alonso de Alarcon, that I would be pleased to declare it with the conditions, amplifications, and pre-eminences, as may be most convenient for you, and shall be most necessary for the greater force of what is insisted, of what my pleasure shall be; and because that for the service of the wars, you have offered to assist me with 1500 ducats in silver, payable at certain prefixed days, I have thought fit, and by these presents I will and declare, that when the suits shall be between those of your nation, whether you be plaintiffs or defendants, or the causes shall be civil or criminal, you shall enjoy the said privilege and its conditions: and when the said suits shall be with Spaniards, or with other persons of divers nations, that the judge conservator shall take cognizance, and do take cognizance only of the causes in which you shall be civilly or criminally defendants, and not when you shall be plaintiffs.

And because that the duties of excise of millones which are imposed on bacallao dry and fresh, pilchards, herrings, and salmon, and other kinds of fish, fresh and salted, it was ordered that it should be recovered of those which consume it; and by reason the farmers of these duties, and judges which take cognizance of these causes, do occasion you great grievances, and oblige you to pay two hundred maravedis for each quintal of baccalao, and accordingly on other sorts as are permitted, and upon the arrival of the ships at the ports of Malaga, Cadiz, and San Lucar, they oblige you to declare the quantity of fish you bring, charging you by the great for the whole, obliging you to the payment thereof, as

money due to me, and oblige you to the payment thereof in four months of what it amounts to, which is unjust, because that those who buy these kinds are clergymen, friars, monks, and other persons which have privileges and habits, mayors, aldermen, and common-councilmen: for which cause the farmers of these duties will not recover them of such, but recover them of you for the whole, without considering the quantity they steal from you, that which is rotten, and what you spend in your own families; and if you insist on the recovery thereof of such persons, they treat you ill and do not pay you: *therefore I will and command, that this duty be recovered of the buyers and consumers, and that the farmers put a person for their account, that may recover the same, as is done in the revenues of Alcavala and Almoxarifazgo*, with this condition, that you be obliged, as I oblige you, that you shall register all the said kinds of fish aforesaid, as you are obliged to do, according to the general despatches, without that this may be in any manner avoided.

And because from the visits which the farmers of duties make you, there results a great deal of trouble, I will and command, that in the cities of Malaga, San Lucar, and Cadiz, be observed to you, *and kept the privilege, that they may not examine the merchandizes which are in your houses, according to what is ordered and commanded by the said decree of the 19th of March of this present year, being the same which is granted to* those who reside in the city of Sevilla: and likewise I command that the said search may not be made by any farmer, if in the custom-house you have paid all the duties, and that this be observed to you and accomplished invioably.

And because that all ships that come to these my said kingdoms, from those of England, Ireland, and Scotland, the ministers of the contrabands, and of the Almoxarifazgo upon searching them, as they enter the ports, cause great vexations and trouble to the masters of them, and shut up the holes and hatches of the said ships, *deferring the visiting them eight or fifteen days, putting waiters aboard at the cost of the masters, who will have to maintain them, and make them presents*, I command the said ministers, as well of the contraband, as those of Almoxarifazgo, and every of them, that within three days they shall and do make the said visit, without putting waiters aboard them, or taking any duties by reason thereof, and if they shall put them, it shall be at the cost of the chief Almoxarifazgo and the admiralty, since you owe nothing: and when there shall come into the said ports of Malaga, Cadiz, and San Lucar, any ship with provisions, or merchandizes, neither at the time of the visit, and of the unloading, nor at any other, as aforesaid, I order that the judges and officers of the contraband, nor admiralty, nor any others, may not *put or do put in them waiters at the cost of the masters or owners, nor do give you any trouble, either the one or the other upon that account, according to what is ordered in the fourth article of the institution of the said admiralty, by which it is expressed relating thereunto, for the satisfaction of the waiters and other officers, in the eighth article of the peace, in which it is ordered, that the vassals of the one king in the territory of the other, shall be treated as the natives themselves, in whose ships never are put waiters at the cost of the masters or owners thereof.*

And because also that the officers of the contraband in the said ports, as soon as the ships cast anchor, demand of the masters their manifest, and if they do not find it in the merchandizes that come consigned to you, they give you trouble, although you have the bills of lading that the masters have signed for them, to deliver them according to their consignment, in which you receive a great deal of damage, because that the best instrument you can have is the bills of lading, because that by them, you may oblige them by justice to deliver you your goods, and if the masters by neglect or malice, do not write them in the said manifest, it is not just that they execute the punishment upon the owners of the goods, but upon the masters and ships, and in so doing the manifest shall be always justifiable. Wherefore it is my will, and I declare, that the masters do comply with exhibiting their manifest, within three days after their arrival in the said ports, and I command, that by reason hereof, the owner of the goods, showing the bill of lading, you may not give him any trouble or molestation whatsoever.

And because likewise the judges for exportation, and other officers, cause you much trouble and vexation if they find in the ship any money, and it being necessary that the masters have a sum according to the tonnage, to buy sails, cables, anchors, and other necessary stores, I give licence and permission, that having first made a register as is usual,

every ship may have three pieces of eight for every ton, for the said purpose, and not for any other, without therefore that upon that account they be put to any trouble.

And because that also they of the excise office of the said city of Sevilla, occasion you trouble, vexation, and lawsuits, saying, that there is an order that you shall manifest the butter, leather, and other merchandizes and provisions, and that you declare the price you sell them at, and to what persons, by which means it is two years since, that you have not brought any butter to the said city, and the order doth not relate to the strangers that bring these goods and provisions by sea, but only with the retailers that go to buy them in the ports and bring them to the said city to gain by them, I declare, that you have no obligation to make the said manifest and declaration, nor can they be obliged thereby to make them, nor to make a process against you, and if they do, I command that they be remitted to the judge conservator to determine them.

And because that many times you have taken leases of the houses in which you live and keep your merchandizes, and while you are in them, persons of great authority take them from you before your lease is expired, because they be large and stand where trade is, and oblige you to remove the goods, whereby they are damaged and stolen from you, I will and command, that during the time of your lease, the said houses may not be taken from you by any person, although he may be a judge, and have a particular privilege.

And that all this may be certain and secure, I command the regent, and judges of my court of degrees of the city of Sevilla, and the judges of the courts thereof, and my governor of the said city and his deputy, and the other judges and justices thereof, and of others whatsoever cities, villages, and places of my kingdoms and dominions of my crown of Castile, to whom principally or accidentally shall concern what is here contained, that all causes which shall be depending, in which you shall be defendants, being of the qualities in this my letter contained, that they may provide and give order, that they may be remitted presently to the judge conservator, as I have named you, in the posture they shall be, though they may have been begun before or after my said decree of the 19th of March, of this present year, together with the said decrees and cedulas notwithstanding it having been ordered by my said court of degrees, to give a copy thereof to my said judges, without making therein any excuse, reply, doubt, or any difficulty whatsoever; and I command, that they do not intermeddle, nor may intermeddle in any thing concerning what is contained in the said decree, and cedulas, and in this my letter, but that they observe and fulfil, and cause to be observed and fulfilled, and executed in all, and through all, as therein is contained, and that each of you, in that part which shall concern him, do cause them to be put in true and due execution effectually, so as in all respects it may be complied with, without that it be necessary to have further recourse to me hereupon, whatsoever laws and pragmaticks of these my kingdoms and dominions, ordinances, styles, use, and custom, which they have or might have, to the contrary notwithstanding; with which, forasmuch as relates to these presents, I dispense, abrogate and derogate, make void and null, and give for no value and effect, these presents remaining in full force and vigour for the future, and of this my letter, the clerks of my royal treasury are to take notice; and I declare, that for this grant you have paid the duty of the Media anata. Given in Valencia, the 9th day of November, 1645.

I. THE KING.

TREATY between Great Britain and Spain. Signed at Madrid, the 8th (18th) day of July, 1670.*

(Translation from the Latin.)

Extracts.—I. First, it is agreed between the above-mentioned plenipotentiaries, Sir William Godolphin and the Earl of Peñaranda, in the names of the most serene kings respectively, their masters, that the articles of peace and alliance made between the crowns of Great Britain and Spain, in Madrid, on the 13th (23d) of May, 1667, or any

* Renewed by Article II. of the Treaty of Versailles, 1783.

clause thereof, shall in no manner be deemed or understood to be taken away or abrogated by this present treaty; but that the same shall remain perpetually in their ancient force, stability, and vigour, so far forth as they are not contrary or repugnant to this present convention and articles, or to any thing therein contained.

II. That there be a universal peace, true and sincere amity, in America, as in the other parts of the world, between the most serene kings of Great Britain and Spain, their heirs and successors, and between the kingdoms, states, plantations, colonies, forts, cities, islands, and dominions, without any distinction of place belonging unto either of them, and between the people and inhabitants under their respective obedience, which shall endure from this day for ever, and be observed inviolably, as well by land as by sea and fresh waters, so as to promote each the welfare and advantage of the other, and favour and assist one another with mutual love; and that everywhere, as well in those remote countries as in these which are nearer, the faithful offices of good neighbourhood and friendship may be exercised and increased between them.

X. It is also agreed, that in case the subjects and inhabitants of either of the confederates with their shipping (whether public and of war, or private and of merchants) be forced at any time through stress of weather, pursuit of pirates and enemies, or other inconvenience whatsoever, for the seeking of shelter and harbour, to retreat and enter into any of the rivers, creeks, bays, havens, roads, shores, and ports belonging to the other in America, they shall be received and treated there with all humanity and kindness, and enjoy all friendly protection and help, and it shall be lawful for them to refresh and provide themselves, at reasonable and the usual rates, with victuals and all things needful, either for the sustenance of their persons, or reparation of their ships, and convenience of their voyage; and they shall in no manner be detained or hindered from returning out of the said ports or roads, but shall remove and depart, when and whither they please, without any let or impediment.

XI. Likewise, if any ships belonging to either confederate, their people and subjects, shall, within the coasts or dominions of the other, stick upon the sands, or be wrecked (which God forbid), or suffer any damage, the persons shipwrecked and cast on the shore shall in no sort be kept prisoners, but, on the contrary, all friendly assistance and relief shall be administered to their distress, and letters of safeconduct given them for their free and quiet passage thence, and the return of every one to his own country.

XII. But when it shall happen, that the ships of either (as is above mentioned) through danger of the sea, or other urgent cause, be driven into the ports and havens of the other, if they be three or four together, and may give just ground of suspicion, they shall immediately upon their arrival acquaint the governor or chief magistrate of the place with the cause of their coming, and shall stay no longer than the said governor or chief magistrate will permit, and shall be requisite for the furnishing themselves with victuals, and reparation of their ships: and they shall always take care not to carry out of their ships any goods or packs, exposing them to sale, neither shall they receive any merchandize on board, nor do any thing contrary to this treaty.

XIV. No private injury shall in any sort weaken this treaty, nor beget hatred or dissensions between the foresaid nations, but every one shall answer for his own proper fact, and be prosecuted thereupon; neither shall one man satisfy for the offence of another by reprisals, or other such like odious proceedings, unless justice be denied or unreasonably delayed, in which case it shall be lawful for that king, whose subject hath suffered the loss and injury, to take any course according to the rules and method of the law of nations, until reparation be made to the sufferer.

Treaty of Peace and Friendship between Great Britain and Spain. Signed at Utrecht, 2d (13th) July, 1713.*

(Translation from the Latin.)

Extracts.—VIII. That there be a free use of navigation and commerce between the sub-

* Renewed by Article II. of the Treaty of Versailles, 1783.

jects of each kingdom, as it was heretofore, in time of peace, and before the declaration of this late war, in the reign of Charles the Second (of glorious memory), Catholic King of Spain according to the treaties of friendship, confederation, and commerce, which were formerly made between both nations, according to ancient customs, letters patent, cedulas, and other particular acts; and also according to the treaty or treaties of commerce which are now, or will forthwith be made at Madrid. And whereas, among other conditions of the general peace, it is by common consent established as a chief and fundamental rule, that the exercise of navigation and commerce to the Spanish West Indies should remain in the same state it was in the time of the aforesaid King Charles the Second; that therefore this rule may hereafter be observed with inviolable faith, and in a manner never to be broken, and thereby all causes of distrust and suspicion concerning that matter may be prevented and removed, it is especially agreed and concluded, that no licence, nor any permission at all, shall at any time be given, either to the French, or to any nation whatever, in any name, or under any pretence, directly or indirectly, to sail, to traffic in, or introduce negroes, goods, merchandizes, or any things whatsoever, into the dominions subject to the crown of Spain in America, except what may be agreed by the treaty or treaties of commerce above said (and the rights and privileges granted in a certain convention, commonly called el Assiento de Negros, whereof mention is made in the 12th Article; except also whatsoever the said Catholic King, or his heirs or successors, shall promise by any contract or contracts for the introduction of negroes into the Spanish West Indies, to be made after that the convention or the Assiento de Negros abovementioned shall be determined).

IX. It is further agreed and concluded as a general rule, that all and singular the subjects of each kingdom shall in all countries and places on both sides have and *enjoy at least the same privileges, liberties, and immunities, as to all duties, impositions, or customs whatsoever, relating to persons, goods, and merchandizes, ships, freight, seamen, navigation, and commerce; and shall have the like favour in all things, as the subjects of France, or any other foreign nation, the most favoured, have, possess, and enjoy, or at any time hereafter may have, possess, or enjoy.*

X. The Catholic King does hereby, for himself, his heirs and successors, yield to the crown of Great Britain the full and entire propriety of the Town and Castle of Gibraltar, together with the port, fortifications, and forts thereunto belonging; and he gives up the said propriety to be held and enjoyed absolutely with all manner of right for ever, without any exception or impediment whatsoever. But that abuses and frauds may be avoided by importing any kinds of goods, the Catholic King will, and takes it to be understood, that the abovenamed propriety be yielded to Great Britain without any territorial jurisdiction, and without any open communication by land with the country round about. Yet whereas the communication by sea with the coast of Spain may not at all times be safe or open, and thereby it may happen that the garrison, and other inhabitants of Gibraltar may be brought to great straits; and as it is the intention of the Catholic King, only that fraudulent importations of goods should, as is above said, be hindered by an inland communication, it is therefore provided that in such cases it may be lawful to purchase, for ready money, in the neighbouring territories of Spain, provisions, and other things necessary for the use of the garrison, the inhabitants, and the ships which lie in the harbour. But if any goods be found imported by Gibraltar, either by way of barter for purchasing provisions, or under any other pretence, the same shall be confiscated, and complaint being made thereof, those persons who have acted contrary to the faith of this treaty, shall be severely punished. And her Britannic Majesty, at the request of the Catholic King, does consent and agree, that no leave shall be given under any pretence whatsoever, either to Jews or Moors, to reside or have their dwellings in the said town of Gibraltar; and that no refuge or shelter shall be allowed to any Moorish ships of war in the harbour of the said town, whereby the communication between Spain and Ceuta may be obstructed, or the coasts of Spain be infested by the excursions of the Moors. But whereas treaties of friendship, and a liberty and intercourse of commerce are between the British and certain territories situate on the coast of Africa, it is always to be understood, that the British subjects cannot refuse the Moors and their ships entry into the port of Gibraltar, purely upon the account of merchandizing. Her Majesty the Queen of Great Britain does further promise, that the free exercise of their religion shall be indulged to the Roman Catholic inhabitants of the aforesaid town.

And in case it shall hereafter seem meet to the crown of Great Britain to grant, sell, or by any means to alienate therefrom the propriety of the said town of Gibraltar, it is hereby agreed and concluded, that the preference of having the same shall always be given to the crown of Spain before any others.

XV. Their royal majesties on both parts renew and confirm all treaties of peace, friendship, confederation, and commerce, made heretofore, and concluded between the crowns of Great Britain and Spain, and the said treaties are hereby renewed and confirmed in as full and ample manner, as if they were now particularly here inserted: that is to say, as far as they are not found to be contrary to the treaties of peace and commerce which were the last made and signed. [*And especially by this treaty those agreements, treaties, and conventions, are confirmed and strengthened, which relate as well to the exercise of commerce and navigation in Europe, and elsewhere, as to the introduction of negroes into the Spanish West Indies, and which either are already made, or will forthwith be made between both nations at Madrid.*] And whereas it is insisted on the part of Spain, that certain rights of fishing at the island of Newfoundland belong to the Guipuscoans, or other subjects of the Catholic King, her Britannic Majesty consents and agrees, that all such privileges as the Guipuscoans and other people of Spain are able to make claim to by right, shall be allowed and preserved to them.

Treaty of Navigation and Commerce between Great Britain and Spain. Signed at Utrecht, 28th November (9th December), 1713.*

(Translation from the Latin.)

Art. I. The treaty of peace, commerce, and alliance, concluded at Madrid, between the crowns of Great Britain and Spain, the 13th day of May, 1667, is ratified and confirmed by this treaty, and for the greater strengthening and confirmation of the same, it has been thought proper to insert it word for word in this place, together with the royal *cedulas*, or ordinations annexed to it, as follows:

Their royal majesties do mutually promise, that they will faithfully perform and fulfil all and every one of the articles of the foregoing treaty, and all privileges, concessions, agreements, or other advantages whatsoever, arising to the subjects on either side, which are contained in them, or in the annexed schedules; and that they will at all times cause the same to be performed and fulfilled by their ministers, officers, or other subjects, so that the subjects on each side may enjoy the full effect of all and every one of them (those only excepted, concerning which something else should be established in the following articles, to the mutual satisfaction of each party), and of all those likewise which are contained in the following articles. Moreover, the treaty of 1670, made between the crowns of Great Britain and Spain, for preventing all differences, restraining depredations, and establishing peace between the said crowns in America, is again ratified and confirmed, [without any prejudice however to any contract, or other privilege or leave granted by his Catholic Majesty to the Queen of Great Britain or her subjects, in the late treaty of peace, or in the contract of Assiento,] as likewise without prejudice to any liberty or power, which the subjects of Great Britain enjoyed before, either through right, sufferance, or indulgence.

II. The subjects of their majesties, trading respectively in the dominions of their said *majesties, shall not be bound to pay greater duties, or other imposts whatsoever, for their imports or exports, than shall be exacted of, and paid by the subjects of the most favoured nation; and if it shall happen in time to come, that any diminution of duties, or other advantages shall be granted by either side, to any foreign nation, the subjects of each crown shall reciprocally and fully enjoy the same.* And as it has been agreed, as is above mentioned, concerning the rates of duties, so it is ordained as a general rule between their majesties, that all and every one of their subjects shall, in all lands and places subject to the command of their respective majesties, *use and enjoy at least the same privileges, liberties, and immunities, concerning all imposts or*

* Renewed by Article II. of the Treaty of Versailles, 1783

duties whatsoever, which relate to persons, wares, merchandize, ships, freighting, mariners, navigation, and commerce, and enjoy the same favour in all things (as well in the courts of justice, as in all those things which relate to trade, or any other trade whatsoever), *as the most favoured nation uses and enjoys, or may use and enjoy for the future, as is explained more at large in the 38th article of the treaty of* 1667, *which is specially inserted in the foregoing article.*

IV. The Catholic King consents and promises, that for the future it shall always be lawful for the subjects of Great Britain, living in the provinces of Biscaya and Guipuscoa, to hire houses or warehouses fit for the preservation of their merchandize, and his majesty will, by renewing his orders to that purpose, take effectual care that it shall be in their power to do this in the like manner, and with the same privileges, with which the said British subjects, by virtue of the aforesaid treaty of 1667, or of any diploma or ordinance, granted by their catholic majesties, did enjoy, or ought to have enjoyed, that liberty in Andalusia, or in any other ports or places of Spain whatsoever. The subjects of Spain shall enjoy the same liberty in any ports and places of Great Britain, with all the privileges belonging to them by the aforesaid treaty.

VI. And as the subjects of their majesties are to enjoy on both sides an entire, secure, and unmolested use and liberty of navigation and commerce, as long as the peace and friendship entered into by their majesties and their crowns shall continue, so likewise their majesties have provided that the said subjects shall not be deprived of that security for any little difference which may possibly arise, but that they shall, on the contrary, enjoy all the benefits of peace until war be declared between the two crowns.

IX. His Catholic Majesty promises, that those merchandizes which are not particularly mentioned in the catalogue of rates, which is to be made according to the third article of this treaty, shall be charged with the same duties in proportion to their value, and no greater than those which are laid upon merchandizes named in the said catalogue of rates. And if any difference arises between the farmers of the custom-houses, or commissaries, and any merchant, concerning the value of any wares, it shall be in the choice of the merchant to sell his wares to the farmer or commissary at the price the farmer of the custom-house valued them at (which price shall be immediately paid in ready money, the duties only deducted), or else to give part of his merchandizes at the rate set upon them, as hath been mentioned, to the farmer or commissary instead of the duty, and retain the rest.

X. It is agreed, that in case the British subjects shall bring any wares from any part of the coasts of Africa into Spain, and the same shall be admitted to pay the duties, those being duly paid, the said wares shall not afterwards be charged either by the captains-general of the coasts, or commanders of the harbours, or any body else, with any other duties, under what name or title soever, excepting such as are payable in general, for all wares of the same sort, at the time of their sale.

XI. *The masters of merchant ships who shall enter into any port of Spain with their ships, shall be obliged, within twenty-four hours after their arrival, to deliver two declarations or inventories of their wares, or of that part of them which they are to unlade there;* viz., one declaration to the farmer of the custom-houses or commissary, and another to the judge of the contraband; nor shall they open the hatches of their ships till they either have searchers with them, or have leave given them by the farmer of the custom-houses to do it. No wares shall be unladen with any other view than that of being immediately carried to the custom-houses, according to a permission which shall be given in writing for that end. It shall not be lawful, however, for any of the judges of contraband, or other officers of the custom-houses, under any pretence whatsoever, to open any bags, chests, hogsheads, or other covers of any wares whatsoever, belonging to the subjects of Great Britain, while they are carrying to the custom-house and before they are brought thither, and the proprietor of them, or his factor, is also come, who may discharge the duties and take the goods into his own custody. But the said judges of contraband, or their deputies, may be present when the wares are taken out of the ships, and also when they are declared and laid open in the custom-house, and if there be suspicion of deceit, as that it is designed to lay open one merchandize instead of another, it shall be lawful for him to open all the bags, chests, and hogsheads, so this be done in the custom-house and no other place, and in the presence of the merchant or his factor, and not otherwise. But

when the goods have been exposed and carried away from the custom-house, and the chests, hogsheads, or other covers containing them, have been marked with the sign or seal of the proper officer, no judge of the contraband, or other officer, shall presume to open them again, or to hinder them from being carried to the merchant's house. Neither shall it be lawful for them, under any pretence whatsoever, to hinder the said goods from being carried from one house or warehouse to another, within the walls or compass of the said city or place, provided that be done between the hours of eight in the morning and five in the evening, and previous notice be given to the farmers of the rights "de Alcavalos and Cientos," of the intent with which those goods are removed, to wit, whether it be that they should be sold, that in that case those duties, if not paid before, may be paid there or at the place of sale; or if they are not to be sold, then a certificate may be given, after the usual manner, to the merchant. Furthermore, it shall be lawful to carry wares from any port or place, within the king of Spain's dominions to any other port or place either by sea or land, under such conditions as are expressed in the 5th article of this treaty.

XII. *The duties upon merchandize brought into the Canary Islands, exported from thence by British subjects, shall not be greater than those if it were paid in the reign of the late King Charles the Second, or such as that become payable by the new books of rates.*

XIV. His Catholic Majesty gives leave to the subjects of Great Britain to settle themselves, and dwell in the town called St. Ander, upon the terms that are expressed in the 9th and 30th articles of the treaty of 1667.

XVI. *If any minister or other subject of her Majesty of Great Britain, or of his Catholic Majesty, shall violate this treaty or any Article of it, he shall be responsible for all the damage occasioned by it, and if he be placed in any public office, he shall, besides making satisfaction to the injured party (as is aforesaid), be deprived of his office also.*

XVII. The subjects of Great Britain having brought by sea from any other port in Spain, wine, brandy, oil, soap, dried grapes, or other merchandizes, and producing certificates that the duties were paid at the place whence they set sail, shall be suffered to put the same into their ships lying at Cadiz, or there to remove them from one ship to another (with the consent of the inspectors of the maritime affairs, and in the presence of them, or their deputies, if they have a mind to be there, and at a seasonable time, to be appointed by the said inspectors within four-and-twenty hours, in order to prevent all frauds whatsoever), and to carry away from thence, with this liberty, that they shall not pay the duty called Houdeaxe, or any other of entrance or going out.

DECLARATION BY QUEEN ANNE.

"We having seen and considered the above-written treaty, have approved, ratified, and confirmed the same, as we do by these presents, for ourselves, our heirs and successors, approve, ratify, and confirm it, excepting only three articles thereof: viz., the 3d, 5th, and 8th, concluded at Utrecht, which are to be observed and understood in the manner and form following; viz.,"—the articles which she proposed substituting for those articles. These from their great length we do not insert, as they do not appear to have ever been ratified by Spain. They insisted chiefly that a duty of 10 per cent *ad valorem* on imports by British subjects, should be levied in lieu of all others.

SEPARATE ARTICLE.

His Catholic Majesty consents, that it shall at all times hereafter be lawful for the British subjects, who shall live in the Canary Islands, for the sake of their trade, to nominate some one person, being a subject of Spain, who shall execute the office of judge conservator there, and shall at the first instance take cognizance of all causes relating to the commerce of the British subjects; and his Royal Majesty promises, that he will grant commissions to such judge conservator, so named, together with the same authority, and all the privileges which the judges conservators have formerly enjoyed in Andalusia. And if the British subjects shall desire to have more judges of that sort there, or to change those that are appointed every three years, it shall be allowed and granted them. His Catholic Majesty consents likewise, that appeals from the sentences of the said judge conservator shall be brought before the tribunal at the Council of War at Madrid, and nowhere else.

TREATY of Commerce between Great Britain and Spain. Signed at Madrid, the 3d (14th) of December, 1715.*

(Translation.)

Whereas, since the treaties of peace and commerce, lately concluded at Utrecht, on the 13th of July, and 9th of December, 1713, between his Catholic Majesty and her late Majesty the Queen of Great Britain (of glorious memory), some differences remained about commerce, and the course thereof; their Catholic and Britannic Majesties, being inclined to maintain and cultivate a firm and inviolable peace and friendship, have (for attaining so good an end) by the two ministers reciprocally and in due form authorized for this purpose, caused the following Articles to be concluded and signed:

I. The British subjects shall not be obliged to pay higher or other duties for goods which they shall bring in or carry out of the several ports of his Catholic Majesty, than those which they paid for the same goods in the time of King Charles II., settled by cedulas and ordinances of the said king or his predecessors; and though the favour or allowance called *pie del fardo*, be not founded on any royal ordinance, yet his Catholic Majesty declares, wills, and ordains, that it shall be observed now and for the future, as an inviolable law, which duties shall be demanded and collected, now and for the future, with the same advantages and favours to the said subjects.

II. His Catholic Majesty confirms the treaty made by the British merchants with the magistrates of St. Ander, in the year 1700.†

III. His Catholic Majesty allows the said subjects to gather salt in the Island of Tortudos, they having enjoyed that permission in the time of King Charles the Second without interruption.

IV. *The said subjects shall not anywhere pay higher or other duties than those which his Catholic Majesty's subjects pay in the same place.*

V. *The said subjects shall enjoy all the rights, privileges, franchises, exemptions, and immunities whatsoever, which they enjoyed before the last war, by virtue of the royal cedulas or ordinances, and by the articles of the treaty of peace and commerce, made at Madrid, in* 1667, *which is fully confirmed here*; and the said subjects shall be used in Spain in the same manner as the most favoured nation, and consequently all nations shall pay the same duties on wool and other merchandize which shall be brought into or carried out of these kingdoms by land, as the said subjects pay on the same goods which they shall import or export by sea; and all the rights, privileges, franchises, exemptions, and immunities, which shall be granted or permitted to any nation whatever, shall likewise be granted and permitted to the said subjects; the same shall be granted, observed, and permitted to the subjects of Spain in the kingdoms of his Britannic Majesty.

VI. And as there may have been innovations in commerce, his Catholic Majesty promises to use all possible endeavours on his part for abolishing them; and for the future will, by all sorts of means, cause them to be forborne. In the like manner, his Britannic Majesty promises to use all possible endeavours for abolishing all innovations on his part, and for the future will, by all sorts of means, cause them to be forborne.

VII. The treaty of commerce, made at Utrecht, on the 9th of December, 1713, shall remain in force, those articles excepted which shall appear to be contrary to what is concluded and signed this day, which shall be abolished and of no force, *and especially the three articles* (3, 5, and 8) *commonly called explanatory.*

* Renewed by Article II. of the Treaty of Versailles, 1783.

† This treaty extended to British merchants all the privileges of the treaty of 1667, and of the two *cedulas* annexed, and every privilege enjoyed by the townspeople of St. Ander, in the way of trade; besides appropriating lands for building, &c., to them.

Treaty between Great Britain and Spain (and France). Signed at Seville, the 9th of November, 1729.*

(Translation.)

Extract.—IV. It having been agreed by the preliminary articles, that the commerce of the English and French nations, as well in Europe as in the Indies, should be re-established on the foot of the treaties and conventions antecedent to the year 1725, and particularly that the commerce of the English nation in America should be exercised as heretofore; it is agreed by the present article, that all necessary orders shall be despatched on both sides without any delay, if they have not been sent already, as well for the execution of the said treaties of commerce, as for supplying what may be wanting for the entire re-establishment of commerce on the foot of the said treaties and conventions.

Done at Seville, the 9th of November, 1729.

SEPARATE ARTICLES.

(Translation.)

Extract.—I. Although, conformably to the preliminary articles, it is said in the fourth article of the treaty signed this day, that the commerce of the English nation in America should be re-established on the foot of the treaties and conventions antecedent to the year 1725; however, for the greater exactness, it is further declared by the present article, between their Britannic and Catholic Majesties, which shall have the same force, and be under the same guaranty as the treaty signed this day, that under that general denomination are comprehended the Treaties of Peace and of Commerce concluded at Utrecht, the 13th of July, and 9th of December, in the year 1713, in which are comprised the Treaty of 1667, made at Madrid, and the Cedulas therein mentioned, the latter treaty made at Madrid, the 14th of December, 1715, &c. &c.; all which treaties mentioned in this article, with their declarations, shall from this day (even during the examinations by the Commissaries) be and remain in their force, virtue, and full vigour; for in the observation of which his Catholic Majesty shall cause to be despatched forthwith, if they have not been despatched, the necessary orders and cedulas to his viceroys, governors, and other ministers, to whom it shall appertain, as well in Europe as in the Indies, to the end that without any delay or interruption they may cause them to be observed and fulfilled.

In like manner, his Britannic Majesty promises and engages to publish the necessary orders, if any be wanting, for re-establishing the commerce of the subjects of Spain in all the countries under his dominion, on the foot specified by the said treaties, and for causing them to be exactly observed and fulfilled.

Done at Seville, the 9th of November, 1729.

Treaty between Great Britain and Spain. Signed at Madrid, the 5th of October, 1750.†

(Translation.)

Extract.—IV. His Catholic Majesty consents hereby that the British subjects be not obliged to pay higher or other duties, nor upon any other estimate of the merchandizes that they import to, or export from, the several ports belonging to his Catholic Majesty, than those they have paid for the said merchandizes in the reign of Charles II., King of Spain; which were regulated by the schedules and ordinances of the said king, or by those of his predecessors. And though the *pie del fardo* (regulation of the duties, &c.) is not grounded upon any royal ordinance, his Catholic Majesty, this notwithstanding, does hereby declare, and it is his pleasure to order, that the same be observed at present and for the future, as an inviolable law; and that all manner of duties shall be demanded and re-

* Renewed by Article II. of the Treaty of Versailles, 1783.

† *Ibid.*

ceived at present and henceforward in the same advantageous and favourable manner as granted to the said subjects.

V. His Catholic Majesty does hereby allow and permit the said subjects to take and gather salt in the Island of Fortudos, without any hindrance, and in the manner as they have done it during the reign of the said Charles II.

VI. *His Catholic Majesty consents by these, that the said subjects shall not pay in any part whatever, higher or other imposts than those that his Catholic Majesty's subjects do pay in the same place.*

VII. His Catholic Majesty does hereby allow and consent that the said British subjects shall enjoy all those rights, privileges, franchises, exemptions, and immunities, which they did *enjoy before the last war, by virtue and in consequence of the schedules or the royal ordinances that were made thereupon, and agreeable to the Treaty of Peace and Commerce that has been made at Madrid, in the year* 1667; and that the said subjects shall be treated in Spain in the same manner as those of the most favoured nation; and that, consequently, no nation whatever shall pay less duties for the woods and other merchandizes that are brought or carried away by them from the kingdoms of Spain by land, than the said subjects shall pay for the same merchandizes that they shall import or export by sea; and that all the rights, privileges, franchises, exemptions, and immunities, that are or shall be granted or allowed to any other nation shall be likewise granted and allowed to the said British subjects, and his Britannic Majesty does hereby consent that the same be granted and allowed to the subjects of Spain in his Britannic Majesty's kingdoms.

Definitive Treaty between Great Britain and Spain (and France). Signed at Paris, the 10th of February, 1763.*

(Translation, as laid before Parliament.)

Extract.—II. The Treaties of Westphalia, of 1648; those of Madrid, between the Crowns of Great Britain and Spain, of 1667, and 1670; the Treaties of Peace of Nimeguen, of 1678 and 1679; of Ryswick, of 1697; those of Peace and of Commerce of Utrecht, of 1713; that of Baden, of 1714; the Treaty of the Triple Alliance of the Hague, of 1717; that of the Quadruple Alliance of London, of 1718; the Treaty of Peace of Vienna, of 1738; the Definitive Treaty of Aix-la-Chapelle, of 1748; and that of Madrid, between the Crowns of Great Britain and Spain, of 1750; as well as the Treaties between the Crowns of Spain and Portugal, of the 13th of February, 1668, of the 6th of February, 1715, and of the 12th of February, 1761; and that of the 11th of April, 1713, between France and Portugal, with the guarantees of Great Britain; serve as a basis and foundation to the peace, and to the present treaty; *and for this purpose, they are all renewed and confirmed in the best form, as well as all the treaties in general, which subsisted between the High Contracting Parties before the war, as if they were inserted here word for word, so that they are to be exactly observed for the future, in their whole tenour, and religiously executed on all sides, in all their points which shall not be derogated from by the present treaty, notwithstanding all that may have been stipulated to the contrary by any of the High Contracting Parties.* And all the said parties declare, that they will not suffer any privilege, favour, or indulgence, to subsist, contrary to the treaties above confirmed, except what shall have been agreed and stipulated by the present treaty.

XVII. His Britannic Majesty shall cause to be demolished all the fortifications which his subjects shall have erected in the Bay of Honduras, and other places of the territory of Spain in that part of the world, four months after the ratification of the present treaty: and his Catholic Majesty shall not permit his Britannic Majesty's subjects, or their workmen, to be disturbed, or molested, under any pretence whatsoever, in the said places, in their occupation of cutting, loading, and carrying away logwood: and for this purpose, they may build without hindrance, and occupy without interruption, the houses and maga-

* Renewed by Article II. of the Treaty of Versailles, 1783.

zines which are necessary for them, for their families, and for their effects: and his Catholic Majesty assures to them, by this article, the full enjoyment of those advantages and powers on the Spanish coasts and territories, as above stipulated, immediately after the ratification of the present treaty.

XVIII. His Catholic Majesty desists, as well for himself as for his successors, from all pretension, which he may have formed, in favour of the Guipuscoans, and other his subjects, to the right of fishing in the neighbourhood of the island of Newfoundland.

Definitive Treaty between Great Britain and Spain, signed at Versailles, the 3d of September, 1783.*

(Translation.)

Extract.—II. The Treaties of Westphalia, of 1684; those of Madrid, of 1667 and of 1670; those of Peace and of Commerce of Utrecht, of 1713; that of Baden, of 1714; of Madrid, of 1715; of Seville, of 1729; the Definitive Treaty of Aix-la-Chapelle, of 1748; the Treaty of Madrid, of 1750; and the Definitive Treaty of Paris, of 1763; serve as a basis and foundation to the peace, and to the present treaty; and for this purpose they are all renewed and confirmed, in the best form, as well as all the treaties in general which subsisted between the High Contracting Parties before the war, *and particularly all those which are specified and renewed in the aforesaid Definitive Treaty of Paris, in the best form, and as if they were herein inserted word for word; so that they are to be exactly observed for the future in their full tenour, and religiously executed by both parties, in all the points which shall not be derogated from by the present treaty of peace.*

VI. The intention of the two High Contracting Parties being to prevent, as much as possible, all the causes of complaint and misunderstanding heretofore occasioned by the cutting of wood for dyeing, or logwood; and several English settlements having been formed and extended, under that pretence, upon the Spanish continent, it is expressly agreed, that his Britannic Majesty's subjects shall have the right of cutting, loading, and carrying away logwood, in the district lying between the rivers Wallis or Bellize, and Rio-Hondo, taking the course of the said two rivers for unalterable boundaries, so as that the navigation of them be common to both nations, to wit, by the river Wallis or Bellize, from the sea, ascending as far as opposite to a lake or inlet which runs into the land and forms an isthmus, or neck, with another similar inlet, which comes from the side of Rio-Nuevo, or New River; so that the line of separation shall pass straight across the said isthmus, and meet another lake formed by the water of Rio-Nuevo, or New River, at its current. The said line shall continue with the course of Rio-Nuevo, descending as far as opposite to a river, the source of which is marked in the map, between Rio-Nuevo and Rio-Hondo, and which empties itself into Rio-Hondo; which river shall also serve as a common boundary as far as its junction with Rio-Hondo, and from thence descending by Rio-Hondo to the sea, as the whole is marked on the map which the plenipotentiaries of the two crowns have thought proper to make use of, for ascertaining the points agreed upon, to the end that a good correspondence may reign between the two nations, and that the English workmen, cutters, and labourers, may not trespass from an uncertainty of the boundaries. The respective commissaries shall fix upon convenient places, in the territory above marked out, in order that his Britannic Majesty's subjects, employed in the felling of logwood, may, without interruption, build therein houses and magazines necessary for themselves, their families, and their effects; and his Catholic Majesty assures to them the enjoyment of all that is expressed in the present article; provided that these stipulations shall not be considered as derogating in any wise from his rights of sovereignty. Therefore all the English who may be dispersed in any other parts, whether on the Spanish continent, or in any of the islands whatsoever, dependent on the aforesaid Spanish continent, and for whatever reason it might be, without exception, shall retire within the district which has been above described, in the space of eighteen months,

* Confirmed by the 1st Additional Article to the Treaty of 5th July, 1814.

to be computed from the exchange of the ratifications; and for this purpose orders shall be issued on the part of his Britannic Majesty; and on that of his Catholic Majesty, his governors shall be ordered to grant to the English, dispersed, every convenience possible for their removing to the settlement agreed upon by the present article, or for their retiring wherever they shall think proper. It is likewise stipulated, that if any fortifications should actually have been heretofore erected within the limits marked out, his Britannic Majesty shall cause them all to be demolished, and he will order his subjects not to build any new ones. The English inhabitants, who shall settle there for the cutting of logwood, shall be permitted to enjoy a free fishery for their subsistence, on the coasts of the district above agreed on, or of the islands situated opposite thereto, without being in any wise disturbed on that account; provided they do not establish themselves in any manner on the said islands.

IX. Immediately after the exchange of the ratifications, the two High Contracting Parties shall name commissaries to treat concerning new arrangements of commerce between the two nations, on the basis of reciprocity and mutual convenience; which arrangements shall be settled and concluded within the space of two years, to be computed from the 1st of January, 1784.

Done at Versailles, the 3d of September, 1783.

British Declaration.—The new state in which commerce may perhaps be found, in all parts of the world, will demand revisions and explanations of the subsisting treaties; but an entire abrogation of those treaties, in whatever period it might be, would throw commerce into such confusion as would be of infinite prejudice to it.

In some of the treaties of this sort, there are not only articles which relate merely to commerce, but many others which ensure reciprocally, to the respective subjects, privileges, facilities for conducting their affairs, personal protections, and other advantages, which are not, and ought not to be of a changeable nature, such as the regulations relating merely to the value of goods and merchandize, variable from circumstances of every kind.

When therefore the state of the trade between the two nations shall be treated upon, it is requisite to be understood that the alterations which may be made in the subsisting treaties are to extend only to arrangements merely commercial; and that the privileges and advantages, mutual and particular, be not only preserved on each side, but even augmented, if it can be done.

In this view, his Majesty has consented to the appointment of commissaries, on each side, who shall treat solely upon this object.

Done at Versailles, the 3d of September, 1783.

Spanish Counter-Declaration.—The Catholic King, in proposing new arrangements of commerce, has had no other design than to remedy, by the rules of reciprocity and mutual convenience, whatever may be defective in preceding treaties of commerce. The King of Great Britain may judge from thence, that the intention of his Catholic Majesty *is not in any manner to cancel all the stipulations contained in the above-mentioned treaties;* he declares, on the contrary, from henceforth, that he is disposed to maintain all the privileges, facilities, and advantages, expressed in the old treaties, as far as they shall be reciprocal, or compensated by equivalent advantages. It is to attain this end, desired on each side, that commissaries are to be named to treat upon the state of trade between the two nations, and that a considerable space of time is to be allowed for completing their work. His Catholic Majesty hopes that this object will be pursued with the same good faith, and with the same spirit of conciliation, which have presided over the discussion of all the other points included in the definitive treaty; and his said Majesty is equally confident that the respective commissaries will employ the utmost diligence for the completion of this important work.

Convention between Great Britain and Spain. Signed at London, the 14th of July, 1786.*

(Translation.)

Extract.—I. His Britannic Majesty's subjects, and the other colonists who have hitherto enjoyed the protection of England, shall evacuate the country of the Mosquitos, as well as the continent in general, and the islands adjacent, without exception, situated beyond the line hereinafter described, as what ought to be the frontier of the extent of territory granted by his Catholic Majesty to the English, for the uses specified in the 3d article of the present Convention, and in addition to the country already granted to them in virtue of the stipulations agreed upon by the commissaries of the two crowns, in 1783.

II. The Catholic King, to prove, on his side, to the King of Great Britain, the sincerity of his sentiments of friendship towards his said Majesty and the British nation, will grant to the English more extensive limits than those specified in the last treaty of peace: and the said limits of the lands added by the present convention shall for the future be understood in the manner following:

The English line, beginning from the sea, shall take the centre of the river Sibun or Jabon, and continue up to the source of the said river; from thence it shall cross in a straight line the intermediate land, till it intersects the river Wallis; and by the centre of the same river, the said line shall descend to the point where it will meet the line already settled and marked out by the commissaries of the two crowns in 1783; which limits, following the continuation of the said line, shall be observed as formerly stipulated by the definitive treaty.

III. Although no other advantages have hitherto been in question, except that of cutting wood for dyeing, yet his Catholic Majesty, as a greater proof of his disposition to oblige the King of Great Britain, will grant to the English the liberty of cutting all other wood, without even excepting mahogany, as well as gathering all the fruits, or produce of the earth, purely natural and uncultivated, which may, besides being carried away in their natural state, become an object of utility or of commerce, whether for food or for manufactures; but it is expressly agreed that this stipulation is never to be used as a pretext for establishing in that country any plantation of sugar, coffee, cocoa, or other like articles; or any fabric or manufacture by means of mills or other machines whatsoever, (this restriction however does not regard the use of saw mills, for cutting or otherwise preparing the wood,) since all the lands in question being indisputably acknowledged to belong of right to the crown of Spain, no settlements of that kind, or the population which would follow, could be allowed. The English shall be permitted to transport and convey all such wood, and other produce of the place, in its natural and uncultivated state, down the rivers to the sea, but without ever going beyond the limits which are prescribed to them by the stipulations above granted, and without thereby taking an opportunity of ascending the said rivers, beyond their bounds, into the countries belonging to Spain.

IV. The English shall be permitted to occupy the small island known by the names of Casina, St. George's Key, or Cayo Casina, in consideration of the circumstance of that part of the coasts opposite to the said island being looked upon as subject to dangerous disorders; but this permission is only to be made use of for purposes of real utility: and as great abuses, no less contrary to the intentions of the British government, than to the essential interest of Spain, might arise from this permission, it is here stipulated, as an indispensable condition, that no fortification, or work of defence whatever, shall at any time be erected there, nor any body of troops posted, nor any piece of artillery kept there: and in order to verify with good faith the accomplishment of this condition *sine quâ non* (which might be infringed by individuals, without the knowledge of the British government), a Spanish officer or commissary, accompanied by an English commissary or officer, duly authorized, shall be admitted, twice a year, to examine into the real situation of things.

V. The English nation shall enjoy the liberty of refitting their merchant-ships in the southern triangle, included between the point of Cayo Casina, and the cluster of small

* Confirmed by the 1st Additional Article to the Treaty of 5th July, 1814.

islands, which are situated opposite that part of the coast occupied by the cutters, at the distance of eight leagues from the river Wallis, seven from Cayo Casina, and three from the river Sibun, a place which has always been found well adapted to that purpose. For which end, the edifices and storehouses, absolutely necessary for that service, shall be allowed to be built; but in this concession is also included the express condition of not erecting fortifications there at any time, or stationing troops, or constructing any military works; and in like manner it shall not be permitted to station any ships of war there, or to construct an arsenal, or other building, the object of which might be the formation of a naval establishment.

VI. It is also stipulated, that the English may freely and peaceably catch fish on the coast of the country assigned to them by the last treaty of peace, as also of that which is added to them by the present convention; but without going beyond their boundaries, and confining themselves within the distance specified in the preceding article.

VII. All the restrictions specified in the last treaty of 1783, for the entire preservation of the right of the Spanish sovereignty over the country, in which is granted to the English only the privilege of making use of the wood of the different kinds, the fruits and other produce, in their natural state, are here confirmed; and the same restrictions shall also be observed with respect to the new grant. In consequence, the inhabitants of those countries shall employ themselves simply in the cutting and transporting of the said wood, and in the gathering and transporting of the fruits, without meditating any more extensive settlements, or the formation of any system of government, either military or civil, further than such regulation as their Britannic and Catholic Majesties may hereafter judge proper to establish, for maintaining peace and good order amongst their respective subjects.

VIII. As it is generally allowed that the woods and forests are preserved, and even multiply, by regular and methodical cuttings, the English shall observe this maxim, as far as possible; but if, notwithstanding all their precautions, it should happen in course of time that they were in want of dyeing-wood, or mahogany, with which the Spanish possessions might be provided, the Spanish government shall make no difficulty to furnish a supply to the English at a fair and reasonable price.

IX. Every possible precaution shall be observed to prevent smuggling; and the English shall take care to conform to the regulations which the Spanish government shall think proper to establish amongst their own subjects, in all communications which they may have with the latter; on condition nevertheless that the English shall be left in the peaceable enjoyment of the several advantages inserted in their favour in the last treaty, or stipulated by the present convention.

XI. Their Britannic and Catholic Majesties, in order to remove every kind of doubt with regard to the true construction of the present convention, think it necessary to declare that the conditions of the said convention ought to be observed according to their sincere intention to ensure and improve the harmony and good understanding which so happily subsist at present between their said Majesties.

In this view his Britannic Majesty engages to give the most positive orders for the evacuation of the countries above mentioned, by all his subjects of whatever denomination; but if, contrary to such declaration, there should still remain any persons so daring as to presume, by retiring into the interior country, to endeavour to obstruct the entire evacuation already agreed upon, his Britannic Majesty, so far from affording them the least succour, or even protection, will disavow them in the most solemn manner, as he will equally do those who may hereafter attempt to settle upon the territory belonging to the Spanish dominion.

CONVENTION between Great Britain and Spain. Signed at the Escurial, the 28th of October, 1790.*

(Translation, as laid before Parliament.)

Extract.—Their Britannic and Catholic Majesties, being desirous of terminating, by a

* Confirmed by the 1st Additional Article to the Treaty of 5th July, 1814.

speedy and solid agreement, the differences which have lately arisen between the two crowns, have judged that the best way of attaining this salutary object would be that of an amicable arrangement, which, setting aside all retrospective discussion of the rights and pretensions of the two parties, should fix their respective situation for the future on a basis conformable to their true interests, as well as to the mutual desire with which their said Majesties are animated, of establishing with each other, in every thing and in all places, the most perfect friendship, harmony, and good correspondence. The other articles of this relate solely to the settlement of fishing boundaries in America.

Additional Article to the Treaty of Peace with Spain. Signed at London, the 14th of January, 1809.

The present circumstances not admitting of the regular negotiation of a treaty of commerce between the two countries, with all the care and consideration due to so important a subject, the High Contracting Parties mutually engage to proceed to such negotiation as soon as it shall be practicable so to do; affording, in the mean time, mutual facilities to the commerce of the subjects of each other, by temporary regulations founded on principles of reciprocal utility.

London, 21st March, 1809.

Extract from Treaty between Great Britain and Spain. Signed at Madrid, the 5th of July, 1814.

III. It having been agreed by the treaty signed at London on the 14th day of January, 1809, to proceed to the negotiation of a treaty of commerce between Great Britain and Spain, as soon as it should be practicable so to do, and the two High Contracting Parties desiring mutually to protect and extend the commerce between their respective subjects, promise to proceed without delay to the formation of a definitive arrangement of commerce.

IV. In the event of the commerce of the Spanish American possessions being opened to foreign nations, his Catholic Majesty promises that Great Britain shall be admitted to trade with those possessions as the most favoured nations.

Additional Articles. Signed at Madrid, the 28th of August, 1814.

I. It is agreed that, pending the negotiation of a new treaty of commerce, Great Britain shall be admitted to trade with Spain upon the same conditions as those which existed previously to the year 1796. All the treaties of commerce which at that period subsisted between the two nations, being hereby ratified and confirmed.

II. His Catholic Majesty, concurring in the fullest manner in the sentiments of his Britannic Majesty with respect to the injustice and inhumanity of the traffic in slaves, will take into consideration, with the deliberation which the state of his possessions in America demands, the means of acting in conformity with those sentiments. His Catholic Majesty promises, moreover, to prohibit his subjects from engaging in the slave trade, for the purpose of supplying any islands or possessions, excepting those appertaining to Spain, and to prevent likewise, by effectual measures and regulations, the protection of the Spanish flag being given to foreigners who may engage in this traffic, whether subjects of his Britannic Majesty or of any other state or power.

Decree of the King of Spain, regulating the Trade of Foreigners with his Dominions in America.

I. A direct commerce shall be maintained in my American dominions with foreigners, subjects of the powers, the allies, and friends of Spain: and the merchant vessels of those powers shall be admitted to traffic in those ports in the same manner as in those of my dominions in Europe.

II. A decree of law shall be issued to regulate this commerce, and to determine the ports which shall be open, as well in the Gulf of Mexico, and the islands, as in the Pacific Ocean. There shall be established custom-houses, where duties on importation and exportation shall be imposed, on the footing of equality, upon the trade of the subjects of the said powers.

III. There shall, in like manner, be determined by regulations on this matter, what advantages, preferences, and franchises, shall be granted to Spanish trade, navigation, agriculture, and industry.

IV. Until the two preceding articles can receive their perfect execution, no alteration shall be introduced in the actual state of the said commerce, and it shall be assimilated in other respects as much as possible with what is practised in the Island of Cuba.

At the Palace, the 9th of February, 1824. FERDINAND.

Royal Order, addressed to the General Direction of the Revenue, for permitting, for a time, the Commerce to America, under Foreign Flags.

(Translation.)

The King, our lord, finding it necessary to protect and extend the reciprocal commerce of America with the mother country, by means of measures conformable to the present situation of mercantile relations, and of navigation, by giving to the latter due uniformity and generality; with the view of consulting the interests of the royal treasury, as well as of commerce and industry, has been pleased, after hearing the opinion of his council of ministers, to order that, until this subject can be regulated after a more mature deliberation, the following regulations shall be observed:

I. Spaniards having occasion to trade to the dominions of America from the ports of the Peninsula and the adjacent islands, in foreign vessels of friendly and allied powers, shall be allowed so to do, without the necessity of previously obtaining the royal permission.

II. Foreign vessels, of the above description, when sailing from the Spanish ports of the Peninsula and the adjacent islands, for the Spanish dominions of America, with a cargo of commodities, the products and effects wholly of the kingdom, with the intention of bringing back those of the colonies, shall pay the export duties to the Indies for articles so laden, and 4 per cent for the permission granted to the flag. Flour shall continue to be excepted in return cargoes.

III. On the entrance, directly into Spanish ports, of vessels returning with the cargoes specified in the preceding article, they shall pay for the goods composing them, the duties of the tariff of free commerce (with the modifications which they shall have received, and the alteration directed by the royal order of February 1, 1825, in respect to coffee and sugar), and 8 per cent for the permission granted to the flag. But if they touch at any foreign port, they shall pay 12 per cent for such permission, unless it can be satisfactorily established, that they were forced to put into a foreign port, and that the cargo was neither unloaded nor transhipped.

IV. Foreign vessels of the above description, sailing from Spanish ports for the Spanish dominions of America, with half, or a third part of a cargo of commodities, the products and effects of the kingdom, and the remainder of foreign goods, shall pay—1st, the duties levied on national goods exported to the Indies; 2d, the 2 per cent transit duty for foreign goods, without any other duty on account of their being foreign; 3d, 8 per cent for the permission granted to the flag.

V. On the entrance direct into the Spanish ports, of vessels returning with the cargo specified in the preceding article, they shall pay for the goods composing those cargoes, the

duties of the tariff for free commerce, and 10 per cent for permission granted to the flag. But if they touch at a foreign port, they shall pay 16 per cent additional for the permission granted to the flag, unless it be fully proved that the arrival was forced, and that the cargo was neither unloaded nor transhipped.

VI. Should his Majesty think proper to rescind or alter the present provisions, the merchants will be duly informed thereof.

VII. The regulation for free commerce, the general instruction of the revenue department, issued in 1816, and the other resolutions relative to the commerce of America, are suspended, in whatever shall be at variance with the contents of the preceding articles.

By the royal order, &c.—Palace, 9th February, 1827.

British Order in Council, granting to Spanish Vessels certain Privileges of Trading with the British Possessions Abroad. 28th April, 1828.

Declares, that whereas the conditions mentioned and referred to in the act of parliament, 6 Geo. IV., c. 114, and acts 7 and 8 Geo. IV., c. 56, have not in all respects been fulfilled by the government of his Most Catholic Majesty the King of Spain, and therefore the privileges so granted as aforesaid by the law of navigation to foreign ships, cannot lawfully be exercised or enjoyed by the ships of Spain, unless his Majesty, by his order in council, shall grant the whole or any of such privileges to such Spanish ships.

And whereas his Majesty, by and with the advice of his Privy Council, doth deem it expedient to grant the privileges aforesaid, in certain cases, to ships of the dominions of his Most Catholic Majesty the King of Spain, his Majesty doth therefore, by the advice aforesaid, and in pursuance and exercise of the powers and authority in him vested by the said recited acts of parliament, declare and grant, that it shall and may be lawful for Spanish ships to import into any of the British possessions abroad, from the colonies and foreign plantations of his Most Catholic Majesty, goods, the produce of those colonies and possessions, and to export goods from such British possessions abroad, to be carried to any foreign country whatever.

Extract from Treaty between Great Britain and Spain, for the Abolition of the Slave Trade. Signed at Madrid, 23d September, 1817.

I. His Catholic Majesty engages that the slave trade shall be abolished throughout the entire dominions of Spain, on the 30th day of May, 1820; and that, from and after that period, it shall not be lawful for any of the subjects of the Crown of Spain, to purchase slaves, or to carry on the slave trade, on any part of the coast of Africa, upon any pretext or in any manner whatever; provided, however, that a term of five months from the said date of the 30th of May, 1820, shall be allowed for completing the voyages of vessels which shall have cleared out lawfully, previously to the said 30th of May.

II. It is hereby agreed that, from and after the exchange of the ratifications of the present treaty, it shall not be lawful for any of the subjects of the Crown of Spain to purchase slaves or to carry on the slave trade, on any part of the coast of Africa to the north of the Equator, upon any pretext or in any manner whatever; provided, however, that a term of six months, from the date of the exchange of the ratifications of this treaty, shall be allowed for completing the voyages of vessels which shall have cleared out from Spanish ports for the said coast, previously to the exchange of the said ratifications.

III. His Britannic Majesty engages to pay in London on the 20th of February, 1818, the sum of 400,000*l.*, to such person as his Catholic Majesty shall appoint to receive the same.

IV. The said sum of 400,000*l.* is to be considered as a full compensation for all losses sustained by the subjects of his Catholic Majesty, engaged in this traffic, on account of vessels captured previously to the exchange of the ratifications of the present treaty; as also for the losses which are a necessary consequence of the abolition of the said traffic.

V. One of the objects of this treaty, on the part of the two governments, being mu-

tually to prevent their respective subjects from carrying on an illicit slave trade, the two High Contracting Parties declare, that they consider as illicit, any traffic in slaves carried on under the following circumstances:

1st. Either by British ships and under the British flag, or for the account of British subjects by any vessel or under any flag whatsoever.

2d. By Spanish ships upon any part of the coast of Africa, north of the Equator, after the exchange of the ratifications of the present treaty; provided, however, that six months shall be allowed for completing the voyages of vessels, conformably to the tenour of the second article of this treaty.

3d. Either by Spanish ships and under the Spanish flag, or for the account of Spanish subjects, by any vessel or under any flag whatsoever, after the 30th of May, 1820, when the traffic in slaves on the part of Spain is to cease entirely; provided always that five months shall be allowed for the completion of voyages commenced in due time conformably to the first article of this treaty.

A further treaty for abolishing the slave trade and regulating the mixed commission at Cuba has been negotiated, similar to slave-trade treaties with France and other countries; but in defiance of all these, the trade in slaves from Africa to Cuba still continues to a horrible extent.

CHAPTER V.

COMMERCIAL LEGISLATION AND MANUFACTURES OF SPAIN.

THE commercial legislation of Spain has been, and continues to be, one of the most pernicious and restrictive of all the systems of trading exclusion. While that most despotic of governments possessed an empire in America to interchange commodities with, her code of trading laws was, comparatively speaking, not altogether so ruinous to her finances and credit, as it has, generally with other measures, proved, since that period, disastrous to her general interests, and so discreditable to her national dignity and moral character, during the last thirty years.

From the time the inquisition, and other tyrannical inventions of the court and church, drove the industrious Moors from Spain, human ingenuity, absolutism, and power, could not possibly have contrived and enforced measures more efficiently calculated to retard the improvement and prosperity of the kingdom, than those of the government, coupled with the authority of the church.

Spain occupies a surface nearly one-half greater than all the British Isles, with a soil capable of yielding nearly double the value of agricultural produce. Spain is eleven times as large as Holland; the latter has no minerals, little land for other purposes than for grazing and for buildings,—no timber,—and a climate the character of which is humid and, for a part of the year, severely cold. If Spain and Holland were left to themselves in the event of a warlike contention, which of the nations would be the most likely to overcome the other? At present, opinion would decide in favour of Holland.

The example of these two nations is an elucidation of the power or weakness

of countries, in consequence of the wisdom and industry, or the folly and negligence of man, in opposition to natural advantages or obstructions. Holland has thriven and attained power, under a system of commercial freedom. Spain has sunk to the lowest point of European degradation, under the most restrictive, and prohibitive customs laws.

The proud system of Spanish legislation was based on possessing and securing within herself all kinds of luxury, wealth, and power. First, by prohibiting the entrance of commodities from any country except her colonial empire; and secondly, by forcing the latter to consume no manufactured articles except those of Spain, with the specious view that all the precious metals would necessarily be sent to the mother-country, where they would be forced to remain, if no foreign commodities were admitted. But in defiance of this system the precious metals were drained off to foreign countries, both from her colonies and from Spain, nearly as rapidly as they were robbed from the natives of Mexico and Peru, or drawn from the mines by the millions of American and African slaves who have been exterminated under the cruel labour to which they were doomed.

British colonists had no sooner settled in North America, than they commenced a very lucrative contraband trade to the Spanish settlements in Cuba and South America. It soon became a trade of prodigious value and clear gain, in exchanging all sorts of English manufactures for the precious metals; the latter were remitted chiefly to England, and partly retained as a circulating medium in the colonies. The Spanish monarchy, to prevent this trade, stationed a fleet of *guarda-costas* along the shores, and their indiscriminate interruption and seizure of all British vessels, met with in those seas, caused the war of 1739 between England and Spain. Afterwards, although England had no interest, but quite the contrary, to break up this commerce, she was induced by Spain to order the British cruisers to seize all British vessels found near the coasts of the Spanish colonies; and the former having acted as if they received their orders from Spain, effectually put down the trade, until it was, after the independence of America, resumed with as great activity as before, by the citizens of the United States.

Spain was, during the whole period, filled with contraband merchandize by way of the Basque Provinces—by smuggling through Portugal and over the Pyrenees—by way of the Mediterranean, and afterwards, and up to the present day, with great activity, by the way of Gibraltar.

Mr. Mark, late British consul at Malaga, who has given us some of the best information relative to the trade of Spain, makes the following remarks:

"Secrecy is in the very nature of the contraband trade. While the smuggling system continues, the government must either be winking at it, or be blinded to its consequences, as it is carried on by a complete system of telegraphing: lines of communication are kept up, by which every shop, every warehouse, every public office, every functionary, is a link; even the women are great smugglers."

Smuggling is so completely organized, that there are estimated to be 100,000

armed men engaged in it; and in all, it is estimated that more than 300,000 grown up persons have scarcely any other occupation but the contraband trade. The cotton manufacturers themselves, and several members of the Cortes are represented as being the most actively engaged in this demoralizing traffic.*

M. Marliani, one of the most high-minded and patriotic senators of Spain, in his valuable work on the prohibitive system,† ably exposes its ruinous consequences in his statement relative to the cotton manufactures of Barcelona. A report on those cotton manufactures was officially drawn up two or three years ago, by Don Estevan de Sairo. This report was, soon after its appearance, generally suspected as having been designedly prepared incorrect, in order to show that the cotton manufactures were of much greater importance than they are now well known to be. M. Marliani says,

"The work of M. Sairo would furnish sufficient details of the state of the manufacture in Catalonia, if the correctness of that report were not impugned by respectable persons. The revising committee of the government, in their report, presented on the 8th of August, 1840, evince their want of confidence in the returns made by the Catalonian manufacturers, denying at every step facts and calculations in M. Sairo's report. The committee manifest equal distrust of the labours of a similar report, drawn up by M. Magin Corminas, in the year 1836. When a committee of this kind, composed of respectable and enlightened persons, thus without reserve express, in an official document, their want of confidence in the representatives of the parties interested, it is impossible not to participate in like distrust. In the pamphlet entitled 'The Cotton Manufactures and Workmen of Catalonia,' Don Ramon de la Sagra demonstrates by figures that the extent of the introduction of raw cotton into Catalonia is out of proportion with the number of spindles said to be employed in spinning in that province; and that if the alleged number were correct, they ought to consume 20,000,000 *pounds of raw cotton per annum; Whereas the average importation of material, taken from the year* 1834 *to* 1840, *does not rise to more than* 9,909,261 *pounds for the use of the manufactories of this article, and to* 12,703,233 *pounds, if the last three years be taken to furnish the averages, in which the quantity imported is made to rise from* 8,328,791, *to the extraordinary amount of* 18,409,407, *but a great part of which*

* De la Influencia del Sistema Prohibitivo en la Agricultura, Commercio, y Rentas Publicas: por Don Manuel de Marliani, Senador por las Islas Baliares.—Influence of the Prohibitory System upon Agriculture, Manufactures, Commerce, and Public Revenue: By Manuel de Marliani, senator for the Balearic Islands.—Madrid, 1842.

† M. Marliani gives the following information on smuggling:—"Don Juan Prim, inspector of the *Carabineras*, gave information to the government, and the direction of Customs at Madrid, on the 22d of November, 1841, that he attempted to make a seizure of the smuggled goods in the town of Estepona, in the province of Malaga, where he was aware a large quantity of smuggled goods existed, he entered the town with a force of carbineers and troops of the line. On entering he ordered the suspected depot of goods to be surrounded, and gave notice to the second alcalde of the town to attend to assist him in the search. In some time the second alcalde presented himself, and at the instance of M. Prim dispersed some groups of the inhabitants who had assumed a hostile attitude. In a few minutes after, and just as some shots were fired, the first alcalde of the town appeared, and stated that the whole population was in a state of complete excitement, and that he could not answer for the consequences; whereupon he resigned his authority. While this was passing, about 200 men, well armed, took up a position upon a neighbouring eminence and assumed a hostile attitude. At the same time a carbineer, severely wounded from the discharge of a blunderbuss, was brought up, so that there was nothing left for M. Prim but to withdraw his force immediately out of the town, leaving the smugglers and their goods to themselves, since neither the alcaldes nor national guards of the town, though demanded in the name of the law, of the regent, and the nation," would aid M. Prim's force. He enumerates places in Murcia, Valladolid, &c., where the whole population, including the parish curates, were engaged in smuggling.

is known to lie unused in the stores. Deducting 10 per cent loss in carding, 11,432,910 pounds only would be left for the use of the manufactories. If the number of spindles said to be employed were really correct, there would be, according to the calculation of Don Ramon de la Sagra, a deficiency to the amount of 7,649,914 pounds computed in spun yarn, or of 8,287,895 pounds of raw material necessary for the manufactories in the state in which they are represented to exist; and even supposing that all that was introduced in 1840 was really spun and manufactured, there would be still a deficit for the due supply of the alleged number of spindles, to the amount of 2,581,721 pounds of raw material.

"It is impossible to depend upon the reports of the persons employed for the purpose, or the returns of the manufacturers themselves. The commissioner appointed is either interested in the monopoly of the Catalans, or is immediately bought up, and a false report is given in. No people have shown greater cleverness and perseverance than the Catalans have in support of this monopoly. Their purses are ever open to gain over the press, to seduce deputies, and pay commissioners to mislead government and the public; and if all this be not sufficient, they are ever ready to threaten the alternative of rebellion."

M. Marliani illustrates the comparatively slow progress of the cotton manufacture of Catalonia, by the following fact:

"Since the year 1769, when the cotton manufacture commenced in Catalonia, the trade enjoyed a complete monopoly, not only in Spain, but also in her colonies. To this protection were added the fostering and united efforts of private individuals. In 1780 a society for the encouragement of the cotton manufacture was established in Barcelona. Well, what has been the result? Let us take the unerring test of figures for our guide. Let us take the medium importation of raw cotton, from 1834 to 1840 inclusive (although the latter year presents an inadmissible augmentation), and we shall have an average amount of 9,909,261 pounds of raw cotton. This quantity is little more than half that imported by the English in the year 1784. The 16,000,000 pounds imported that year by the English, was less than the third part imported by the same people in 1790, which amounted in all to 31,000,000 pounds, and the sixth part of that imported in the year 1800, which was 56,010,732 pounds; it is less than the seventh part of the importations in 1810, which amounted to 72,000,000 pounds; it is less than the fifteenth part of the quantity imported into the same country in 1820, which sum amounted to 150,672,655 pounds; it is less than the twenty-sixth part of the British importations in 1830, which amounted that year to 263,961,452 pounds; and finally it is less than one-sixtieth part of the British importations of raw cotton in 1840, which amounted to 592,504,000 pounds.

"Has the prohibitory system really afforded any protection to the Catalonian manufactures? Most certainly not; and the proofs are at hand. On opening the commercial tables or returns of the trade of France, published by the government, the first country to which the French manufacturers of cotton appear to have exported their goods is Spain; and to what amount? In 1833 the value of all the French imports amounted to 2,254,360*l.* sterling approximately; and of this amount there came to Spain 573,640*l.* worth of cotton goods, that is about the fourth part of the exportations of France. In 1839 the value of the cotton goods introduced from France into Spain amounted to 936,378*l.* sterling. And lastly, in 1840, they arose to 1,333,248*l.* sterling. Taking the value of the whole cotton exports of France at 4,340,000*l.* sterling, it follows that a third part of the cotton exported by France found its way by contraband into Spain. Just in proportion as the Catalans boast of the increase of their manufactures have French cottons entered the country without paying a fraction to the treasury."

M. Marliani next proceeds to calculate the value and quantity of British cotton goods introduced into Spain. The tables published (of exports) by the British Government give no idea of the contraband trade in English cottons in the Peninsula. Spain, though not appearing in the government returns of exports as a great consumer of British cottons, is notwithstanding much more than she seems, inasmuch as a large portion of the cotton goods sent annually to Gibraltar find their way into Spain by contraband. M. Marliani makes the following calculation of the quantity of British manufactured cottons introduced into Spain:

	£
" Imported direct to Spain	34,687
To Gibraltar	608,581
Portugal 731,573*l.*, of which three-fourths find their way to Spain	540,000
Total	1,183,268

" Again, Great Britain imports annually into Italy to the amount of 2,005,785*l.* in cotton goods, 50,000*l.* worth of which it is not too much to assume go into Spain through the ports of Leghorn and Genoa. Adding together, then, these several items of cotton goods introduced from France and England into Spain by contraband, we arrive at the following startling result:

FRANCE.—Cotton goods imported into Spain, according to the *French* government returns	1,331,608
ENGLAND.—Cotton goods through Spanish ports	34,637
Through Gibraltar	608,581
,, Portugal	540,000
,, Leghorn, Genoa, &c.	500,000
Total	£3,014,826

This is M. Marliani's calculation; a moderate one, and founded upon sufficiently authentic official and private data. Other writers calculate the amount of contraband cottons in Spain much higher. M. Prebrer calculates the amount at 5,850,000*l.* M. Marliani adheres to the calculation of 3,400,000*l.* sterling value annually. M. Marliani includes only articles of contraband cottons. From 6,000,000 to 8,000,000 pounds weight of tobacco are yearly imported into Gibraltar, the greater part of which is there sold to smugglers, to be illicitly introduced by them into Spain. In the official returns of France, on the other hand, about 40,000*l.* worth of tobacco is set down as sent into Spain; flour, corn, and dressed skins, to the amount of about 50,000*l.*

The legal exports of cotton manufactures from France, and illicitly passed into Spain, in 1841 and 1842, greatly exceed the amount in 1840; and in 1843 it may be estimated that at least one-third more will be smuggled. The same system of contraband has always prevailed in Spain, and from the same causes.—See Townshend's Account of Spain, 1787, and Inglis, 1830.

The Manufactures of Spain have certainly not thriven under the prohibitory system, as M. Marliani clearly shows. A German writes in 1841, from Madrid to the editor of the *Prussian State Gazette*,

" The import of foreign manufactured goods has been hitherto strictly prohibited in Spain; the question for the decision of the Cortes is simply, under what conditions their import shall now be permitted.

" It is well known that the cotton manufacture of Spain for the last 20 years has been a matter of very minor importance. Lately, however, in spite of desolating civil wars, it has recovered in an extraordinary degree, and at the present moment it is on the increase.

" The seat of this branch of industry is confined to Catalonia, to a small part of Valencia, and the Balearic Islands.

" It is perfectly notorious that the Catalonian manufactories cannot supply more than two-thirds (one-third ?) of the quantity required for consumption in Spain; nevertheless they maintain that a protective duty of 80 to 85 per cent is absolutely necessary to enable them to exist, if the import of foreign cotton goods is to be permitted.

" In the mean time, they consider that people should pay a high price for their common home-made goods, and that the foreign article, though infinitely better and cheaper, should be excluded from their market. And this is put forth in the face of proof that the whole of Spain is deluged with English and French cotton goods.

"From goods so imported, the Spanish treasury does not derive one farthing benefit. The whole of the income which Spain, notwithstanding her enormous duties, obtains from her customs, does not exceed annually 70,000,000 to 80,000,000 reals; whilst her comparatively insignificant neighbour, Portugal, receives 72,000,000 from the same source. On the whole, it is reckoned that the prohibitive system of Spain costs her yearly more than 360,000,000 reals (4,000,000*l.* sterling), which is, in fact, so much bounty paid to the Catalonian, but lost to the country generally.

"It is, however, but natural that these should uphold the maintenance of the present system. On the other hand, the inhabitants of that part of Spain who would benefit the most by the free importation of foreign goods, have used every means in their power to break down the monopoly by which they conceive themselves injured. Frequently since the death of Ferdinand VII., popular commotions have broken out in the south of Spain, and invariably on such occasions the principal demand by the junta was for the free import of English cotton goods at a moderate duty.

"In this consists mainly the difference between the Catalonians and themselves, and hence arise those constant bickerings between them and the Andalusian landed interest, which render the settlement of this question so very desirable and necessary.

"Andalusia, as it is well known, exports the greater portion of her wine to England; at the present moment this is subject to so high an import duty there, that little profit is to be obtained from it by the Spanish wine-grower. The Andalusians entertain the hope that England will, in the event of her cotton goods being permitted to enter Spain, lower her high duties upon wine.

"In the mean while, the government says to the Catalonian manufacturers, the smuggling occasioned by your monopoly amounts yearly to 360,000,000 reals. If we allow the import of cotton goods at 25 per cent, we shall obtain 90,000,000 duty, and have besides the prospect of a favourable market for our wine, fruit, and other southern produce. Renounce, therefore, your monopoly, and learn to supply your goods at such a price as that, under the protection of a moderate duty, you may have no need to fear the freedom of import.

"On the other hand, the Catalonians answer, a protective duty of 20 to 25 per cent will not diminish smuggling, which affords a profit of 60 per cent. Generally our industry supplies annually 30,000,000 to the exchequer, and the south takes from us about 60,000,000; from Andalusia we take 16,000,000 in oil, and large quantities of other goods: and for wool alone we pay Seville no less than 20,000,000. It is true our goods are dear, but they cost us dear. The interest of capital with us is from 6 to 12 per cent; in England it is only from 2 to 2½ per cent. The price of coal is four times higher here than in England. The necessary machinery is 70 per cent dearer here than in England, and 20 per cent higher than in France. But the hardest of all is, that we cannot use such machines as we require, as the workmen oppose us, and the government affords us little protection from their insolence, but rather supports them in it. Since 1835 the large manufactory of Benaplata, in Barcelona, which worked with modern machinery, under the management of foreigners, has been burnt by the workmen, and since that time the manufacturers have been compelled to use exclusively the old looms; so that at the present moment, out of a number of 28,204 looms, there are now only 231 modern machines in use."

This is all a fallacy; the turbulence of the stupid workmen excepted. The principal manufacturers of Barcelona maintain their cotton fabrics, far more for the purpose of a mask, to import by contraband, and sell as their own, the manufactures of France and England; and the whole capital invested in the cotton factories of Spain is said to be over-rated at 200,000*l.*, and the actual number of persons employed to be under 60,000; although the reports published by government augment the number to about 100,000 persons.

Spain may be considered the very paradise of bold smugglers. The mountain passes and the headlands and inlets of a vast extent of sea-coast, cannot

possibly be guarded by the weak, ill-paid customs officers of Spain; even when if the latter were sincerely aided by the military. Mr. Henderson, in a recent pamphlet on the tariff duties of Spain, very truly observes;

"Thus there are large towns, and entire districts that live by this illicit trade: from whose bosom spring the banditti that infest the roads of Spain. Their fatigues and habits predispose thousands of Contradistas, naturally robust and valiant, to the exercise of war at any moment, from whatever cause it arises: constituting the focus of those guerilla outbreaks, that incessantly shake the nation and the throne.

"This consideration is sufficient, in itself, to induce the government to exert all its powers to put an end to a system, that likewise convulses all the elements of society, of industry, and of revenue.

"One hundred thousand armed men, engaged in the contraband trade, upon a principle of perfect organization, defy the inert and timid measures of 15,000 douaniers, paid to afford an illusory protection to the manufacturers, and their 50,000 workmen.

"Independently of these formidable hordes of smugglers, there is not a doubt that the higher classes and public employés are engaged, and participate in the profits of the well-organized insurance companies, established for the purpose of smuggling goods into Spain.

"A royal decree of 1827, estimates that 5000 families engaged solely in the tobacco contraband, are annually ruined; and it may be fairly estimated, therefore, that at least, on an average, 3000 families pursuing the illicit trade, are involved in ruin, and many condemned to punishment.

"Looking then at the fatal effects of prohibitions, we may arrive at a fair calculation of the immense annual sacrifice which they inflict upon Spain.

	£
The 100,000 men engaged in illicit trade, might in useful labour be worth to the country 2*s.* per day each, allowing 300 days to work, equal to	3,000,000
3000 families ruined, estimated at 50*l.* each, annually	150,000
2000 processes cost 20*l.* each, annually	40,000
15,000 custom-house officers at 2*s.* per day, which they might produce in labour	450,000
The annual cost of this force, and vessels employed	500,000
Loss to the people by the prohibition of iron	500,000
Loss to the people on Cotton and other goods, say 30 per cent on 8,000,000*l.*	2,400,000
Loss to the public revenue, duty not received on iron, if allowed, would be 1,000,000*l.* at 30 per cent	300,000
Loss to the public revenue, duty not received on other illicit goods 7,000,000*l.* (including consumo duty) at 25 per cent	1,750,000
Total loss	£9,090,000

The manufactures of Spain, though described as in a state of great prosperity and perfection in the 14th and 15th centuries, never have been, according to the best authorities (Capmany, among others), in a flourishing condition, notwithstanding the abundance of minerals, and of wool and silk. Restrictions under the worst of governments, the most haughty of grandees, and the most darkly cruel, intolerant of churches, have been the cause of the backward state of manufactures, as well as of agriculture and of all branches of industry in Spain. Exclusive of the cotton manufactures of Catalonia, there are some silk fabrics at Barcelona, Valencia, and a few other towns, and a few common woollens and linens, in various provinces: all produced at high prices. Soap is generally made for home use. Some hardwares are made in the towns, especially in Astu-

rias, and the iron of Biscay is of good quality. (See Mines of Spain hereafter.) Its cost is, however, very high. There are numerous common tanneries in the north provinces; fire-arms and swords are also made in several towns. The government monopolizes the manufacture of brass cannon, saltpetre, gunpowder, tobacco, porcelain, looking-glasses, and tapestry: all these monopolies are carried on at a loss. There are common brandy distilleries; and the wines of Spain (which see hereafter), are among the most advanced branches of industry. Cordage is made of esparto rush in several places. In Aragon there are a few declining silk manufactories, at Saragossa, &c., and also some common woollens, linens, paper hats, earthenware, and articles of leather. Segovia and some other places, as Castile, have some woollen manufactories, but they have also declined; and the other fabrics of Castile, such as silk stockings, gloves, glass, and coarse linens, are unimportant. Canvass, cordage, and hats are made at Comino, where there is a royal cigar monopoly. In Gallicia there are made a few coarse linens and woollens. In Granada there are also made a few coarse woven goods, paper, &c. In Leon and Valencia, common hardwares, woollens, and linens are made for their own use by the townspeople and peasantry. If we include the whole manufacturing industry of Spain, and compare its value with the evils which the laws for its assumed protection have inflicted on the country, it sinks far below contemptibility in its amount. The greater part of what is evil in the character of the labouring classes, may be traced, closely or remotely, to the contraband trade, as well as to the corruption and tyranny of a government at all times the worst in Europe.

The following view of Spain, at the close of the last century, was written during the reign of the late king, Ferdinand VII. It will further exemplify the causes of Spanish misrule and weakness.

"Exclusive of about a fourth of the population, composed of persons living on their property without doing any thing, Spain, according to the census of 1797, contained 100,000 individuals existing as smugglers, robbers, pirates, and assassins escaped from prisons or garrisons; about 40,000 officers appointed to capture these, and having an understanding with them; nearly, 300,000 servants, of whom more than 100,000 were unemployed and left to their shifts; 60,000 students, most of whom begged, or rather extorted charity at night, on the pretence of buying books: and if to this melancholy list we add 100,000 beggars, fed by 60,000 monks at the doors of their convents, we shall find, that, at the period referred to, there existed in Spain nearly 600,000 persons who were of no use whatever in agriculture or the mechanical arts, and who were only calculated to prove dangerous to society. Lastly, having made these and other necessary deductions, we find that there then remained 964,571 day-labourers, 917,197 peasants, 310,739 artisans and manufacturers, and 34,339 merchants, to sustain by their productive exertions 11,000,000 of inhabitants. These results which, *mutatis mutandis*, are as applicable at the present day as at the time when they were deducted, exhibit a state of society so radically corrupt and debased, as to render all hopes of its regeneration very nearly desperate."

So extraordinary is the condition, thus described, of Spain, that it could only have been the result of the tyranny and darkness of the Government and of the Church for more than five centuries. How could we therefore expect the sudden regeneration of a nation constituted of such rotten elements?

CHAPTER VI.

SPANISH TARIFF OF CUSTOMS AND CONSUMPTION DUTIES.

SPAIN, exclusive of her numerous prohibitions, has imposed high discriminating duties of from 50 to 100 per cent, for more than two centuries, on such foreign ships and cargoes as have been admitted into Spanish ports.

The tariff, which was in force until the 1st of November, 1841, is divided into fifteen classes; viz.,

1. Grain, provisions, fish of all kinds, wines, oils, and some small articles, as starch, roots, straw; of these, 72 articles are entirely prohibited, including corn and seeds, and food, and all kinds of salted and pickled fish of whatever kind (except stockfish and Newfoundland codfish at high discriminating duties).

2. Animals of all kinds—importation prohibited, and exportation subject to high duties, except on Merino sheep, black cattle, and horses, which are prohibited.

3. Drugs, herbs, roots, barks, seeds, &c., for dyeing, painting, and other uses; wax, tallow, pitch, &c., exhibit a list amounting to upwards of 400 articles, out of which number there are nearly 100 *total prohibitions.*

4. Includes hides and skins of common description, dressed and undressed tanned, &c., fine peltry of all kinds, either in the hair, dressed, and tanned, and all articles made of the above. These articles amount to about 80 in number, out of which there are 64 *prohibitions.*

5. Manufactures of flax, hemp, cotton, and wool, of all kinds, containing about 90 articles, out of which there are 42 *prohibitions,* and those admitted are of very little value.

6. Wool and hair manufactured, including goats'-hair, bristles, horse-hair, feathers, and human hair; consists of about 77 articles, and contains 63 *prohibitions.*

7. Comprises manufactures of silk only, or of silk mixed with wool, gold, or silver, and is, with but two exceptions (these are, *silk twist*, or *Turin hair*, and *raw* or *spun silk of all sorts,*) *entirely prohibitory.*

8. Includes cabinet ware, furniture, and other utensils of wood, horn, shell, ivory, mother-of-pearl, &c., or of ornaments made thereof; and in this class are also comprised the *original* raw materials, in all about 80 articles, with 39 *prohibitions.*

9. Instruments and machines of all kinds—nearly all of a prohibitory character.

10. Toys and jewellery of all kinds, open or in boxes. This is a most ex-

tensive class, it contains nearly 300 distinct articles, out of which there are but 23 *prohibitions*; but the duties are enormous.

11. Paper of all kinds and qualities *entirely prohibited.*

12. Includes all manufactures of crystals and glass, of stone and minerals, and of porcelain and earthenware; contains about 90 articles, of which 13 only are *entirely* prohibited: the duties are also enormous.

13. Comprises metals, wrought, unwrought, or manufactured, and contains nearly the same number of articles as the preceding class, out of which there appear to be about 35 *prohibitions*; and the duties on the others all excessive, with the exception of tools, &c.

14. Contains all descriptions of the precious metals, gold and silver, in bullion, or wrought in jewellery, &c.; amounts to 72 articles, with but three *total* prohibitions.

15. Includes common timber, for naval, house, and other purposes, fine wood for cabinet work, and dyeing woods, &c., nearly 50 *descriptions*, and *no prohibitions*, although cork in boards, or prepared for bottles, and tanning barks of all kinds included under this class, *are strictly prohibited.*

The exceptions to the prohibitions are chiefly on raw materials and instruments which are considered necessary for Spanish manufactures. Butter, cider in bottles, tea, oil of turpentine, whale oil or blubber, cod oil. Pepper, buckram, and certain linens and friezes, and a very few other articles, are admitted at duties in the first instance, exclusive of local taxes, of 25 per cent.

Hogs'-lard, linseed-oil, spectacles, telescopes, fish-hooks, buttons, chains, needles, brushes, carpenters and most other kinds of tools, knives, forks, and spoons (of metal), buckles, and a few other articles were by this tariff admitted at duties of 30 per cent.

There were also to be added the various local duties as *arbitrios*, taxes on *sales*, and *re-sales*, and gate dues, or consumption duty of from one-third to one-half of the tariff duties.

The new tariff which came in force on the 1st of November, 1841, is more liberal in regard to various raw materials, but imposes additional duties on importations in foreign vessels, and the consequence has been, *that fish exported from Newfoundland, and goods from England to Spain, are now carried nearly altogether by Spanish vessels to the exclusion of British vessels, in direct violation of the existing treaties between both countries.*

This tariff is divided into 5 parts; viz., 1, Articles prohibited; 2, Articles imported from foreign countries; 3, Articles imported from America; 4, Articles imported from Asia; 5, Articles exported from Spain.

SPANISH TARIFF, PROMULGATED ON THE 1ST OF NOVEMBER, 1841, AND NOW IN FORCE.

THE importation, into Spain, of the following articles is prohibited; viz.,

Cotton manufactures of all kinds; barilla; brushes for horses; brandy; spirits of wine (alcohol); ornamental furniture and ornaments, whether of metal or wood, or set with precious stones, or mock jewels, and all objects necessary in the celebration of the Roman Catholic worship.

Firearms of all kinds; jet; quicksilver; sulphur; sword-canes and air-guns; buttons, and dies for Spanish coins; ships and vessels under 400 tons; corn and grain; horses, mares, and mules.

Cacao from foreign European countries, by land or sea.

Stockings of all kinds; bell metal; carcasses and shells; small carts for children; and wheelbarrows; charts published for the use of the Spanish admiralty, &c., reprinted in foreign countries; cinnabar; mattrasses; cork; squares and rules of all sorts, stamped or not; hides and skins, salted or dried; epaulets, and gold and silver tassels for military uniforms; chocolate; waste silk; figures and dolls dressed, or statues, or busts of marble, stone, china, or wood; buckram; writing-desks, of ordinary metal, or plated or gilt; bast, or feather-grass (*esparto*), wrought; looking-glasses, the plate being upwards of one fourth of their height; tin and pewter wares in whatever form, plain or japanned, and tin or iron plates, of all kinds; bands, rollers, and fillets; artificial fruits and flowers; flasks; caps of all kinds; madder, ground or unground; gloves, and mittens of all kinds; iron, wrought; blades for swords, daggers, knives, &c.; soap, hard or soft; cages for birds; sealing-wax; wool; books; woods, manufactured and ornamented, also instruments of wood; furniture, and any description of wooden manufactures; smallwares (*manufacturas de pasamanería*), of all kinds, such as bands, tapes, network, &c.; saddlery and harness of all kinds; marble, or alabaster, wrought and polished, in pieces or blocks; coarse fringe stuffs (*nearruga*); stockings and socks of all kinds; playing-cards, books, and works in the Spanish language; gold and silver, wrought in any shape not permitted by law; paintings and designs for fans; bread of all kinds of flour; paper of other descriptions than those named in the tariff; pastes, such as macaroni, semolina, &c.; combs; furs; parchment; fish of all kinds, whether fresh, salted, or dried, except codfish and stockfish (*bacalao*); stone (*piedra infernal*), stones; viz., fire stone, grind and whet stones, rough stone, or stone hewn for building. Articles of ornament for ordinary use, containing effigies, or pictures of the saints; stereotype plates (called *clichés*); lead in bars, or with or without mixture of tin; feathers for head-dresses, and plumes for all other purposes; gunpowder; powder for cataplasms; powder, or fine sand for cards; fishing nets; wearing apparel of all descriptions, excepting that worn, or brought by travellers as personal luggage; rosaries; salt, common, and saltpetre; hats of all kinds; tobacco; cards or plates, having coats of arms engraven thereon; wheat, barley, rye, pulse, peas, beans, maize, and all kinds of grain and flour; candles, wax, and tallow; national decorations and badges, crosses, and orders; window glass, common, and hollow glass, covered or not covered with wicker work; gypsum, in stone or powder, and plaster of Paris; sieves, and screens of all kinds.

Among the above list of general prohibitions, there are several, but not important exceptions, in the tariff of articles imported from foreign countries, which extends in consequence of its numerous repetitions to 1326 articles, exclusive of articles imported from America and Asia.

In order to simplify the numerous repetitions and lengthy arrangement of this tedious tariff, we have arranged the articles so as to present them in conformity to the class to which they belong.

SPANISH TARIFF OF IMPORT DUTIES ON FOREIGN GOODS.

WOVEN MANUFACTURES.	Number, Weight, or Measure, (Spanish).	Fixed Value in Spanish Money.	Fixed Value in English Money.	Per-centage Rate of Import Duty by National Vessels.	Additional Rate of Import duty, if in Foreign Vessels.	Consumption Duty.
		reals vellon	£ s. d.

The following products, &c., of the Philippine Islands, are also admitted by this schedule, at the following rates:

At 3 per cent, with a rate of one half additional, for consumption duty: Canes and reeds; birds of Paradise; and aromatic lozenges, &c.

At 2½ per cent, with similar additional duties: Thin reeds, and filaments thereof; coverlets of hair; mother of pearl; *gonoti*; *guinra*; *guingon de Ilocos*; canvass; *de Ilocos nipis-piña*; chests, covered with skins; mats, fine; pepper; silk tapestry and silk wares, variegated; napkins *de Ilocos*; *Sinagudan*; *Sinamay*; straw hats of all kinds; tickings and twilled stuffs; dresses of *nipis-piña*, bordered.

At 2 per cent, with similar additional duties: Bast, made up into tackle; and cocoa nut oil.

At 1½ per cent, with ditto ditto: Glue and isinglass; and sinews of cattle.

At 1 per cent, with ditto ditto: Bast, rough; animal bones; tortoiseshell; hides; *madriñaques*.

Admitted free of all duties: Wood for building, or for any other purpose; also, dye-woods

RATES of Duty on Articles imported from China.

ARTICLES.	Number, Weight, or Measure.	Fixed Value in Spanish Money.	Fixed Value in English Money.	Per centage, rate of Import Duty, by National Vessels.	Consumption Duty
		reals vellon	£ s. d.		
Cinnamon	lb.	3	0 0 7½	20 per cent	two-thirds
China tea and coffee services, boxes and chests, painted and ornamented for tea, &c., cigar cases, of bone, ivory, or mother of pearl, and all fine carved works of the same materials, such as fans, &c. &c.	each	ad valorem	ad valorem	15 per cent.	do.
Pepper	lb.	1½	0 0 3½	20 do.	do.
Rhubarb	do.	20	0 4 2	15 do.	do.
Tea, fine pearl	do.	20	0 4 2	15 do.	do.
—— Hyson and other kinds	do.	15	0 3 1½	12 do.	do.

In addition to the above, the following articles are also admitted, at the rates specified; viz.,

At 25 per cent, with two-thirds additional for consumption duty: Saucers containing colours for painting; ivory balls; picture-frames with drawings.

At 20 per cent, with a similar additional duty: Woollen stuffs, called *baratos* and *caugas*; small linen cloths and Canton linens of all kinds.

At 15 per cent, with ditto ditto: Nankeens of all sorts, tapestry and woollen coverlets, and shawls and handkerchiefs of crape, plain, printed, or bordered, mixed with silk.

At 10 per cent, with ditto ditto: Fans ordinary; and glue.

At 5 per cent, with ditto ditto: Cloves and figured crape.

Note.—All articles not included in this schedule, pay 25 per cent upon their respective values, together with the additional rate of two-thirds for consumption duty.

The following rates of Duty are imposed on the Exportation from Spain of the undermentioned articles.

ARTICLES.	Number, Weight, or Measure.	Export Duty in National Vessels, or by Land.	Export Duty in English Money.	Additional rate of Export Duty, if in Foreign Vessels.
		reals vellon	£ s. d.	
Alcohol, or galena	quintal	1	0 0 4	one-third
Bronze, raw, in the shape of bell metal, and old cannon	do.	15	0 3 1½	do.
Cork, in boards or pieces	do.	6	0 1 3	do.
Bark of trees, and bark for tanning	do.	6	0 1 3	one-half
Sculpture, paintings and designs	do.	6	0 1 3	do.
Graphite, in pieces	do.	2	0 0 5	one-third
—— in powder	do.	1	0 0 2½	do.
Mineral copper, or copper mixed with iron, in a state of first fusion	do.	1	0 0 10	do.
Rams	each	80	0 16 8	do.
Ewes	do.	40	0 8 4	do.
Hare and rabbit skins	lb.	1	0 0 2½	do.
Precious stones, of the kingdom; viz., topazes, emeralds, &c. &c., not cut or polished, pay 3 per cent *ad valorem* in national vessels, and an additional rate of one-third in foreign vessels				
Lead	quintal	1	0 0 10	do.

Note.—The following articles are not permitted to be exported, viz.—Pasteboard; skins and hides of all kinds; rope-yarn; animals' claws, clippings of hides; sucklings and yearlings; all wood fit for ship-building, or for oars, or spars; all objects pertaining to ancient arts; archæology or numismatography; original plans, and ancient manuscripts; cocoons of silk; rags of cotton and linen, and such like articles; iron ore.

PRINCIPAL CUSTOMS' REGULATIONS AFFECTING THE COMMERCE OF SPAIN WITH FOREIGN COUNTRIES.

CLASSIFICATION OF SPANISH MARITIME PORTS.

The customs' establishments on the coasts of the Peninsula and the adjacent Islands are classified under four heads:—

At the custom-houses of the first class, may be carried on general trade, both as regards importation, exportation, and the coasting trade.

At those of the second class, the import and export trade to and from foreign countries and America is permitted, and also the coasting trade.

At those of the third class, the export trade to foreign countries and America, together with the coasting trade: and,

At those of the fourth class, the export trade to foreign countries, and also the coasting trade.

The following are ports of the first class: viz.,—Alicante, Barcelona, Bilbao, Cadiz, Corunna, Malaga, Palma (in Majorca), St. Sebastian, and Santander.

Those of the second class are:—Almeira, Bonanza, Calahonda, Cartagena, Ferrol, Ibiza, Jijon, Mahon, Palamós, Pasages, Puebla del Dean, Rivadeo, Salou, Santoña, Tarragona, Vigo, and Villanueva del Grao de Valencia.

Those of the third class are —Avilés, Deba, Fuenterrabia, Huelva, Rosas, and Suances.

Those of the fourth class are:—Altea, Benidorme, Denia, Gandia, Jábea, Torrevieja, Villajoyosa, Adra, Vera, Arenas de Mar, Mataro, Sitges, Algeciras, Ceuta, Conil, Jerez, de la Frontera, Puerto de Sa Maria, San Fernando, Tarifa, Benicarló, Castellon, Nules, Vinaroz, Camariñas, Corcubion, Muros, Noya, Blanes, Cadaqués, La Escala, Lloret, Palafurgell, San Feliu de Guixols, Selva de Mar, Almuñecar, Guetaria, Ayamonte, Cartaya, Higuerita, Lepe, Moguer, Sanlúcar de Guadiana, San Juan del Puerto, Puebla, Santiago de Foz, Vivero, Estepona, Marbella, Velez Málaga, Aguilas, Mazarron, Candas, Castropol, Cudillero, Figueras, Lastres, Luanco, Luarca, Llanes, Navia, Rivadesella, San Esteban de Pravia, Vega de Navia, Vega de Rivadeo, Villaviciosa, Bayonne, Carril, Guadia, Marin, Pontevedra, Villagarcia, Castro-Urdiales, Laredo, San Vicente de la Barquera, Cambrils, San Carlos de la Rápita, Torredembarra, Tortosa, Vendrell, Villanueva y la Geltru, Cullera, Murviedro, Bermeo, Plencia, Alcudia, and Soller.

IMPORTATION FROM FOREIGN COUNTRIES.

Linen goods shall pay duty on importation by the number of threads and their weight, and not by the number of cloths, or the mark or size of the pieces.

The measure for determining the number of threads shall be the fourth part of the Spanish square inch; and the weight the quintal of 100 Castilian pounds.

Silk manufactures shall also pay duty in like manner, viz.—not by the number, mark, or size of the pieces, but by the class to which they belong, and by the pound weight.

Packages and bales, &c. containing linen manufactures of one or various kinds, shall not be admissible if weighing less than two quintals (Castilian). Batistes, and all linen goods of whatever sort, introduced loosely by travellers in their carriages, as their personal effects, are however excepted.

Silk manufactures can only be imported by sea in vessels measuring 40 tons, each ton containing 20 quintals (Castilian).

As regards importations by the land frontier, the former system remains in force.

If the bales or packages be inclosed in two wrappers, the duty shall be paid upon the contents of the inner wrapper.

Steam-vessels, whether national or foreign, which go to foreign ports, having accommodation for carrying merchandize, shall be subject to the rules set forth in the customs' regulations.

EXPORTATION TO FOREIGN COUNTRIES.

All productions of the soil or industry of Spain, not named in the tariff of exportation, may be freely exported under any flag, without being subject to any duties of whatever kind or denomination.

Goods, wares, and merchandize, subject to export duty, and exported by sea in national vessels, shall pay the duties specified in the tariff of export duties; and if they be exported in foreign vessels, they shall be subjected to an additional rate of one-third above that paid by Spanish vessels, with the exceptions named in the tariff.

With respect to merchandize exported by the land frontier, no higher rates shall be levied than those which are imposed by this tariff upon national vessels, nor shall any other duties, of whatsoever nature, be exacted.

Upon goods, wares, and merchandize, subject to the payment of export duties, there shall be levied upon their gross value a rate of six per cent as "arbitrios," agreeably to the stipulations of Art. XI. of the present law.

Goods, wares, and merchandize, the produce or manufacture of Spain, and exported from any Spanish port for the Spanish foreign possessions (posesiones de Ultramar) shall be treated as if sent to some port of the Peninsula or of the adjacent islands.

Goods, wares, and merchandize, the produce or manufacture of Spain, exported from thence to any foreign destination, may be brought back into the Peninsula and the Balearic Islands, upon payment of the import duty levied by the tariff on such articles according to the flag of the vessel; those articles, however, which are prohibited cannot be introduced,

without subjecting the masters of such ships, and the consignees, to the penalties established by law.

Goods, wares, and merchandize, the produce or manufacture of Spain, exported from thence, in national vessels, to the Spanish colonial possessions, may be brought back, free of duty, provided such articles are returned, either in the vessel in which they were exported, or in a national vessel, having a certificate to prove the same, properly attested by the competent colonial customs authorities; and also that such importation shall be made at the custom-house, either in the Peninsula or the Balearic Islands, from whence such merchandize was exported.

The transport of prohibited merchandize to foreign ports is only permitted in vessels measuring 200 tons.

COASTING TRADE.

The coasting trade between Spanish ports can only be carried on by vessels built, owned, and navigated by Spaniards.

Coal, however, the produce of Spain, may be carried coastways in foreign vessels, provided such vessels convey this article, and none other.

Steam vessels plying between one Spanish port and another are only permitted to transport goods and effects belonging to the passengers they convey, and not merchandize generally. Such goods and effects are to be subject to the customs' regulations promulgated in respect to the same.

MONIES OF SPAIN.

The real vellon is valued at 2½*d.* sterling; 20 reals vellon = 1 Spanish dollar, = 4*s.* 2*d.* sterling. The real of plate is double the real vellon.

1 hard dollar = 1 ¼ dollar of exchange, = 10 reals of new plate, = 10 reals of old plate, = 20 reals vellon, = 170 quartos, = 361¼ maravedis of old plate, = 680 reals vellon, = 51,79*d.* sterling.

WEIGHTS AND MEASURES OF SPAIN.

Gold and Silver Weight.—Gold and silver are weighed by the Castilian mark, of 50 Castellanos, 400 tomines, or 4800 grains.

Apothecaries' Weight.—The apothecaries' weight is the Castilian, but the ounce is divided into 8 drachmas, 24 escrupulos, 48 obolos, 144 caracteres, or 576 grains.

Commercial Weight.—1 commercial pound = 2 marks (Castilian), or 16 ounces; 1 commercial ounce = 8 drachmas = 16 adarmes = 576 grains. 1 quintal of 4 arrobas, or 100 lbs. = 101,44 lbs. avoirdupois, or 46 kilogrammes.

Dry Measure.—Corn, salt, and other dry goods, are measured by the cahiz. 1 cahiz = 12 fanegas; 1 fanega = 12 celemines. The celemine has various subdivisions, as ½, ¼, ⅛, &c.

The fanega measures 4322¾ Spanish, or 3439 English cubic inches, and is equivalent to 1,550 English imperial bushel. 5 fanegas are nearly equal to 1 quarter English.

Wine Measure.—1 arroba (wine or great arroba) measures 1237½ Spanish, or 981 English cubic inches; therefore 1 arroba of wine = 3,538 imperial gallons; 1 arroba (small) of oil = 2,780 imperial gallons.

1 botta = 30 arrobas (wine), or 38½ of oil; 27 arrobas (wine), or 34½ of oil = 1 pipe.

The botta contains 127½ English gallons, and the pipe 114¾ English gallons.

Long Measure.—1 Spanish foot = 12 pulgadas, or 144 lines; and is equivalent to 11,128 English inches, or 0,2826 of a French metre; 1 palmo of 9 pulgadas, or 12 dedos = 8⅓ English inches; 1 vara, or 4 palmos = 33,384 English inches, or 0,847 of a metre. 1 braza = 2 varas, or 6 feet; 1 passo = 5 feet; 1 estadal = 4 varas, or 12 feet; 1 cuerda = 8⅓ varas, or 25½ feet.

CHAPTER VII.

AGRICULTURE OF SPAIN.

THE accounts which have been written of the former flourishing and extensive state of agriculture, we consider very greatly overrated, and the Count de Laborde's assertion "that no country in Europe is so generally fertile as Spain, or has equal advantages at all seasons of the year," is also fallacious. Many parts are subject to droughts, and crops cannot in several extensive districts be produced except by means of irrigation. Miguel Ozorio y Redin, who wrote in the last half of the 17th century, estimates that one half or 18,000,000 of hectares of the peninsular kingdom were annually sown with corn: of which 12,000,000 were sown with wheat and rye, and 6,000,000 under barley and oats. The *Junta de Medios* reported that in 1803 the superficial area of Spain was equal to 104,194,720 fanegados, distributed as follows; viz.,

	Fanegados.	Acres.
Arable land	55,000,000	60,000,000
Meadow land	15,000,000	16,000,000
Fallow land	13,000,000	14,000,000
Irreclaimable	4,000,000	4,200,000
Swamp and alluvial land	17,194,720	18,500,000
Total	104,194,720	112,700,000

The above is nearly as exaggerated as Ozorio's account.

According to the statements laid before the Cortes, the cultivated land in 1808, before the French invasion, was distributed as follows:

	Fanegados.	Acres.
The nobility more than one-half	28,306,700	30,500,000
The clergy one-sixth	9,093,100	10,000,000
The commune of the cities, and a few of the citizens, about one-third	17,599,900	19,500,000
Total	55,000,000	60,000,000

The live stock of all Spain, with some deductions as to decrease, was stated by estimate as follows: viz.

Horned cattle, 3,694,156; horses and mares, 533,926; mules, 298,214; asses, 780,788; sheep and ewes, 24,916,212; goats, 6,916,890; pigs, 3,628,283.

The annual value of the territorial wealth averaged in 1799, according to the same return, 5,143,938,348 reals = 53,681,545*l.* sterling. But it would appear that either from the negligence or interest of the persons employed in collecting the materials of the report, that the annual productive value has been underrated. The minister Arguelles valued the total produce of the territorial wealth at 8,572,220,591 reals, or nearly 90,000,000*l.* sterling.

The foregoing statements appear to be either greatly overrated, or the lands under corn cultivation, and the numbers of live stock, must have greatly decreased since 1803, and before 1808. Mr. Mac Culloch estimates the number of sheep in 1841, as not exceeding 14,000,000. M. Moreau de Jonnès gives a different account from the foregoing, and states the number of sheep in 1803 to be 12,000,000, and in 1826 at 18,000,000. We believe that there is no ascertaining the truth, and that Mr. Mac Culloch's estimate is not far from the probable number; that the number of horned cattle at present in all Spain is under 3,000,000. M. de Jonnès, in 1826, says 2,944,885, and 2,728,283 hogs.

The census and returns of 1803 states the produce of corn to be as follows, reduced to hectolitres and quarters; viz.,

	Hectolitres.	Imperial Quarters.
Wheat	17,060,000	5,864,350
Barley	8,321,000	2,860,343
Rye	5,626,000	1,933,935
Oats, maize, rice, &c. . .	3,619,000	1,243,284
Total	34,726,000	11,901,912

STATEMENT of the quantity of Wheat and other sorts of Grain, which, in an average of Five Years, from 1834 to 1838, has been produced in the principal agricultural Provinces of Spain, calculated from the Amount of Tithes paid during that period.

PROVINCES.	Castilian Fanegas.	OBSERVATIONS.
Aragon	1,113,760	Produces a surplus, sent to Catalonia.
Avila	1,254,800	Ditto ditto, of about ½ exported through Santander.
Albacete and Cuenca	7,220,650	Ditto ditto, for Valencia and Murcia.
Cordova	640,840	Require a large surplus, which is supplied by Toledo and La Mancha.
Granada	750,000	
Jaen	510,000	
Leon	3,100,000	Produces a surplus, exported through Santander.
Madrid	750,000	Deficiency supplied by La Mancha and Castile.
Murcia	1,111,110	Ditto, and supplied by Albacete and Cuenca.
Mancha and Toledo	4,545,000	Surplus of ½, sent to Andalusia and Madrid.
Seville	840,100	Deficiency supplied by La Mancha and Toledo.
Salamanca	1,770,110	Surplus sent to Santander for exportation.
Segovia	1,887,440	
Valladolid	2,774,440	
Valencia	1,071,120	Deficiency supplied by Albacete and Cuenca.
Total Fanegas..	36,220,640	

Calculating five Castilian Fanegas to be equivalent to eight Winchester bushels, 36,220,640 fanegas are equal to 57,953,101 bushels, or 7,494,138 Winchester quarters. From the concealment of quantity, and irregularity in the returns of Tithes, it may be fairly reckoned that the produce of grain is one-third more than the above. There are no returns existing from Catalonia, Galicia and Estremadura.

The foregoing, even admitting that one-third more is raised annually, exhibits but a wretched account of the produce of corn in Spain; especially when it is estimated that Catalonia does not produce more than one-third of the quantity consumed in that province. The truth is, however, that the Spaniards, like the Sicilians, substitute chestnuts, fruits, and other easily produced or obtainable articles

to a great extent, for bread. Of the agriculture of the respective provinces, we may briefly sum up with the following observations.

The provinces of Biscay are, in the arable districts, cultivated with tolerable skill; and although Biscay and Guipuscoa do not produce sufficient for the consumption of the inhabitants, Alava yields a surplus. The soil is generally clayey, and ploughed with oxen, or broken up as smoothly as garden ground by the simple instrument called the *laya*. The ashes of brushwood is used as a manure for wheat or barley. The agricultural people of Biscay live chiefly in *Caserios* of 6 or 8 houses, and generally occupy and cultivate their own lands. Preparing charcoal and smelting iron is, next to agriculture and pasturage, their chief employment. Wheat, barley, oats, some maize and fruits, are grown; and some wines of good quality are made in the Biscayan provinces.

In NAVARRE, pasturage is extensively followed, and more corn of different kinds is raised than is sufficient for the inhabitants, but agriculture is still in a rude and neglected state. The crops are wheat, maize, barley, oats, hemp, flax, some little oil, and liquorice. There are some distilleries. Forests of excellent oak, chestnut, and pine, along the sides, and in the valleys of the Pyrennees. Salt mines abound.

In ASTURIAS, the climate is mild along the sea-coast, and cold in the mountains. Some cattle bred in this part of Spain are drove for sale into Castile. Little wheat is grown. Chesnuts are plentiful, and used for food. Some vines are cultivated, from which a little bad wine is made. There still remain forests of oak, chestnuts, and beech.

In GALICIA, pasturage and agriculture are followed, but the latter is in a rude and almost neglected state; and although some of the produce of agriculture is sent to other provinces, the quantity is of little importance.

In LEON, there is a considerable supply of corn produced and exported to the northern parts of Spain, and to Santander. This province has extensive pasture, but irrigation is neglected. Maize, wheat, flax, spices, &c., are cultivated.

In both OLD and NEW CASTILE pasturage is more attended to than agriculture; yet the produce is so far sufficient for the consumption of the inhabitants that some corn is exported to Valencia, Estremadura, and Grenada.

In ESTREMADURA, the soil is described as so fertile, that, according to Minano, it should yield sufficient corn for one-third of the population of Spain; but agriculture is more neglected than in any other province, and pasturage substituted. Four millions of sheep, besides herds of swine, are said to be driven annually from other parts to feed during winter on the plains of Estremadura. Its produce of corn is far from sufficient for its consumption.

GRENADA.—In this celebrated province, the extraordinary care bestowed by the Moors on agriculture and irrigation has not been altogether eradicated

by the despotism which attempted the complete expulsion of that intelligent and industrious race. The truth is, that their expulsion from Spain was very far from complete. The great body of the most obscure, or agricultural Moors, remained in the country, and either in reality or feignedly embraced the Romish faith. Wine and oil are the principal articles produced, above the consumption, in this once fertile province, which does not now produce sufficient corn for the population.

In ARRAGON, although agriculture is very defective, there is a small surplus of grain produced, and the pastures feed nearly 2,000,000 sheep, and a few horned cattle. There are still some forests of oak, beech, &c.

In ANDALUSIA, corn cultivation is also in a backward state; but its wines of Xeres are the best, at least the most known in foreign countries. The horses are also the best in Spain. Cotton and the sugar cane will thrive as well as they do in more southerly climates; but the country being parcelled out in vast estates, pasturage is extensively followed in consequence.

VALENCIA.—This province is naturally the most fertile in Spain, yet it does not produce sufficient corn for even the scanty consumption of its inhabitants. Its plain, from thirty to forty miles broad, extending south of the mountains to the sea, yields all kinds of grain, including rice and maize, and vegetables and fruits. The orange, the mulberry, the vine, and other delicious fruits, all thrive. Two crops, or even three, in the year are produced; but all industry is in a deplorably backward state in this beautiful country. Rice is the most valuable grain crop raised. The cultivation of the white mulberry, once said to be the source of great profit, has greatly diminished.

Barilla, which was produced formerly to the extent of 300,000 lasts per annum, is reduced to one-tenth of that quantity. The produce of raisins sent chiefly to England has alone increased. In every other respect agriculture has retrograded; and during the years 1840 and 1841, at least 20,000 agricultural labourers left Valencia for Algiers. The stock of sheep is small.

CATALONIA has been described as the best cultivated province of Spain: this remark holds only true in respect to certain tracts; for the whole province does not produce one third part of its consumption. Yet the Catalans are remarkably industrious; and in that respect differ greatly from the general character of the Spanish people. Catalonia has also been exempted from the odious Alcavala tax. The cultivation of rice is prohibited on account of its unhealthiness. Irrigation is generally followed; and water for that purpose is even drawn from wells by a kind of machine. The soil is light, and ploughed frequently by no more than two small oxen.

Nearly the whole of the south of Spain is eminently adapted for the growth of rich products—wines, olive-oil, grain of all kinds. Oranges, figs, lemons, limes, almonds, and various nuts, raisins; apples, pears, mulberries, borrila,

and various vegetables, edible gourds, and fruits, are the most congenial products.

Formerly the importation of foreign corn was admitted: and in the year 1818, the latest of authentic imports on record, there were imported 1,032,534 quintals of wheat, 60,768 qls. of barley, 343,331 qls. of beans, 10,197 qls. of haricots, 13,739 qls. of peas, 3372 qls. of lentils, 14,008 qls. of rye, 11,367 qls. of Indian corn:—4 *quintals* being equal to *one English quarter*—and 9038 sacks and barrels of flour. All imported from the Black Sea, the Levant, Sicily, and Italy. Importation of foreign corn being now prohibited, and a monopoly of the supply for Catalonia has been granted to the other provinces.

Among the causes of the defective state of Spanish agriculture are the tenures of land. The *inalienable indivisible Mayorazgos* are considered as having, for a long period, comprised, including the property of the church, about three-fourths of the territorial surface of Spain.

The *Mayorazgos* are of different tenures; viz.,

First, *Agnacion Rigorosa*, which strictly limits the succession to males, in the direct line, to the exclusion of females.

Second, *Agnacion Artificiosa*, by which the male heirs in the direct line first succeed; and failing them, the males next in degree of the female line.

Third, *Agnacion de Masculinidad*, restricting the succession to the males and females of the male line.

Fourth, *La Regular*, by which males and females inherit; the sons first, the daughters next, and then in the form of collateral line.

Fifth, *La Saltuaria*, which requires personal qualities and conditions, laid down by the founder of the mayorazgos, without reference to descent.

Property held in mayorazgo can in no way be alienated in favour of child, wife, or widow, and is even more closely bound up than the Scottish *Tailzies*, which they resemble. *Viudadad*, or small allowance to widows, is a very precarious aliment.

The Mesta is another great, although secondary cause of the neglect of agriculture. This is the name of a great incorporated company of nobles, ecclesiastical chapters, persons in power, and members of monasteries, who were authorised to feed their flocks, at scarcely any expence, on all the pastures of the kingdom; and have almost an imperative special code of laws (*Leges y Ordenanzas de la Mesta*) for maintaining their originally usurped privileges. It holds its courts, and has numerous Alcaldes, *Entregadors*, Quadrilliers, Achagueros, and other law officers. Within the last five years, the *Mesta* has possessed about half the sheep in Spain.—See Jovellanos, La Borde, Faure, and Minano

If we consider the backward state of agriculture in Spain, the indolence of the rural population, the great numbers who are otherwise employed than in husbandry, and the preference given to pastoral occupation over that of tillage, we

may conclude that, for a long period, there will be little if any surplus of grain raised in this kingdom, although the greater part of most of its provinces are so eminently adapted for the growth of all kinds of grain.—See Prices of Grain and Miscellaneous Statements hereafter.

WINES OF SPAIN.

The soil and climate of Spain are highly favourable to the cultivation of the vine, and in Postlethwaite's edition of Savary's Commercial Dictionary, the quality of the wines of Spain, like that of the other products of the country, is extolled far beyond any merit which they possessed at that period, and certainly above what their general quality at the present time deserves. The grapes which are produced on the vines, trained as espaliers in Andalusia, grow in large bunches; and those on the vines which are stunted in their height by clipping, are also of good quality, but generally the vines are neither skilfully cultivated nor the grapes well gathered. The wines are prepared in a dirty, slovenly and imperfect manner: the fine and clear wines of Xeres however excepted. Those of Benicarlo, Malaga, Alicante, and Rota, being also prepared with more care, are of tolerably fine quality. The red (*blackstrap*) cargo wines of Spain, chiefly Catalonian, are strong rough imitations of Oporto wines, and often used to adulterate the latter. They are also sold as port in various places, and drunk as such by those who prefer strong to pure and wholesome wine. They are also exported to Cette and Bordeaux to fortify French wines. *Xeres* is the centre of the wines so well known as sherry. The large wine magazines of Xeres, like those of Marsala, are all above ground; and warmth and not coolness appears to be most favourable for the preparation or ripening of the sherry and Madeira wines. The best vineyards in the district of Xeres, and of which only good wines are made, are all on the slopes of hills or banks. The total area is estimated at from about 11 to nearly 12,000 English acres. The produce is not well known, and the inferior sherries are adulterated with a wine called *mosquer*, produced in other places, chiefly on the banks of the Quadalquivar. The sherry wines are kept in immense casks or tuns, from which they are drawn off into butts of 105 imperial gallons, or into smaller casks for exportation. The finest wines require no more than from half a gallon to a gallon of good brandy, and a very small quantity of sweet sherry, *Paxarete*, or of *Amontillado*, is also added. Amontillado is a remarkably dry wine, made of grapes not quite ripe, or in imitation of the fine dry wines of Montilla near Cordova; it is the purest of all Spanish wines and keeps without any admixture of brandy. Brown sherries are usually produced by boiling down other wines until of a dark colour, and mixing a sufficient quantity of the latter will give the required shade to the pale sherries. The wines of Xeres are exported chiefly from St. Mary's, and from Cadiz, and, with others which are passed under the same name, are those of the growth of Spain, which are most known in other countries.—See Cadiz

The dry and sweet wines of the districts of Malaga follow next in the quality of wines exported from Spain, and the first, resembling sherry, is supposed to be sold generally as such. The richest Malaga wine is the sweet *lagrimas* made much in the same manner as Tokay from the juice, which oozes without pressure, from the ripe grapes hung up in nets or in bunches. The produce of Malaga wines is estimated at near 40,000 pipes, of which about two-thirds is said to be exported.—See Trade of Malaga hereafter.

CHAPTER VIII.

MINES OF SPAIN.

SPAIN, which has from the time of the Romans downwards been renowned for her mineral wealth, has not become either rich or powerful from the possession of every variety of mineral in her European dominions, or from the gold and silver which she has drawn in such enormous quantities from America.

The silver and lead mines lately discovered in the Sierra Almagrera, in Almeira, near the borders of Murcia, are described as remarkably rich, and a large amount of British and some Spanish capital has recently been invested in working them. The return, if the accounts be not exaggerated, yield large profits.

Hoppensack, in his account of the mines of Spain, which he investigated in 1780, states the average amount of produce as follows; viz.,

	Kilogrammes.		Francs.
Mercury	900,000	value	4,500,000
Lead	1,600,000	,,	800,000
Iron	9,000,000	,,	1,800,000
Copper	15,000	,,	30,000
Antimony	300,000	,,	540,000
Zinc	125,000	,,	50,000
Total			7,720,000
Or			£ 308,800

Coal and iron is found in many parts of Spain. The latter is chiefly mined and smelted in the Basque provinces; where the ore in some parts, especially of Somorrostro, yields one-third of good iron. The iron ore of Mondragon yields 40 per cent.

In NAVARRE there are several iron mines, one of copper; and rock salt, marble, jasper, &c., abound.

In LEON there is some iron smelted and made into hardware.

In ARRAGON there are neglected mines of gold, silver, lead, copper, nitre, and alum. One salt mine is extensively wrought.

In ASTURIAS coals are dug up, and copper and iron, &c., is said to be found.

In ANDALUSIA and VALENCIA there are mines of gold, silver, lead, copper, iron, quicksilver, arsenic, coal, and antimony, &c.: all long neglected, except the lead mines of Adra, near Malaga. At present there is said to be a general mining mania in Spain.—See Miscellaneous Statements.

The Quicksilver mines of Almaden in La Mancha are very productive. England receives a great part of their produce; and the quantity sent from Spain for purifying the precious metals to America has at all times been supplied nearly altogether by the mines of Almaden.

CATALONIA abounds in mineral riches. Coal in great plenty in the Pyrenees—copper, lead, zinc, manganese, cobalt, nitre, zinc, &c., in other places. Cordova is described as a mountain of salt. Marble is abundant.

CHAPTER IX.

FINANCES OF SPAIN.

No country in Europe has less natural pretensions to be involved in financial difficulties than Spain. Notwithstanding the enormous treasures plundered from the native princes, and drawn from the mines of America,* and the natural riches of her home dominions, Spain appears to have been at all times in a state of fiscal poverty; and latterly she has, with ample means, utterly disregarded the solemn obligation to pay the interest of the money borrowed upon the guarantee of her national property and credit.

Under the reign of Ferdinand and Isabella, the revenues of the monarchy were composed of,

1. The lands forming the private domain of the kings.
2. The ground-rents; a kind of feudal tax imposed on the inhabitants of conquered provinces.
3. Del rauso fonsadera y maneria; pecuniary rent, which was in lieu of the military service, which the inhabitants were bound to give their prince.
4. Del yantar; a tax destined to pay the expenses of the royal table, and which fell to the lot of the towns where the court remained whilst travelling.
5. Portazgos, barcages y montazgos; toll-tax imposed on the highways and rivers, in return for the military assistance given by the crown to merchants and travellers.
6. The forera; poll-tax imposed on the non-noble inhabitants or peasants.
7. La martiniegay marzaga; contribution of the same origin.
8. Las juderias; poll-tax on the Jews.
9. Morerias; poll-tax imposed on the Moors.
10. La dime; established by the Moors, consecrated and applied to the use of the community in the territories conquered by the Spaniards.
11. La Santa cruzada; produce of religious alms for sustaining the war against the infidels.

* During the eighty years ending 1619, it is stated in Postlethwayte's *Commercial Dictionary*, vol. ii., p. 761, "that the value brought to Spain, as registered at Seville, was besides all private trade, five thousand millions (5,000,000,000) in gold, silver, pearls, jewels, and other merchandize" but this, as well as all other accounts of the precious metals imported from America, we consider doubtful. The amount of treasure must, however, from the number of vessels employed in carrying it, have been enormous.

12. Las tercias, the ninth part of the produce of the ecclesiastical tithes.
13. The Customs.
14. Pedidos y monedas, ordinary impositions voted by the Cortes.
15. The salt mines of the kingdom.
16. La Alcavala, duty of ten per cent on the value of every article sold.

To the ordinary taxes, the catholic kings added the produce of the four grand commanderies of the military orders, to whom the pope conferred the perpetual right of investiture.

According to a report of the Council of Finances, the revenue of the monarchy, under the reign of Ferdinand and Isabella, amounted to the sum of 347,689,601 millions of maravedis, and under Charles IV. and Ferdinand VII. and the constitutional government, as follows, viz.:

ORDINARY RECEIPTS.

CHARLES IV.—1790.	reals vellon.	FERDINAND VII.—1816.	reals vellon.
Ordinary rents including customs	87,397,795	Ordinary rents, customs and duty on wool included	136,000,000

Amount of indemnities due for confiscations and spoliations undergone by the citizens since 1815	500,000,000	125,000,000	25,000,000	6,250,000
DEBT WITHOUT INTEREST.				
Amount of arrears of public debt	10,148,292,296	2,537,073,074		
Unsettled debt of treasury, prior to 14 March, 1808	484,931,965	121,232,991		
Ditto of the 1st restoration	900,000,000	225,000,000		
Ditto of the constitutional government and of 2d restoration	500,000,000	125,000,000		
RECAPITULATION.				
Total of inscribed and cleared debt	12,864,473,631	3,031,315,033	560,349,175	140,104,270
Ditto of debt not cleared	3,800,000,000	950,000,000	124,000,000	31,000,000
Ditto of debt without interest	12,033,533,261	3,010,705,817		
Grand Total of Public Debt on 31 December, 1833	27,698,006,892	6,992,021,750	704,349,175	176,104,270

If the above statement approximates to a correct exhibition of the national debt of Spain, the total amount due on the 31st of December, 1833, was 276,080,876*l.* sterling; and the annual interest 7,154,170*l.* sterling. Recent semi-official statements are greatly at variance with the above account: that is, if the debt (three-sevenths of the whole) not bearing interest, be included.—See statement of debt for 1841-2, hereafter.

ESTIMATE of the Value of Lands, Properties, and Immoveables, which composed the actual Public Domain of the Spanish Nation in 1833.

	CAPITAL.		REVENUE.	
	reals vellon.	francs.	reals vellon.	francs.
Palaces, woods, and farms of the crown, not included in the civil list	120,800,000	3,000,000	5,000,000	500,000
Lands and immoveables belonging to the proprios	3,000,000,000	750,000,000	102,000,000	25,500,000

Edifices and dependencies of the royal suppressed manufactories	20,000,000	5,000,000		
Wood of Segura	6,000,000	1,500,000	140,000	150,000
National forests	100,000,000	25,000,000	3,000,000	750,000
Public granaries (positos)	40,000,000	10,000,000	2,000,000	500,000
Canals, being constructed	84,000,000	21,000,000	2,000,000	500,000
Bridges, roads, aqueducts, and edifices of the nation	1,000,000,000	250,000,000	2,500,000	625,000
			226,444,000	56,771,150
To be deducted for services given to the proprios to the communities and administrations of mostrencos and positos	....	....	182,832,000	45,708,000
Disposable total	12,970,540,000	3,025,000,000	44,112,000	11,271,150
Sterling money		£121,000,000		£ 450,846

In respect to the valuations made of the properties possessed by the Spanish clergy, it appears from the official documents obtained by the government in 1740, for the imposition of direct taxes, that the clergy as well secular as regular, that is to say the cathedrals, colleges, ecclesiastical benefices, abbeys, monasteries, and convents of either sex, possessed an annual revenue arising from lands, houses, herds of cattle, and other patrimonial rents and dues of 859,806,257 reals. The greater part of the herds, as well as the capital invested by the several monastical orders in agricultural industry, having been lost to the proprietors during the war with Napoleon, as well as in consequence of the ecclesiastical reforms made, the above annual revenue was reduced about 150,806,257 reals; which would make the actual revenue, without augmenting it at all for the increased value of farms and rents, amount to the sum of rls. vel. 700,000,000 = 175,000,000 frs.

According to the committee of the Cortes of 1825 the annual produce of the ecclesiastical tithes amounted to	342,919,223 =	85,729,555
Produce of ecclesiastical tax called Santa Cruzada	20,000,000	5,000,000
Property of the Jesuits already applied to the public debt by Charles VI., but subsequently reimbursed by Ferdinand to the order, may be valued at	5,000,000 =	1,250,000
Produce of ecclesiastical tax called Voto de Santiago, to	20,000,000 =	5,000,000
Produce of ecclesiastical tax called primicia	60,000,000 =	15,000,000
The revenue of immoveables belonging to pious and charitable establishments	60,000,000 =	15,000,000
Edifices, such as monasteries, convents, churches, and other religious places, given at the rate of 3 per cent of their value, an amount of	19,610,700 =	4,902,450
Total	12,247,529,923	336,982,005
Sterling		£ 13,479,280

The property of the Jesuits, and that of which they had the control in the reign of Ferdinand I., consisted of—1st. The property which has belonged to the church (los Temporalidades). In this category are included the colleges and provincial establishments. 2d. The church property called Colegiata de San Isidro, and that which formerly belonged to los estudios reales. The collegiate church of San Isidro was endowed by an act executed in the name of Charles III. on the 2nd of December, 1786. This endowment included the following properties; viz.,

	Reals.
45 Villas, worth	1,128,308
32 Houses in Madrid	3,898,011
19 Censos	1,606,680
12 Capitals in 15 gremios	1,328,027
Revenues at 2 per cent upon foundations	286,920
7 Juros	393,640
Gifts and lands	73,336
Rent of the Imperial College at Naples	5,837,520
3 Ecclesiastical pensions	5,162,480
One-half anates de los dignitarios de Toledo	1,120,000
Produce of the vacancies in these dignitaries	1,120,000
Sums granted by his Majesty	11,986,800
Total of the church property	34,001,682
If to this be added the product of the estudios reales	30,997,800
Ditto of the temporalidades reales	262,293,233
Grand total	327,292,715
	or £3,272,927

The following are the details of the religious establishments in Spain, during the reign of Ferdinand VII.

"The Capuchins possess 132 convents, belonging to both sexes. The order of St. Augustin has 196 convents of both sexes. The Recollects, reformed from the order of St. Augustin (bare-footed), have 73 convents of both sexes. The bare-footed Carmelites hold 106 convents of both sexes. The Reformed Carmelites (bare-footed), 191 convents of both sexes. The Trinitarians, 83 convents of both sexes; the Reformed Trinitarians, 29 convents. The order of Our Lady of Mercy has throughout Spain 97 convents for both sexes. The reformed Mercenarios (bare-footed), 41 convents of both sexes. The hospital for the poor sick, 58 convents. The regular canons of St. Augustin, 23 convents of both sexes, canons and canonesses. The order of the canons of St. Sepulchre has only two convents in Arragon. The canons called Premotratenses have 19 convents. The canons of the Holy Ghost have 12 convents, 4 of which have canonesses. The regular canons of St. Anthony Abbad, 36 convents. The canons of St. George constitute only one order and have only one rich convent. The order of the Jesuits possessed, previously to their expulsion, 123 convents in Spain, and 127 in America. There are now in Spain about 200 Jesuits, the greater part of whom are resident at Madrid. In the provinces they have a few colleges. On their return to Spain in 1814, the entire of their property was not restored, but in 1822 and 1823 they took possession of all the property which they considered as theirs. The congregation of the priests of the Oratoire have 21 convents, the regular clergy (minors) 15 convents, the ministering clergy 6 convents; the poor clergy of the Mother of God and of La Scolapia, and the congregation of the Father of the Mission, 4 convents; the secular clergy (missionaries), 9 convents, extremely rich; the religious order of St. Brigada, 5 very rich convents; the Society of Mary possess 5 convents; the total amounting to 2923 convents, including those which we mentioned on a former occasion. The religious order of St. Francis alone possesses 1175 convents, the edifices devoted to public worship amounting to the number of 28,149. The number of individuals belonging to the clergy and to the religious orders amounts to 265,000. In the above list we have not included the re-established Jesuits, or the new

convents founded since 1787 up to the present day. For instance, the convents of St. Vincent de Paul, of the Salisas Neuvas, and the Solida de la Baloma, at Madrid. It was extremely difficult to form an exact calculation of the different revenues of the clergy. The following is, however, an average account drawn up by the Marquis de la Corona.

In the two last centuries the expenses for constructing and repairing the various convents amounted to the enormous sum of 6,885,000,000 reals, *i. e.*, 209,000,000 per annum.

VALUATION of the capitals possessed by the Spanish nation in 1832, according to M.M. Beramendi, Chone, nd Vifron, members of the Junta de Medios,*

	CAPITAL.		PRODUCTS.	
	reals vellon.	francs.	reals vellon.	francs.

Total	[illegible]	[illegible]	[illegible]	[illegible]

N.B.—There are not included in this statement the capitals represented by the heath and barren land, nor the value of the mines not yet worked.

How far the foregoing statements may be correct or false, we have not the means of proving: they are all extracted from official returns made by the Spanish government; and they, at least, show that the financial department had, exclusive of the revenue derived from the oppressive and unequal system of taxation*, an enormous property at its disposal; and which with common wisdom and honesty would have easily maintained the national credit of Spain.

As to the present value of the property of the Spanish government, or the amount actually derived from the customs and other taxes, we have no materials on which the public of Europe can place any reliance.

M. de Mendizabel stated the value of the unsold property in 1840, at about 95,780,000*l.* sterling. The sales effected since that period, and the decreased value of all securities in Spain, have, it is estimated, reduced the amount of the disposable property of government to about 60,000,000*l.*, but these estimates we consider as extremely uncertain.

* The tax *d'alcavala y cientos*, on all moveables sold or exchanged, the provincial taxes, or duties on wine, vinegar, oil, and distilled spirits, are levied with inquisitorial rigour; the *octroi* duties on animals; those on sugar, paper, the *capitation* tax on peasants and citizens (from which the nobility are exempt),—the *tercias*, or the ninth part of additional tithes,—the *gabelle*, which compels the towns and villages to buy a fixed quantity of salt, at a high tax, from the government,—the *lanzas*, or tax to replace military service of troops, which the nobles were liable to furnish; the tax *mesdanato*, or repayment of half the first year's salary to government, of all places of charge or dignity, and a tax for seals of titles, commissions, &c. The tax *ensuedo* is a *tithe* of the rent of the best house in each parish, producing about 3,240,000 francs.

The debt of Spain, in January, 1842, is stated to amount to 14,160,968,047 reals, or 157,344,080*l.* sterling. Of this debt about 65,000,000*l.* is only admitted to be due to foreigners, the interest of which has not been discharged for several years. The present gross amount of the Spanish revenues is stated to range between 9,000,000*l.* and 10,000,000*l.* sterling. The above statement does not evidently include the amount stated in 1833 as *Debt*, without interest (which see).

As to the expenditure we have no clear statement, further than that from the management of the administration; it exceeds the income, without paying a real towards the interest of the foreign debt of Spain.

Spain, however, need not, in her financial burdens or obligations, be considered in a desperate condition. She has abundant resources, and requires only an honest and enlightened administration; a wise and sound reform of her system of customs, laws and duties, and of her direct taxation, to attain, in ten years at furthest, from the adoption of such reforms, an independent treasury, and the honourable distinction of fulfilling her national obligations.

CHAPTER X.

NAVIGATION AND TRADE OF SPAIN.

The navigation and commerce of Spain are described as of great extent and value as far back as the earliest known periods of history. The Greek and Phœnician navigators sailed to and finally colonised Spain, and traded between the East and this extensive peninsula: then considered the extreme western limit of the world. Cadiz is said to have been founded by the Tyrians about 1000 years before the Christian era. Many other towns, as Valentia, Malaga, Cordova, &c., were founded by the Greek and Phœnician colonists. The Carthaginians long afterwards established themselves as traders and colonists in Spain, the seaports of which, and of the other coasts of the Mediterranean, were, in consequence of this trade, in active correspondence with each other. The Vandals and Visigoths afterwards occupied Spain, and subdued, but did not extirpate, or drive out, the former inhabitants, nor yet extinguish the commerce of the seaports: for it appears that the Vandals (A. D. 428) embarked for Africa, and found no difficulty in collecting at Gibraltar a fleet of ships from the other seaports of Spain, sufficient to transport 80,000 men, with their baggage, arms, and provisions. It would also appear that the trade and navigation of the several kingdoms of Spain flourished during the time of the Moors.

The reigns of Ferdinand and Isabella, of Charles V. and Philip II., are de-

scribed as the great era of Spanish navigation and trade, but although Spain has gloried in employing both the discoverer of America, and the conqueror of Mexico, we are unable to discover or conclude that Spain was at any period a great commercial country. Building royal fleets by means of excessive taxation,—granting a monopoly of the carrying trade to and from America, and the Philippines,—excluding generally the manufactures of foreign countries,—and bringing to Spain the gold and silver robbed from the natives of Cuba, Porto Rico, Mexico, and Peru, and the precious metals extracted afterwards by slave labour from the mines of America,* cannot assuredly be considered extensive, or sound, commerce, which consists legitimately of a fair interchange of the commodities of one country or one place for those of another kind, use, or value. In this sense the navigation and commerce of the Portuguese was far more important than that of Spain.

The more general accounts transmitted to us of Spanish trade and riches are now well known to have been most outrageously exaggerated. Spain, if we except the precious stones and the gold and silver treasures of her churches,† retained but a comparatively small portion of wealth imported from both the Indies.

According to the Spanish official reports, the commerce of Spain with her colonial possessions, taking the annual average of the five years previous to 1790, amounted in British sterling money to the following value; viz.,

Importations from the colonies	Precious metals	£4,880,000
	Various products	2,160,000
	Total Imports	£7,040,000
Exported to the Spanish colonies	Spanish products	£2,640,000
	Foreign ditto	3,000,000
	Total Exports	£5,640,000
Importation into Spain from foreign countries	By Licet Trade	£1,760,000
	By Contraband	3,440,000
		£5,200,000

During the year 1792, the imports from foreign countries into Spain, by contraband or otherwise, are stated to have amounted to 714,896,000 reals vellon,

* From the silver mines of Potosi alone, according to the report of the Minister Laberto de Sierra in 1802 (exclusively of the vast sums fraudulently secreted), there was exported to Spain, in 246 years, the enormous value, reduced to British sterling money, of nearly 168,000,000*l.*, and during the following years the official account of gold and silver imported (exclusively of smuggling) from the Spanish colonies, appears enormous; viz., in 1784, 10,014,000*l.*, in 1785, 9,478,400*l.*; in 1792, 3,862,000*l.* Humboldt states the average annual produce of the Spanish American mines as follows: 1500 to 1545 = 600,000*l.*; 1545 to 1600 = 2,280,000*l.*, 1600 to 1700 = 3,200,000*l.*; 1700 to 1750 = 4,400,000*l.*; 1750 to 1803 = 7,060,000*l.* sterling.

† None in the world exceeded in their internal riches the churches of Spain. The church of the Escurial, in 1716, contained 3537 massive *reliquaires* in silver, in vermeil, or gold, and set with precious stones. These *reliquaires* contained 7 whole saints, 107 saints' heads, 177 saints' arms and legs, 346 saints' veins, 1400 saints' thumbs, fingers, and toes, 1500 other holy relics of saints; and the statue of St. Lawrence, weighing 650 lbs. of silver, and 18 lbs of gold.

or 7,446,833*l.* sterling, and the exports to foreign countries only to the value of 396,195,000 reals vellon, or 4,125,989*l.* sterling. The Spanish authorities, in their official reports, term the foregoing the flourishing years of their commerce.

The Junta de Medios which sat at Cadiz in the years 1811, 1812, and 1813, whose reports we have already referred to, states, that a war with England has always been ruinous to Spanish trade, and yet that the exports of Spain in 1795 amounted in value to 480,000,000 reals vellon, viz.:

In diamonds and precious stones	7,000,000
,, silks	20,000,000
,, wools	150,000,000
,, cotton	7,000,000
,, leather and skins	30,000,000
,, brandy, barilla, soap, raisins, and acids	156,000,000
,, salt, drugs, and colonial produce	110,000,000
Total	480,000,000
Total sterling	£5,000,000

That the total Imports amounted that year, including contraband—

In jewels, glasswares, paper, furniture, perfumery, and cloths	480,000,000
,, wine, copper, grain, tanned skins, and provisions	240,000,000
Hemp, roots, pitch, flax, wood, ironworks, tin, and drugs	160,000,000
Reals vellon	880,000,000
Total sterling	£ 9,166,666

It must appear evident, from the foregoing brief statement, how greatly the trade and the navigation of Spain were overrated. Spanish shipping was, during the foregoing years, engaged chiefly in the Mediterranean and Spanish coasting trade, and, in the trade with the Spanish colonies.—See Trade of, hereafter. Cadiz was the rendezvous of the annual galleons which brought home the precious metals of Guinaxaco, Potosi, &c. The same port is said to have admitted annually 600 foreign vessels, Barcelona 350, and Malaga 300; but these were of small tonnage and arrived under great restrictions, and the loss of the colonial trade has greatly diminished the trade of those ports.

As to the actual trade of Spain since 1814, our returns do not enable us to state, even by estimate, the general trade of Spain. The Spanish government returns give the general trade of Spain as follows, in 1827 and 1828; viz,

	Value of Imports.		Value of Exports.	
	£	£	£	
1827.—Foreign trade	2,602,080	3,809,200	2,120,040	2,876,481
Colonial trade	1,207,120		456,441	
1829.—Foreign trade	3,803,640	4,579,280	2,064,120	2,621,880
Colonial trade	775,640		557,760	

The imports during those years consisted of colonial produce,—tobacco, from Gibraltar and United States,—hardwares,—linens, more in value than one-tenth of

the whole,—woollens and silks,—salt fish, (value about 300,000*l.* in 1829),—building timber and other raw materials. The exports consisted of flour, &c. to Cuba, Porto Rico, Madeira, and the Canaries,—and brandy, wines, dry fruit, almonds, olive oil, wool, silk, quicksilver, lead, iron, steel, &c.

England and France are the countries which shared most in the trade, by contraband or otherwise. In the latter trade France has and must always have the advantage over every other country. The legal importations from France in 1827 amounted to 29,085,000 francs, or nearly one-third of the whole, but this did not include the contraband trade from France. The exports to France amounted to 20,983,000 francs, which did not include the contraband (the latter probably of little value). England, during the same year exported legally to Spain 16,453,000 francs, and imported from Spain 19,858,600 francs. The Sardinian States rank next, exporting legally to Spain to the value of 4,859,000 francs, and importing 2,588,000 francs. No other state exported to Spain above the value of 2,900,000 francs.

The trade between France and Spain, according to the French official accounts, amounts, during the following years, to

Years.	Imports from Spain	Exports to Spain.	Years.	Imports from Spain.	Exports to Spain.
1787	60,339,000fr.	40,161,200fr.	1828	19,973,000fr.	41,637,000fr.
1788	27,256,000	49,890,200	1829	21,246,000	41,707,000
1789	32,238,000	41,084,000	1830	22,916,000	34,245,000
1825	16,273,000	53,272,000	1831	20,224,000	36,025,000
1826	17,392,800	46,206,000	1832	16,675,400	28,032,000
1827	22,919,000	40,821,000	1837	27,000,000	45,700,000

In 1839 the imports, chiefly wool, cork and lead, from Spain into France, amounted to 28,500,000 francs in value; while the declared value of exports, chiefly cotton and other manufactures, increased to the amount of 57,500,000 francs, exclusive of great quantities smuggled over the frontiers without declaration of export from France.

The above Imports are the Spanish goods entered for consumption in France, and the exports include only articles of French origin or manufacture.

In 1841 the balance of trade, according to the French official account, was considerably against Spain, her exports to France being only 37,162,689frs., whilst her imports from France amounted to 100,893,906 frs. The principal articles for which Spain was tributary to France were cotton cloths, which, though prohibited by Spanish law, figure among the items for 36,127,019fr.; linens for 12,999,091fr.; silks for 9,890,720fr.; woollens for 8,649,026fr.; haberdashery for 3,279,459fr.; machinery for 1,820,749fr.; paper, books, and prints for 1,529,028fr., &c. The returns made by Spain consist almost entirely of raw materials. The principal articles were wool to the value of 9,764,511fr.; lead, 6,707,388fr.; cork, 3,719,733fr.; dried fruits, 3,032,498fr.; mats, 1,691,599fr.; oil, 1,688,805fr.; silk, 1,041,648fr.; grain, 758,982fr., &c. The only manufactured goods to be

found in these tables are linens, which only represent an amount of 143,808fr.; and silks, of 103,433fr. The commercial intercourse between France and Spain is far greater by the land frontier than by sea, the exports from France by the first being 61,029,292fr., and by sea only 39,864,614fr. The number of vessels employed in the trade was 2,543, measuring 163,357 tons. Of these 1,121 cleared the Spanish harbours with cargoes, and 296 in ballast; and 677 sailed from the French harbours with cargoes, and 449 in ballast.

The greater part of the small craft employed in the trade between France and Spain are smugglers, between the masters and owners of which and the employés of the Spanish customs, it is known that there is an understanding of perfect security for landing French manufactures.

MERCHANDIZE imported into France from Spain during the Year 1842.

TRADE BETWEEN ENGLAND AND SPAIN AND THE BALEARIC ISLANDS.

The trade and navigation between England and Spain, though ranking next to that between France and Spain, is unimportant compared with the elements which both countries possess for the most extended interchange.

The commerce between England and Spain during the last century is described as of considerable value; and, for the supply of her colonies, Spain was compelled to purchase, through the merchants of Cadiz and Guipuzcoa, foreign goods (especially woollens from England), notwithstanding the legal prohibitions.

During the years 1809 to 1814 the trade in British manufactures to Spain and for Spain by way of Gibraltar, appears to have greatly increased. The declared value of British manufactures exported to Spain and Gibraltar during the following years were; viz.,

The contraband trade from Gibraltar, and even through Cadiz, though the freedom of the port has been withdrawn, will still continue, so long as the present system of customs exists in Spain.

Since the breaking up of the government of Espartero, it is stated that the contraband trade has been more active than at any former period. The indiscriminate licence given, some time ago, by the Spanish government to the revenue cutters, called *guarda costas*, utterly failed, though they were guilty of the most unjust and vindictive seizures of vessels driven near the Spanish shores.

Tobacco.—Of this article about 6,000,000 lbs. is smuggled annually from Gibraltar into Spain, and about 4,000,000 lbs. is exported from the same depôt to Oran, Algiers, Malta, and other places. Spain, in the face of this contraband, still maintains her Royal Tobacco Monopoly. Exclusive of the tobacco smuggled into Spain from Gibraltar, it is smuggled in extensively along the whole north and west coasts of Spain. The recent extension of the Spanish Customs to the sea-coasts and ports of Biscay will not diminish, but, it is asserted, will greatly increase the contraband trade.

* In the year 1829 Cadiz was declared a free port, and the exports of British goods to be smuggled into Spain from Gibraltar immediately decreased, while the direct exports to Cadiz immediately increased; and would have continued to increase, were it not for the great contraband trade from France, which increased after the revolution of July, and to which the augmented industry of France during peace had also given an impulse by the multiplication of French goods, especially cottons and woollens suitable for the Spanish markets.

British and Irish Produce and Manufactures Exported from the United Kingdom to Spain and the Balearic Isles.

In the above statement of imports, the packages of oranges of all sizes are included: the wine was chiefly sherry: next to which in quantity was Malaga wine. The brandy imported from Spain has been imported chiefly for re-exportation. The high duty of 22*s.* 6*d.* and 5 per cent the gallon, prevents its use for adulteration; and its quality is so inferior as to prevent its competing at the same duty with French brandy.

The wines of the Canaries are often sold as Madeira, – and with care they might, it is affirmed, be produced of equally good quality. Area of Teneriff, Canary, Palma, &c., about 2,500 English square miles: population about 240,000. The formation of these islands is volcanic; very fertile, where there is humidity. Average produce: wine, 54,000 pipes; barilla, 2,000,000 quintals; wheat, millet, rye, and barley, about 150,000 quarters; potatoes, about 500,000 barrels; also fruits, and various vegetables.

FISHERIES AND COASTING-TRADE OF SPAIN.

In order to encourage the fisheries of Spain the importation of all foreign fish, except cured codfish and stockfish, is prohibited. The shores of Spain along the Atlantic and the Mediterranean abound with varieties of fish,—but a sufficient quantity has never been caught or cured for the consumption of a population who have generally observed the Lent and fasts of the Roman Catholic Church; and it is owing to this circumstance that the importation of foreign cod-fish is not prohibited. Along the shores and indentations of the Bay of Biscay a kind of cuttle-fish, much esteemed for eating, salmon, and various other kinds of fish abound,—and the fishery forms a source of considerable employment and profit to the inhabitants of Fontarabia, St. Sebastian, Santander, and other places along the coasts of this bay and the Atlantic shores of Gallicia. The herring and pilchard fishery at Ferrol produces more than sufficient for the consumption of the inhabitants of this district. Along the coast from Gibraltar to the frontiers of Portugal the fishery is also followed by some of the inhabitants at several places along the shore. Within the Mediterranean, especially at Malaga and Carthagena, a considerable fishery is carried on; and anchovies and other varieties of fish are abundant and sold at low prices for daily use.

The coasting-trade of Spain is limited to national vessels. This trade employs a great number of small vessels in carrying wines and various other articles from the places where they are the most abundant to those where they are most wanted, or, to and from the ports which are legally open for the foreign or the colonial trade of Spain. We have, however, no returns that can be relied on of the number of coasting-vessels, nor even of those employed in the colonial and foreign trade of Spain, and we can only refer generally to such returns as we have been able to procure of the navigation and trade of the provincial seaports.

NAVIGATION AND TRADE OF CATALONIA.

BARCELONA is the most important manufacturing and trading town in Spain, though its trade is said to have greatly declined since Spain lost her American

possessions. Its harbour is sheltered by a mole, but large vessels cannot enter, nor anchor without being exposed to the winds in the bay. The British trade at Barcelona is unimportant. In 1831, 18 British vessels entered, and 110 other vessels arrived at Barcelona from foreign ports.

"The province, or, more properly speaking, the principality of Catalonia, is divided into four provinces, Barcelona, Tarragona, Lesida, and Gerona. It is 70 leagues in length from west to east, and 50 wide from north to south, contains 70 leagues of coast on the Mediterranean, 260 in circumference, and 1000 square leagues of surface; it contains 12 cities, 242 villages, 1523 hamlets, 22 garrisons—and many rivers, 22 of which empty themselves into the Mediterranean.

"Besides the British consular residence at Barcelona, there were formerly six British vice-consulates, but that of Villa Nova has been suppressed. Of the remaining five that of Tarragona is the most important.

"*Rosas*, situated near France at the eastern extremity of Catalonia, has a spacious bay, which during the war afforded an excellent refuge for our ships; at present it is scarcely of any importance to British commerce. Its export of cork has ceased.

"*Palamos* and *Matano* are also almost entirely without commerce with England; the chief employment at Matano is ship-building, but in time of war both places may be useful in supplying our navy with provisions and water.

"*Tarragona* and *Salou* are the only two ports in this consulate which supply exports for the English markets.

"It is difficult to obtain exact statistical information, but the population of this principality is estimated at about 1,300,000 souls.

"*Barcelona* may be considered the commercial capital of Spain, and its geographical position, its establishments of manufactures and the industry of its inhabitants, are likely to continue it so under all circumstances.

"There are 18 resident consuls; in 1826 the population was only 100,639; in 1829 it had encreased 13,141, and is now supposed to contain about 200,000 souls; it has eight hospitals, a university, a seminary, a society of 'Belles Lettres,' many colleges and establishments of literature and science, in which 4000 students are taught gratuitously,—several valuable libraries that contain the archives of Arragon, the most complete and extended record in existence. It may be said in general to possess all the elements of the first capital in Spain, and would probably ere this have been extended to double its present size, but being a garrison town and of course surrounded by walls, the population has hitherto been compressed into a small space; but the suppression of the convents, and the extension of the sea-wall, have afforded opportunities of enlarging and beautifying the town, which have been eagerly embraced. The new buildings will bear comparison with Regent-street in London or the Rue de Rivoli in Paris, and the *coup d'œil* from the centre of the Plaza de Palacio is not to be rivalled.

"The trade of Barcelona with England has entirely changed its character within the last few years. In the year 1825 the import trade by British ships consisted in corn, cod-fish, broad-cloths, bags, bombazeens, flannels, hardware, cotton, and hides. In that year there were imported only 17,500 quintals of cod and stockfish; while in the preceding year the import was 24,600; in the year 1823, 34,100 quintals; and in 1822, 57,200. Of the 17,300 quintals imported in 1825, there can only be counted 5000 of Newfoundland. After this depression the trade again recovered itself in this article, for in 1828 there were imported 45,000 quintals of Newfoundland cod, 12,000 Norway, 7,000 sundry stockfish, and 28,000 Shetland ling and cod. Up to the year 1832 the British trade averaged about 24 to 26 vessels per annum, chiefly importing cotton, fish, and hides, but not a single vessel laden with coals nor machinery. Since that year the introduction of these articles has taken place, the import of fish gradually disappearing, and the cotton trade was lost by prohibition, and at last the fish trade also. In 1837 we imported in 23 vessels nothing but coals and iron. In 1838, coals and iron only in 14 vessels. In 1839 the same kind of cargoes in 30 vessels. In 1840, the same sort of cargoes, with

one of sugar in 35 vessels, and in 1841 nothing but coals, iron, and machinery in 57 vessels.

"It will thus be observed that though our trade with Barcelona has doubled in extent, it is now entirely confined to two articles.

"There are no exports from the port of Barcelona to England, each of the 57 vessels of last year having gone away in ballast, the greater number to Marseilles, but some few to Tarragona and Salou, where they have taken in wine, nuts, almonds, and brandies."—*Report on Catalonia*, 1842.

NAVIGATION, &c., for the Year ending 31st December, 1842.

Of the 69 British arrivals, 52 vessels had coals, 3 coals and iron, 1 wheat in transit, 3 iron and bricks, 1 mixed cargo, 4 machinery, 1 machinery and iron, 1 gas pipes, 1 timber and fish, 2 cargoes not named: of the 69 departures, 65 were in ballast, 1 had mixed cargo, 1 part cargo (machinery), 1 part cargo (wheat), and 1 had coals.

Twenty-eight British vessels arrived at Tarragona, of which 24 were in ballast: 1 had almonds, 1 slate, and 1 marble in transit, and 1 fish and deals; and departed with cargoes of oil, nuts, wine, brandy, and corks, with the exception of 1 departed in ballast, and two remaining in port.

Three vessels arrived at Salou: 1 with raisins, 1 with marble, 1 in ballast, and departed with cargoes of nuts.

PORTS OF VALENCIA.

The port of Valencia is about two miles from the city, at Grao. Boats only can enter the harbour, and larger vessels anchor in the roadstead, which is exposed to south and south west gales. The population is estimated at about 64,000. Its manufactures of silks, and taffetas of silks, &c., must have greatly declined, or the accounts transmitted us of their former magnitude have been very greatly exaggerated.

ALICANT is considered the principal commercial port of Valencia, but its harbour is no more than a roadstead in a deep bay, where all large vessels anchor, but small vessels

lay near the pier. Population about 11,000. The trade of this and the other ports of the province, has declined very much during late years, both as to importation and to exportation generally, with the probability of continuing stationary, owing to the heavy duties levied on almost every article of importation, and the prohibition of a great number, together with the many vexatious and unnecessary formalities required by the new tariff published this year in Spain. The exportation of barilla, and the cultivation of it, have declined greatly, in consequence of the great adulteration in the preparation of it in this province, and the consequent substitution of chemical substance for it where it was formerly imported. The exportation of raisins has increased greatly within a few years; the quantity in the year just expired (1841) being 192,000 cwts. to all parts, chiefly to Great Britain.

The effect of the high duties levied on articles of importation, and the numerous prohibitions, is that smuggling is extensively carried on, partly by the connivance of the custom-house officers in classing articles under false denominations, and partly clandestinely by Spaniards, for no British subject is known to be concerned in fiscal frauds. *All sorts of cotton manufactures being prohibited, are smuggled into this part of Spain from Gibraltar, Algiers, and Oran, chiefly by Spanish fishing boats, which take the goods to be smuggled ashore. The whole population of this part of Spain is clothed and supplied for household use with such prohibited articles, which are sold openly in the towns.*

Port charges on shipping, entering, and clearing out in ports of Valencia; say on vessels of 300 tons, which pay the maximum rate for anchorage. Tonnage is paid at 1 real vellon per ton, should the vessel load outwards—if cleared in ballast, nothing.

	Spanish Vessels, reals vellon.	Foreign Vessels reals vellon.
Anchorage	75	75
Health visit and pratique	15,2	98
Captain of the port	8	8
Bill of health	14	25
Tonnage duty 1 real per ton, if loaded outwards	300	300
If cleared in ballast	0	0
Mole duty and light	24	120
Tarifa light, inwards and outwards, 24 maravedis per ton	211,26	48 mars. or double 423,18
	647,28	1,049,18
	£6 2 7 sterl.	£10 10 0 sterl.

There are not any ports in this province where goods may be warehoused on importation, and afterwards re-exported duty free.

The custom-house regulations for entry and clearance of ships and merchandize are as follows; viz.,

Manifest of the ship's cargo, tonnage, and crew, to be made within twenty-four hours after pratique being given, when two custom-house officers are put on board; the consignees then enter their merchandize (Spanish consul's certificate from the port of loading not being now required), and obtain permission to discharge, which, when done, the officers report to the custom-house. To load the whole or part of an outward cargo, the master reports, and the shippers make their specific entries, the goods pass through the custom-house, and when on board the waiting-officers make returns, and with the receipts of the captain of the port and of the health-office of the respective charges being paid, the clearance is granted, and on the consul of the nation to which the vessel belongs certifying the number and qualities of the crews and of the cargo on board, the municipal bill of health is issued, and the vessel is then clear for sea.

British capital is at present employed in the establishment of smelting works at Alicante, for the smelting and refining of argentiferous ores from the rich mines of the province of Murcia, at Almagrera, &c., established by the British merchants of this place on an exten-

sive scale, under the denomination of "Asociacion Britanica," of which I, the consul, have been named president, and the scientific operations are conducted by a practical gentleman from Cornwall, with workmen from the same place, twenty-five in number, under whom are a sufficient number of Spanish assistants. The produce of the works within the year has been 100,000 ounces of pure silver, and 400 tons of lead. Following the example of the "Asociacion Britanica," five other joint-stock companies of Spaniards have been formed at this place, but on much smaller scales, but none of them have yet produced silver, being without proper scientific persons to conduct the operations.

Agriculture in this province has not improved, in general, owing to a succession of dry years: barilla, which formerly was the principal article, upwards of 500,000 cwts. being annually produced, does not now come up to 30,000 cwts. Raisins are the only article that has increased, nearly the whole of which are exported to England.

The manufacture of woollen cloth is carried on extensively at Alcoy, in this province, but the qualities are inferior to British and much dearer. Paper is also manufactured of middling qualities at moderate prices, also common earthenware and crockery used by the inhabitants.

The population of this province has much decreased of late years; the emigration of agricultural labourers to Algeria continues to be considerable.

There are not at present any public works in progress, except the extension of the mole and the formation and repair of roads, which are actively proceeding.

There are five Spanish steam-vessels now plying from Cadiz to Genoa calling at the intermediate ports; also two French.

To give a statement of the articles prohibited to be imported, it would be necessary to copy the Spanish tariff, which is presumed to be in the possession of the Foreign Office. In general goods, imported in all foreign vessels pay one-third more duty than if in Spanish, the latter not being any particular privilege enjoyed by the former.

The average prices on board of the several articles of export are; viz,

		s.	d.	
Barilla	cwt.	12	0	sterling

Four British vessels arrived at Benicarlo in 1842, in ballast, and sailed with wine for London.

Carthagena is the most commodious and safe Spanish port in the Mediterranean. Population of the city about 29,000.

"The articles exported from Carthagena and the province of Murcia, consist of wheat, barley, Indian corn, oil, barilla, red pepper, bass-weed, raw and manufactured silk. All of which are produced in the province of Murcia; a considerable quantity of plain and cut glass is exported from this to the north of Spain.

"The principal articles of merchandize imported into Carthagena, consist of bacallao, or salt-fish, sugar, cocoa, coffee, rice, tobacco, pepper, iron, cinnamon, soap, and brandy, from America, Biscay, Majorca, and Cataluña. A few articles of English and French manufactures are imported, such as hardware, linens, and woollens, the consumption in this province being very limited.

"The trade of Carthagena has been declining for the last thirty years, but it is during these last fifteen or twenty years that it is so much fallen off. Two causes have conspired to produce this decline: namely, first the raging of an epidemical fever in 1804, 1810, 1811, and 1812, to which from 20,000 to 30,000 of the inhabitants fell victims, out of a population of 50,000; and secondly, the abandonment of the naval arsenal, which is now in a state of decay. The population is now estimated at 11,000.

"The commerce of this city is at present in a very distressed state, and with respect to an increase of trade, it is believed that it must gradually improve, as the mines in this neighbourhood are now taking a favourable turn; which with proper management will undoubtedly return immense profits to the shareholders at large, and thereby improve the commerce of Carthagena.

"All kinds of cotton goods, earthenware, glassware, furniture, tobacco, snuff, lead mineral, quicksilver, sulphur, manufactured hides, ditto tin or pewter, books, every sort of embroidered manufacture, marble, gold and silver jewellery, &c., are absolutely prohibited to be imported.

"No prohibition exists here with respect to articles imported from countries not being the place of their growth or production, such articles are admitted upon the same terms, whether coming direct from the place of their production, or from any other country.

"Spanish vessels enjoy privileges of importation; namely, all goods or merchandize in Spanish vessels upon importation pay a fixed per centage on the value of the article, but if the same article is imported in a foreign vessel, it pays a greater, and sometimes a half more duty.

"The tonnage duty and other dues on a foreign vessel of 100 tons burden entering at and clearing from the port of Carthagena, are

	rls.	£	s	d.
Tonnage duty, 1 real vellon per ton	100	1	1	3
Anchorage	55	0	11	8
Free of the port	6	0	1	4
Captain of the port	6	0	1	4
Battery pass	8	0	1	9
Lighthouse, 12 qts. per ton	1414	1	10	0
Obtaining ship's papers	20	0	4	3
Brokerage	40	0	8	6

"All foreign ships if not liable to quarantine, pay a duty to the Health Board for admitting them to free pratique, called estrangeria, of 98 rls or 1*l.* 0*s.* 8*d.*

"The bonding system of warehousing goods is not adopted here. The law is, that the duties must be paid on all goods and merchandize within four months after they are deposited in the custom-house, or immediately on being landed; if not deposited in the custom-house. There are no ports wherein goods may be warehoused on importation, and afterwards exported with or without payment of duties."—*Consular Report*, 1842.

British Trade.—The trade of England with Carthagena is of comparative small value. In 1837 there arrived six vessels, importing only 240*l.* value of goods, and sailing with produce of the country. In 1842, there arrived only

three British vessels, two of which were from England, importing British goods valued at 19,404*l.*, and one from Jamaica. Thirteen small new Granadian vessels of only 1023 tons, arrived with assorted cargoes from Jamaica, and two Spanish vessels from the same place. These vessels enjoying much greater privileges than British vessels, and the importation being of articles which would pay higher duty than if imported from Europe.—See Tariffs.

ANDALUSIAN PORTS.—*Cadiz* and *Malaga* are the only seaports of any foreign commercial importance, though there are numerous other harbours which carry on a coasting trade and the fisheries. The harbour of *Almeria* is deep, well sheltered, and capacious. It was formerly considered a most important place, on account of its deep port and the richness of the surrounding parts of Granada: population about 18,000. Its foreign trade has greatly declined, but it has still a coasting trade of some importance.

Malaga is a tolerably good port defended by a long mole. It had formerly a considerable import and export trade, but this has greatly declined, owing to the same vicious customs' laws and duties, which now prevail in all Spanish ports. The imports are colonial products, and legally such manufactures as pay only moderate duties; all others are introduced by the smuggler. The exports consist principally of wines and excellent raisins, almonds, figs, lemons, olive-oil, some brandy, anchovies, and the lead of Granada. Of the 33,000 to 40,000 pipes of Malaga wines produced, from 20,000 to 28,000 pipes are exported. Fresh grapes, as well as Muscatel raisins, are exported to England and other parts.

Gross Return of British Trade at the principal Ports within the Consulate of Malaga during the Year ending the 31st of December, 1841.

Of the 167 British vessels which arrived at Malaga in 1841, there were from Great Britain, with machinery 8, sawdust 4, coals 8, iron and coke 12, iron and machinery 1, iron 31, in ballast 5, iron and coals 2, fire-bricks 1, sundries 1.

From Gibraltar, in ballast 29, sundries 5, spars 1, horns 3, coals 1, transit 3, staves 9, iron 2, pencils 1, machinery 1.

From Almeria, in ballast 2, iron 1.

From Cadiz, fruit 1, in ballast 1.

From Adra, iron 1, bricks and iron 1, ballast 2, fire-bricks 1, in transit 1.

From Marseilles, in transit 1, in ballast 1.

From Oran, in ballast 3, in transit 2.

From Guernsey, in ballast 5; from Jersey, in ballast 3; from Carthagena, in ballast

1; from St. Petersburg, in ballast 1; from Denia, in transit 6; from Calpé, in transit 1; from Tarragona, in transit 2; from Alicante, in transit 1; from Halifax, codfish 1.

Of the 157 British vessels which departed from Malaga in 1841, there were for Great Britain, with fruit 53, wine 1, oil and wine 3, oil 17, fruit and oil 3, in transit 1, sundries 1.

For Gibraltar, ballast 3, lead 2, wine 5, sugar 2, fruit 15, bricks 2, in transit 3, oils &c. 2, bricks and fruit 1, oil and wine 1, sundries 2.

For Oran, sundries 1; for Marseilles, in transit 1, in ballast 6; for Cadiz, in ballast 4; for Faro, in ballast 5; for Stettin, oil 4; for Palermo, in ballast 1; for St. Thomas, sundries 1; for Leghorn, in transit 1; for Rio de Janeiro, wine 1; for Xavea, in ballast 1; for Seville, in ballast 3; for Malta, in ballast 1; for Alicante, in ballast 3; for Denia, fruits 1; for Almeria, in ballast 2; for Tarragona, in ballast 1; for Guernsey, fruit 1; for St. Petersburg, fruit 1; for Adra, in ballast 1, iron and coke 1; for Jersey, fruit 1.

Of the 78 British vessels which arrived at Almeria in 1841, there were from Great Britain, with coals 7, coke, &c. 23, sundries 1, coke and coals 10, coke and bricks 3, machinery 1, coke and machinery 3, iron and coke 4, coals and iron 3.

From Ancona, linseed in transit 1; from Oran, in ballast 1, in transit 1; from Gibraltar, in ballast 3, in transit 4; from Garrucha, coals and coke 1, ballast 2; from Algiers, in ballast 2; from Adra, in ballast 3; from Malaga, in ballast 2; from Vera, in ballast 2; from Malta, in transit 1.

Of the 78 British vessels which departed from Almeria in 1841, there were for Great Britain, with lead, wool, and colocynth 1, linseed 1, barilla 1, lead 7, lead and grapes 2.

For Vera, with coke, &c. 7; for Gibraltar, in ballast 7, in transit 3; for Antwerp, lead 1; for Cadiz, in ballast 4; for Malta, cocoa 1, in transit 1; for Garrucha, coals, &c. 3, coke 2; for Genoa, lead and bass rope 1, steel 2; for Adra, coke and coals 21, coals and machinery 4; for Teneriffe, in ballast 1; for Denia, in ballast 2; for Villaracos, coke 3; for Malaga, in ballast 1; for Marseilles, in ballast 1; for Leghorn, in ballast 1.

Of the 25 British vessels which arrived at Adra in 1841, there were from Great Britain, none.

The whole of the vessels which arrived from Almeria, with coke 8, coals and coke 7, and machinery 2, coals 5, coals and iron 1, coke and iron 1, ballast 1.

Of the 25 British vessels which departed from Adra in 1841, there were for Great Britain, with lead, 3.

For Malaga, in ballast 8; for Marseilles, lead 1; for Lisbon, in ballast 1; for Cadiz, in ballast 1; for Gibraltar, in ballast 1; for Quebec, in ballast 1; for Alicante, in ballast 3; for Denia, in ballast 2; for Almeria, in ballast 2; for Leghorn, lead 2.

Marbella has good deep anchorage in its bay. The harbour of *Algesiras*, in the bay of Gibraltar, has good and deep anchorage, but very little trade.

Aguamonte is a fishing-port at the mouth of the Guadina.

St. Lucar, at the mouth of the Guadalquivar, is the port of Seville, although vessels of about 100 tons ascend from the sea to the latter, and smaller craft navigate the river up to Cordova. *Port St. Mary*, in the bay of Cadiz, may be considered as a mere dependant harbour for the trade of the latter in wine.

Cadiz, which has still a population of about 58,000 inhabitants, was long the most important seaport of Spain. Its good harbour and its immediate proximity to the Atlantic, rendered it the most convenient port in Spain for the foreign and American trade. It held the monopoly of the latter until 1778; and, after that monopoly was abolished, Cadiz still continued to engross the greater share of it, until the independence of Spanish America. It was made a free port in 1832,

but this privilege was withdrawn on account of the smuggling trade. Cadiz and St. Mary are still the outlets for the foreign sherry trade.

The following account of the trade of Andalusia is extracted from the report of the British Consul at Cadiz, for the year 1842.

"Commerce in the province of Andalusia, which is in a most depressed state, consists in the importation of colonial produce from Cuba, Puerto Rico, and the Philippine Islands, in Spanish vessels. Under the same flag are imported into Cadiz, cocoa, hides, cochineal indigo, and other produce of South America. Certain manufactured goods, namely, silks, linens, and woollen cloths, iron hoops, tin, glass, hard and earthenwares, butter and cheese, are likewise chiefly imported from England, France, and Germany, in Spanish vessels. Codfish, still an article of great consumption in this province, though less than heretofore, is chiefly imported under the British flag; 50 of our vessels having arrived in this port from Newfoundland during the last year, and only 2 Spanish vessels within the same period.

"Large quantities of staves for wine casks, and occasionally some tobacco for the royal monopoly, are imported in American and other foreign vessels from the United States. Timber is imported from Russia, Sweden, and Norway.

"Exportation consists chiefly of wines, quicksilver, salt, fruit, olive oil, wool, and cork.

	IMPORTATION TRADE.				EXPORTATION TRADE			
		Vessels.	Tons.	Value.		Vessels.	Tons.	Value.

1842	,,	295	46,028	29,351	,,	300	46,901	710,514

"This declension in the trade is attributable to the present prohibitive system, which is *condemned by mercantile people of every class*, who are universally anxious for the imposition of a fair and moderate duty upon every article of use or consumption in Spain.

"The prohibitory system is carried to a length absolutely to exclude the fair trader from competing with the smuggler, and is consequently most injurious to the revenue.

"The immense duties upon most admissible articles, and the total prohibition of others, have occasioned a most extensive and well organized contraband trade throughout the country, and by this illicit trade admissible articles are introduced into the interior from 100 to 300 per cent below the duties imposed. All goods imported in foreign vessels are subject to the same duties, which are about one-third heavier than those levied upon goods imported in Spanish vessels. British vessels are consequently excluded from participating in import freight.

"Cotton goods, brandy, soap, quicksilver, sulphur, gunpowder, fire-arms, salt, oil paints, hats, and also many articles of inferior value are totally prohibited.

"At *Seville* and in *Cadiz* several hundred people are now employed in making with hand-looms, a coarse linen, in general use by the lower order of the Spaniards.

"This coarse manufactory will prosper and increase as long as the present high duties continue to be levied on foreign linens, and the supplies of yarn can be furnished at the present price from England.

"Leather, soap, glass, coarse woollen cloths, and hats, are also manufactured in this province.

"A pottery was established at Seville in the year 1841, wherein 300 Spaniards and 30 British subjects are employed.

"During the last year, the proprietors sold about 1100 tons measurement of earthenware for use in Seville and other parts of Spain. The common white more nearly resembles the English earthenware than the imitation of the coloured.

"The difference with respect to port and other charges at Cadiz, is, that British vessels pay a tonnage duty of 1 real de vellon, or 2½*d.* sterling; and for light duty, 24 maravedis,

or 1½*d.* sterling; exchange 37½*d.* per dollar of exchange; whereas Spanish vessels are exempt from the tonnage duty, and pay for light duty, 12 maravedis, or ¾ farthings and a half sterling at the same exchange.

"At San Luca de Barrameda, Spanish vessels pay 1 real de vellon, or 2½*d.* sterling per ton, whereas the tonnage duty on British vessels is regulated by the following schedule.

Reals de Vellon.	£	s.	d.	Reals de Vellon.	£	s.	d.
30 tons burden 80 =	0	16	7½	From 180 „ 250 . . 1200 =	12	9	0¼
From 30 to 70 . . 200 =	2	1	6	„ 250 „ 320 . . 1600 =	16	12	0½
„ 70 „ 120 . . 400 =	4	3	0	„ 320 and above 2000 =	20	15	0½
„ 120 „ 180 . . 800 =	8	6	0				

Exchange at 37½*d.* per dollar of Exchange.

"In addition to these vast differential duties, British vessels moreover pay in that port 75 reals de vellon, or 15*s.* 6½*d.* sterling at the above exchange as governor's fees, which Spanish vessels do not pay. Goods may be warehoused at Cadiz on importation, and be exported within two years upon the payment of one per cent deposit duty."

In 1843 the trade of Cadiz is described as follows:

"The commerce of Cadiz is in a most deplorable state. In the words of the merchants, it is reduced to a bagatelle. And even this 'bagatelle' commerce is with England, the chief article being wine (sherry), besides a little cork and salt. This miserable condition of a fine province like Cadiz arises entirely from a want of a commercial treaty, from which want, not England, but Spain is suffering. No people can trade with this country. The duties prohibit all imports, whilst smuggling is the only thing which keeps up the idea of trade throughout the province. Everybody smuggles. In fact, the profession of smuggling has become so congenial to the habits of the people, that it will require a very powerful hand to suppress it, on the making of any commercial treaty with England. As it is, the government must suffer a dreadful loss, for they spend a great sum to keep up the preventive service, while they do not get a farthing by the importation of articles of foreign manufacture. The principal articles of this smuggling commerce are English goods, especially wearing apparel."—*Cadiz, 30th March*, 1843.

"Were it not for the few English ships in the port of Cadiz, the trade of this fine city would be reduced to absolute nullity. The resident English families are reduced to two, and on these few residents the government has recently played a singular trick. The government, having sold all the church property, were compelled to make some provision to keep the clergy from starving, and as 'extraordinary' provisions are not binding on foreigners, they have declared this to be ordinary."

RETURN of British and Foreign Trade at the principal Ports of Cadiz and San Luca in 1842.

Total British vessels in 1841.—Arrived at Cadiz 292, value of cargoes £36,850; departures 288 vessels, value of cargoes, chiefly wine, £878,643. Total British arrivals at St. Lucar in 1841 amounted to 72, value of cargoes £10,000; of wines, &c., exported by British vessels, the value is estimated at £236,199.

The former yearly returns of trade stated, that admissible goods imported from Great Britain and other countries in Spanish vessels, paying only about two-thirds of the enormous duties levied on similar goods when imported in British or foreign vessels, the amount of importation of manufactured goods in British ships was annually decreasing.

A new tariff came into operation on the 1st of November 1841, which has rendered the custom-house regulations, always abstruse, far more complicated than heretofore,—but has not altered the prohibition system which has gradually diminished our shipping relations, and has so progressively augmented our commercial difficulties with Spain.

In corroboration of these facts, 295 ships which entered this harbour during the present year, 220 either arrived in ballast, or sailed without landing their cargoes, being 3 vessels more than in the preceding year, and an increase of 227 tons.

In these 295 entries are not included: 104 steam-packets that arrived during this year with her majesty's mails only, having no merchandize on freight for this port.

30,212 cwts. of codfish have been imported from the Newfoundland Fishery in British vessels, being 1612 cwts. more than in 1841.

The exportation to Great Britain in English vessels from this port consists principally in sherry wine, as well as other white wines of an inferior sort.

Quicksilver, lead, wool, oil, dry fruits, grains, and oranges, are chiefly exported from Seville.

In British vessels about 21,000 tons of salt have been exported from Cadiz to the Newfoundland Fishery, and also 11,000 tons to the river Plate and the Brazils.

In 1841, 13 British and no Spanish vessels imported Newfoundland fish to Cadiz. In 1842, 13 British and 1 Spanish vessel; and in 1843, 22 British and 4 Spanish vessels arrived with Newfoundland codfish. Five of the British vessels left for other foreign ports, having only discharged 60 tons at Cadiz.

In Spanish vessels are imported almost exclusively the admissible goods of British, French, and German manufactures; also large quantities of salt butter and cheese for the consumption of this extensive province from the Hanseatic towns.

In Spanish vessels are likewise imported the produce of the colonies of Cuba, Puerto Rico, and the Philippine Islands, to which the produce of this country is in like manner exclusively exported under the Spanish flag.

29 Spanish vessels have arrived during this year from the Pacific, river Plate, and the republics of Mexico and Columbia, laden chiefly with hides, cocoa, indigo, cochineal, dyewoods, sugar, as well as other colonial produce.

The 65 American vessels which entered this port in 1842, imported chiefly staves and tobacco, taking in return salt and some wine, lead, and fruit.

36 Russian and 23 Swedish and Norwegian vessels arrived with timber or in ballast, and all exported salt.

This year 36 French vessels entered the port of Cadiz—31 were steamers—employed chiefly in carrying passengers; the other five were driven into this harbour by stress of weather.

The public feeling at Cadiz, and throughout this province, is strongly in favour of a treaty with the English. The commerce of Spain, flowing from the legitimate sources, would then, in its progress, give that stimulus to honest industry which is so much required to ameliorate the condition of the demoralized and impoverished Andalusians; whilst the government, thus promoting industry, encouraging honesty, suppressing vice, gratifying the tastes, and supplying the wants of the people, would be enriched from the receipt of duties upon useful imports, satisfactorily imposed and cheaply collected.

Whereas, the present prohibitive system, whilst it prevents not the surreptitious introduction of such British manufactures as are used by the Spaniards, occasions the vast expense of maintaining a countless number of inefficient revenue officers, who are incompetent in many cases, and unwilling in others, to impede the pursuits and to diminish the profits of the professed smuggler.

Not only would the merchants, factors, and traders of Great Britain, together with the general population of Andalusia, derive great advantages from a well-regulated commercial intercourse, but our shipping interest likewise would be thereby much advanced: for the vessels which now arrive in ballast from Great Britain, for the purposes of returning thither with the growth and produce of this province, would then earn freight outwards, by bringing cargoes of British manufacture: and if a reciprocal abrogation of all discriminating and countervailing duties which are now levied upon the ships and productions of Great Britain and of Spain, could be achieved, our advantages would, by such an arrangement, be greatly multiplied.

Of the 295 British vessels which arrived at Cadiz in 1842, there were—from Great Britain, in ballast 11, with coals 52, yarn 2, general cargoes 2, coals and iron 1, iron 2, staves 1, bale goods 1, returned wine 1. Total, 103.

From Jersey, with staves 1, coals 2, in ballast 15, with fish 1, part cargo 1, general cargo 1. Total, 21.

From Guernsey, in ballast 3, with potatoes 1. Total, 4.

From Gibraltar, with lead 1, iron and staves 1, yarn 1, returned wine 4, general cargo 1, in ballast 50, with staves 2, coals 1, butts 2, iron 2, part cargo 2. Total, 67.

From Newfoundland, with fish 21.

From Malaga, in ballast 6.

From Lisbon, with fruit 1, in ballast 5, with returned wine 1. Total, 7.

From Alicante, in ballast 16.

From Bilboa, with coals 1, in ballast 1.

From Leghorn, in ballast 1; from Toulon, with staves 1; from Porto, in ballast 1; from Viana, in ballast 3; from St. Michaels, in ballast 1; from Marseilles, in ballast 1; from L'Orient, in ballast 1; from Ancona, in ballast 1; from Corunna, in ballast 1; from Algiers, in ballast 2; from Tarragona, with general cargo 1; from Oporto, in ballast 2; from Valencia, in ballast 6; from Labrador, with fish 2; from Mogadore, in ballast 1; from Carthagena, in ballast 2; from Naples, in ballast 7; from Leghorn, in ballast 7; from St. Sebastian, in ballast 1; from Cape Breton, with fish 1; from Bay de Chaleur, with fish 1; from Genoa, in ballast 1; from Civita Vecchia, in ballast 1; from Palermo, in ballast 1; from Arcachat, with fish 1. Total, 295.

Of these, from Great Britain, there were in ballast 41 vessels; from other ports, 116. Total, 157.

Of the 300 British vessels which departed from Cadiz in 1842, there were—for Great Britain, with wine 75, wine and cork 3, fruit 1, salt 11, salt and wine 1. Total, 91.

For Vera Cruz, with general cargo 1; for Malta, with fish 1.

For Seville, in ballast 4, with coals 1, fish 1. Total, 6.

For Pernambuco, with salt 3; for River Plate, with salt 3; for Monte Video, with salt, &c. 12.

For Jersey, with salt 16, wine 1, salt and wine 2. Total, 19.

For Valencia, with fish 1; for Newfoundland, with salt 89; for Gaspe, with salt 2; for Alicante, with fish 3; for Quebec, with salt 4, in ballast 1; for St. John's, with salt 1; for Malaga, in ballast 2; for Lisbon, with fish 2; for St. Petersburg, with wine 2; for Bahia, with salt 1; for Corunna, with salt 1; for Marseilles, in ballast 3; for Halifax, with salt 4; for Gibraltar, in ballast 1; for Rio de Janeiro, with fish and salt 1, salt 1; for Tampico, with general cargo 1; for Bilboa, with salt 1; for Naples, with fish 3; for Leghorn, with fish 3; for Mauritius, with salt 1; for Buenos Ayres, with salt 1; for Syra, with general cargo 1; for Hamburg, with wine 1. Total, 300.

11 vessels departed in ballast to foreign ports.

Of 84 British vessels which arrived at San Luca, there were—from Great Britain, in ballast 39, with clay 5, coals 12, steam-engines 1, clay and iron 1. Total, 58.

From Cadiz, in ballast 3, with merchandize 1. Total, 4.

From Gibraltar, with clay 1, in ballast 12. Total, 13.

From Viana, in ballast 2; from Aveiro, in ballast 1; from Jersey, in ballast 2; from Malaga, in ballast 2; from Almeria, in ballast 1; from Mogadore, in ballast 1.

Of the 84 vessels from Great Britain, 39 were in ballast, from other ports, 24. Total, 63.

Of the 84 British vessels which departed from St. Luca, there were—for Great Britain, with oil 13, wheat 1, cork 5, bones 8, wool and quicksilver 7, oil and bones 1, quicksilver 2, wool and cork 2, wool 1, fruit 31, fruit and cork 1. Total, 72.

For Antwerp, with oil 2, liquorice and lead 1, wool and minerals 1, fruit 3, wool 1. Total, 8.

For Lisbon, in ballast 4.

SEAPORTS OF THE NORTH OF SPAIN.

If all the ports of northern Spain were thrown as openly as those of most other countries, the extensive sea-coast of Gallicia, Asturias, Santander, and Biscay, would afford sufficiently numerous and convenient navigable inlets and outlets for trade.

Ferrol, an excellent port, is limited to the use of the Spanish navy, and with the exception of Corunna, Santander, and Bilboa, the other ports are limited to the Spanish fishing and coasting-trade.

The exemption from customs'* duties enjoyed by the Basque provinces, from time immemorial, was withdrawn on the 1st of December, 1841, when tripled lines of customs were ranged along the frontiers, and the fallacious, oppressive, anti-commercial and fiscal, system of Spain was imposed on these provinces. The consequence is, that the legal trade has greatly diminished, and the high premium for smuggling will have the usual evil influence on the hitherto honest character of the Biscayan peasantry. A gentleman, highly worthy of confidence, who has lately travelled over Biscay, describes in a letter, written to us from Bilboa, the state of this interesting part of the peninsula as follows:

"To describe the condition of the people of Biscay, requires great observation. First as to the moral condition of the poor.

"The peasants and lower classes of the large towns are decidedly on a par with the same classes in France and Belgium—I say this with confidence. There is a school in every village, nothing to be boasted of, it is true, as regards its arrangements, &c., but still, reading, writing, and accounts are taught, and the children are apt, and receive knowledge with great facility. I questioned boys whom I met or saw at play, and in answer to my question if they could read and write, every boy pulled a copy out of his bosom, and held it to me with a proud look. In the houses of the peasants I found catechisms, prayer-books, and books of sermons. Instruction has taken root, and is putting forth.

"With regard to religious or moral conduct, including *all* classes, I am convinced that a great balance is in favour of the Spaniards, compared with the French, or even the Belgians, who are a religious people.

"With respect to the back and belly condition of the lower class in this part of Spain, they have nothing to complain of. The interior of a house or cottage has no superfluous articles of furniture, but this is *their fashion*, and not their want. They have comfortable clothing for Sundays and feast-days, and good clean linen on their beds. They have red faces and healthful chubby offspring—the women breed like rabbits—I never saw so many children before. I have daily stopped to refresh in the small inns of villages, and in every instance had good table-cloths and napkins, with changes of silver spoons and forks. In short I have found comfort, cleanliness, and plenty in every village—frank, cheerful, good-natured manners,—kind answers to my inquiries, and when I have lost my way

* In our brief view of the government of Biscay and Navarre, we have inadvertently omitted to state that the freedom from customs' duties had been withdrawn, and that the system of centralization, and high duties and prohibitions had been substituted.

amongst the mountains, the labourer would, unasked, quit his work and lead me in the right way, refusing compensation."

SANTANDER is the principal seaport of Old Castile, and has an extensive trade with Cuba, to which it exports flour, ground at large mills erected in the vicinity of the town. Wool is also exported to England and other places; and there are iron mines in the adjacent mountains. The harbour is capacious, well sheltered, and deep enough for large trading vessels.

BILBOA is the chief port in Biscay, and although it and St. Sebastian are conveniently situated for trade, the recent introduction of the Spanish customs will, it is feared, greatly injure the trade of both.

Gross Return of British and Foreign Trade at the principal Ports within the Consulate of Biscay and Guipuzcoa, during the Year 1842.

PORT OF BILBOA.

Of the 66 British vessels which arrived at Bilboa in 1841, there were—from Great Britain, with general cargoes 29, earthenware 11, in ballast 22, with fish 1.

From Newfoundland, with fish 2; from Charante, in ballast 1.

Of the 53 departures from Bilboa in 1841, there were—for Great Britain, with wool and wheat 3, wheat 31, bones 1, wool 4.

For Santander, in ballast 1; for Newfoundland, in ballast 1; for Jersey, in ballast 1; for Cadiz, in ballast 2; for Santona, in ballast 4; for St. Martin, in ballast 2; for St. Sebastian, with fish 1; for Requecada, in ballast 2.

Of the 43 British vessels which arrived at Bilboa in 1842, there were—from Great Britain, in ballast 18, with general cargoes 8, earthenware 1, fish 2, tobacco 4, coke 1.

From Newfoundland, with fish 5; from Jersey, with fish 1; from New Carlisle, with fish 1; from Guayaquil, with cocoa 1; from Stornway, with fish 1.

Of the 55 British vessels which departed from Bilboa in 1842, there were—for Great Britain, with wheat 31, madders 3, wool 2, in ballast 2; with chestnuts 4.

For St. Sebastian, in ballast 1, with fish 1.

For Requecada, in ballast 3; for Cadiz, in ballast 1.

For Newfoundland, in ballast 4, with biscuit 1.

For New Carlisle, in ballast 1; for Zante, in ballast 1.

St. Sebastian.—Of the 10 British vessels which arrived in 1841, there were—from Great Britain, with earthenware 2; tobacco and cinnamon 1, ballast 5; Bilboa in ballast 1; Newfoundland with codfish 1.

Of the 16 departures, there were—for Great Britain with cocoa-shell 2, wheat and

ditto 1, wheat 3; Bilboa, with earthenware 2; Bordeaux, in ballast 1; Newfoundland, in ballast 1.

Of the 16 British vessels which arrived at Santander in 1841, there were,—from Great Britain, with steam-engine 1, tobacco 3, in ballast 4; Bilboa, with wool 1, in ballast 2; Guayaquil, cocoa 2; Jersey, in ballast 1; Guernsey, in ballast 1; Santona, wheat 1.

Of the 16 British vessels which departed, there were—for Great Britain with wool and madder 1, wool 1, cocoa, 1; wheat 8, cocoa and wheat 1; Gibraltar, in ballast 1; Lisbon, in ballast, 1; Cadiz, in ballast 1; Reguessada, in ballast 1.

BALEARIC ISLANDS.

MAJORCA.—The climate of Majorca is mild and salubrious; the soil loamy, and generally rich.

Agriculture is in a rude state. Corn crops fail in wet seasons, and the produce then does not equal half the consumption of the inhabitants. Corn is imported annually from Catalonia and Valencia. The olive crops are the most important, producing annually about 180,000 arrobas. Strong red and white wines are exported in considerable quantities, and are often distilled into brandy. Oranges, figs, melons, carobs, pumpkins, and cauliflowers are grown. The saffron is superior in quality to that of La Mancha.

The breeding of cattle is but little attended to. The sheep and hogs are of a large breed.

Hares, rabbits, partridges, and various birds abound. Fish of various kinds are plentiful.

The exports are chiefly oil, wine, brandy, oranges, and other fruits; mules and asses; palm brushes and baskets, turners' work, and sailors' hats.

The imports are wheat, salt meat, sugar, coffee, groceries, woollen and cotton manufactures, iron hardware, &c.

The capital, (Palma) is situated on the south side of the island. Population, 34,343 persons.

MISORCA is next in size. The soil of this island is generally sandy and sterile, with very little wood. On the brows of hills there are fertile tracts, which produce good crops of corn and grapes. Wheat and barley are the grains principally grown; but not sufficient for two-thirds of the consumption of the population. Wines, both red and white, are made in comparatively large quantities: about 9000 arrobas are annually exported. The olive does not thrive, owing to the effect of the cold north winds. Capers, which grow wild, are exported. Flax, hemp, saffron, and cotton, are grown to a limited extent. Fruits and vegetables are abundant, but inferior to those of Majorca. The cheese made resembles Parmesan. Cattle, sheep, goats, and mules abound; wool is exported. Bees are generally bred, and furnish great quantities both of honey and wax. Game is plentiful. Anchovies and other fish swarm along the coast.

Port Mahon, one of the best ports in the world, is the chief place of trade. The exports are wine, wool, cheese, capers, honey, and wax, to Spain, Marseilles,

Genoa, Leghorn, &c. The imports are wheat, oil, linen, cotton and woollen manufactures, timber, tobacco, &c., chiefly from Spain, France, and Italy.

Minorca was occupied by the British during a great part of the last century. There was at that time some enterprise and activity diffused among the people. Since its cession to Spain, both industry and trade have declined. Accounts are kept in Spanish money. Iviza, or Ivica, is 27 miles long, and 15 broad. Hilly, woody, and fertile. Produces olives, figs, wines, corn, hemp, and flax: exports sea salt and some wool; fish is plentiful. The inhabitants are ignorant, indolent, and poor.

CANARY ISLANDS.

We have in the previous pages given a statement of the trade between the United Kingdom and these islands, and we have very little that bears upon their commerce to add. The area of Teneriffe, Canary, Palma, Lanzarote, Gomera, Fuerteventura, Hierro, Graciosa, Allegranza, is estimated at about 3400 English square miles; the population at about 250,000 inhabitants. These mountainous islands are of volcanic formation, and present rocks, gorges, mountains, and valleys. Where there is any water or humidity the soil is fertile; and its annual produce is estimated as follows; viz., wheat, maize, barley, millet, and rye, about 150,000 British imperial quarters; barilla, 300,000 quintals; wine, the most important product, from 50,000 to 54,000 pipes. Potatoes, about 500,000 (?) barrels. Besides these articles, fruits and various vegetables are grown. The sugar-cane, also, grows, but it is not cultivated. Brandy is imported to strengthen the wines. The other imports are various manufactures, leather, iron, &c. The exports are wines, barilla, silk, brandy, some grain and honey occasionally, orchilla, and moss, cochineal, &c. Santa Cruz in Teneriffe, Palma in Canary, Lanzarote, and Ortova, are the principal ports.

The Spanish laws are those of the Canaries, and the whole property is held under strict entail, by a few grandees, and by the monasteries and convents. Ignorance and bigotry prevail.

Under almost every other government but that of Spain, these islands would be of great productive and commercial importance.

NAVIGATION AND TRADE OF THE PORTS OF THE CANARIES, IN 1842

Santa Cruz.—British arrivals, 18 vessels, 2346 tons; value of cargoes imported 3655*l.*; of cargoes exported by them 11,464*l.* Spanish arrivals, 68 vessels, tons 7230; American vessels 7, tons 1999; French vessels 5, tons 836; Sardinian vessels 3, tons 365; Portuguese vessels 2, tons 251; Danish vessels 2, tons 159; Hamburgueze vessels 2, tons 231; Dutch vessels 1, tons 50; Bremen vessels 1, tons 134; Monte Videan vessels 1, tons 248; imperial vessels 1, tons 248. Total vessels, 111; tons, 11,103.

At Palma only 1 British vessel arrived to take in water: 8 Spanish vessels arrived with goods from London, and 7 from other parts, and 7 vessels belonging to other foreign states. At Port Ortova 28 vessels arrived: of which 7 were British, 5 American, 13 Spanish, 2 Hamburg, and 1 French. At Lanzarote 1 British and 3 American vessels arrived.

The inhabitants of the Canaries, chiefly of Spanish origin, are, when they emigrate to the Philippines or elsewhere, an adventurous race. Naturally they may be trained to industry and activity. But under a smothering government and the tenure of property in the Canaries, they sink into sloth, and are kept in superstitious ignorance by the church, as well as by the feudal lords. The fishermen, alone, seem to be those who have any spirit or activity among the resident inhabitants.

CHAPTER XI.

SPANISH COLONIES

Spain, notwithstanding the revolt and independence of her vast possessions on the continent of North and South America, still possesses fertile and magnificent insular colonies in the western and also in the eastern hemisphere.

Unfortunately, however, for not only the aboriginal races, but for all those who were transplanted to replace the labour, which was *ex-tortured*, until their extirpation, from the former, the Spanish character exhibits a spirit and practice of barbarity, avarice, and legislative fallacy, unparalleled in the history of any other ancient or modern nation. We do not, however, exculpate other powers from the crimes of injustice and cruelty towards the natives of the countries which they discovered or subdued, or towards the unfortunate African race. The English and the Dutch were nearly as unjust as the Spaniards; and as slave masters fully as cruel. The Portuguese are described as kinder to their slaves than other Europeans; but we consider that the French, especially in America and the West Indies, have generally acted with greater kindness to the aborigines, and with less cruelty to their slaves than any other colonizing or slave-holding people.

The Spaniards colonized St. Domingo before they attempted to settle in Cuba.

The latter, which is separated from the former by a strait, was discovered by Columbus, in 1492. In 1511, a cacique named Hatuey, who escaped from Spanish tyranny in St. Domingo, became a chief in Cuba. On the latter being invaded by Diego de Velasquez, the cacique persuaded his people to throw all their gold

into the depths of the sea, as gold was the god of the Spaniards. The Spaniards soon subdued the Indians; the cacique was fastened to the stake as a heretic; a priest endeavoured to convert him, and to hold out to him that he would then go to paradise. "Are there any Spaniards there?" asked Hatuey.—"There are," replied the priest; "but none except good Spaniards."—"The best are too bad for me ever to be in their company, and I won't go to any place where I can possibly meet them. Speak not to me of your religion, which allows you to be so cruel and unjust: leave me to die in mine." Hatuey was accordingly burnt, the Christian name was dishonoured, but Velasquez ceased to have any formidable enemy—the other caciques were submissive, and the natives subjected to slavery in the mines, were in a few years exterminated. Scarcely a Spanish life was lost in the conquest of Cuba.

"This, one of the largest islands in the world," remarks Raynal, "served as the entrepôt of a great trade. It is regarded as the *boulevard* of the New World, and it has important productions. Under these aspects it merits serious attention.

"Cotton is the production which may be naturally increased with profit in this island. At the time of its conquest it was very generally grown; now it has become so rare, that for years none of it has been exported.

"Although the Spaniard has an aversion, almost insurmountable, to imitate others, he has adopted in Cuba the culture of coffee: but in transplanting this production from foreign colonies, he did not imitate the activity which renders it valuable.

"Sugar, the most important production of the West Indies, would alone suffice to extend prosperity to Cuba: but the Spaniards have only a small number of plantations, where their best canes yield only a small quantity of inferior sugar.

"Spain possesses by far the most extensive and fertile part of the West Indian Islands. In active hands their islands would become the source of riches without limits: in their present state they are frightful solitudes.

"It would be calumniating the Spaniards to believe them incapable, by character, of laborious and painful industry. If we consider the excessive fatigues which are so patiently endured by those of this nation who follow the contraband trade, it is evident they endure much greater hardship and fatigue than is experienced in rural industry. If the Spaniards neglect to enrich themselves by labour it is the fault of their government." Such was the state of Cuba about sixty years ago.

The trade of Cuba, and the other Spanish possessions, was subjected to monopolies and every vexatious restriction by the government of Spain. During the present century monopolies, generally speaking, have ceased in Cuba and Porto Rico; and the inhabitants of the former have managed to secure for their trade greater freedom than has ever been practised in Spain. The growth of sugar and coffee, produced by slave-labour, has greatly increased. The slave-

trade, in despite of treaties, is still extensively carried on; and although England consumes none of the sugar which their labour is made to produce,—all continental Europe and all America, afford markets for the sugar as well as the coffee of Cuba and Porto Rico.

Sugar, which was introduced from the East into Sicily and Spain, and afterwards into Madeira, was, from the latter transplanted into the West India Islands, soon became the most important crops; and which, with coffee and cotton, have constituted their most valuable exports.

The colonies now possessed by Spain, are the Canaries, already noticed; the small factory establishment on the coast of Africa, comprising only about 36 square miles, with about 4000 inhabitants; and Cuba and Porto Rico, in the West Indies; and the Philippines, in the Indian Archipelago

CHAPTER XII.

CUBA.

CUBA is situated between the latitude of 19° 50 N., and 23° 12 N., and between the meridians of 74° 8' W., and 84° 58 W. longitude. Its extreme length, following the centre, is calculated by some at 800 miles, by others, at not 700 miles. Its breadth varies from 20 to 130 miles. The area of this magnificent island is stated by Humboldt to be 3615 square leagues, or 32,535 geographical square miles. Mr. Turnbull's calculation is 31,168 square miles; that of its dependencies; viz., the Isle of Pines, 865; Turignano, 38; Romano, 172; Guajaba, 15; Coco, 28; Cruz, 59; Paredon Grande, 11; Barril, 13; De-Puerto, 9; Eusenachos, 19; Frances, 14; Largo and other minor isles, 96. Total 32,807 square miles. If the latter is calculated as English statute miles there is a great descrepancy between the two estimates. We incline to the correctness of Humboldt, as calculated in marine leagues, of 20 to the degree.

The coasts of Cuba are generally surrounded with reefs and shallows, within which are low sandy beaches in many parts, or more generally a slip of very low land, frequently overflowed by the sea, and nearly always wet and heathy. The lagoons, within the beaches and sands, yield a good deal of sea-salt. There are, however, many excellent harbours.

A cordillera of calcareous mountains extends from one end of the island to the other. Its soil is generally fertile, except where the limestone rocks protrude over the surface. The forests of Cuba are still of great extent. Mahogany, and other useful woods, are among the large indigenous trees. Palm-

trees and plantains are abundant. Maize is indigenous. Only one small animal, the Hutia, has ever been known as indigenous. As to its mineralogy, its copper mines are by far the most valuable. Coal, which is highly bituminous, follows next. Asphaltum, marble, and jasper abound. It is doubtful whether there were ever any gold or silver mines worked in this island. That found among the natives, is now supposed to have been collected by washing the sands, and accumulated during ages by them.

In agriculture, especially in the cultivation of sugar and coffee, the inhabitants of Cuba, aided by slave labour, have made great progress since the year 1809, when the trade of this island was emancipated from the restriction of trading to no foreign country whatever. The administration of Cuba has, since that period, published, with apparently great care, official returns of the population, agriculture, revenue, and trade of the colony. These returns, made under the direction of Don Rama de Sagra, were commenced during the administrations of the Captain-general Don Francis Denis Vives, and of the Superintendant-general Conde de Villanueva. We have from these returns formed the condensed tables which follow.

Population of Cuba.—The census of 1775, gave a population of 170,370; that of 1791 gave 272,140; that of 1817 gave 551,998; and that of 1827 gave 704,487 inhabitants; viz., whites, 168,653 males and 142,398 females. Total whites, 311,051 Free coloured and negroes, 51,962 males, 54,532 females; slaves, 183,290 males, 103,652 females.

STATEMENT of the White, and Free, and Slave Coloured Population, in each of the Departments of the Island of Cuba, in the Year 1841

DEPARTMENTS	Cities & Towns.	Villages.	Hamlets.	Rural Districts.	WHITES.			FREE.		SLAVES.		GRAND TOTAL.
					Males.	Females.	TOTAL.	Coloured. TOTAL.	Negroes. TOTAL.	Coloured. TOTAL.	Negroes. TOTAL.	
Western Department	9	50	62	90	135,079	108,244	244,023	75,350	41,193	5,885	315,869	631,760
Central Department	6	6	31	88	90,035	83,838	173,873	21,294	18,293	2,819	47,307	193,608
Eastern Department	7	13	8	101	32,030	28,363	60,393	41,190	13,310	2,246	64,925	180,256
Total	22	109	99	279	257,144	191,717	448,291	88,034	64,781	10,974	423,321	1,007,624

Of the free coloured 43,658 were males, 44,396 females. Of the free negroes 32,145 were males, 32,739 females. Of the slave coloured 5868 were males, 5106 females. Of the slave negroes 275,382 were males, and only 150,139 females. Total free population 571,129. Total slaves, 436,495. Excess of free over slave population, 134,634.

There is a garrison of several battalions, and a small marine force.

Agricultural Returns.—In 1830, of the 468,523 caballerias of 32 English acres of land, which compose the whole territory, 38,276 were under sugar, coffee, tobacco, garden, and fruit cultivation, and 9734 in grazing-grounds, and in unfelled woods belonging to sugar and coffee estates

	caballerias.
There were under sugar-cane plantation	5,394
,, coffee-trees	5,761
,, tobacco	1,389
In lesser, or garden and fruit, cultivation	25,732
Total caballerias	38,276
Total acres	1,224,832

It appears that there were an area of 430,247 caballerias, or 13,767,904 acres uncultivated in the whole island; some parts of which were appropriated to rearing and fattening animals, others to settlements or towns, and the remainder occupied by mountains, roads, coasts, rivers, and lakes; but the greater part were absolute wilds. The value of lands vested as private real property has been estimated as follows:

	dollars.
32,857 caballerias in grazing grounds, for larger and for smaller cattle, and attached to Halos and Cerrales, at 100 dollars	3,285,700
10,752 ditto in grazing-grounds, attached to estates, with enclosures, at 1000 dollars	10,952,000
15,300 ditto in sugar estates, at 1500 dollars	22,950,000
9,200 ditto coffee estates	13,800,000
20,732 ditto in smaller cultivation, provisions, &c., at 2000 dollars	41,464,000
2,778 ditto in tobacco, at 700 dollars	1,944,600
Total value of lands in 1830	94,396,300 dollars.

Those under cocoa or cotton, are supposed to be included in the above.

The buildings, engines, materials of labour, and other utensils of country estates, were estimated in value as follows:

	dollars.
On the wild pastures	1,737,000
On pasture or grazing attached to estates	619,600
On sugar estates	28,835,000
On coffee estates	20,000,000
On smaller cultivation	2,789,400
On tobacco plantations	622,850
Total value of buildings, utensils, &c., 1830	55,603,850 dollars.

The value of the different products of cultivation were valued as follows; viz.,

	dollars.
Sugar-canes in the ground	6,068,877
Coffee-trees	32,500,000

We have no accounts of the present extent of cultivation in Cuba; but by comparing the value of exportable produce of 1830 with that of 1842, and by various estimates, we consider it probable that the lands under sugar, coffee, tobacco, and gardens, may fairly be estimated at 54,000 caballerias, or 1,728,000 acres.

If we compare this extent with the remaining vast area of the fertile soils of Cuba, which are still uncultivated, and the produce which the whole island at present yields, it can scarcely be an exaggeration to say, that Europe might draw as much coffee and sugar from Cuba alone as the quantity at present con-

sumed. But the process of reclaiming the forests and waste lands must necessarily be slow, even by slave labour; for that labour must not only be hereafter more limited, but it would appear from the returns of free labour in Porto Rico, and from the Prize Essay lately approved of in Jamaica, that free labour is cheaper than slave labour.

In 1760, the produce of coffee and sugar together, in Cuba, only amounted to about 5,000,000 lbs. Forty years afterwards the produce of both increased to above 40,000,000 lbs. In 1820, the exports increased to above 100,000,000 lbs.; and since that period the increase will appear by referring to the tables of the trade of Cuba, which follow. In 1800, there were, according to Don Sagra, but 80 coffee farms and plantations; in 1817, they increased to 780; in 1827, to 2067, at present it is estimated to above 3000. Tobacco is indigenous, and the best quality is grown, but it is said not to be profitable to the planter. In 1826, the exports of cigars amounted to 197,194 lbs.; in 1837, to 792,438 lbs. The culture of cotton and indigo is on the decline. Maize, rice, and plantains are abundantly grown, also potatoes and some wheat. Mr. Turnbull says, that burning the wood on the ground to be cleared deteriorates the soil: in North America, and even in Old Spain, it is burned to fertilize the soil. There is one railroad constructed; the common roads are very bad.

CHAPTER XIII.

CUSTOMS' DUTIES AND REGULATIONS OF CUBA.

The customs and fiscal system of Cuba has been greatly improved since 1809. Differential duties on cargoes in Spanish and in foreign ships are however maintained.

IMPORT DUTIES.

The rate of duty charged on the importation of foreign produce and manufactures, in foreign bottoms, are 24¼ and 30¼ per cent on valuations attached to each article in the tariff, excepting flour, hogs, and tarred cordage, which pay a fixed duty; and as a general rule, although there are a few exceptions, foreign produce and manufactures in Spanish bottoms, from a foreign port, pay 17¼ and 21¼, and Spanish produce and manufactures in foreign bottoms, from a Spanish port, pay the same; and foreign produce and manufactures in Spanish bottoms, direct from the Peninsula, pay 13¾ and 16¾ per cent.

Spanish produce and manufactures (except flour, which pays 10s. sterling per barrel), imported in Spanish bottoms, direct from the Peninsula, pay 6¼ per cent on the valuation in the tariff, but after having touched in any foreign port, they pay duty as if shipped from that port.

EXPORT DUTIES.

The produce of Cuba pays export duty at the following rates:

Foreign flag, for any port, 6¼ per cent upon the valuation of tariff.
Spanish flag, for a foreign port, 4½ per cent ditto.
Spanish flag, for a Spanish port, 2¼ per cent ditto.

Except leaf tobacco, which pays 12½, 6¼, and 2¼ per cent, according to the flag and

destination; and clayed sugar, which pays 1*s.* 1*d.* sterling per 100 lbs. in foreign bottoms, and 11½*d.* sterling in Spanish bottoms; whilst rum, tafia, swine, horses, mules, horned cattle, cigars and molasses pay the same duty in all cases.

On the total amount of all duties an additional 1 per cent is levied, under the denomination of "derecho de borlanza," and of late years an additional impost of one-seventh of the amount of duties has been added, to meet the expenses of the late war, except on the import of Spanish flour and the export of sugar, coffee, molasses, leaf tobacco, and cigars, which have had a fixed additional duty imposed.

Foreign flour remains untouched, the old duty amounting nearly to a prohibition.

On all bottled liquors there is a deduction made of 5 per cent on the duties, as a compensation for breakage; and on earthenware and glass 6 per cent for the same cause.

On jerked beef, from Buenos Ayres and Brazils, 14 per cent; from the United States and Campeachy 6 per cent is allowed for waste and damage.

There is also a small impost on imported liquors, to meet the expenses of the "casa de benificencia" of the Havanna, at the rate of 2*s.* sterling per pipe, 1*s.* per cask or hogshead, 6*d.* per demijohn, and 6*d.* per dozen bottles.

Coffee pays an additional municipal duty of about 13*d.* sterling per 100 lbs.

Gold and silver, of the proper standard, when properly manifested and reported, may be imported free of duty, otherwise 4 per cent. is levied. Gold pays an export duty of 1¼ per cent, and silver one of 2¼, but the duty is generally evaded, although at the risk of seizure both of specie and vessel.

Foreign agricultural implements and machinery, in foreign bottoms, pay 2¼ per cent ad valorem; but steam-engines for the use of the mines, ploughs, stallions, mares, rice-mills, and all implements for the manufacture of sugar, may be imported free of duty.

Cotton, green fruits, tobacco stems, syrup, and lime-juice are exported duty free.

Sugar, coffee, cotton, tobacco in leaf, and cigars, air-guns, daggers, pocket-pistols, knives with points, and obscene prints, are not allowed to be imported; and books and printed papers generally are subject to the inspection of a censor before leaving the custom-house.

Gunpowder and muskets are the only goods allowed to be deposited at St. Jago de Cuba, and as the slave-trade falls off so does the deposit of these articles. The Havanna is the only general port of deposit in the island.

Merchandize having paid duty inwards pays none on exportation.

Every master of a vessel entering the port is obliged to present two manifests of his cargo and stores; one to the boarding-officers of the customs, and another at the time of making the entry and taking the oaths, twenty-four hours after arrival, with permission to make any necessary corrections within the twelve working hours; and every consignee is bound to deliver a detailed invoice of each cargo to his, her, or their consignment, within forty-eight hours after the vessel entering the port, and heavy penalties are incurred from mere omission or want of accuracy.

The total amount of duties paid upon the leading articles of *import* and *export* in foreign bottoms, are shown in the following table, reduced to British money.

The tonnage duty on Spanish vessels is 5 rials, or 2*s.* 6*d.* sterling per register ton.

On foreign vessels, 12 rials, or 6*s.* sterling.

On vessels arriving in distress or in ballast, or departing empty, no duty is levied.

Beside the tonnage duty, every foreign square-rigged vessel entering with cargo and loading here, incurs about 17*l.* sterling expenses, with 5¼ dollars or 1*l.* 2*s.* sterling for each day occupied in discharging. Foreign fore and aft vessels, pay about 3*l.* sterling less port charges. Spanish vessels incur nearly the same amount of charges.

Every vessel is required to bring a bill of health, certified by the British consul at the port of her departure, or at that nearest to the same, and want of attention to this rule subjects the vessel to quarantine.

The ton is composed of 20 quintals.

The gallon in use here is equal to that of the English old measure.

The dollar is worth about 4*s.* sterling: the previous calculations are at that rate.

The Sevillian piseta, worth one-fifth part of a milled dollar, is the coin chiefly in circulation in this part of the island; it was permitted to be imported up to the year 1831, at the rate of four pisetas to the dollar, and consequently has driven almost every other coin beyond its aliquot parts out of circulation. The Spanish government, however, at length aware that smuggling transactions in these pisetas were carried on to a great extent, have lately issued an order reducing them to their proper value, and paying the holders the difference of 20 per cent in coupons to be redeemed hereafter at the will of the authorities."

TONNAGE DUTIES AND PORT CHARGES.

Tonnage duty on Spanish vessels 62½ cents; and on foreign vessels 8 dlrs. 50 cts. per ton.

In the port of Havanna an additional duty is exacted of 21¼ cents per ton on all vessels, national or foreign, for the support of the dredging machine (pontoon).

The wharf dues in Havanna are on Spanish vessels, 75 cents per day; other nations 1dlr. 50 cts. per day for each 100 tons of their register measurement.

Lighthouse dues, officers fees, &c., are not estimated, there being no official information in the department with regard to them, except for the port of Baracoa. The port charges differ in the various ports; those of Baracoa are:—tonnage duty, 1dlr. 50 cts. per ton; anchorage, 12 dlrs; free pass at the fort, 3dlrs.; health officer's fee for boarding vessels 8dlrs: custom-house interpreter, 5 dlrs.; officer's fee to remain on board to seal and unseal while discharging, 5 dlrs.; inspecting vessel's register, 8 dlrs.; clearance 8 dollars.

The collection of the duties is made in a very simple manner. The island of Cuba is divided into customs' intendancies, of which Havanna is the principal.

The intendancy is organized into seven branches; viz., the intendant, the superior council of the hacienda, the tribunal of accounts, the accountant-general, the treasurer-general, the administration of the customs, and the administration of the internal revenue. The administration of the customs is comprised of the administrator or collector, the accountant, and the treasurer.

When a vessel arrives at the Havanna, she is first boarded by the health officer; after whom comes the revenue officer, and the smuggling preventive service.

A copy of the custom-house regulations, in Spanish, French, and English, is handed to the captain, and a manifest required of him of all the particulars of his vessel and cargo. Every article on board the vessel omitted in the manifest, is subject to confiscation.

Within forty-eight hours after the entry of the vessel, every consignee must deliver a

detailed statement of the articles coming to him, with their quantities, weights, and measures, all reduced to the legal standard.

All the documents and papers relating to a vessel are stitched together in a book, with the signatures and seals of all the government officers through whose hands the several documents pass. A copy of this book is made for the use of the inspectors and appraisers; the latter function being restrained within very narrow limits, by a printed tariff of all articles of import, with a valuation to each, which valuation in a great degree defines the duties of their *ad valorem* character. As fast as the inspection and appraisement takes place, the consignee is permitted to remove the goods, by procuring the signature of some responsible person to the words inscribed in the book, "I make myself answerable for the duties." The inspection and appraisement being concluded, the book is returned to the accountant's office, where the liquidation of the duties is forthwith made.

The payment is then proceeded with. These payments are mostly cash; that is to say, on some articles, whatever may be the amount, cash is required; upon other articles the duties are cash under 1000 dollars. If the amount is greater, a credit of one-fourth is given for sixty days, and one-fourth payable at the end of each succeeding month—making five months' credit in all. The security for this credit consists simply in the promissory note of the consignee, without endorsement, with the power, in case of a failure, to convert every other note of the same individual into a cash debt; the individual to be for ever after incapacitated to enter goods except for cash.

This system has been in force many years, and under it no loss whatever has been sustained by the government.

Formerly the same credits required the endorsement of a holder of real estate, but this was abandoned on account of its insecurity.

The exports of the island produce are generally for account of speculations, sometimes for account of European refiners, and rarely for account of the planters. The chief speculators are the United States and European merchants. Shipowners, and merchants in Cuba, often take interests in cargoes, and some are shipped on account of speculators at Havanna. The produce being always purchased for cash, it is sometimes done with the nett proceeds of imports. Sometimes specie is imported for the purpose; but a large proportion is paid for by bills of exchange. Drawers of bills, of good character, can always sell them to any amount. When abroad, bills are not in demand; returns for imports are made in produce for account of their owners, instead of being made in bills drawn against the same produce for account of some speculator.

Money accounts are kept in pesos, reals, and maravedis. The peso, or dollar, is equal to 8 reals plate, or 20 reals vellon. The real plate is equal to 34 maravedis. By the act of Congress of 1799, the real of plate is estimated at 10 cents, and the real vellon at 5 cents, and they are so calculated at the custom-houses. There are, also, as in other parts of the Spanish dominions, halves, quarters, eighths, and sixteenths of the dollar.

The gold coins are the doubloon, and its subdivisions. The doubloon is equal to 8 escudos d'oro, or gold crowns, and is legally worth 10 dollars, but the price varies, according to weight, and sometimes to demand.

Weights and Measures.—The pound is equal to about 1 lb. 4 drs. avoirdupois; making 100 lbs. or libras, equal to 101 lbs. 7oz. avoirdupois.

The subdivisions are:—36 grains = 1 adarme; 2 adarmes = to 1 drachma; 8 drachmas = 1 onza; 16 onzas = 1 libra; 25 libras = 1 arroba; 4 arrobas = 1 quintal.

The vara is equal to 33,384 inches, or 108 varas = 100 yards. The fanega is equal to 3 bushels nearly, or 200 lbs. Spanish. The arroba of liquid measure is equal to 4,245 gallons.

The regulations in regard to, and the expense of, the entry of goods in the island of Cuba, may best be understood from the actual disbursements on account of a British or other foreign vessel, as follows:

DISBURSEMENTS BY A FOREIGN SHIP-MASTER AT THE PORT OF HAVANNA.

	dollars.		dollars.	
Custom-house entry and stamp	3	25		
Harbour-master's fees, in and out	6	00		
Board of health	2	00		
Marine interpreter	2	00		
Translating manifest	10	00		
			23	25
Tonnage duty on 260 4-95 tons, at 1 dollar 50 cents per ton, and 1 per cent "balanza" duty on amount of said tonnage	393	94		
Wharfage from 10th to 23d instant, inclusive, fourteen days, at 1 dollar 25 cents per day on each hundred tons, 260 tons	45	00		
Stage hire fourteen days, at 75 cents per day, and 3 rials for carrying the same	10	88		
Mud-machine, 1¾ rials per ton, and 1 per cent "balanza"	57	44		
			507	76
Custom-house clearance, and bills of discharge:—				
Eleven days' discharge, at 5 dollars 50 cents per day	60	50		
Two visits, in and out	11	00		
Seven sheets of extracts, each 1 dollar	7	00		
Clearance	8	00		
Stamp paper for clearance	8	25		
			94	75
Light money	4	00		
Moro pass, governor's fee, and clearing officer	4	00		
Certificate of duties being paid	4	25		
Custom-house broker	3	00		
			15	25
The following are not government charges, but in continuation, &c.:—				
Bill of health, 7 dollars; Russian consul's certificate, 8 dollars 50 cents; Danish consul's certificate, 5 dlrs.	20	50		
			20	50
Cooper's bill for repairing casks	9	94		
Journeymen for discharging cargo, twelve days, for six men, each 75 cents per day	54	00		
American consul's bill	10	25		
Lighterage on 1,573 boxes sugar	157	25		
Trip on board	0	40		
			231	84
Total			893	35

To which add commission, 2½ per cent.

During the time a vessel is discharging, a government officer is stationed on board, and is required to report daily to an officer of the custom-house; and for each report the vessel pays 5 dollars 50 cents. The charge is the same, whether one barrel or a thousand is discharged each day. A vessel loaded with jerked beef pays 5 dollars 50 cents for every 500 arrobas, or 12,500 lbs., without reference to the quantity discharged each day. Lumber pays 5 dollars 50 cents for every 20,000 feet. Cotton, the same for every 60 bales. Salt cargoes, 5 dollars 50 cents per day. Logwood a like sum for every 800 quintals, and the

same amount for every 25 tons. Three copies of the invoices of all cargoes are made out to the custom-house on Spanish stamped paper; and for each leaf is charged 1 dollar. It frequently happens that thirty to forty sheets, of not more than four to five lines each, are required from vessels from New York, Havre, and Liverpool. These are some of the vexatious extortions which are allowed to interfere seriously with the real interests of that magnificent island. The following is a statement of the ships that have arrived and sailed from each port of the island:—

Ships entered and sailed from the Island of Cuba.

Warehouse	178,117	3,611	158,512	13,191	766	16,070
Other places	1,552	3,100	381	1,181	20,184	1,106,027
Total	1,503,413	265,510	2,273,011	312,117	283,070	7,819,849

The United States, it appears, supplies but a very small proportion even of those manufactures of which she has the best means of producing. Nearly all the manufactures coming from England are in Spanish bottoms, while American manufactures are in United States vessels. Spanish vessels can go to England, take in cotton goods, and carry them to Cuba, on better terms than American vessels can carry them direct. This is a singular fact, and is to be accounted for only on the ground that the paper currency of the United States carries the level of prices too high to admit of profitable shipment to the specie prices of Cuba. This view is confirmed by the fact that, during the six months which has elapsed of the year 1843, cottons have been exported from the United States to an amount far greater than ever before. A difference in the currencies of the two countries forms an insuperable bar to equality of intercourse.

The sugar imported into England from Cuba, as well as that from Brazil, has chiefly been refined in bond. The sugar exported from Brazil to Trieste, and to many other continental ports, those of France, Portugal, and Spain excepted, has been chiefly in British ships.

STATEMENT of the Number of Vessels which have arrived at, and sailed from the various Ports in the Island of Cuba, during the Year 1842.

SEAPORTS OF CUBA.

The Havanna, Spanish Habanna, is justly described as one of the best harbours in the world. The population, in 1827, consisted of 46,621 whites, 23,562 coloured and black free people, and 23,840 coloured and black slaves. Total, 94,023. Including the garrison, the present population is considered little if under 150,000.

It is by far the most commanding maritime point, and consequently the most important political position in the West Indies; but our purpose is only to view it in a commercial point of view.

MATANZAS, which ranks next to Havanna as a commercial port, was previously to 1809 prohibited to trade to any foreign country, and restricted in its trade in many other respects, though forming an outlet for the products of the richest part of Cuba. It lies on the north coast, 52 miles east of Havanna. Its harbour, which is rather limited in anchorage-ground by the mud brought down by two rivers, is sheltered by a ledge of rocks. Population, in 1827, was 14,341.

The Bay of Nuevitas constitutes the harbour of Puerto Principe, a large city 12½ leagues inland, with a population of 49,012 inhabitants in 1827.

SANTIAGO DE CUBA, the capital of the eastern department of the island and the seat of an archbishopric, containing a population of about 40,000 souls, is situated in 20 deg. 1 min. north latitude, and 76 deg. 3 min. 30 sec. west longitude, and possesses a safe and commodious harbour of tolerably easy access.

the sea-breeze generally blowing into the harbour during the day and the land wind blowing out during the night.

There are but few British subjects established in the province, with the exception of those engaged in mining pursuits, and indeed few foreigners of any nation, with the exception of Frenchmen, who are found in considerable numbers in and around Santiago, both from France and her ancient colonies, or their descendants, and whose example and exertions have had great influence on the agricultural prosperity of the province; the cultivation of coffee may be traced to their immigration.

ARRIVALS at St. Jago de Cuba during the Year 1840.

Nations.	Number of Vessels.	Tonnage.
Spanish	132	13,879
British	125	23,667
American	124	19,912
French	29	6,305
Hanseatic Towns	10	1,698
Dutch Colonies	6	376
Columbian and Mexican	3	200
Danish	1	150
Total	430	

The Spanish arrivals were chiefly from the Peninsula, with flour, wine, brandy, hardware, dried fruits, soap, spices, coarse earthenware, provisions, drugs, silk goods, and a few other manufactures.

The British arrivals were principally direct from Great Britain, in the employ of the English mining companies, with coals, mining machines, tools, powder, and various mining supplies; and a few from British North America with cod fish, whilst twice or thrice per annum a vessel arrives from England with an assorted cargo of earthenware, hardware, sugar pans and mills, cutlery, iron in bars, powder, sheet copper, and glass.

American arrivals almost exclusively from ports in the United States with provisions and lumber, naval stores, and a few dried goods of native and other produce, candles, soap, furniture, manufactured tobacco, and some hardware and machinery.

The French arrivals were from France, with wines, brandy, silk goods, furniture, mirrors, oil, candles, perfumery, jewellery, porcelain, and a few other articles of luxury.

Hanseatic vessels, almost entirely from Bremen, with dry goods, hardware, gin, and some provisions.

The Dutch colonial arrivals were with dry goods, fruits, and provisions.

The Colombian and Mexican vessels were from Campeachy and Lisat, with grass bags, grass ropes, and hides.

The Danish vessels from Hamburg, with dry goods and provisions.

The imports of late years have been nearly equal, and are expected to continue so.

Spanish imports for the year 1841 amounted to . £319,320 sterling.
British imports for the same period „ . . . 18,999 „

But in comparing the two amounts, the fact must not be lost sight of, that large quantities of British dry goods, hardware, and earthenware, are annually imported from *Jamaica in Spanish bottoms, chiefly on account of the difference in duty*, and also from the facility of selecting the above-named articles as cheaply in Kingston as in London, and with the advantage of being able to proceed there and return in three weeks' time. But it must not be concealed that the Hanseatic Towns interfere sadly with British imports, underselling us in many articles of hardware, cotton, woollen and linen goods, and glass; although, generally speaking, they are considered inferior to British manufacture of a similar kind.

THE Average Wholesale Prices Duty paid, of the chief Articles of Import during the past Year, have been as follows:

ARTICLES.	Sterling. £	s.	d.	to £	s.	d.	ARTICLES.	Sterling. £	s.	d.	£	s.	d.

EXPORTS from St. Jago de Cuba during the Year 1840.

Coffee	14,307,800 lbs.
Sugar, clayed	21,977 boxes of about 4 quintals.
—— Muscovado	4,915 hogsheads of about 7 ditto.
Cotton	10,429 bales of 105 lbs.
Molasses	1,600 hogsheads of 117 gallons.
Tafia and rum	1,174 pipes of 110 ditto.
Tobacco	21,865 bales of 80 lbs.
Wax; white and yellow	30,225 lbs.
Fustic	1,400 tons.
Lignum vitæ	100 ditto.
Cigars	5,000 boxes of 1000 each.
Hides	2,000.
Copper ore	27,142 tons.
Doubloons	2,289
Hard dollars	12,867½

During the past four years there has not been any great difference in exports, with the exception of coffee and copper ore.

The exports of coffee have fallen off greatly during the last two years, owing to excessive drought, but they may be expected to revive; whilst those of copper ore have greatly increased. The raising of the latter article only commenced 12 years back, from which time it has been annually augmenting in quantity, but its richness or per centage has fallen off very sensibly, and all late reports from Cuba are erroneous when treating of this article.

When mining first commenced in this province the ore was valued, and truly valued, at 16*l.* per ton, whilst the utmost that it would sell for now is 10*l.* sterling on board.

The amount inserted in the yearly report of the trade of Cuba for the year 1840, which is published at the Havanna, is 3,706,951 dollars 2 rials, or 741,390*l.* 5*s.* sterling, more than the actual worth of all the copper mines now working in the island, and is done designedly, in order to exact, if possible, an excessive duty upon the export of the ore, which at present, by royal decree, is duty free; but the exemption has expired or is expiring.

The Average Wholesale Prices of Articles of Export, duty not paid, during the past shipping season ruled as follows:

	£ sterling.		£ sterling.
Coffee, 1st quality	2 12 0	to	2 16 0 per 100 lbs.
—— 2d ditto	2 2 0	„	2 6 0 ditto.
—— 3d ditto	.....	„	1 16 0 ditto.
—— 4th ditto	1 8 0	„	1 12 0 ditto.
—— triage	1 0 0	„	1 8 0 ditto.
Sugar, clayed white	.....		1 12 0 ditto.

Hides	.....		0 6 0 each.

CHAPTER XIV.

PORTO RICO.

The fertile island of Porto Rico lies between the latitudes of 17 deg. 54 min. and 18 deg. 31 min. N., and the longitudes of 65 deg. 39 min. and 67 deg. 21 min. W. Its area is computed at about 3750 square miles, being about 2500 square miles less than the area of Jamaica. A ridge of mountains extends from the east to the west end of the island. Some of the rivers which flow down are navigable for small vessels; and some of the numerous coves and inlets form good harbours for large ships. The soil is generally fertile and beautifully undulated. There are no serpents or other reptiles. There are large rats, which do great injury to the sugar-canes. The climate is generally salubrious; but some parts are subject to rains, others to droughts.

Porto Rico was discovered by Columbus in 1493. It was invaded in 1509 by the Spaniards from St. Domingo; and the natives, said to have amounted to 600,000 in number, were exterminated in a few years. The Spaniards, however, derived no profit from this island, though it subjected them to great expense. Ponce de Leon, who in his voyage in search of the fountain of perpetual life discovered Florida, was the explorer and conqueror of Porto Rico.

The laws of Spain, as administered in Cuba, are those of Porto Rico; and

in the latter these laws are particularly severe in regard to foreigners; especially if Protestants.

The population, according to a late census, is stated at 150,000 inhabitants, of which there are not more than about 10,000 blacks. Free labour prevails in this colony. Among the slaves there are many of those, or their offspring, which the emigrants from Spanish St. Domingo brought with them; most of the settlers from the Danish, French, and British islands did the same.

Porto Rico is an agricultural colony. It has no manufactures, nor have any mines of gold or silver, or other minerals, been worked. According to an official return of 1830, the land cultivated, and its produce, were as follows:

Articles of Culture	Acres in Cultivation.	Produce.	
		Sugar (Muscovado)	114,690 cwts.
Sugar-cane	14,803	Molasses	1,507,769 gallons
		Rum	12,165 puncheons
Plantains	30,769	Plantains	617,825 loads
Maize	16,194	Maize	63,750 fanegas
Rice	14,850	Rice	not known.
Tobacco	2,599	Tobacco (cured)	34,640 cwts.
Manioc	1,150	Cassava bread	30,119 loads
Sweet Potatoes	1,224	Sweet potatoes	29,570 cwts.
Yams	6,696	Yams	7,850 ditto
Pulse	1,100	Pulse	4,570 ditto
Coffee	16,992	Coffee	250,000 ditto
Cotton	3,079	Cotton	not known.
Fruit trees and gardens	140		
Total acres in cultivation	109,587	or about one-fifteenth of its area.	

During the last thirteen years several thousands of acres have been cleared and cultivated.

In 1828, 1,437,285 acres were held by 19,140 proprietors. At the same time, 423 individuals were proprietors of estates regularly worked by slaves; 275 of which were sugar, and 148 coffee plantations: 17,440 proprietors were graziers who bred cattle, and who also raised provisions and some coffee. In 1802, there were but 29 sugar estates in Porto Rico, and the total value of exports was estimated at 57,500 dollars.

We are indebted for valuable information relative to Porto Rico to Dr. Reid, who practised for some years as a physician on that island, from whence he has recently returned.

"Previously to 1828," says Dr. Reid, in a manuscript report, "Porto Rico was little known to, and less frequented by, foreign adventurers on account of the policy observed by the government, which had a tendency to exclude strangers, by opposing almost insurmountable obstacles to their settlement.

"Anterior to the period alluded to, strangers were required to produce the most undoubted evidence of being Roman catholics, in order to become domiciled, and they were

also under the necessity of becoming naturalized after five years residence—I say that formerly this was not optional but of necessity. A stranger, before he was permitted to land in the island, was to give security for good political and moral conduct, and supposing that he were able to surmount these difficulties, such were the jealousy and illiberality of the government, that few were induced to remain in a country where no prospect of success appeared.

"In 1828, however, the leniency and liberality of Don Miguel La Tone, then captain-general, by relaxing the rigour of former observances, had great effect in removing the impediments to the establishment of foreigners in the island. La Tone acted strictly according to the spirit of the Real Cedule of 1815, having for its object the encouragement of agriculture and commerce in the Spanish colonies.

"Thus the *Domicilio* was procured by paying a trifling sum of money, and the applicant by complying with certain formalities.

"Moreover, government encourages, instead of damping the enterprize of foreigners, convinced, that in this manner, the resources of the island would be best developed.

"In consequence of the encouragement given under the administration of La Tone, a considerable migration took place to this island.

"Planters from the neighbouring islands of St. Croix and St. Thomas, sold their estates and brought their slaves and capital to this country, lured by the superior fertility of the soil, and the liberality of the government as administered by La Tone.

"Several planters of the windward British and French islands, acted like the people from St Thomas and St. Croix.

"Merchants also had their attention attracted towards this spot, and the establishment of several commercial houses now existing was effected.

"Seconded by foreign enterprize and foreign capital, this island has continued to prosper in a most extraordinary degree since 1828; and it has been a source of considerable revenue to the mother country.

"But notwithstanding the rapid improvement which has been effected in this island, and the continued increase of its staple exports, the improvement would have been still greater, and the export considerably larger, *but for the oppressive duties imposed upon all articles of necessary consumption, and the frequent heavy exactions made by the government towards the support of the war in Spain.*

"These causes, by lessening the profits of the planters, have prevented them from extending their estates. Thus the advancement in the cultivation of the soil is more due to the continued influx of new settlers with their important capital, than to the prosperity and advancing operations of the old.

"Some years ago the great mass of the inhabitants did not require, and scarcely knew, the use of many articles which are now considered necessary.

"Of this class are fine cotton goods, fine linens, and woollen cloths. The natives of the present day, throughout the island, are extremely fond of dress and fine apparel.

"Formerly people were very remiss in furnishing their houses; at present they pay great attention thereto. I might multiply instances of the advancing civilization of the natives, forming by far the greatest proportion of the population.

"All the machinery for the manufacture of sugar and rum is allowed to be imported duty free. Men cannot be imprisoned for debt, nor can a planter's estate be sold, or any of his implements of agriculture and manufacture, unless he owes at least two-thirds of the whole value of his estate.

"If a proprietor sell an estate or a house here, in order to remit the proceeds, he is required by the government to pay 10 per cent on the amount of the property sold.

"The *Roman Catholic faith is the only religion tolerated*, and all foreigners are, at least, supposed to be of that faith, before they are permitted to become domiciled."

The sugar estates and other plantations are situated on the sea-coast, near the capital and other towns or *pueblos*.

SEAPORTS.—The following are the legal ports for the importation of goods, and the exportation of produce: San Juan de Porto Rico, the capital, (population

30,000); Mayugas, Pouce, Guayama, Aquadilles, Cabo Royo, Guayanilla, Salinas, Manati, Patillas, Penuelas, and Saguerillo.

The principal articles exported are, sugar, rum, molasses, coffee, cotton, tobacco, hides, live-stock, dyewoods, lignum vitæ, and timber, ground provisions, rice, salt, &c.

The sugar is nearly all muscovado, no clayed sugar being made in this island. The molasses is of a good quality, and exported chiefly to the United States. The rum in general is inferior to that manufactured in the British West Indies.

The coffee of this island is of good quality, but scarcely equal to that of St. Domingo in point of flavour.

The cotton is of fair quality, but the fibre is short. Indigo is indigenous.

The tobacco, though rather inferior to that of Cuba, is of good quality for smoking. It is produced only by free labour.

The hides are large, and the cattle are of a good breed. Numbers of them are carried to the neighbouring islands. The beef is good, and the cattle of Porto Rico are superior to those bred on the Spanish main.

Sugar.—According to official documents, the quantity of sugar exported from all parts of Porto Rico in 1839, amounted to 69,245,783 lbs., valued at 2,423,602 dollars. The ports of exportation were—

Porto Rico, 9,441,247 lbs.; Guayama, 16,054,672 lbs.; Aguadilla, 990,771 lbs.; Cabo Royo, 1,134,762 lbs.; Fayaribo, 583,158 lbs.; Areibo, 8,009,435 lbs.; Naguabo, 1,198,782 lbs.; Humacao, 1,364,246 lbs.; Guayanilla, 2,686,529 lbs.; Salinas, 514,728 lbs.; Manati, 56,025 lbs.; Patillas, 643,362 lbs.; Penuelas, 5,615 lbs.; Saguillo, 20,000 lbs.

Coffee.—The quantity exported during the year 1839, was 8,538,362 lbs., valued at 853,836 dollars. The ports of exportation were—

Porto Rico, 717,471 lbs.; Mayagues, 3,187,200 lbs.; Pouce, 634,691 lbs.; Guayama, 304,248 lbs.; Aguadilla, 2,134,014 lbs.; Cabo Royo, 283,977 lbs.; Areibo, 507,289 lbs.; Naguabo, 3525 lbs.; Humacao, 86,300 lbs.; Guayanilla, 288,115 lbs.; Salinas, 116,562 lbs.; Manati, 57,036 lbs.; Patillas, 24,325 lbs.; Penuelas, 92,609 lbs.

Molasses.—3,311,719¾ gallons of molasses, valued at 496,759 dollars, were exported during the year 1839. The ports of exportation were—

Porto Rico, 288,627 gallons; Mayugues, 446,734 gallons; Aguadilla, 2942 gallons; Pouce, 915,637 gallons; Guayama, 1,244,098 gallons; Cabo Royo, 37,895 gallons; Fayarilbo, 57,746 gallons; Areibo, 88,888 gallons; Naguabo, 47,500 gallons; Humacao, 56,509 gallons; Guayanilla, 91,382 gallons; Salinas, 4108 gallons; Manati, 1810 gallons; Patillas, 28,933 gallons.

Cotton wool.—1,183,973 lbs. of cotton, grown in the island, valued at 189,435 dollars, were exported during the year 1839. The ports of exportation were—

Porto Rico, 361,484 lbs.; Mayagues, 503,022 lbs.; Guayama, 8170 lbs.; Aguadilla, 309,097 lbs.; Guayanilla, 2200 lbs.

Live stock.—The value of live stock exported is given for the same year as follows: horses, 7023 dollars; mules, 4340 dollars; horned cattle, 20,303 dollars.

Coin.—In 1839, 1104 dollars value of gold coin, and 129,285 dollars of silver, were exported, = 130,389 dollars.

Hides.—673,832 lbs. of hides, valued at 60,644 dollars, were also exported; viz.,

From Porto Rico, 423,888 lbs.; Mayagues, 159,047 lbs.; Ponce, 6,210 lbs.; Guayama, 8,399 lbs.; Aguadillo, 72,320 lbs.; Cabo Royo, 4,474 lbs.; Areibo, 520 lbs.; Humacao, 1,918 lbs. Guayanilla; 1,239 lbs.; Manati, 625 lbs.

Wood.—The value of timber exported was estimated at 24,236 dollars.

Rum.—649⅔ puncheons of rum, valued at 16,241 dollars, were exported in 1839; viz.,

From Porto Rico, 277½ puncheons; Ponce, 127 puncheons; Guayama, 107 puncheons; Aguadilla, 10 puncheons; Fayardo, 23½ puncheons; Areibo, 53 puncheons; Naguabo, 10½ puncheons; Humacao, 4 puncheons.

Rice.—228,925 lbs. of rice, valued at 10,301 dollars, were exported in 1839.

Dyewood.—The value of dyewoods exported in 1839, was estimated at only 491 dollars.

Corn.—Indian corn and grain were exported only to the value of 531 dollars.

Miscellaneous.—Articles not enumerated were exported to the value of 14,879 dollars, of which was salt to the value of 2701 dollars.

Total value of produce exported in 1839 was, 4,398,142 dollars, and in coin, 130,389 dollars, and of 988,079 dollars, the value of deposited or bonded goods exported. The total amount of exports during 1839 amounts to 5,516,660 dollars.

The rum exported is chiefly to the British North American colonies.

Rum is also extensively and immoderately consumed in the island by the common people.

EXPORTS FROM PORTO RICO IN 1840.

Sugar.—The quantity of sugar exported was 81,793,693 lbs., value 2,862,779 dollars.

Coffee.—The quantity of coffee exported was 12,450,114 lbs., value 1,254,011 dollars.

Molasses.—The quantity of molasses was 3,033,034 gallons, value 454,195 dollars

Tobacco.—The quantity exported was 4,227,484 lbs., value 169,099 dollars.

Live Stock exported; viz.,

	dollars.
112 horses, value	4,783
86 mules ..	4,308
3396 cattle ..	117,090
Total	126,181

Cotton.—The exports of cotton were 621,218 lbs., value 99,394 dollars.

Hides.—The exports of hides were 607,385 lbs, worth 54,664 dollars.

Rum.—There were exported 1100½ puncheons, value 27,518 dollars.

Wood.—The value of wood for building exported, amounted to 21,517 dollars; the quantity of dyewoods exported, amounted to 1,261,795 lbs, value 7882 dollars.

Salt.—The exports of salt were 3995 bushels, value 3995 dollars.

Miscellaneous Articles were exported to the value of 15,911 dollars.

Specie.—The exports of coin amounted to 121,346 dollars.

The export of merchandize in bond amounted in value to 1,424,251 dollars.

The total value of Porto Rico products exported in 1840, was 5,088,911 dollars; which, with the value of specie and bonded goods, 1,424,251 dollars, makes the total value of exports, for 1840, amount to 6,634,588 dollars.

12,547,910 lbs. of sugar, it appears, were exported in 1840, over the quantity exported in 1839; from which it would also appear that the cultivation of sugar had increased in this ratio in the course of one year, a proof of the advancing state of the agriculture of the island.

3,911,752 lbs. more of coffee were also exported in 1840 than in 1839.

IMPORTS IN 1839 AND 1840.

The total value of 1839 was 5,462,206 dollars. The imports of oil, wine, and fermented liquors, amounted in 1839 to 290,095 dollars; spices, 9856 dollars; preserved and dried fruits, 22,777 dollars; salted meats, 85,095 dollars; various kinds of grain, 1,079,542 dollars; lamp oil, lard, &c., 124,346 dollars; salted fish, 250,521 dollars; miscellaneous articles, 95,705 dollars.

THE Imports of Manufactured Goods were as follows:

	dollars.		dollars.
Cotton goods	811,0 [illegible]	Silks	91,760
Woollen do	[illegible]	Lumber	211,510
Linen do	410,011	Hardware and metals	811,131
Furs	119,201	Articles not included in the foregoing classification	711,189

THE total value of Imports in 1840, was 7,538,472 dollars; viz.,

	dollars.		dollars.
Wines, oil, and fermented liquors	373,284	Lamp oil, lard, &c.	215,527
Salted meats	85,095	Salt fish	311,211
Spices	11,000	Other articles not included under the preceding heads	150,738
Dried and preserved fruits	32,558		
Grain of various kinds	1,132,907		

MANUFACTURES Imported were as follows:

	dollars.		dollars.
Cotton goods	[illegible]	Lumber	311,124
Woollen do	95,[illegible]	Hardware, metals, &c.	557,034
Linen do	507,205	Other articles not included in the previous heads	1,371,950
Furs	200,101		
Silks	184,873		

The total value of goods imported from Spanish ports, and under the Spanish flag in 1839, was 725,740 dollars; in 1840 it was (with the exception of the imports from Cuba) 915,260 dollars. The amount from Cuba, under the Spanish flag, in 1840, was 217,232 dollars: under the British flag, 315 dollars.

The imports from the neighbouring colonies, under the Spanish flag, in 1839, amounted to 1,951,617 dollars; in 1840 to 2,617,489 dollars. In 1839, the value of imports from the United states amounted to 1,192,670 dollars; in 1840, to 1,279,177 dollars. In 1839, the value of the imports from Germany was 193,956 dollars; in 1840, 412,568 dollars. In 1839, the amount of Danish imports was 44,715 dollars; in 1840, none imported. In 1839, the amount of French imports, by French vessels, was 86,382 dollars; in 1840, it was 135,990 dollars. In 1839, the value of Dutch imports amounted to only 8,615 dollars; in 1840, none imported. In 1839, British imports, under the British flag, amounted to 145,825 dollars; in 1840, under various flags, to 185,187 dollars. In 1839, Portuguese imports amounted to 833 dollars; in 1840, the imports, chiefly under the Brazilian and Spanish flags, from the Brazils, amounted to 517,982 dollars. In 1840, the value of imports from the continent of South America was 518,819 dollars.

Exports 1839 and 1840.

The value of exports to Spain, under the Spanish flag, in 1839, was 400,401 dollars; in 1840, under various flags to Spain, 1,816,658 dollars. The value of exports to Cuba, under the Spanish flag, in 1840, was 24,593 dollars. In 1839, the value of exports to the neighbouring colonies, under the Spanish flag, was 414,996 dollars; in 1840, under various flags, 671,058 dollars. The value of exports to the United States, under the American flag, was, in 1839, 2,588,482 dollars; in 1840, under various flags, 1,803,761 dollars. Exports to Germany in German vessels, in 1839, amounted to 266,694 dollars; in 1840, under various flags, to 480,288 dollars. Exports to Denmark and her colonies, under the Danish flag, in 1839, 211,758 dollars; and in 1840, 14,386 dollars. Exports to France, under the French flag was, in 1839, 292,054 dollars; in 1840, under various flags, 926,900 dollars. Exports to Holland under the Dutch flag, in 1839, amounted to 10,965 dollars; in 1840, under various flags, to 18,180 dollars. Exports to Great Britain and her colonies, under the British flag, in 1839, amounted to 347,892 dollars; and under the same flag, in 1840, to 356,997 dollars. Exports to Italy, under various flags, in 1840, 148,825 dollars. Exports to Turkey, under the British and Austrian flags, in 1840, 11,282 dollars. Exports to the continent of South America, under various flags, in 1840, 28,226 dollars. Exports to British America, in 1840, under the Spanish and British flags, 333,348 dollars.

In proportion as the Dutch and Danish trade with Porto Rico have been declining, the British has been advancing.

Number of Vessels of different Nations with their Tonnage, which entered the harbours of Porto Rico in 1839 is as follows:

Countries.	1839		1840	
	Number of Vessels.	Tons.	Number of Vessels.	Tons.
Spanish	635	28,954½	648	31,308½
American	109	63,943	349	48,518
Brazilian	....	....	2	571
Bremen	12	1,968	21	2,394
Danish	17	4,527	32	3,201
French	88	6,201½	178	17,202
Hamburg	4	737	9	994
British	114	9,136	26	10,830

CHAPTER XV.

TRADE BETWEEN THE UNITED KINGDOM AND CUBA AND PORTO RICO.

The exports of British manufactures to Cuba was carried on to a very great extent before 1809, when they were absolutely prohibited by law. Since that period the trade had increased in proportion.

Account of the declared value of British and Irish produce and manufactures, Exported from the United Kingdom to Cuba and Porto Rico, in each Year from 1827 to 1842. A small part of these goods were Exported to some of the other foreign West Indies, Haiti excepted.

YEARS.	£	YEARS.	£
1827	699,378	1835	747,013

CHAPTER XVI.

THE PHILIPPINE ISLANDS.

THESE islands form an extensive group situated in the Asiatic archipelago. Of these islands, ten are large and the rest very small.

The following, drawn up from an official statement for 1837, is given as the area and population of the ten principal and smaller islands; viz.,

	Area.		Population.
Luzon	56,604	square miles.	2,264,807
Mindoro	4,155	,,	29,632
Panay (3 provinces)	4,516	,,	406,030
Isla de Negros	3,774	,,	35,622
Zebre	2,162	,,	250,817
Layte	4,198	,,	92,165
Sarvar	5,470	,,	99,635
Masbate	1,215	,,	2,316
Palayan	7,558	,,	*11,097
Magindanao	35,637	,,	*74,560
Smaller islands, including the Islas de Calamianes	8,826	,,	
Total	134,115		3,500,000

The inhabitants are active and bold. They are not only industrious cultivators of the soil, but also carpenters, smiths, masons, goldsmiths, and ordinary manufacturers. They consist of Malays, who acknowledge the rule of Spain, which treats them as free subjects; also of Chinese and various races from the continent of Asia. The Papuans, or natives of the mountains, and of the little unfrequented islands, are described as wretched savages.

The Philippines yield all tropical products, including rice, millet, maize, sugar, indigo, tobacco, coffee, hemp, cotton, a great variety of fruit, timber, and other products. The agricultural implements used, and the mode of cultivation, are said to be generally Chinese.

Rice is grown in the low and marshy soils, and constitutes the principal food of the population. Upland rice is also cultivated as in Java.

The *Sugar-cane* is raised. The great fertile grounds of the plain of Pampagna, and of the island Panay are the principal sugar districts, and sugar is the most important product exported.

Tobacco is a government monopoly, and only allowed to be exported when manufactured into cigars.

Indigo is extensively cultivated, but in quality it is inferior to that of British India;—it is grown to rather an important extent.

Sapan wood forms a valuable article of export to China.

* Including only the Spanish portion of these islands.

The *Coffee-plant* grows wild on the western part of Luzon, where it was introduced about fifty years ago by Spain.

This wild coffee is much esteemed, and exported from Manilla to other countries. Cloves, cinnamon, the wild tree bread-fruit, sago and cocoa, margo and nuts, grow naturally, as well as by cultivation.

Good building timber is abundant, especially in the hilly or mountainous districts.

The banana grows generally in all the Philippines. Hemp grows abundantly near Manilla and in Panay and Zebre; cordage and a coarse cloth are made of it by the Malays. Sago grows in Luzon; also the cocoa-nut.

The land shrub-cotton grows well, but it is prepared in the most slovenly manner.

The domestic or live animals are buffaloes, goats, pigs, and a few sheep.

The shells of the land-tortoises form an important export. The shells of pearl oysters, which abound, and edible swallows' nests, are exported to China.

Excepting the making of cigars, and of straw and chip hats, and cigar cases, and a few coarse cottons and hemp cloths, some common pottery, goldsmiths' work, ordinary smiths', carpenters' work, and building vessels and boats, it can scarcely be said that there are any manufactures.

The Sources of Revenue, are *Customs Duties*, the *Tobacco Monopoly*, and the *Capitation Tax*. All persons are liable to pay the latter except the *Mestizos* of mixed European blood. The shop-keepers, small traders, mechanics, coolies, and domestic servants are chiefly Chinese, and ranked in four classes, of poll-tax payers, from 12 dollars to 120 dollars, or from £3 to £30 per annum, according to the class to which they are subject, from the time they are of the age of 16 to 60 years; no Chinese is permitted to arrive at and settle on the Philippines after the age of 10 years. Indian or Chinese Mestizos pay about 4*s.* 6*d.* annually, after the age of 12 years during life, and Indians of both sexes about 2*s.* each during the same period. The number of persons subjected to the poll-tax in 1838 was 1,306,112, of whom about 920,000 inhabited the island of Luzon.

CHAPTER XVII.

COMMERCIAL LEGISLATION OF THE PHILIPPINE ISLANDS.

CUSTOMS, REGULATIONS, AND DUTIES.

THE conditions upon which foreign ships and merchandize are admitted into Manilla, have been defined by a tariff, published on the 14th of December, 1837, and which was put in force by the administration of commerce at the end of the year 1838.

It has not undergone any changes, except that in 1838, the trading with certain articles, which were thought to concern the French trade particularly, was prohibited.

The official valuations, fixed by the customs of Manilla as a basis whereon the duties are to be levied, were greatly modified in 1837, as regards the articles of importation, at the urgent demand of the foreign trade, particularly that of the French consul.

TARIFF OF IMPORTATION DUTIES IN THE PHILIPPINES.

For the produce of foreign countries east of the Cape of Good Hope and west of Cape Horn, the following duties are placed instead of the preceding ones, if the importation takes place in vessels under the Spanish flag:

Singapore, Batavia, and other neighbouring places . . . 8 per cent.
China . . . . . 9 „

These two quantities do not always apply to the articles, which, according to the general tariff, pay a higher duty, nor to articles coming from any other places than those that are named.

Goods damaged by accident at sea, shipwreck, &c., are, after salvage, valued by the officers, when they are declared for consumption, and are, in that case, exempted from import duties.

Colouring ingredients from roots, fruits, &c., employed in dyeing, others than cochineal, *plants* and *seeds* of vegetables of every kind, flowers, &c., are prohibited for consumption; the products of the soil and industry of the foreign possessions of Asia; viz., spirits

or fermented liquors not named in the tariff, rum, arrack, &c., coffee, raw cotton, cocoa-nut oil, indigo, opium, gunpowder, sugar, and tobacco. These articles are only admitted in entrepot, except gunpowder, which is to be deposited, and where it is to remain until re-exportation, in a special magazine of the government.

Fire-arms, ordnance and sporting guns, horse-pistols, &c., cannot be imported for use without a special permission from the government. Without this permit, they are only admitted in entrepot.

Clothing apparel, such as handkerchiefs, stockings, hats, small dresses, &c., which are for children on account of their small dimensions, are submitted to a special estimation by the officers.

II.—EXPORT DUTIES LEVIED IN THE PHILIPPINES.

ARTICLES.		DUTIES	
		Under Spanish Flag.	Under Foreign Flag.
Silver for Spain, bullion	}	exempt	exempt
— ditto, specie			
— for every other country, bullion	value	6 per cent	6 per cent
— ditto, specie	do	2 do	2 do
Gold for Spain, (as Silver)			
— for any other country, bullion	} do	1 do.	1 do
— ditto, powder			
— ditto, specie	do	1 do.	1 do
Abacá (hemp of Manilla)	do.	1½ do.	2 do
Rice	do.	exempt	6 do
Tobacco from the magazines of the monopoly, in leaves manufactured	do.	do	exempt.
Another produce of the soil and industry of the Colony, for Spain	do.	per cent	6 per cent
ditto, for any other country	do.	1½ do.	3 do
Foreign produce, for consumption, as the produce of the colony			

III.—ENTREPOT AND TRANSIT DUTIES LEVIED IN THE PHILIPPINES.

To foreign produce admitted in entrepot the fixed duties are as follows:

Magazine and administration duty, for one year, on entering, the value 1 per cent, on departing, 1 per cent; above one year, additional duty in proportion to the length of time.

The time of remaining in entrepot, cannot exceed *two* years, without especial permit of the superintendant; and in no case is it permitted to exceed *three* years. The merchandize in entrepot is to be valued according to the tariff. That which is not named in the tariff, is valued according to the current prices of the place at the time of importation. For liquids, in case of leaking, breaking of the vessel or evaporation, the duty on coming out of the magazine, is levied on the quantity declared by the verification.

During 40 days, from the time of the delivery of their manifests, the captains or supercargoes of foreign vessels, are allowed to declare for transit, the total or a part of their cargo. This delay being expired, the merchandize, which composes the cargo, must either be declared for entrepot or interior consumption. If no declaration is made, the merchandize is declared for entrepot.

Any demand being made, to embark return-merchandize before the expiration of the forty days, implies the renunciation of the benefits of the declaration for transit of the merchandize imported by the vessel.

IV.—POLICE OF THE PORT OF MANILLA, AND OF THE ANCHORAGE-GROUND.

The following regulations, published at Manilla, on the 15th of July, 1842, by the captain-general of the Philippine Isles, were immediately put in force.

Art. I. Every vessel on entering the bay, is bound to hoist its flag, at the island of Corregidor, and to allow itself to be reconnoitred by the government crafts, which for this purpose are stationed at the island. These crafts hand over to the captain directions to the anchorage ground; viz., The present regulations. The chart of the bay, if necessary.

If the captain, without being prevented by the weather, avoids the reconnoitring by the vessels of the state, when announced by firing a gun, he pays, as a forfeit, double the value of the powder used. In sight of Manilla and Cavita, vessels are to hoist their flag.

II. No vessel entering the bay, can communicate with any body, without having received the sanitary visit, and without having been admitted into free intercourse. Until then, the vessel must hoist, at its mizen-mast head, the quarantine flag, or any other signal flag.

According to the sanitary regulations, the captain is responsible for any intercourse taking place before the visit and admission to free intercourse. He pays for every infraction of the law, 250 piastres (£51 sterling). In case of distress, the prohibition of all communication extends to the vessels which give assistance.

III. At the time of the visit, the captain must produce the bill of health of the port from whence he came, and, in default of this, a declaration signed by himself, whether there was a contagious disease at the port from whence he came, the state of health of all the individuals with whom he went to sea, and the incidents of the voyage. The crew and passengers are to assemble on deck, to pass inspection, and to answer the questions which the Deputy of Health shall deem necessary to put to them.

The captain must also hand over on board, the register or papers of the ship, so that one may know the vessel's name,—the nation to which it belongs—the name of its captain —its tonnage—its national act—with the designation of the date of departure—of the stay in port—of the destination—of the arms on board—of the cargo—of the name of the trustee—and of all the remarkable incidents of the voyage.

He must also give the list of the passengers and crew, signed by himself, with their rank, profession, and passports.

To avoid all delay or mistake, the captain must commit to writing, the state of his health, that of the crew and passengers, and the *muster* of crew and passengers, before the visit of the port.

For every inaccuracy in this declaration in the number of individuals described in the muster, in the indication of their rank or profession, he forfeits each time 250 piastres (£51 sterling).

If the captain, at the time of the visit, has not committed to writing the above-mentioned subject, the vessel cannot enter the port without a renewed visit.

All letters and despatches must be transmitted to the assistant of the post-office, who is always present at the visit. The captain receives from the post-office the charges for carrying the said letters and despatches, according to a tariff given to him on payment.

IV. Every vessel performing quarantine, and not being allowed any communication, must conform to the instructions which are handed to the master, and retain, at its mizen-head, the yellow flag or signal. Every contravention is adjudged according to the laws, and the captain fined 500 piastres (£108 sterling) even though it has no bad consequences.

V. At the time of debarkation, the captain is bound to present himself before the captain of the port, to be sent with his passengers before the authorities. Persons of distinction are not obliged to accompany the captain. The customs of the island are made known to them at the time of the visit.

VI. At the anchorage-ground it is not permitted to retain the guns loaded, nor to fire them, except in cases of distress, or on previous authorization. Transgressors are fined 20 piastres (4*l.* 6*s.* 8*d.*) as a forfeit, and 10 piastres (2*l.* 3*s.* 4*d.*) for every gun fired.

VII. Every captain must present to the government or trustee a caution of 500 piastres (108*l.* sterling) as a guarantee for the observation of the present regulations, and that within thirty hours after the visit, at Manilla, and within forty-eight at Cavita or Cañacao. If he exceeds these delays, he pays a fine of 50 piastres (10*l.* 16*s.* 8*d.*), and is reprimanded.

VIII. In order to discharge or take on board ballast, the captain must have the permission of the captain of the port. The omission of this formality, throwing into the sea ballast, excrements, or any submergible matter, subjects him to a fine of 100 piastres

(21*l.* 12*s.* 6*d.*) in the Bay, and of 200 piastres (43*l.* 5*s.*) in the ports of Cavita and in the river of Manilla.

IX. Persons are condemned to a fine of 25 piastres (5*l.* 8*s.* 4*d.*) who communicate with vessels with which intercourse is forbidden; and captains to 50 piastres (10*l.* 16*s.* 8*d.*).

X. After ten o'clock at night, vessels are not allowed to perform any commercial operation on the anchorage-ground, unless previous permission has been obtained, or unless there is any urgent necessity. The captain of any merchant vessel or the proprietor of any banca who breaks this regulation, is liable to a fine of 25 piastres (5*l.* 8*s.* 4*d.*). Ships at anchor may stop any suspected banca which accosts them after ten o'clock at night. Sailors discovered ashore at untimely hours, are taken and punished, according to the laws, for any disorderly acts they may have committed.

XI. On entering the river, the vessels must deposit their gunpowder in closed and marked packages. Captains are fined 1 piastre (4*s.* 6½*d.*) for every pound of powder they retain on board contrary to this regulation.

XII. After *eight* at night, no fires are allowed on the river, and no light carried about without a lantern; fine of 5 piastres (1*l.* 1*s.* 8*d.*). It is specially ordered, that no pitch, tar, or grease, or any inflammable substance, be melted down or heated on board a ship; penalty of 25 piastres (5*l.* 8*s.* 4*d.*).

XIII. It is also ordered that the captain is not to land the whole or any part of the arms on ship board, on pain of a forfeiture or a punishment, which is fixed for such cases.

XIV. Nobody has a right to punish a native or resident for any fault committed by him in working, by the day, at the careening of vessels, or at any other labour on or about vessels. The punishments appertain to the captain of the port.

XV. No native, notwithstanding his own wish, may remain on board after working hours.

XVI. The captain is not to admit on board any passenger without a passport from the government; on a penalty 250 piastres (54*l.* sterling). Nor is he to land any passenger from on board his vessel by stealth; penalty 100 piastres (21*l.* 12*s.* 6*d.*). Passengers can only land by regular permission from the captain of the port.

To prevent desertions, the transferring of the crew from one vessel to another is not allowed without previous notice to the port captain; penalty of 10 piastres (2*l.* 3*s.* 4*d.*).

The trustees and securities are responsible, during the length of the stay, and until the vessel is out of port, for the men authorised to be on land, belonging to the crew of the vessel, for false reports of health, or for any other transgression.

Captains are condemned to an amount of 10 piastres (2*l.* 3*s.* 4*d.*), in case of the desertion of any of their men, if they do not immediately inform the captain of the port, so that the latter may order the arrest of the deserters. If the desertion takes place at the time of departure, the trustees are responsible for the expenses occasioned by the deserters, from the time of their arrest to that of their leaving the country.

XVII. In case of death on board of any individual, the captain must give notice of it to the port captain, in writing, informing him of the cause of death, and demanding permission for burial.

Casting the body of the deceased into the sea without authorization, is punished by a fine of 21 piastres (5*l.* 3*s.* 9*d.*), without prejudice to the proceedings to which the non-declaration must occasion on the part of the civil and sanitary authority.

XVIII. To obtain a permit to depart, in ordinary circumstances, captains are to present themselves to the government two days beforehand, with their muster-roll signed by the captain of the port.

The office of the said captain will deliver them their despatches, on the presentation of certificates, stating that they have conformed to the laws of the government, of the custom-house, and of the post-office.

Every vessel departing without its despatches is fined 2 piastres per ton.

Vessels departing must, beforehand, hoist a signal flag at the head of their main-mast.

XIX. In every special circumstance, the captains must assent at the extraordinary visits, which the civil authorities of the port, treasury, or health, may exact

XX. The captain is not to allow any of the men of his crew to land, without he is a guarantee for all debts which they may incur.

XXI. When a vessel has sailed, the dispositions of the present *regulation* are applicable to the securities, until the fulfilment of the given guarantees.

XXII. The forfeitures are doubled in case of *recidivation*.

XXIII. All regulations and tariffs, anterior and contrary to the present, are revoked.

V. ANCHORAGE POLICE.

When anchoring, the captains must take care not to drop their anchors on the moorings of other vessels, and not to embarrass their movements: they are bound to alter their position as soon as either case is made known to them. If the position taken by vessels is not convenient for their security, or to the police, the captains are also bound to alter it, according to the instructions of the port captain.

Once at anchor, no vessel can remove from its position without previous permission, except in case of compulsion, of which the captain must give notice to the office of the captain of the port, when circumstances will permit it.

At the anchorage ground off the bar of Manilla (or, when the weather is fine, a part of the crew generally lands, and where accidents happen which prevent the return on board), vessels will always have to drop an anchor.

To enter or to depart from the river, the captains must demand the authorisation of the captain of the port, who will transmit to them the necessary instructions, and give them a pilot and the help they demand.

Vessels entered and anchored, in cases hereafter mentioned, or in analogous cases, may make the following signals to their proprietors or trustees, and if the said proprietors and merchants cannot answer, the demanded assistance is brought to them by the authority of the port, every time that the circumstances will permit of it. The guns may be repeated at intervals, the vessels having still their flags hoisted. The flag to be hoisted is the national flag, and if necessary, two flags may be hoisted, one a signal of some kind, and in default, a flag of tarred cloth, &c.

Assistance asked for.	Flags.	Guns.
Moorings	1 at bowsprit	1
Anchor	1 at shrouds of mizen	1
Moorings and anchor	1 at bowsprit / 1 at shrouds of mizen	1
Shalop	2 at mizen	1
Mutiny on board	1 at shrouds of main	1
Fire	2 at head of main mast	2

VI.—MANIFEST OF CARGO.

According to the regulations of 1837, the captains or supercargoes of Spanish or foreign vessels must, at Manilla, during the thirty hours which follow the entrance visit, and at Cavita during the forty-eight hours, present the general manifest of their cargo, with the indications of the packages, their mark and number, and of the weight or number of articles which are not enclosed in packages.

The administrator then delivers immediately the permission for unloading the Spanish vessels.

The permission for the unloading of foreign vessels he delivers twenty-four hours later. The reason of this delay is to allow the captains or supercargoes to present, in a special manifest, the packages with their marks and numbers or the weight of the merchandize which they may wish to declare for transit.

The administrator authorises, by a distinct permit the unloading of the luggage which is to be presented to the custom-house to be expedited; except always clothing apparel, which may be contained in a handkerchief or open envelope, and the desk and portfolio of the captain or passengers of the cabin when they have previously been verified on board.

The unloading being completed, those interested must immediately present a list of the packages which they intend for entrepot, with a clear and precise designation of their contents, or of the weight or number of articles, and with the indications of the merchandize which they introduce for consumption.

Before the custom-house proceeds with the expedition and the remittance of the merchandize, the indebtors must furnish, for the payment of the duties, a guarantee, which is accepted by the administrator.

If the twenty-four hours expire without a declaration for entrepot having been made, the whole of the merchandize will be considered as declared for consumption.

National or foreign vessels, which have departed from the port with a cargo of the produce of the soil and of the industry of the country, or with a cargo of any other produce whatever, if they are compelled to put back again, without having touched at a foreign port, may unload and land such part of the said cargo as they may think proper, without paying any duty, so as to be able to re-export them, without paying any additional duties to those they had paid at the first exportation: the said merchandize to be deposited in the magazines of the custom-house, or in any other magazine pointed out by the administrator, under the necessary superintendance.

The merchandize taken out of *entrepots* by the vessel in question, may be re-entered or deposited in other magazines, with the prescribed formalities, until the said vessels can put to sea again, without being obliged to pay any entrance or departure duty.

Vessels, putting back for the anchorage-ground, may land the whole or part of their cargo, according as their repairs obliges them, in depositing it, until the end of the operation, in a magazine under the superintendance of the custom-house, without paying any duty;—but if the captain prefer putting them in entrepot, the packages are admitted, according to their kind, on the usual conditions, with a lesser duty of 1 per cent to be paid at their being taken out only, according to the declaration of the manifest.

VII.—NAVIGATION.

The tonnage duties have been maintained at the following rates by the regulation of 1837:

		p.	r.	gr.
Foreign vessels and champans of China, loading or unloading in port.	per ton	0	2	0
.. entering and departing in ballast	..	0	1	0
.. on putting back for victuals, water, or for anchorage at sea .		0	1	0

The following are not reputed as articles of cargo, for the application of the first duty. On entering, the specie and articles of the first necessity; on departure, ship provisions.

The tonnage duty is settled by the gauge fixed by the patent, or by the roll of matriculation presented to the administrator of the customs, by the captain or trustee of the vessel.

MANILLA, the seat of government, is the chief port in which the foreign trade of the Philippines is carried on. It is a fortified walled city, the population of which, and its ten suburbs, is said to consist of about 6000 Spaniards and other Europeans, and from 90,000 to 100,000 of Malays, Chinese, Tacolus, or natives, and some negroes. The Aduana, or custom-house, is a huge structure, and the government-house, containing numerous offices, is another large building. There is a garrison of 7000 men, and it is said as many priests. The churches and convents are numerous. There is a bar at the entrance with only 13 feet depth of water at low ebb. Vessels of 600 tons in ballast and of 300 laden pass over it.

TRADE OF MANILLA IN 1839 AND 1840.

1839.—119 vessels, six of which were French, cleared from the port of Manilla in the year 1839. The value of articles exported amounted to 561,648*l.*, and consisted of the following; viz.,

		Value.
Sugar	244,800 quintals	£209,576
Indigo	3,900 do.	59,860
Cigars (in boxes of 1000)	42,400 boxes	54,408
Abaca	58,700 quintals	50,280
Tobacco, leaf	28,700 do.	30,692
Coffee	5,900 do.	15,524
Rum	43,900 gallons	11,528
Straw hats, &c.	38,300 number	8,804
Hides, dried skins	8,000 quintals	8,060
Sapan wood	37,100 do.	7,940
Tortoiseshell	46 do.	4,920
Cotton	1,600 do.	3,868
Rice	11,700 do.	2,416
Native woven stuffs	4,700 pieces	1,768
Woods of various kinds	7,000 quintals	1,504
Cigar cases	18,300 number	1,100
Miscellaneous articles		49,400
Gold dust, specie, &c.		40,000
Total		£561,648

1840.—The value of articles imported into Manilla in the year 1840, amounted to £664,948
The value of exports was 736,012
Total £1,400,960
Total of 1837 1,075,540
Total of 1838 1,144,404
Increase from 1837 to 1840 £ 325,420

In addition to the above trade of 1840 there have been extra commercial movements in consequence of the Anglo-Chinese crisis, chiefly in regard to cottons and opium, which the British merchants at Bengal sent back provisionally to the warehouses of Manilla. These movements were estimated in imports at 392,424*l.*, and in exports at 372,432*l.*

STATEMENT of the Value of Imports into, and Exports from the Port of Manilla in the Year 1840, distinguishing the Countries traded with.

COUNTRIES.	Imports.	Exports.	TOTAL.
	£	£	£
England	274,360	346,692	621,052

Specie	16,500	England	10,850
		United States	1,152
		France	416

It appears, by the above tables, that, at present, England enjoys nearly half of the trade of Manilla. Four-fifths of the total value of tissues of all kinds furnished to Manilla, came from England. The value of these imported from France amounted to 18,000*l.*, being tissues of cotton and of silk, which is a larger sum than that in the preceding years.

The chief reason of the small amount of traffic carried on between Manilla and France, is that this port of the Philippine Islands only exports such articles as sugar, coffee, dyewoods, indigo, &c., with which France is chiefly provided by her colonies and America.

The value of articles imported into Manilla from America, has nearly doubled since 1838, and is ten times what it was in 1837. This is owing partly to the Anglo-Chinese crisis, and partly to the dispute into which American paper has fallen, which by that country is forced to export a larger quantity of merchandize to Manilla. The value of articles imported into Manilla from China, which amounted in 1840 to 115,750*l.*, in general only amounts to from 28,000*l.* to 32,000*l.*

The trade between Manilla and Sydney has increased considerably. During the three first months of 1841, more than 25 vessels from New Holland entered at Manilla. The vessels from Sydney generally arrive in ballast, to obtain freight for England.

The following were the Average Prices of Colonial Produce at Manilla, during the last Six Months of 1840.

Furniture	25,000
Books and paper	23,000
Horology	14,000
Drugs	14,000
Other articles	81,000
Total	610,000

England.—The British direct trade with Manilla, was equal to one-fourth of the whole trade.

Tissues, particularly those of cotton, chiefly handkerchiefs, called *cambayas*, an article greatly consumed in the Philippine Isles, compose the greater part of the English imports; and sugar and indigo formed the exports from Manilla.

The direct trade of England with Manilla, has decreased in 1842; but the trade between Manilla and the English colonies of India and Australia, has rapidly increased.

The value of the interchange between Manilla and these possessions, constituted in 1842, one-sixth part of the whole trade of Manilla, and amounted to 7,500,000 francs, or £350,000 sterling.

The sole trade between Sydney (Australia), and the capital of the Philippine Isles, which began only in 1839, for it did not exist in 1838, amounted in 1842 in value to more than 3,000,000 of francs, or 120,000*l.* sterling. The imports from Sydney to Manilla have been inconsiderable, consisting chiefly of marine stores. Sugar, and various other products constitute the exports from Manilla to Sydney.

The trade between the English possessions of India, and in particular Bombay and Singapore, with the Philippine Isles, which in 1842 employed 26,000 tons of shipping, which carried to and from Manilla to the value of 4,500,000 francs or 1,800,000*l.* sterling. A great part of the imports from India consisted of opium in transit through Manilla to China.

The trade of the United States with the Philippines was equal to one-sixth part of the interchange between the latter and all other countries. The imports from the United States to the value of 120,000*l.* in 1842, consisted in cotton tissues, raw, and some marine stores. The American naval rendezvous in the Polynesian seas is generally at Manilla.

The coarse domestic or cotton manufactures of the United States now compete successfully with those of England. The American vessels take nearly all in return from Manilla, Abaca (Manilla hemp), cordage, and a considerable quantity of sugar. In all, in 1842, to the value of nearly 5,000,000 francs or 200,000*l.* sterling.

The trade between the Philippines and China amounted in 1842 to the value of 180,000*l.* sterling. The exports consist of indigo, gold dust, provisions, cotton, wood, &c. The imports from China consist of specie, tea, and tissues. The trade has nearly doubled since 1840. At the present time building wood, the growth of the Philippine Isles is exported to Hong-Kong; to which, it is expected that an export will follow of the coffee, cigars, sugar, and rum of Manilla.

The navigation between Manilla and China employed in 1842, 35,000 tons of shipping, more than one-third of the total navigation.

The direct trade between Spain and the Philippines ranges under that of the fifth in the scale of the trade between Manilla and other countries. Spanish ships however import largely from England, as they enjoy superior privileges, in the Philippines, to the British flag.

Foreign and Colonial Merchandize Imported into the United Kingdom from the Philippine Islands.

	Indian Corn	32 0	31 0

Portugal (see trade of Lisbon and Oporto hereafter,) has, as far as our accounts inform us, at all times grown insufficient corn for the consumption of the inhabitants.

STATEMENT of the Prices of Horned Cattle, Sheep, and Pigs, and of the various descriptions of Meat, (fresh and salted) in Spain, Portugal, the Italian States, and some of the Ports of the Mediterranean and the Adriatic, and also at Odessa, in the year 1841.

CHAPTER XVIII.

MISCELLANEOUS STATEMENTS.

COPPER MINES OF CUBA.

The government, when the mines of Cuba, near Santiago, were opened by a company in 1830, exempted the ore from duty for ten years. This exemption was extended to 1843, when it ceased. The greater part of the supplies for these mines were brought from England. The average produce of the ore is stated to be from 15 to 16 per cent, and the mines, though expensively worked, pay 10 per cent to the speculators.

REMARKS ON THE CENSUS, AND THE IMPORTS AND EXPORTS OF CUBA.

"To the official value of exports and imports, add 12½ per cent, to get at the exact amount.

"To the number of slave population returned, add nearly 50 per cent, to get at the correct number; that difference being withheld and concealed by many, conceiving the object of the census to be taxation."

The above is extracted from a private letter from one of the first merchants at Cuba. Fraud at the customs is an hereditary practice at Cuba, inherited from Old Spain.

CUSTOMS AND EXCISE REVENUE OF CUBA.

1841. Customs, 4,767,399 dollars; Excise, 1,445,407 dollars. Total 6,212,806= £1,247,561.

SPANISH MINES.

Extract from a Letter relative to Mining in Spain.

"I have been in this part of Spain (Biscay) for the last six weeks, detained by a 'Company' established for the purpose of working the coal-mines in the province of Biscay; there are no less than four rival companies of the same description. A mineral mania afflicts the land. In some parts it is the mercury mania, in some the silver mania; some are copper mad, while others are coal mad. Some, unfortunately, are furious with a mad attack on all the precious as well as the baser metals at once. Each one builds his 'château en Espagne' with the enormous wealth he imagines he shall dig ready coined out of the convulsed state of his native mountains.

"On my arrival here the 'Company' was most impatient to have a coal-mine opened, and they pointed out a spot close to the town and the river, which they gravely assured me was the most convenient, 'because the coal could be consumed or exported without expense of carriage.'

"I had no little difficulty in persuading these good folks that the first thing to be done was to ascertain if coal existed in this favourite spot. They were stupified, and really looked so, to hear that coals could not always be found by *going deeper*. It required little search to convince me that no coal seams existed near the town, and, after six weeks' hard riding in every direction, I am persuaded that no coal measures exist in any part of the province of Biscay. If such were the case, the coal would have been found long ago. The mountains have been turned from their foundations—the strata lies at an angle of 60 to 80 degrees with the horizon, and from natural as well as artificial causes is laid bare in so many places that an exact knowledge of its sectional composition is easy to ascertain. For the same reason I am inclined to think that no coal will be found to any remarkable extent either in the province of Santander or the four Basque provinces, though I should not be surprised if good coals were to be found south of Asturias, that is in the flat country between Oviedo and Madrid. Asturias abounds with good coal, but to what extent there are no data to establish, as no surveys have been made. The measures hitherto discovered are from thirty to forty miles from the coast, in a mountainous country.

"The seams lie at an angle generally of 80 degrees. The expenses of getting, with interest of capital, &c., under the most favourable circumstances the proprietor can expect, will not be less than 9*s.* per ton—add 8*s.* per ton for carriage, &c., to the coast, and the cost price will be 17*s.* per ton. This is by no means an exaggerated calculation, for the Asturian coals are selling in Bilboa at 28*s.* per ton.—the ship-carriage is not more than 5*s.* per ton, yet the Asturian colliers complain that they are losing money, and it is a fact that they are by no means in a prosperous state.

"The duty on English coals is—in Spanish vessels 9*s.* 8*d.*—English vessels 12*s.* 8*d.* per ton, 2400lbs. Even with these heavy duties English coals will continue to be sent to some of the Spanish ports. Besides coals, there is plenty of good iron ores—the country, from its mountainous formation, furnishes numerous waterfalls—the population is great, and the character of the people is quiet and laborious; with so many favourable elements, I imagine the Asturians will one day, and not long, be one of the most important provinces of Spain. The consumption of coals in Spain up to this period, is exceedingly limited—charcoal is the only combustible, except in kitchens, where wood is generally used.

"The peroxide of iron, a mineral very rich and of excellent quality, abounds in all the northern provinces, particularly in the neighbourhood of Bilboa. There are also numerous small forges for the making of iron, which is done on what is called the Catalan system, no doubt the primitive plan first adopted in half-savage life. The quantity of bar iron made in Biscay varies very little, and amounts annually to about 90,000 quintals of 155lbs. per quintal, say 6200 tons. Spanish bar iron sells here, from 20*l.* to 27*l.* per ton. English bar iron, of same dimensions, from 18*l.* to 25*l.* per ton. Spanish quality is softer, with a longer fibre than the English, owing to its fabrication with charcoal. The quantity of pig and bar iron imported here from England has very much increased, and is increasing. If iron works are established in Asturias, of which there is more than a probability, English iron will be shut out, if the present high duties are continued."

AGRICULTURE OF BISCAY.

Extract from a letter written from Bilboa on that subject.

"Several corn-mills have been erected, and others are erecting, both in this province, the province of Santander, and Old Castile, for making flour for exportation to the Havanna. The principal port of shipment is Santander, but preparations are making for shipping large quantities from Bilboa.

"The present price of good Old Castile wheat, on board at the port, is 40 reals the fanega of 90lbs., or 43*s.* the quarter: the freight to London would be 6*s.* per quarter.

"This same wheat costs at, or between Valladolid and Burgos, 24 to 26 reals the fanega, or 26*s.* the quarter; the carriage absorbs this immense difference. The Basque provinces do not grow sufficient wheat for their own consumption, though there is no lack of good strong land to produce a considerable surplus for exportation. The causes of this are various. The civil war was one cause; it has ceased, and I have observed in my geological excursions, that more land is getting into work; the principal cause is the bad system of cultivation—or rather, perhaps, the want of capital. The plough, and all other

improved implements may be said to be unknown: it is all hand cultivation. From one to four acres is the size of the farms; just sufficient for a man and his wife, and family to cultivate.

"Cultivated land near the high road is worth from 30*l.* to 50*l.* per acre. High uncultivated land is worth very little.

"A Welch farmer has come out with his family and purchased 150 acres of land at 1*l.* per acre within 2 miles of Bilboa, and close to a good road. He assures me he shall be able to get a produce of 20 to 1. Farms in no part of the north of Spain or provinces adjacent pay more than 1¼ to 2¼ per cent, though lands have comparatively no burdens, and the purchase so low—fault of an unproductive culture. In Old Castile farms are larger, but for want of manure, land seldom or never produces three crops in five years."

CULTIVATION IN PORTO RICO.

The southern part of the island is generally under sugar plantation. Most other parts of the island are under a mixed cultivation of sugar, coffee, field rice, maize, plantains, tobacco, and pasture.

Artificial irrigation is not practised; but notwithstanding the drought which prevails in the south, sufficient water for nourishing the cane is obtained at about two feet below the surface.

The average produce of sugar, per English acre, for the whole of Porto Rico, is estimated by Flinter at 30 cwt.

The coffee cultivation belongs chiefly to small proprietors. The coffee-trees grow to a great height, and yield from 15 to 40 lbs. each. Most of the poorest families have from 15 to 30 trees. In the forest coffee-trees grow in the wild state, laden with berries. The free labourers bring each, during the harvest, to market, parcels of from 40 lbs. to a quintal of coffee, as well as the surplus of all their crops in exchange for articles of clothing and various articles of necessity or commerce. On the large estates coffee is cultivated by slaves. The plants are kept low by pruning; the annual produce is said to be little more than a pound for each plant. Tobacco is only cultivated by free labour.

The grazing lands on the north and north-east of the island are extensive, and large herds of horned cattle pasture on them. Sheep do not thrive well in Porto Rico.

CULTIVATION IN THE PHILIPPINES.

COMPARATIVE Statement of Annual Cost and Proceeds of 5 Cabalitas of Land sowed with 5 Measures of Indigo Seed, in the Province of La Pampagna.

	dlrs.	r.	m.
For ploughing the land once in 5 days	1	2	0
For harrowing once, sowing and covering the same	0	5	3
Expenses of fencing in the same	11	0	6
For 5 measures of seed	1	4	6
For making 2 harrows, and fixing the same	1	6	0
Expenses of workmen, and 25 vats for preparing the same	9	1	0
Expenses of overseer	3	7	3
For 10 measures of lime	2	4	0
For baskets, stretchers, &c., to dry the same	0	1	0
Expenses of attending vats	3	1	0
Total cost	35	3	6

COMPARATIVE Statement of 2 Cabalitas of Land, sowed with 1 Measure of Rice; that is, of Cost and Proceeds in the Province of La Pampagna; viz.,

	dlrs.	r.	m.
For ploughing the land twice in two days	1	0	0
For harrowing ditto twice in two days, and sowing	1	1	0
For fencing ditto	2	0	6
For reaping ditto, with 10 persons	2	0	6
For thrashing and cleaning 10 measures	2	2	0
Total cost	8	4	0

COMPARATIVE Statement of the Annual Cost and Proceeds of a Cabalita of Land, planted with Sugar-cane, in the Province of La Pampagna; viz.,

	dlrs.	r.	m.
For ploughing the land six times	1	4	0
For harrowing ditto three times	0	6	0
For inclosing the same in a wicker fence, stakes, &c.	4	0	9
For 4000 sprouts for planting, digging holes, &c.	1	7	6
For repairing fences and weeding	0	6	0
For 14 sugar-moulds	2	5	0
For expenses of manufacturing 14 loaves of sugar	12	0	0
Total cost	23	5	3

GENERAL Statement of the Sales, Expenses, and Proceeds of the Tobacco Monopoly from 1782, when it commenced, till the Year 1809 inclusive.

YEARS.	Sales.	Expenses.	Proceeds.
	dollars.	dollars.	dollars.
1785	379,229	151,710	227,519
1793	545,977	223,539	322,497
1799	981,240	522,504	458,736
1801	874,884	358,183	516,101
1803	1,051,160	431,125	620,035
1809	957,291	451,110	506,754

The total value of sales during the years 1782 to 1809 inclusive, amounted to 19,106,379 dollars.

	dollars.
The expenses	9,049,573
The net proceeds to	10,056,806
The amount remitted to Spain	1,971,695
Expended on public works	345,261
Paid into the Manilla treasury	7,013,904

We have no later accounts: further than that the expenses bear even a greater proportion to the proceeds than as above stated.

SECTION XV.

PORTUGAL.

CHAPTER I.

POSITION AND NATURAL RESOURCES OF PORTUGAL.

The position of Portugal is, perhaps, superior to that of Spain; and in point of situation, exceedingly inconvenient to the latter; the principal rivers of which, find their way to the sea, only through the former. The physical aspect of Portugal, closely resembles that of Spain. The mountains, like the rivers, of the one, intersecting the other kingdom. The prevailing features that present themselves are, a sea coast occasionally irregular, but not deeply indented; rivers, mountains, and rich valleys; two great plains, one south of the Douro, the other south of the Tagus: luxuriant vegetation; the most slovenly husbandry; dirty habitations; scarcely any roads, and generally a naturally rich soil, and picturesque country.

The soil of Portugal yields (or should yield) all the productions common to France and Spain. It is admirably adapted for the growth of the best vines, which form the principal branch of agricultural industry; wheat, maize, and other grains, grew in the greatest perfection; yet the inhabitants have for centuries depended chiefly on other countries for bread. Although equally rich in minerals as Spain, scarcely any mines are worked. The salt of St. Ubes (exported in such great quantities) must be considered, in respect to labour, as manufactured by the sun. The Tagus, Douro, and other rivers of Portugal, open a most important, inland navigation, susceptible of improvement by the formation of roads and canals, neither of which can scarcely be said to exist. The harbours are few, and have sand-bars at their entrances, which render them intricate. Lisbon, however, which is commodious and safe, will admit the largest ships. Oporto has water over the bar, for vessels of 300 to 400 tons; the other harbours are Vianna, Aveiro, Figueira, Setubal or St. Ubes, Faro, Lajos, and Tavira.

The Madeiras and Azores are important, as producing in great abundance, grapes, oranges, and other fruits; and having harbours, or rather shelter for

shipping. The Cape Verd islands, Mosambique, and Angola; the small settlements of Goa, Macao, &c. in the east, are considered at present, as of little benefit to Portugal.

Portugal has lost her vast dominions in the western world; but her natural resources, and the colonies she still retains, leaves her in possession of all the elements necessary for again becoming a great commercial nation.

AREA, Population, &c. of Portugal.

PROVINCES, &c.	SUPERFICIES. ENGLISH Miles	ENGLISH Statute Acres.	French Leagues.	Population in 1798.	CHIEF TOWNS.	Population of Chief Towns, 1798.

Grand total	....	....	....	4,503,000		

Mr. M'Culloch states the population of Portugal in 1838, to be 3,549,420; no doubt from the authority which he considered the best. The "Annuaire Historique Universelle," Paris, for 1842, states the population of Portugal at 3,224,174 inhabitants. We, however, from all the accounts transmitted to us, are led to conclude that the present number of inhabitants does not amount to *three millions*; and that the population of the chief towns does not probably exceed the above statement for 1798.

The Portuguese fleet consists only of 2 ships of the line, 4 frigates, and six gun-brigs. The regular army is stated to consist of a total force of 26,418.

GOVERNMENT OF PORTUGAL.—Portugal, after the decline of the feudal authorities, and her subjugation under Philip II., became an absolute arbitrary government. The tryanny of the monarchy, and the most corrupt intrigues, have long over-ruled all other considerations and interests. The Marquis of Pombal chiefly, and a few others, who held places in the ministry, endeavoured, with partial success, to rescue the kingdom from tyranny and degradation. Corruption, however, prevailed; justice was polluted. The judges, with wretched salaries, were influenced by bribery; and, the nobles, who are divided into two branches, the *Titulados* and the *Hidalgos*, held the peasantry in slavish subjection.

This shameful state of misgovernment and injustice continued until the French, under the empire, entered the country, and until the Braganza family

were restored, when Portugal, imitating Spain, compelled her king to grant a representative constitution. A counter-revolution re-established absolutism. Dom Pedro separated Brazil from Portugal, reserving the former to himself, and granting to the latter a charter. The usurpation of Miguel and despotism followed. Dom Pedro finally expelled him, and restored the Charter, leaving the kingdom to his daughter.

By the Constitutional Charter, the legislature consists of a House of Peers, and a House of Representatives. The eligibility of deputies and electors can scarcely yet be defined in the still unsettled state of the government. The legislative proceedings, and the acts of the executive government, are neither distinguished by profound deliberation, nor judicious policy: which, considering the long mis-government and degradation of the kingdom, may be easily accounted for.

The kingdom is divided, according to the decision of the Cortes, in 1823, into 12 provinces, 26 *Comarcas*, and numerous *Jugaldos*, or cantons. But, as yet, these are little more than projected divisions.

The Council of State is composed of seven, or more members.

The Ministerial Department, &c., consists of—

The Ministers of Interior, Justice, and a section of Foreign Affairs; Finances and Public Treasury; Foreign Affairs and War, and Marine and Colonies.

CHAPTER II.

COMMERCIAL LEGISLATION OF PORTUGAL.

Commerce has, in this kingdom, not been so much restricted by a high tariff or prohibitions, as by the maladministration of a government, which, by its imbecility and tyranny, broke down those energies and that spirit of adventure which had at one time distinguished the Portuguese nation. The extensive lands held by the monasteries, and the darkening power of the church, have always formed another chief cause of national degradation. The separation of Brazil nearly completed the ruin of the Portuguese trade, which, in regard to exports, is now chiefly limited to wine, fruits, wood, cork, and salt.

The natural advantages and resources of the kingdom, however, ought to enable Portugal to become one of the most important trading countries in Europe The want of roads, the barbarism of the laws and police,—the consequent insecurity of person and property, and the general ignorance of the population, especially in latter times, as to all the arts and sciences, do not warrant us to hope for any early regeneration of this ancient kingdom.

Of all the treaties into which England has entered with foreign states, none has been so highly and generally praised as that with Portugal, signed by Mr. Methuen at Lisbon, in December, 1703. Those who have undergone the labour of inquiring fully into its effects, will conclude that none has been more generally pernicious.

Treaties or conventions of commerce have been considered as contracts by which one nation has endeavoured to obtain an advantage from another. If the true principles of trade were fully understood, treaties for regulating international commerce would become useless. The spirit of such conventions, between one nation and another, distinctly conveys the meaning that some others, than the contracting states, are placed upon a less favourable understanding: while all exhibit the restrictions which commercial legislation has, in almost every country, imposed on industry, trade, enterprise, and intercourse.

If the qualifications necessary for the negotiation of a good commercial treaty, as sketched in a pamphlet attributed to Mr. Eden, in 1787, could ever be possessed by any one man, or even by several men, and if such good treaty be pronounced "a masterpiece of skill," great allowances may be made for those who have negotiated commercial treaties with foreign governments; but at the same time such negotiations ought never to be intrusted to any but men who possess the best knowledge of the sound principles of international exchange, joined to skill, discretion, and judgment, in executing a trust in which the most numerous interests of nations, and individuals, are so deeply, widely, and may, in consequence, be permanently involved.

The Methuen treaty stipulated for the admission of English woollens (then prohibited) into Portugal, in consideration of England admitting, "for ever after," Portugal wines at two-thirds of the duty payable on the wines of France.

This most unwise of treaties with a country having but a small population, the greater part of which were and are poor and unable to consume any great quantity, comparatively speaking, of British woollens, gave rise to that legislation on the part of France, which has constituted a war of material injuries, between two great countries, from that period up to the present day.

With the visionary and fallacious object of encouraging our woollen manufactures, by finding an exclusive market for them in Portugal, we nearly prohibited the importation of the leading article which France had to interchange with us for manufactures; and for this purpose we consented to drink scarcely any other than the heavy, black, and spirituous wines of Oporto, instead of the clear and wholesome wines of Bordeaux, Burgundy, and Champagne.

We do not deny that there were advantages in having a market for our woollens in Portugal,—especially one, of which, if not the principal, was the means afforded of sending them afterwards by contraband into Spain. English woollens, however, found their way extensively into Portugal before the date of the Methuen Treaty, in defiance of the legal prohibition; and fortunately that treaty

exists no longer to shackle us in our commercial negotiations with other wine-producing countries.

Portugal prohibited the importation of flour in 1783, and in 1816 established rigorous corn laws. Yet Portugal has not been rendered independent of foreign countries for bread.—See Tables of Corn imported hereafter.

The official valuations in her recent tariff are complicated vexations, and based capriciously on ancient prices.

The duty on fish, which was fixed at 800 rees (4*s.* 6*d.* sterling), has been increased to 1600 rees, or 9*s.*, about 100 per cent ad valorem. The object of this increase was stated to be the protection of the fishing company: a miserable concern, of which an account will be found hereafter. The great increase of duties on woollens and other articles in the Tariff of 1841, is declared to be for the purpose of protecting and encouraging domestic industry.

MANUFACTURES.—These are confined to some coarse and very inferior woollens, a few common cottons and linens, of the rudest kind; and a few other rudely made articles.

Mr. Baillie says, "It is surprising how ignorant, or at least superficially acquainted, the Portuguese are with the commonest branches of handicraft; a carpenter is awkward and clumsy, spoiling every work he attempts, and the way in which the doors and woodwork, even of good houses are finished, would have suited the rudest ages.

"Their carriages of all kinds, from the fidalgo's family coach to the peasant's market-cart, their agricultural implements, locks and keys, &c., are ludicrously bad. They seem to disdain improvement, and are so infinitely below par, so strikingly inferior to the rest of Europe, as to form a sort of disgraceful wonder in the middle of the nineteenth century."

Such other accounts as we have of their industry are not more favourable.

The food of the labouring classes consists chiefly of garlic, dried fish, rancid oil, goat-cheese, nuts, and other articles, which are the most easily obtained. Uncleanliness and indolence prevails. We attribute this to the long misrule of the government, the general ignorance of the people, and the bigotry of the church, far more than to the natural character of the Portuguese, who have been greatly and unjustly abused. Naturally, they are well disposed and tractable. They require only education and the force of example to regenerate them so as to class with the more civilized nations of Europe.

TREATY of Commerce and Navigation between her Majesty and the Queen of Portugal. Signed at Lisbon, July 3, 1842.

(Ratifications exchanged at Lisbon, July 30, 1842.)

ARTICLE I. The subjects of each of the High Contracting Parties shall, in the dominions of the other, enjoy all the privileges, immunities, and protection enjoyed by the subjects of the most favoured nation. They shall be entitled to travel, to reside, to occupy dwellings and warehouses, and to dispose of their personal, leasehold, and all other property lawfully held by them, by sale, gift, exchange, or will, or in any other way whatever, without the smallest let, and without any hinderance whatever.

They shall be exempt from forced loans, or any other extraordinary contributions not general, or not by law established, and from all military service, by sea or by land. Their dwellings, warehouses, and every thing belonging thereto, shall be respected, and shall not be subjected to any arbitrary visits or search. No examination or inspection shall be made

of their books, papers, or accounts, without the legal sentence of a competent court or judge.

The assessment of the amount to be paid by the British subjects in Portugal and its dominions for manecio or decima industrial, and from which they have hitherto enjoyed special exemption, shall in all cases in future be made, if so claimed by them, according to the rate to be given by informadores, of whom two shall be Portuguese and two British merchants, to be named by the Concelho de Districto; and in case any objection should be made by the parties assessed to the amount of the said assessment (which shall in all cases bear a just proportion to the rate at which the native subjects of Portugal are assessed), they shall have a right to appeal to the tribunal of the treasury, and to appear in person, or to be heard by counsel, before the said tribunal; and in the meantime no execution shall be made on their property, until an ultimate decision shall have been pronounced by the said tribunal.

It is, however, understood that British subjects resident in Portugal and its dominions, not carrying on trade, or exercising any branch of industry therein, but deriving their incomes from other sources, shall, in like manner with Portuguese subjects, be wholly exempt from the operation of the said manecio or decima industrial tax.

The subjects of each of the High Contracting Parties shall also, within the dominions of the other, be allowed the free use and exercise of their religion, without being in any manner disturbed on account of their religious opinions: they shall be allowed to assemble together for the purposes of public worship, and to celebrate the rites of their religion in their own dwelling-houses, or in the chapels or places of worship appointed for that purpose, without any the smallest hinderance or interruption whatever, either now or hereafter; and her Most Faithful Majesty does now and for ever graciously grant to the subjects of her Britannic Majesty to build and maintain such chapels and places of worship within her dominions. It being always understood that the said chapels and places of worship are not to have steeples or bells.

Her Britannic Majesty's subjects shall likewise have full liberty to bury their dead, after the manner, and with the ceremonies usual in their respective countries, and in the grounds and cemeteries which they shall have purchased and prepared for that purpose; and the sepulchres of the dead, in conformity to ancient and existing practice, shall in no way, or on any account, be disturbed.

II. The subjects of either of the Contracting Parties may freely dispose by will of the personal effects which they shall possess in the territories of the other; and their heirs, though subjects of the other contracting party, may succeed to their personal effects, either by will or *ab intestato*, and may obtain possession of the same in due course of law, either in person, or by other persons appointed by them to act on their behalf. In the event of the absence of heirs, or of persons duly appointed to act for them, the consul may be authorized to take charge, in due course of law, of the said effects, until the owner shall have made the necessary arrangements for obtaining possession of the property. If disputes shall arise between several claimants with respect to the title which each may have to the property, such disputes shall be decided by the courts of the country in which the property is situated; and if hereafter any favour as regards the possession or inheritance of landed or funded property (*bienes fonds*) shall be granted, in the dominions of either of the High Contracting Parties, to the subjects of any other nation, the same favour shall extend reciprocally to their respective subjects, as the case may be, either in Portugal or Great Britain.

III. The subjects of either Contracting Party residing within the dominions of the other, shall be free to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor, agent, or interpreter; nor shall any such British subjects be restrained in their choice of persons to act in such capacities, nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall be given, in all cases, to the buyer and seller to bargain together, and to fix the price of any goods, wares, or merchandize, imported into, or to be exported from, the dominions of either Contracting Party, the laws and established customs of the country being duly observed.

The subjects of either of the High Contracting Parties residing within the dominions

of the other, shall be at liberty to open retail stores and shops, under the same municipal and police regulations as native subjects; and they shall not, in this respect, be liable to any other or higher taxes or imposts than those which are or may be paid by native subjects.

IV. There shall be reciprocal liberty of commerce and navigation between the subjects of the two High Contracting Parties: and the subjects of the two sovereigns respectively shall not pay in the ports, harbours, roads, cities, towns, or places whatsoever in either kingdom, any other or higher duties, taxes, rates, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods, the produce of the one country, upon importation by sea or by land from that country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of and imported from any other country; and no duty, restriction, or prohibition shall be imposed upon the importation and exportation from one country to the other, of the goods and produce of each, which shall not be imposed upon goods of the same kind, when imported from or exported to any other country: and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and her Majesty the Queen of Portugal, do hereby bind and engage themselves, their heirs, and successors, not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects or citizens of any other state, which shall not also, and at the same time, be extended to the subjects of the other High Contracting Party, gratuitously, if the concession in favour of that other state shall have been gratuitous, and on giving, as nearly as possible, the same compensation or equivalent, if the concession shall have been conditional.

V. No duties of tonnage, and no harbour, lighthouse, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the two countries, if laden: or in respect of any voyage, if in ballast, which shall not be equally imposed, in the like cases, on national vessels.

VI. All goods, the growth, produce, or manufacture of their respective possessions, which can legally be imported into either country from the other, in ships of that other country, shall, when so imported, be subject to the same duties, whether they be imported in ships of the one country or in ships of the other: and in like manner, all goods which can legally be exported from either country to the other, in ships of that other country, shall, when so exported, be subject to the same duties, and be entitled to the same drawbacks, bounties, and allowances, whether they be exported in ships of the one country or in ships of the other.

VII. In order to promote and encourage the commercial intercourse between the dominions of the High Contracting Parties, for the mutual benefit of their respective subjects, her Britannic Majesty and her Most Faithful Majesty agree to take into consideration the duties now levied upon articles the produce or manufacture of either country, with a view to make such reductions in those duties, as may be consistent with the interests of the High Contracting Parties respectively.

This matter shall without delay be made the subject of a special negotiation between the two governments.

VIII. British ships shall be allowed to proceed direct from any port of her Britannic Majesty's dominions to any colony of her Most Faithful Majesty, and to import into such colony any goods, the growth, produce, or manufacture of the United Kingdom, or of any of the British dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Most Faithful Majesty: and such British ships, and such goods so imported in them, shall be liable, in such colony of her Most Faithful Majesty, to no higher or other duties and charges, than would be there payable on Portuguese ships importing the like sorts of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in Portuguese ships.

In like manner, Portuguese ships shall be allowed to proceed direct from any port of her Most Faithful Majesty's dominions to any colony of her Britannic Majesty, and to im-

port into such colony any goods the growth, produce, or manufacture of Portugal, or of any of the Portuguese dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Britannic Majesty; and such Portuguese ships, and such goods so imported in them, shall be liable, in such colony of her Britannic Majesty, to no higher or other duties and charges, than would be there payable on British ships importing the like sorts of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in British ships.

IX. British ships shall be allowed to export from any colony of her Most Faithful Majesty to any place not under the dominion of her said Majesty, any goods not generally prohibited to be exported from such colony; and such British ships, and such goods so exported in them, shall be liable, in such colony, to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, Portuguese ships exporting such goods, or on such goods exported in Portuguese ships.

In like manner, Portuguese ships shall be allowed to export from any colony of her Britannic Majesty to any place not under the dominion of her said majesty, any goods not generally prohibited to be exported from such colony: and such Portuguese ships, and such goods so exported in them, shall be liable, in such colony, to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, British ships exporting such goods, or on such goods exported in British ships.

X. It is hereby declared that the stipulations of the present treaty are not to be understood as applying to the navigation and carrying trade between one port and another, situated in the dominions of either contracting party, if such navigation and trade should in those dominions be reserved by law exclusively to national vessels. Vessels of either country shall, however, be permitted to discharge part of their cargoes at one port in the dominions of either of the High Contracting Parties, and then to proceed, with the remainder of their cargo, to any other port or ports in the same dominions, without paying any higher or other duties in such cases, than national vessels would pay in like circumstances; and they shall be permitted to lade, in like manner, at different ports in the same voyage outwards.

XI. The reciprocal liberty of commerce and navigation declared and stipulated for by the present treaty, shall not extend to contraband of war, or to articles the property of the enemies of either party.

The power granted by former treaties to carry, in the ships of either country, goods and merchandize of any description whatever, the property of the enemies of the other country, is now mutually renounced.

XII. In all cases in which, in either kingdom, the duty to be levied upon any goods imported from the other kingdom shall be not a fixed rate, but a proportion of the value of the goods, such *ad valorem* duty shall be ascertained and secured in the following manner; that is to say, the importer shall, on making his entry for the payment of duty at the custom-house, sign a declaration, stating the description and value of the goods at such amount as he shall deem proper; and in case the officer or officers of the customs shall be of opinion that such valuation is insufficient, he or they shall be at liberty to take the goods, on paying to the importer the value thereof according to the declaration of the importer, together with an addition of ten per cent; and the custom-house officer shall at the same time return to the importer any duty which the importer may have paid upon such goods; and the amount of these sums shall be paid to the importer on the delivery of the goods to the said officer or officers, which must not be later than fifteen days from the first detention of the goods.

XIII. Inasmuch as all merchandize, of whatever origin, whether admissible for home consumption or not, may be received and warehoused in all those ports of the United Kingdom of Great Britain and Ireland which are by law appointed to be warehousing ports for such articles, pending the entry of the same, either for home consumption or for re-exportation, as the case may be, under the regulations appointed for this purpose, and without such articles being liable, in the meantime, to the payment of any of the duties with which they would be charged, if upon arrival they were entered for consumption within the United Kingdom;—

In like manner the Queen of Portugal covenants and agrees that the ports of her Most Faithful Majesty's dominions, which now are, or which shall hereafter become by law, warehousing ports, shall be free ports for receiving and warehousing, either for home consumption or for re-exportation, as the case may be, all merchandize imported in British ships, and all articles whatever, the produce or manufacture of the British dominions imported by Portuguese ships; and the articles thus received and warehoused, subject to due regulations, shall not be liable, in the meantime, to any of the duties with which they would be charged, if they were entered for consumption on their arrival in the dominions of her Most Faithful Majesty.

XIV. All goods or merchandize found on board of, or which shall have formed the cargo, or part of the cargo, of a vessel of the one country, which shall be wrecked, or left derelict, on or near the coast of the other country, unless the importation of such goods or merchandize shall be absolutely prohibited by law, shall be admitted for home consumption in the country on or near the coast of which such vessel shall be wrecked, or left derelict, or such goods or merchandize may be found, on payment of the same duty, as if the said goods or merchandize had been imported in a national vessel, even though such goods or merchandize could not by law be imported into the said country in any other than national vessels: and in fixing the amount of duty to be paid on such goods or merchandize, regard shall be had to any damage which the said goods or merchandize may have sustained.

To prevent frauds, the Board of Customs of each nation shall exercise their judgment as to the causes of wrecks; and when they are satisfied that the said wrecks were the result of accident or misfortune, and free from suspicion of collusion, they shall authorize, at the option of the proprietor or agent, if present, or otherwise of the consul, the transhipment or the sale for home consumption, of the goods or merchandize, provided that such goods and merchandize could have been legally imported by the ships of the one country into the ports of the other country.

If any ships of war or merchant-vessels should be wrecked on the coasts of either of the High Contracting Parties, such ships or vessels, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods or merchandize which shall be saved therefrom, or the produce thereof, if sold, shall be faithfully restored to the proprietors, upon being duly claimed by them, or by their agents duly authorized; or if there are no such proprietors or agents on the spot, by the respective consuls of the nation to which the proprietors of the said ships, vessels, or goods may belong, and in whose district such wreck may have taken place, provided such claim be preferred within a year and a day from the time of such wreck; and such consul, proprietor, or agent, shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandize saved from the wreck shall not be subject to duties, unless cleared for local consumption.

If any merchant-vessel of either country should be driven into the ports of the other by stress of weather, for the purpose of effecting necessary repairs, every facility shall be afforded to such vessel for obtaining the assistance it may be in need of.

The strictest reciprocity shall be observed, in the most favourable sense, as to the relief to be afforded to such vessel from the duties, charges, and expenses in the ports of either nation, to which vessels, entering solely for the purposes of trade, are subjected. Sufficient time shall be allowed for the completion of repairs; and while the vessel shall be undergoing repair, its cargo shall not unnecessarily be required to be landed, either in whole or in part: and any difference of opinion which may arise between the custom-house authorities and the masters of the said vessels, as to the necessity of landing all or any part of the cargo, shall be referred to two sworn or public surveyors, one to be named by the chief custom-house authority of the port, and the other by the consul of the nation to which the vessel belongs.

XV. Her Majesty the Queen of Portugal engages that the commerce of British subjects within the Portuguese dominions shall not be restrained, interrupted, or otherwise affected by the operation of any monopoly, contract, or exclusive privilege of sale or purchase whatsoever; but that the subjects of the United Kingdom shall have free and unrestrained per-

mission to buy from and sell to whomsoever they please, and in whatever form and manner may be agreed upon between the purchaser and seller, without being obliged to give any preference or favour in consequence of any such monopoly, contract, or exclusive privilege of sale and purchase. And her Britannic Majesty engages that a like exemption from restraint, in respect to purchases or sales, shall be enjoyed by the subjects of her Most Faithful Majesty trading to or residing in the United Kingdom. But it is distinctly to be understood, that the present article shall not be interpreted as affecting the special regulations now in force, or which may hereafter be enacted, with a view solely to the encouragement and amelioration of the Douro wine trade, (it being always understood that British subjects shall in respect of the said trade be placed on the same footing as Portuguese subjects,) or with regard to the exportation of the salt of St. Ubes.

This article does not invalidate the exclusive right possessed by the Crown of Portugal, within its own dominions, to farm for the sale of ivory, urzela, gold dust, soap, gunpowder, and tobacco, for home consumption; provided, however, that should the above-mentioned articles, generally or separately, ever become articles of free commerce within the dominions of her Most Faithful Majesty, the subjects of her Britannic Majesty shall be permitted to traffic in them as freely and on the same footing as the subjects or citizens of the most favoured nation.

XVI. It is agreed and covenanted that neither of the High Contracting Parties shall knowingly receive into, or retain in its service, any subjects of the other party who have deserted from the naval or military service of that other party, but that, on the contrary, each of the Contracting Parties shall respectively discharge from its service any such deserters upon being required by the other party to do so.

It is further agreed and declared, that if either of the High Contracting parties shall grant to any state any new favour or facility, with respect to the recovery of deserters, such favour or facility shall be considered as granted also to the other Contracting Party, in the same manner as if the said favour or facility had been expressly stipulated by the present treaty

And it is further agreed, that if any apprentices or sailors shall desert from vessels belonging to the subjects of either of the High Contracting Parties, while such vessels are within any port in the territory of the other party, the magistrates of such port and territory shall be bound to give every assistance in their power for the apprehension of such deserters, on application to that effect being made by the consul of the party concerned, or by the deputy or representative of the consul; and no public body, civil or religious, shall protect or harbour such deserters.

XVII. Her Britannic Majesty, on the representation of her Most Faithful Majesty, and in contemplation of the improving system of law and justice in Portugal, hereby consents to give up the exercise of the rights connected with the Conservatorial Court, so soon, and so long, as British subjects are admitted in Portugal to the benefit of securities similar or equivalent to those enjoyed by the subjects of her Most Faithful Majesty in Great Britain, as regards trial by jury, protection from arrest without a warrant from a magistrate, and examination within twenty-four hours after apprehension *in flagrante delicto*, and admission to bail. It being always understood, that in other respects the subjects of her Britannic Majesty in Portugal shall be placed on the same footing as Portuguese subjects, in all causes, whether civil or criminal; and that they shall not, except in cases *flagrantis delicti*, be liable to imprisonment without formal commitment (*culpa formada*) under a warrant signed by a legal authority.

XVIII. It is hereby agreed that her Britannic Majesty, relying upon the guarantees which are, or may be, afforded to British subjects by the law of Portugal under the present constitutional system, henceforward claims for British subjects in Portugal no privileges which are not enjoyed by Portuguese subjects in the Portuguese or British dominions. It being however understood, that her Britannic Majesty will be entitled, in the event (which God forbid) of political troubles affecting the operation of the above-mentioned guarantees, to claim the re-establishment and observance of the privileges surrendered by the present and preceding article

XIX. The present treaty shall be in force for the term of ten years from the date hereof; and further, until the end of twelve months after either High Contracting Parties shall have given notice to the other of its intention to terminate the same: each of the

High Contracting Parties reserving to itself the right of giving such notice to the other at the end of the said term of ten years, or at any subsequent time.

And it is hereby agreed between them that, at the expiration of twelve months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

It is agreed, nevertheless, that either of the Two High Contracting Parties shall have the right, at the end of five years, to require a revision of any articles not affecting the principle of the treaty, on giving six months notice of a desire to make such revision; provided, however, that it be distinctly understood that the power of giving such notice shall not extend beyond, nor be recognised after, the termination of the fifth year.

XX. The present treaty shall be ratified, and the ratifications shall be exchanged at Lisbon at the expiration of two months from the date of its signature, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Lisbon, the 3d day of July, in the Year of our Lord, 1842.

DECREE PROMULGATING THE NEW PORTUGUESE TARIFF.

ART. I. The general customs' tariff is modified conformably with the instructions, regulations, and tables hereunto annexed, which shall form part of the law.

II. The modifications hereby made, shall come into operation three months after the publication of the *new pauta*; of valuations of those articles which, from their peculiar nature, it may be found necessary to except.

III. The regulations of this law shall not affect the legislative enactments of the islands of Madeira and Porto Santo, as regards wine, brandy, corn, and grain; such local regulations shall still remain in operation.

IV. The dispositions of the law of the 25th July, 1839, relative to lac, and lac-dye, indigo and dyestuffs, the produce of Asia, applicable to medicine and the arts, are hereby extended.

V. The government shall cause to be printed and published, a new edition of the general tariff, comprising the alterations alluded to by Article I. of this law.

VI. All enactments contrary to the spirit of this ordinance, are hereby annulled and revoked. We recommend all the authorities charged with the due execution of this law, &c. Done at the Palace of Necessidades, the 11th of March, 1841.

By the Queen (com Rubrica e Guarda.)
Manuel Gonçalves de Miranda.

The decree, similar to the above, for carrying into effect the new and amended *pauta*, in pursuance of Article V. of the above ordinance, is dated the 20th March, 1841.

PORTUGUESE CUSTOMS' REGULATIONS.

These customs' regulations extend to all the custom-houses of Portugal, and also to those of the Azores, and the adjacent Islands. These custom-houses may pass all descriptions of goods, &c., merchandize contained in the tariff, with the exception of those which follow, being of foreign production or manufacture; viz., cotton, woollen, silk, and linen manufactures, tea, wines, and spirituous or fermented liquors, vinegar, corn and grain, vegetables, olive oil, and jewellery; which can only be entered, either for consumption or being warehoused at the custom-houses at Lisbon and Oporto in Portugal, at that at Angra in the island of Terceira, at Ponta Delgada, in St. Michael's or at Funchal in Madeira.

ART. II. The rates of duty specified in the tariff have reference only to the import and export duties upon foreign goods and merchandize, and also upon certain articles therein named, being the produce or manufacture of the Portuguese possessions in the Archipelago of the Azores and the adjacent islands; all other merchandize, &c. of the Portuguese possessions not enumerated in this tariff, is admitted free.

III. Spirituous liquors, silk goods, and other merchandize, entered in contravention of the restrictions and prohibitions contained in the tariff, shall be seized, even although the proprietors or consignees may be liable to other penalties.

IV. All duties and charges under the denomination of (sellos, taras, pranches), or of

any other kind which have heretofore been imposed at the afore-mentioned custom-houses, upon the importation or exportation merchandize, shall be replaced by the dues specified in the present tariff, together with an additional rate of 3 per cent. which shall be paid as an equivalent for the former charges.

V. The revenue arising from the above charge of 3 per cent. shall be paid into the customs' treasury, according to the decree of 17th September, 1843, in order to meet:— 1. The usual payments made by the treasury. 2. The compensations to administrators-general, &c., whose offices have been abolished. 3. The expences of the stamp department. 4. The necessary official expenditure in the shape of stationery, &c.

The remainder, after deducting therefrom the payments to employés, according to their relative proportions, shall be applied to the general service of government, agreeably to the regulations embodied in the following article:

VI. At the end of each year the heads of the customs' depots, shall transmit to the government, through the inspector-general of the customs, an account of the receipts accruing under the charge of 3 per cent, in order that the government may make such alterations in regard to the apportionment of this fund as they shall deem convenient.

VII. Besides the above-named duties, merchandize deposited in the custom-house, whether for consumption or merely warehoused, shall pay, at the end of the first year after its importation, a warehouse charge of 20 reis per quintal, if dry goods; or of 16 reis per almude, if liquid. The following articles, however, are excepted from this regulation; viz., sugar, cocoa, coffee, cinnamon, tea, hides, cloves, pepper, salt, saltpetre, tobacco, and leather tanned, which may remain in the warehouse free, for the space of two years, at the end of which period, however, they shall become liable to the payment of the above duties.

VIII. The government shall, by a special order, authorize the customs to receive an additional rate of duty upon merchandize imported from foreign countries, equivalent to the difference of duty existing in such foreign states, between their own vessels and Portuguese vessels, or as regards Portuguese produce, when imported in such foreign territories.

IX. *With the view of encouraging national industry, which is the chief object of the present tariff, it is decreed that all exemptions heretofore made, by special permission, in favour of articles of first necessity, fit for Portuguese manufactures, shall be abolished.*

X. If it be found that the rate of customs' duty may exceed, by 3 per cent, the actual value of goods imported, and should the importing parties require it, a reduction of duty, proportionate to the difference between the real and average value may be made.

XI. In order to arrive at the precise value of such merchandize, it shall be lawful for the chief of the customs department, and the proprietor of the goods, each to name a fit and proper person, who may act together as umpires in determining the value of such merchandize; and in the event of these parties not coming to any decision thereupon, the chief of the customs shall name a third party for the above purpose.

XII. Upon the importation of merchandize comprising mixed wares of various but distinct kinds, the duty shall be calculated on the material of the greatest value. This regulation, however, does not apply to ornamented wares, whose total value is less than the total value of the principal material to which they belong, except in such cases as are expressly stated in the tariff.

XIII. Passengers' or travellers' baggage and luggage are delivered free of duty; it being understood that by baggage and luggage is meant passengers' articles of wearing apparel, &c. In order, however, that the same may be verified, all packages, and papers describing such goods, with the address of the owners, shall be transmitted to the customs, under penalty of forfeiture of the same. The customs authorities are to proceed to the immediate inspection and delivery of such goods, upon their respective proprietors appearing to claim them.

XIV. National manufactures, once exported from Portugal to foreign countries, lose all claim to be considered as Portuguese fabrics, and in the event of their being brought back into the Portuguese dominions, they shall be received as foreign manufactures.

Silk manufactures are, however, excepted from the above regulations, provided they be imported in packages of a certain weight, that may be re-exported within the space of one year, to be reckoned from the date of the day of entry, and provided they have not been transferred from one party to another, and also upon their identity being legally verified.

XV. The articles enumerated in the tariff are categorically arranged in their respective classes.

XVI. In order to avoid repeating the names of articles analagous to those specified in the various classes, the term "all others not specially enumerated" is used. This regulation does not, however, affect the necessity for particularly describing each article and its quality separately, and specially, in the bill of entry; and the employés of the customs are to take particular care that a full and perfect designation is so set forth.

XVII. The General index shall exhibit the names of articles not specially enumerated, and the Permanent Board of Customs shall, from time to time, make any necessary alterations in such index.

XVIII. All merchandize enumerated in the tariff shall pay the import duty upon the gross weight (*peso liquido*), deducting a tare.

Silk, woollen, linen, and cotton manufactures, and also skins and hides, and wares of bone or tortoise-shell, are excepted from the above regulation, and pay duty upon the actual weight (*peso real*).

XIX. The legal tare shall be allowed upon liquids (which pay upon the gross weight), and also on other goods; and if the merchandize be contained either in vessels of glass, china, copper, or in packages made of such wares as may generally be received as objects of commerce, such vessels or packages, shall also pay the duties, to which they are subject under the tariff.

XX. Should it happen that a question may be raised, as to the amount of duty which ought to be paid upon any article not named in the tariff, the parties making declaration, shall describe the nature of the article, its uses, and application, together with its mercantile value, and upon this information being committed to the head of the customs department, he shall class such article for duty as analagous to some article enumerated in the tariff.

XXI. In case of emergency, the chief of the customs, or a party named by himself, shall permit the entry of such article, according to the declaration of the parties appointed to determine its nature and value, upon payment of the rate of duty fixed for some analagous article; but should the proprietor of the goods, or his representative, not be satisfied with such a decision, he shall be allowed to enter the same, upon depositing the said amount of duty, together with an additional amount of one-third of such value, until the doubt may be decided.

XXII. In the event of any dispute arising between the proprietors or consignees of merchandize and the customs authorities relative to the amount of duty to be paid, such duty shall be provisionally deposited, subject to the decision of the Permanent Board of Customs, relative to its correct application.

XXIII. Foreign merchandize, which are of the same kind as those which pay a heavier export duty than the import duties upon the same, and which are excepted from the general regulations and practice in regard to those articles which are free from export duty, and that have paid the import or consumption duties, the first named shall pay, in addition to the import duty, the amount also of the export duty rated in the tariff, on being re-exported.

XXIV. Such merchandize, however, which pay higher rates of export than import duty, when deposited in the customs warehouse, and the proprietors thereof wishing to re-export the same, shall pay only a tenth part of the export duties named in this tariff.

XXV. On the entry of cattle; viz., oxen, sheep, swine, and horses, at the land frontier custom-houses, the proprietors shall give a bond for the payment of the duty upon such only as shall remain in the kingdom; this bond to remain in due form according to established practice.

XXVI. The principal officers of customs shall take special care not to permit foreign merchandize to be shipped, for consumption, on board Portuguese vessels, under the denomination of goods for re-exportation; however, in order to favour national shipping and navigation, the articles named in table B of the tariff, as provisions for the crews of such vessels, shall be allowed to be so re-exported, on payment of the import duties fixed by the tariff.—Palace of Necessidades, 20th March, 1841.

(Signed) BARON DE TOJAL.

As the classification of the foregoing tariff, may not be familiar to British merchants and manufacturers, and as the depreciated and uncertain value of the milree now varying from 52½*d.* to 54*d.* sterling, instead of 67½*d.* sterling, has rendered it impossible to have stated correctly the duties in English money, we subjoin the following tabular statements, showing the rates per cent of duty from the United Kingdom to Portugal, upon the principal articles which have been and which would be exported from the former to the latter if the duties in the tariff were moderate.

ARTICLES	Present Duties Portuguese Money		Rate per cent	ARTICLES	Present Duties Portuguese Money		Rate per cent

The duty on the above malt liquors, previous to the peace of 1834, was 18 per cent, more or less; and the importations averaged 350 to 400 old pipes, the duty amounting to 3,200,000 rees, to 1,800,000 rees annually. Since that period to the present time, a period of 8 years, not more than 6 pipes have been imported for consumption; the duty amounting only to 518,400 rees during that time; thus showing by the table above, the loss to the Portuguese revenue, in consequence of the high duties, without benefit to the government or their subjects.

There are three manufactories of malt liquor in the kingdom, and the proprietors are, viz., one Frenchman, one German, and one Englishman.

The duties on hams, bacon, and porter are said to be prohibitory. The duty, 1680 rees per arroba, is equal to 32½ per cent; the duty of 1200 rees per arroba on pork and lard, to 75 per cent on pork, and 37½ per cent on lard. The duty on cheese 40 to 50 per cent. The duty on beef to 78 per cent. In 1828, when the duty on butter was moderate, 53,601 barrels were imported into Lisbon from Ireland. In 1841, 8919 barrels only.

The pretence of encouraging the rearing of live stock and supporting agriculture have been the usual fallacious arguments used for raising and for countenancing the high duties on butter, cheese, pork, lard,—and upon corn and grain of all kinds.

The lower qualities of woollen cloths are completely excluded from the Portuguese market, except by contraband, at the same time that the provinces are overrun with Spanish cloth smuggled across the frontiers. In case of dispute with the customs regarding quality, the goods may be taken by them with an addition of 30 per cent, as is the custom in England.

Under the treaty of 1810, cloths were divided into four classes, according to the invoice prices; viz.,

Goods up to	Paid duty on	At [illegible] per cent.	Per Yard	Exchange	Equal to
[illegible] per yard	[illegible] reis per cor cado	9 reis per cor cado	120 reis	[illegible]	[illegible] per cent. on [illegible]
4s. to 11s. 11d.	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
12s. to 20s.	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Above 20s.	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

The above were the actual duties paid before the rate of 360 reis per lb. was levied in 1837.

Late duty, . 360 reis per lb. are 1s. 7½*d* equal to 27 per cent on 6s.
Present duty . 600 „ „ 2s. 8½*d*. „ 45 „ „

By the tariff of 1837, the duty of 300 reis per lb. was subject to a deduction of 15 per cent in favour of Portuguese vessels, and only to a charge of 3 per cent for emoluments.

That is to 15 per cent, or . . 54 reis.

Duty by Portuguese vessels . 300
Add 3 per cent. . . 9 for emoluments

315 reis = 1s. 5d. = 23½ per cent on 6s

By the Tariff of 1841, the duty of 600 reis per lb. is subject to no deduction, and the charge for emoluments is augmented to 6 per cent = 636 reis, or 48 per cent.

List of Articles of Cotton Manufacture, on which the Duties in Portugal have been calculated by British Merchants at Lisbon, according to the Value of the Articles Imported into Portugal from the United Kingdom.

Silver Coins.—New crusado, equal to 480 reis; half, equal to 240 reis; fourth, equal to 120 reis; eighth, equal to 60 reis; testoon, equal to 100 reis; half testoon, equal to 50 reis; vinten, equal to 20 reis.

There are also copper coins of 10, 5, 3, and 1½ reis.

There are two modes of payment in Portugal; one is called "metal," or specie; the other "lei," or according to law. Bills of exchange are paid in lei, as are all other articles, if no agreement is made to pay in metal. Lei is one half specie, and the other paper currency. This paper currency was issued or established in July, 1797, and bears an interest of 6 per cent. It is subject to great fluctuation in its value. In the first year of its issue it was at a discount of 1 and 2 per cent. It has augmented occasionally to 15, 20, and 25 per cent; and as times go, to 30 per cent, although large quantities of the paper are regularly called in. During the invasion by the French in 1807, it was at a discount of 50 per cent. There is now but a small quantity of it in circulation.

Commercial Weights.—8 ounces, equal to 1 ounce; 16 ounces, equal to 1 pound or libra; 32 pounds, equal to 1 arroba; 4 arrobas equal to 1 quintal; 13½ quintals, equal to 1 ton; 83 Portuguese pounds, equal to 88lbs. avoirdupois, or 100lbs. Portuguese = 101·10 English.

Measure for Corn, Salt, &c.—64 meopias, equal to 32 outavas; 32 outavas, equal to 16 quartos; 16 quartos, equal to 8 meyos; 8 meyos, equal to 1 alqueire; 1 alqueires, equal to 1 fanega; 15 fanegas, equal to 1 moyo. The alqueire contains 817 cubic inches. 50 alqueires are equal to 19 bushels; the Moyo = 22·3 bushels.

Liquid Measure.—1248 quartillos, equal to 312 canadas; 312 canadas, equal to 26 almudes; 21 almudes, equal to 1 pipa; 18 almudes, equal to 1 barril; 2 pipas, equal to one tonelada. An almude is equal to nearly 4.37 English wine gallons.

Long Measure.—8 inches, equal to 1 palma, or 8.8·9 English inches; 3 palmos, equal to 1 covado; 1 covado is equal to 26.2·3 English inches. 1 Portuguese pe, or foot, 12.91 inches English; 1 vara 43.2.

Coffee, rice, cocoa, sugar, and almonds are sold by the arroba; cotton, indigo, and pepper by the pound; oil by the almude; wine by the pipe; corn by the alqueire, and salt by the moyo.

STATEMENT of various Foreign Articles, together with the respective quantities of the same, which shall be permitted to pay the ordinary duties on their re-exportation, in Portuguese vessels, as provisions for the ships' crews, both on their voyage out and home

DUTIES ON FOREIGN CORN.

Donna Maria, by the grace of God, &c. &c. Be it known to all my subjects, that the General Cortes and Deputies of the Portuguese nation have enacted, and I have sanctioned the following law:—

The General Cortes, &c. have decreed as follows:—

ARTICLE I. The importation of foreign grain and flour, of potatoes, and of bread, either for home consumption, or for the purpose of being warehoused, is prohibited in all the ports of the kingdom of Portugal and the Algarves.

§ Are excepted from the above restriction:—

1. Certain parties privileged as regards these duties.
2. Those which are specified by this law.

II. Should the harvest prove insufficient for the home consumption, the government shall authorize the admission of such a supply of foreign grain, as may meet the deficiency.

§ 1. The quantity, description, and quality of the grain to be admitted, shall be set forth in a decree published by the government.

2. Such importation of foreign grain, can only be made at the maritime ports of Lisbon, Oporto, and Faro.

3. Before the entry of such grain is permitted at Lisbon, it shall be inspected by the inspector-general of the public corn market, the council of the districts of Lisbon and Santarem, and also by the administration of the company das Lezirias.

The same course shall be followed by the district councils at Oporto, Braga, and Vianna, before foreign grain is admitted at Oporto.

The like course is to be adopted by the district council and the municipal chamber, at Faro, previously to the admission of foreign grain at that port.

4. The importation of grain, at the land frontier custom-houses, shall not be permitted until previous information respecting the same shall have been given to the district council, and to the municipal chamber of the capital of the district. The necessary intelligence being so given, the district council and municipal chamber shall name the port, or ports, at which the importation shall take place; and the government shall provisionally designate these ports, in the order permitting the importation.

5. In addition to the foregoing regulations, the government shall oblige the various district councils to publish annually, after the harvest, an account showing the amount of corn grown in their respective districts, together with the estimated consumption in these localities. The government are to be in possession of such returns previous to the 30th November in each year.

III. Foreign corn, admitted for consumption into the port of Lisbon, shall pay, in addition to the ordinary price of sale, the duties established by the edict of 15th October, 1824, the which are continued by the law of 31st March, 1827; viz., on soft wheat 100 reis; on hard wheat 200 reis, the alqueire of 3,07 gallons, or about 8s. the quarter for soft, and 16s. hard wheat.

1. Foreign corn, admitted for consumption at Oporto and Faro, shall pay similar duties to those above referred to, which have been under these laws established for regulating the duty on foreign grain in those ports.

2. Foreign grain admitted at the land customs, shall pay the following rates of duty; viz., wheat, 100 reis per alqueire; rye, 60 reis ditto; barley, 40 reis ditto.

IV. The government shall lay annually before the Cortes, a detailed statement, setting forth the actual state and working of this law.

V. The proprietors in the province of Alem Sojo, whose corn lands are situated within five leagues of the Spanish frontier, shall be obliged, after harvest in each year, to make a return to the chiefs of the administrative council, or to the parochial regedor, of the quantity and description of corn, which may be in their possession.

The inhabitants of the other provinces shall, in like manner, make returns to the municipalities adjacent to the Spanish frontier.

1. The correctness of these declarations shall be scrupulously examined by the proper authorities; and in case they be found fraudulent, either by exhibiting too large or too small a quantity, the parties making the declarations, shall, in such case be compelled to give up the difference in quantity, so over or under stated.

2. The declarations shall be made immediately after the general harvest, and published by edict in the respective parochial districts.

3. The owners and merchants who may desire to carry their corn before the respective councils, shall obtain the proper official document, after the declaration has been made. Such permit shall be regularly attested according to the declarations, and shall have affixed thereto the form of discharge.

4. These permits shall be upon stamped paper, of Portuguese manufacture, but without a seal. The administrators and registers shall not be entitled to any remuneration for granting these documents, but their assistants shall receive 5 reis, if the quantity of grain named in the permit does not exceed 20 alqueires; 10 reis, if 20 alqueires and under 10 mojos; and 20 reis, if exceeding the latter amount.

VI. The edict of the 15th of October, 1824, shall remain in full effect, where not contrary to the provisions of the present law.

VII. The legislative enactments prior to the decree of 10th of January of the current year, for the regulating of the corn trade of Madeira, Porto Santo, and the Azores shall remain in force.

VIII. The disposition of Article IX. of the edict of 15th of October, 1824, which prohibited the importation of national flour into the ports of the kingdom, is revoked, as well as all other enactments, contrary to the spirit of this law.

VIII. This law shall not come into operation until three months after its publication, with respect to vessels arriving from the Black Sea and Russia (except those from the port of Riga), nor until after two months for those coming from North America and 1½ months for those arriving from any other ports, Riga excepted.

We charge all the authorities concerned in the execution of his law into operation, to see that it be carried into full and complete effect.

The minister, secretary of state for the finance department, shall cause it to be printed, published, and circulated.

Done at the palace of Necessidades, this 14th day of September, 1837.

ALIENS.—The following privileges have been granted to foreigners residing within the dominions of Portugal; either by treaty or by Royal allowance.

1. They are exempted from paying any of the duties or taxes called peidios, pedas, fintas, talhas, presidios, servicos, or from rendering any such personal services as are commanded by the king or by his council to his subjects.

2. They are not compelled to conduct prisoners, even when tendered a compensation for so doing.

3. They are exempted from the land and sea service.

4. They are not to be charged against their will, with any office, civil, military, or legal.

5. They are not to be deprived by any act of *apozentadoria** of their dwelling-houses, but on the contrary, they shall enjoy an exemption from it in respect to their dwellings, food, or any other property belonging to them, and they shall have the privilege of obtaining horses, carriages, houses, provisions, or such other articles as they may want, paying for the same according to law.

6. They are allowed to ride on mules or horses over any part of the kingdom and its dependencies.†

7. They are permitted to buy or sell at their will, or by factors or servants, all kinds of merchandize which are allowed to be sold by law.

8. They have the privilege of one year, in the event of war, for settling their business and carrying away their property, free of duty.

9. They are exempted from the payment of duties on provisions which they may receive from abroad for their own use, or for that of their families, on making oath that they are not intended for sale.

10. They are allowed to have weights and scales in their houses for their own use.

11. In case of their death, any property which they may not have disposed of by will, is to be delivered to the consular agent of their nation, first paying the debts due in the kingdom.

12. The *Corregidor de Civel da Citade* in Lisbon, and the *Corregidor de Commarca*, are their judges, *conservadores*, to maintain their privileges, and to try any suit, either civil or criminal, in which they may be plaintiffs or defendants. No officer of justice is to use any violence against them, nor to arrest them, nor to enter their domiciles, under a penalty of twenty crusados to the use of the foreigner, except authorized thereto by a written order from the judge conservador, and except whilst in pursuit of any malefactor actually found in flagrant crime.

12. In case of an arrest being decreed against them, they are to enjoy the privilege of "homage," which is, that they shall be carried to the castle of St. Jorge, if in Lisbon, under an act of "homage," which shall be recorded on the occasion, according to the

* *Apozentadoria* is a seizure or injunction.

† *Note.*—In former times this privilege was denied to Jews, Moors, and some persons of the poorer classes.

custom. They are not to be put in irons, but are always to be kept under the sanction of the "homage" which is granted to them. And if the cause of their arrest is such as will justify their being released on bail, they are to be set at liberty without delay, or they may be placed under civil arrest in their own houses, according to the nature of the prosecution.

13. They are not to be incommoded with any seizures, attachments, arrests, sequestrations, or distresses on their chattels, or appurtenances of personal use, nor on their furniture. N.B. This privilege appertains rather to consular agents who are not merchants.

14. These privileges are extended to their factors, servants, or clerks, provided the number does not exceed six persons.

15. The children of an alien by a Portuguese woman are considered aliens; but those of an alien woman, by a Portuguese husband, are deemed to be subjects of Portugal.

16. Foreign merchants are exempted from paying the duty called "Decima de Maneyo."

17. Aliens are not subject to the sumptuary law against profusion: they may use lace of gold or silver on the liveries of their servants, or on their carriages, &c.

18. If any officer of justice, or any other person, should disregard any of these privileges or exemptions, the transgressor is subject to a fine of 50 crusados.

CHAPTER III.

NAVIGATION AND TRADE OF PORTUGAL.

PORTUGAL, even before the days of King Emanuel, and of the celebrated Albuquerque, was justly celebrated for the adventurous spirit of its navigators. Its commerce was also extensive, if the area and population of Portugal be compared with those of Spain. The trade of Portugal has, however, even when Brazil formed one of her colonies, been greatly overrated; although there is no doubt of its having greatly declined.

The foreign trade of the port is chiefly confined to Lisbon and Oporto. The exports consist chiefly of wine, salt, and raw produce. The imports, of manufactured goods, colonial produce, corn, and flour.

NAVIGATION AND TRADE OF LISBON.

Lisbon is conveniently and beautifully situated on the right bank of the Tagus, and a few miles from its entrance. Latitude, 38 deg. 42 min. N.; longitude, 9 deg. 6 min. W. The population is estimated at 250,000, including negroes, mulattoes, and various mixed races. This capital, viewed from any commanding distance, as it stretches up the hills, with its churches, convents, palaces, and other edifices, with the white houses that extend and rise above the quays has, like Constantinople, a splendid aspect. Like those, also, of the Turkish capital, the streets of Lisbon are among the most filthy in the world; while, unlike the Turks, the inhabitants, excepting the merchants and higher classes, are the dirtiest in Christendom.

The harbour or port of Lisbon is capacious, deep within, and convenient, having broad quays, which extend for more than two miles in front of the city. The southern channel over the bar has a depth of 6 fathoms, or 36 feet; the north, 4 fathoms.

Of the small number of sea-going ships engaged in the foreign trade, few belong to the port. It is not estimated that more than 50 vessels, of from 60 to 300 tons, and some larger, are now engaged in trading with South America, China, and the East Indies, and exporting salt from St. Ubes to Cork, and importing Irish butter in return; from 290 to 320 vessels are said to be employed in the coasting trade. Formerly, it is stated that about 400 ships, of from 300 to 600 tons, were employed in the navigation between Lisbon and Brazil.

The exports are wine, oil, fruit, salt, &c. The imports are chiefly hemp, flax, and linens from Russia; iron, steel, timber, pitch, tar, and salt-fish, from the Baltic; corn, linens, &c., from Germany and Holland; silks and clothing from France; woollens, cottons, hardwares, coals, &c., from England, and cod-fish from Newfoundland.

By the following decree, Lisbon was declared a free port, or a port with warehousing privileges, and for the admission of the vessels of all nations.

ARTICLE I. The port of Lisbon is free to all merchant vessels of every country not at war with Portugal, and every kind of merchandize and articles of commerce will be admitted into it for deposit, wheresoever produced, or under whatsoever flag imported.

II. Even in case of war the merchandize deposited shall not be liable to embargo or confiscation. On the contrary, all private property which may be lying in the said port, or shall afterwards be introduced under a friendly or neutral flag, shall be religiously respected.

III. The merchandize thus admitted for deposit shall be allowed to be freely exported, subject only to the payment of a duty of one per cent, and for the charge of warehouse, labourers, and port watch, up to the time of its being re-shipped.

IV. Whenever merchandize is not introduced for the purpose of being warehoused, but of being transferred from one vessel to another, it shall be subject to the payment of a duty of two per cent, and the expences of the port watch, regulated according to a reasonable proportion.

V. The duty on the transhipment or re-exportation of the merchandize, shall be levied according to the custom-house value of the articles, or where no custom-house value exists, according to the invoice price; and in the absence of both these rules, it shall be levied ad valorem.

VI. No merchandize shall pay warehouse room for the first year, but at the conclusion of that period it shall pay a monthly rent, for such time as it may be left in the warehouses.

¶ From this rule all merchandize is excepted which, on account of its inflammable nature, cannot be deposited in the custom-house. In this case it must be placed in private warehouses at the cost of the parties.

VII. All the duties pressing on Portuguese navigation shall be reduced, in order to render it less expensive, and to enable it to compete with foreign navigation.

VIII. All merchandize and articles of commerce, in the head custom-house at Lisbon, or in the warehouses under its inspection, shall be considered as in deposit, for the purpose of enjoying all the benefits of this decree, just the same as if they had been subsequently introduced.

IX. All the provisions of the present decree shall be extended to the city of Oporto, as soon as the measures necessary to facilitate its execution shall be taken.

X. All licences are abolished, except in cases of extreme urgency. The clearance for consumption will continue according to the present system, until the proper alterations shall, after due consideration, be determined by law.

XI. All laws and provisions contrary to the present decree are revoked. The minister for the affairs of finance will take notice thereof, and see to its execution.

Palace of the Necessidades, March 22, 1834.

PORT REGULATIONS.—1. The present limits of the port of Lisbon, extend to Paço d'Arcos, where vessels are to submit to the customs' police, and sanitary regulations. Before passing the bar, vessels must heave to, in order to receive on board a customs' officer.

2. When the latter is taken on board, a flag must be hoisted by his order, to denote the same to the customs.

3. When the vessel has been visited at Paço d'Arcos, the captain must pursue his course direct for Lisbon, unless stopped for sanitary reasons, in which case he will receive the necessary instructions how to act.

4. Each captain must have his manifest in duplicate, signed by him, and certified by the Portuguese consular agent, or, in his absence, by the local authorities at the port from which the vessel sailed. The manifest must contain the name, tonnage, and nation of the vessel, the port from which it sailed, the names of the merchants who consigned the cargo, and those to whom the goods may be consigned, with the quantity and kind of the articles, with marks and numbers on the margin.

5. When the customs' officers are once on board, and present the captain with a copy of these regulations, he is then bound to deliver them one of his manifests with all the other papers referring to the character of his cargo, with a sworn declaration of his crew, passengers and their luggage; of his remaining provisions: the officer is then to inform him, that he may, if necessary, amend his manifest, under the penalty of any article omitted being seized.

6. All letters must also be delivered to the officer of customs; or pay nine times the amount of postage.

7. The entry being then regularly made, all passengers' luggage shall, as soon as possible, be taken to the custom-house to be examined.

8. If the captain should delay giving his manifest, after the prescribed time of twenty-four hours, he shall pay double port dues: other fines shall be levied for omissions in the manifest of goods found on board.

9. If a captain brings no manifest, but makes the entry otherwise regularly, he shall in addition to the regular duties, pay only 5 per cent ad valorem on goods.

10. The captain is obliged to anchor his vessel where directed by the anchorage or port officer.

11. Each contravention of anchoring, will subject him to a fine equal to half the port dues.

12. Exceptions are drawn from anchors, &c. driven by force of weather.

Other necessary regulations will be given to the captain by the port officer.

No one can go on board a vessel loading or discharging, without the permission of the customs' officer.

The usual time allowed to discharge is six days, four days more in case of need may be accorded. The regulations of the port are translated into different languages, and the copy delivered to any captain, will be in the language of his country, in order that he may not plead controvertion in ignorance.

PORT CHARGES.—These, including tonnage duties on a vessel of 300 tons, amount to about 12*l.* sterling. Vessels sailing without a cargo, pay for lights, 200 reis per cent, instead of 50 reis, in order to encourage the export trade. Commission 2½ per cent, and del credere 2½ per cent.

There is a bank and insurance office in Lisbon.

The ports of St. Ubes, Faro, and Figueira, are outports of Lisbon.

STATEMENT of the Number and Tonnage of Vessels which entered Inwards and cleared Outwards at each of the principal Ports within the Consulate of Lisbon, in the Year, 1835.

REMARKS.—The Swedish vessels imported about 100*l.* worth of deals, and the Portuguese from Ireland about 500*l.* worth of earthenware and butter

The exports consist almost entirely of salt and fruit. The English took 2150 chests of oranges, the French 5200, and other nations about 1200 boxes. The English also took 1000 quintals of cork-wood. The Portuguese all went to England or Ireland, and, besides salt, took 1000 chests of fruit and 300 quintals of cork-wood.

RETURN of the British and Foreign Trade to the Port of Lisbon, during the Year ending the 31st of December, 1842.

Entered: British ships, 351, 49,267 tons, 4117 men; American ships, 15; Austrian, 10; Belgian, 9; Brazilian, 12; Danish, 28; Dutch, 44; French, 25; Hamburgian, 6; Hanoverian, 10; Lubec, 1; Mecklenburg, 1; Neapolitan, 5; Oldenburg, 2; Prussian, 2; Russian, 39; Sardinian, 18; Spanish, 22; Swedish, 68; Tuscan, 1; Portuguese, 1120. Total, 1789. It has not been possible to ascertain the tonnage and other particulars of foreign vessels. Sailed: British ships, 340; 47,943 tons; 4034 men. Other ships, same numbers as arrived.

Of the 351 British vessels that arrived, there were from Great Britain, with general cargoes, 90; coals, 85; ballast, 22; iron, 8; butter, 4; coals and machinery, 1; iron and coals, 2; iron and tin, 2; machinery, 2; horses, 6: from Oporto, in ballast, 2; Cephalonia, currants, 1; Oran, ballast, 1; Gibraltar, ballast, 3, cork and bark, 1; Larache (Africa), leeches, 3; Civita Vecchia, wheat, 1; Sierra Leone, timber, 1; Vianna, ballast, 4; Genoa, wheat, 1; Newfoundland, fish, 28; Malta, wheat, 1; Gijon, ballast, 1; Malaga, ballast, 3; Figueira, salt, 1, ballast, 1; St. Michael's, ballast, 6; Maranhao, cotton, 1; Terceira, ballast, 2; Jersey, fish, 1, ballast, 1; Guernsey, ballast, 3; Leghorn, wheat, 1; Teneriffe, wine, 1; Odessa, wheat, 1; Seville, ballast, 2; Dort (Holland), ballast, 1; St. Lucar, ballast, 1; Taganrok, wheat, 1; British steamers from Falmouth, with mail and general cargo, 52; from London, in ballast, 2. Total, 351.

Of the 340 British vessels departed, there were for Great Britain, with fruit, 127; general cargoes, 27; wine and fruit, 9; wheat, 3; salt, 7; cork, 1; salt and onions, 1; salt and wine, 2; salt and fruit, 1; ballast, 1; wine, 1; cork and bark, 1; bones, 1; wine and cork, 1; for Sierra Leone, general cargo, 1; Newfoundland, salt, 22, salt and fruit, 2; Monte Video, salt, 9; Larache, general cargo, 1, ballast, 2; Gibraltar, wheat, 1, fish, 5, ballast, 3; Lima, general cargo, 1; Malaga, ballast, 5; Palermo, ballast, 1; Figueira, ballast, 2; Vianna, ballast, 1, fish, 1; St. Michael's, ballast, 1; Maranhao, general cargo, 1; Quebec, salt and fruit, 2; Sines, ballast, 4; Demerara, ballast, 2; St. Ubes, ballast, 24; Cadiz, general cargo, 1, iron, 1, ballast, 1, butter, 1; Oporto, ballast, 1; Valencia, fish, 1; Alicant, fish, 2; Denia, ballast, 1; Malta, horses, 1; Rio Grande, salt, 1; St. Helena, general cargo, 1: British steamers departed for Cadiz, with part cargoes, 52; Gibraltar, in ballast, 2. Total, 340.

ST. UBES, 1842.

Of the 33 British vessels that arrived, there were from Great Britain, in ballast, 3; with iron, 1; Oporto, in ballast, 1; Lisbon, in ballast, 22; Vianna, in ballast, 1; Malaga, in ballast, 2; Guernsey, in ballast, 1; Faro, in ballast, 1; Gibraltar, in ballast, 1.

Of the 33 British vessels that departed, there were for Great Britain, with cork-wood, 1, cork and fruit, 5, fruit, 9, cork 3, salt and cork, 2, salt, 6; Monte Video, salt, 2; Riga, cork and salt, 1, River Plate, salt, 2; Guernsey, fruit, 1; Norway, salt, 1.

PORT OF FIGUEIRA, 1842.

Of the 25 British vessels arrived, there were from Great Britain, in ballast, 1, with fish, 2, iron and coals, 2; Newfoundland, fish, 13; Arichat (Canada), fish, 1; Jersey, fish, 1; Lisbon, ballast, 2.

Of the 25 British vessels departed, there were, for Great Britain, with wine, 1, wine and cork, 1, wine and fruit, 1; Newfoundland, salt, 19; Jersey, salt and wine, 1; Lisbon, ballast, 1; Malaga, ballast, 1.

PORT OF VIANNA, 1842.

Of the 21 British vessels arrived, there were from Great Britain, with iron, 10; Newfoundland, fish, 11.

Of the 21 British vessel departed, there were for Great Britain, in ballast, 1; Lisbon, ballast, 4; Figueira, ballast, 1; Cadiz, ballast, 1; Sines, ballast, 2; Oporto, ballast, 1; Newfoundland, salt, 11.

Port of Faro, 1842.

Of the 15 British vessels that arrived, there were from Great Britain, in ballast, 8; Lisbon, ballast, 2; Cadiz, ballast, 1; Gibraltar, ballast, 2; Vianna, ballast, 1; Oporto, ballast, 1.

The 15 British vessels departed, were all for Great Britain, with cork and baskets, 2, cork 8, fruit, 2, cork and fruit, 3.

An Account of the Quantities of Wheat, Barley, Rye, Indian Corn, and Wheat Flour, the growth of Foreign Countries, received into the Public Corn Market in the City of Lisbon, during Twenty years, from 1788 to 1807, both inclusive; with the value annexed, in Portuguese and Sterling Money, at par of Exchange.

See prices of corn, cattle, &c., in Portugal.

The British Consuls, in their returns, invariably state that they cannot obtain any values or quantities of imports and exports from the customs authorities in Portugal: the following is a very detailed account of the value of imports and exports, prepared by the French consuls in Portugal, forwarded by them to the minister for foreign affairs, and afterwards published in the bulletin of the minister of commerce.

In comparing the above statements with those of 1838, it appears that in 1839 there was in the general navigation, a diminution in 1839, of 1541 tons, and that of the whole of the value of trade, an augmentation in value of 8,919,700 francs or about 13 per cent. The principal augmentations were in the following articles:

ARTICLES IMPORTED.—Tissues of all kinds, 3,000,000 francs; sugar 750,000; rice 700,000; drugs 600,000; skins and leather 400,000; coffee and cocoa 300,000.

ARTICLES EXPORTED.—Fruits 550,000; wool, 400,000; oil 300,000; metals 300,000. And the diminutions on articles of import were—tea 4,200,000; metals 700,000; and on wines exported 500,000.

The value of the merchandizes exchanged directly in 1839, between Lisbon and France was 3,887,400 francs.

In 1838, the value of merchandizes exchanged was of 3,711,800 francs. There was, therefore, in 1839, an augmentation of 175,600 francs.

The direct French navigation with Lisbon, amounted to 3319 tons, being 888 tons more than in 1838.

The principal articles of exchange between the two countries, were—

Imports from France into Lisbon.—Tissues of cotton, 666,500; of silk 484,800; of flax, 92,800; of wool, 57,000. Total, 1,301,100 francs. £52,044 sterling.

Sundry manufactures, 1,054,200; drugs, 223,000; articles of fashion and of Parisian industry, 120,000; books and papers, 88,700; skins and leather, 85,600; metals, raw and manufactured, 53,300 francs.

Exports from Lisbon to France.—Alga tinctoria, 570,960; raw wood, 180,500; oil, 66,000; fruits, oranges and others, 34,300; wines, 31,000.

The total value of the trade of the ports of Lisbon and Oporto amounted in 1839, in tonnage to about 316,000 tons, and in value about 137,000,000 francs; viz.,

Tonnage	Lisbon	228,031		
	Oporto	87,921		
			315,952 tons.	
Value	Lisbon	79,691,700		
	Oporto	58,197,000		
			136,888,700 francs.	
There was added the trade of St. Ubes, (*Setural*)				
Figueira and Algarves			6,000,000	
Total value of the foreign trade of Portugal, in 1839			142,888,700 francs.	
			£ 5,715,548 sterling.	
Total value of the foreign trade in 1840			121,455,000	
			Sterling £ 4,858,200	

Of the above total value of the foreign trade of Portugal during the year 1840, England participated to the value of 58 per cent; France, 21 per cent; all other countries, 23 per cent. The Portuguese Customs value of cotton manufactures imported from England, amounted to £795,280. Woollens and linens, £472,000. Hamburg woollen to the value of £3600. Silks from France, 16,000.

ST. UBES has a population of about 16,000 inhabitants. It carries on a considerable pilchard fishery, but the making and exporting of sea salt is the principal business of the place. It exports also some good oranges, lemons, and white and muscadel wines. The export of salt and its price are restricted by absurd regulations. The whole produce of salt is calculated at 230,000 moyas, one-third of which is allowed to be sold to foreign vessels. The price for some years has been at from 1000 to 1500 reis per moy.

THE General Value of the trade of France with Portugal, for the following Years.

TRADE OF OPORTO.

Oporto is situated on the north bank of the Douro, nearly two miles from its mouth, in latitude 41 deg. 10 min. north, longitude 8 deg. 37 min. west, and about 175 miles from Lisbon; population estimated at from 78,000 to 82,000, including the bourgs on the opposite side of the Douro. A convenient high quay extends along the whole river front of the town. This town is a much cleaner town than Lisbon, but still far from clean in the English sense of the word. It is also considered a more industrious place than Lisbon, having a few inconsiderable manufactories of leather, cordage, silk, wool, linen, and cotton; some tanneries, soap-works, ship yards, and a tobacco manufactory. Vessels of two to three hundred tons can only pass over the bar of the Douro until it is nearly high water. Vessels drawing above sixteen feet water can scarcely ever enter the river.

The Douro is navigable by river craft for about 100 miles. By this inland navigation, Oporto has long been the great depôt for the wines, cork, wool, fruit, sumach, oil, wool, &c., of the countries watered by the Douro; excepting those parts of Spain through which it flows.

The imports are manufactured goods: corn, beef, cod-fish, hemp, timber, colonial produce, &c.

In 1835, a convention was agreed upon between Spain and Portugal, allowing the former to navigate the Douro along its course.

Pilotage Regulations for the Douro.—These were published at Oporto, in May, 1841. They declare that the navigation over the bar of the Douro must be conducted by pilots regularly appointed, and their number shall be 19 of the first and second classes, besides supernumerary pilots.

The outward and inward pilotage of every vessel over the bar to be confined to the 19 pilots of the first and second classes; the pilotage in the river by the supernumerary pilots.

Pilots are prohibited to stipulate for the sum, to be received when they board vessels in distress, and are bound to give immediate assistance, under pain, in case of the slightest delay, of suspension from their functions; or in case of misconduct, to more severe punishment.

The pilots are obliged to reside at St. Jean du Foz, and all vessels, except small craft, are bound to take, over the bar, a supernumerary pilot.

When a supernumerary pilot is on board a vessel exercising his functions, and cannot bring it into port, he must remain on board such vessel, the master or owner of which to pay him the whole of his due, and a ration per day, until he is landed at Oporto. In case of dispute, the Portuguese consuls are required to make the foreign master fulfil the above regulation.

The pilotage rates, for the entrance or the departure of vessels, in ordinary cases, are fixed as follows:

	reis.		sterling.
Small crafts	800	=	4s.
Fishing-boats (Hiate)	1200	=	6s.
Steam vessels	2400	=	12s.
Sloops	3500	=	17s. 6d.
Three-masted schooners and brigs	4000	=	20s.
Also to each pilot boat (including the crew)	2400	=	12s.
To each supernumerary pilot boat	1200	=	6s.
To each pilot, per day, outside the bar	800	=	4s.

The gratification to pilots are optional. The remuneration due, in extraordinary cases, to pilot-boats outside the bar, to be rated in accordance to the difficulty of the pilotage and the danger incurred.

The first pilot, and in his absence, the second, will be charged to hold council with the others, as to the possibility of the entrance or the departure of the vessels, and decide by the majority of voices. A pilot, who in the execution of the decision of the council does not conform to such decision, will immediately be suspended from his functions, and be responsible for all indemnifications, and subject also to corporeal punishment.

When an accident happens on account of a pilot refusing to conform to the above results, the pilot cannot demand for his defence, the opposition of the captains or proprietors of vessels to the free exercise of his functions, except this opposition was manifested with violence, in which case the pilot must immediately protest, so as to cover his responsibility.

The first pilot is bound to sound the bar, at least every fourteen days, and to make known the result to the intendant of the marine, as well as any change that may have taken place in the river.

Any pilot, losing a vessel, in consequence either of intemperance or incapacity, will be punished according to the full extent of the law. Every pilot is bound to have by him the regulations of signals appropriated for the service of the Douro.

The monies, weights, and measures, are the same as for the whole kingdom.

A bank has been established in Oporto.

The Oporto wine company is still in existence.—See accounts of the Wines of Portugal and Madeira hereafter.

NOTE of the number of Vessels (coasters included), with their Tonnage, &c., which entered the River Douro during the following Years, distinguishing foreign from national.

In the total trade between Oporto and all foreign countries, and Portuguese Africa, which in 1839 amounted to the value of 2,280,000*l.*, compared with that in 1838, there is a decrease in the value of more than 330,000*l.*: viz.,

On Imports of 152,720*l.*, or 14½ per cent.

„ Exports of 181,768*l.*, or 15½ per cent.

There is an increase in the value of re-exports of 12,968*l.*

The articles which exhibited the greatest variations were as follows:

Decrease: On Imports—Cod-fish, iron and steel, rice, wood unprepared, hardwares, cotton-wool, coffee, paper manufactures, and tar.

On Exports—wines (130,000*l.*), silk tissues, oil, salt, and specie.

Increase: On Imports—tissues of wool, brass, wood prepared (staves), glass-wares, coals.

On Exports—tissues of flax and hemp, fruits and vegetables, cork, jewellery, &c., tallow and candles, cabinet work, hats, wool, and salted provisions.

Since the new Portuguese tariff has been in operation, under which the duties are for the most part extremely high, it has followed as a necessary consequence, that smuggling has very much increased; a fact which will explain the apparent decrease in the trade of Portugal. Two articles would offer great advantages to the French trade; viz., fine cloths, on which there is a duty of 4 francs 91 cents per kilogramme; and cod-fish, of French taking, the third quality would probably find a market in the north of Portugal.

The exports of wines from Oporto in 1839 experienced a great falling off, especially in the exports to England and Brazil. This decrease (to a value of 87,932*l.* to the first, and 55,528*l.* to the second of these countries,) is to be accounted for by the very large quantities imported into London in the year 1838, which are not yet consumed, and by the disturbance of the trade between Oporto and Brazil, since the publication of the decree of the 6th May, 1839, which levied a duty of 50 per cent on Portuguese wines imported into Brazil. The high tariff of Portugal, if persisted in, will finally ruin the export wine trade of Oporto, to which the system pursued of classification, and the restriction upon the consumption of British goods, are both opposed.

This measure, undertaken by the Brazilian government with a view to provide for the deficit in the revenue, and to meet the expences of the states, has much affected the trade of Brazil. The value of imports from this country into Oporto which amounted in value to 294,928*l.*, in 1838, in 1839 only amounted to 202,832*l.*, a decrease of one-third. The exports from Oporto to Brazil have only fallen from 172,880*l.*, to 137,040*l.*, being a decrease of one-fifth.

Since the raising of the Portuguese customs duties, the following quantities of wine were exported to various countries from Oporto in 1840:

	hectolitres.
Great Britain	134,073
Brazil	14,583
United States	7,309
Hamburg	3,368
France	57
Other countries	13,904
Total	173,294 or 33,190 pipes.

This quantity is about the seventh part of the quantities of ordinary wine exported from France in 1839, which amounted to 1,183,060 hectolitres. Of this, 30,265 hectolitres were exported to England, 51,086 to Brazil, and 128,022 to the United States.

CHAPTER IV.

PORTUGUESE POSSESSIONS.

The possessions still held under the dominion of Portugal, comprise none in America, and but very insignificant spots in Asia. Her possessions on the continent of Africa are little more than slave-trading ports. The Azores, Madeira, and the Cape de Verd Islands, are, however, capable of being made far more valuable than they are at present, by cultivation, by sound legislation, and by industry and skilful culture.

The Azores, or Açores, or Western Islands, consist of three groups of islands lying in the Atlantic, about 300 miles west of Portugal. The most westerly being Corvo and Flores; the central, includes Terceira, Fayal, Gracioso, St. George, and Pico; and the easternmost, St. Michael's and St. Mary's. They are all of volcanic origin and formation. They rise boldly from the ocean. The soil generally is remarkably fertile, and rendered far more productive than that of Portugal. The cultivation is, however, rude, and the inhabitants ignorant and superstitious.

The climate is salubrious though often unsettled, wet, and changeable. Excellent crops, of all kinds of grain and vegetables, wine, the best oranges and lemons, bananas, the sugar cane, coffee, tobacco, the valuable lichen orchella, are

all produced in these fertile islands in the utmost perfection. Oxen and asses are the common beasts of burden and draught. The horses are scarce and of inferior breed; sheep and goats numerous; and swine and dogs abound. The estates are held by a few proprietors under strict entail. The tenants are subjected to severe exactions, and, under an oppressive feudal system, labour only when compelled by necessity. Husbandry is consequently in the rudest state; yet in spite of all this, the extraordinary fertility of the soil is so remarkable, that it not only yields sufficient corn and other productions for the population, but affords also a considerable quantity of corn for exportation to Portugal. Coarse linens, and a few other articles are manufactured by the peasantry, part of which they export.

The exports are, to England, chiefly oranges, wine, brandy, orchella; to Brazil and Portugal, coarse linens, corn, cheese, salt meat, &c.

The imports are manufactured goods, pitch and tar, cordage, tea, coffee, sugar, rum, salt, timber, staves, images, and crucifixes, &c.

SEAPORTS.—The Azores have, strictly speaking, no seaports: but afford in several places anchorage when the wind does not blow strongly on the shores.

The population of all the islands of the Archipelago amounts to about 250,000 inhabitants. A great part of the soil is left waste; and the Azores are considered capable of maintaining at least 1,500,000 inhabitants, were the islands moderately cultivated. They are divided into three comarcas, under a governor-general and two lieutenant-governors. The seat of government is Angra in Terceira; Porte Delgada, in St. Michael's, is the chief town. The revenue amounts to about 550,000 piasters; the expenditure to about 200,000; the balance is sent to the treasury at Lisbon.

TABLE of the Duties of Importation Charges in the Azores on the principal Commodities Imported from Great Britain, showing the proportion to the value of the same.

Note.—The duties of the Portuguese tariff are taken at Lisbon according to the value of the milreis at that place, which is equal to about fifty-four pence halfpenny sterling. As a rebate to the import trade of the Azores, the duties are there levied according to the 10 as value of the milreis, which is about fifty-two pence halfpenny sterling. The rates of the foregoing table are rendered into sterling according to the system of the Azores, at the exchange of 9m. 60r. per pound, they are in proportion to the Lisbon rates as 53 to 111.

In the Azores an additional duty of ten per cent, charged on the rates of the tariff under the title of "emolumentos," diminishes this difference.

ST. MICHAEL'S.—The exports of St. Michael's are chiefly oranges and corn; the imports, manufactures of all kinds and colonial produce. These imports are principally from Great Britain, America, and Portugal, with occasional cargoes from other countries. Population about 80,000.

The oranges are exported nearly altogether to Great Britain; the corn almost exclusively to Portugal

" Tea, tobacco, spices, silks, and other prohibited and highly-taxed articles, are at times smuggled into the island in quantities almost equivalent to the consumption.

" In both branches of trade there has been a very large increase since the beginning of the present century, and as the cultivation is still extending, the increase is likely to continue as regards the exports.

" The amount of legal importation of goods will decrease if Portugal be governed by its present commercial principles; but the island must draw in return for its export, goods or coin, and the latter being the most difficult mode of payment, the former will be brought in by contraband. To this latter course the supineness of the superior, and open corruptibility of the inferior fiscal authorities, are highly favourable, and it is painful to reflect that the systematic contraband trade now carried on in prohibited or highly-taxed articles, is very likely to increase every year, tending to the expulsion of the fair trader, and the general demoralization of society.

" The exportation of corn at the commencement of this century was about 600 qrs., then valued at 24,000 m. or 575*l.* sterling, this has annually increased to the present quantity of about 30,000 qrs. valued at 50,000*l.* The exportation of the last seven years has been as follows.

1835	. . .	11,678 moios, or 35,025 qrs. valued at			£59,846
1836	. . .	14,080	..	32,240	.. 54,573
1837	. . .	5,565	..	16,695	.. 27,942
1838	. . .	9,580	..	23,740	.. 40,357
1839	. . .	4,890	..	14,670	.. 22,525
1840	. . .	12,153	..	36,459	.. 62,205
1841	about . .	9,000	..	27,000	about 47,000

" The surplus corn produce of these islands always finds a market in Portugal.

" When the exportation has decreased the cause has been a deficient harvest. It not unfrequently happens that no rain falls between the 1st of April and the 1st of October in such cases the seeds of the autumn crops are killed in the ground, and the only corn gathered is that sown in spring and harvested in August and September.

" The oranges exported in 1801 was valued at 10,000*l.*; in 1820, 25,000*l.*, and had reached in 1840, a quinquennial average of nearly 100,000 boxes, valued at 90,000*l.*

" The cause of this increase is the demand in England for oranges.

" The value of an acre of orchard land, at a moderate distance from the chief town is about 50*l.*, the expense of enclosing and planting it about 18*l.*, and the annual outlay, during ten years of nursing, about 2*l.* During three years, however, beans and other minor crops are raised to draw some return from the ground. At the end of this term the land yields oranges to the value of 10*l.* per acre. During each of the succeeding five years, and thence gradually increasing in production to 25*l.* per annum. Thus, as there is but little outlay, an orange garden is almost net profit.

" The cultivation of oranges under such promising auspices is rapidly extending, and the exportation therefore would be greatly increased were the tree not subject to a cankerous disease.

"The foregoing table is compiled from the entries made at the custom-house of the port by the importers; but it does not represent the whole of the importation. A large amount of articles is brought in by contrabandists, a class which, at St. Michael's, is composed of persons of greater respectability, wealth, education, and social respectability, than the smugglers in other countries.

"ST. MARY'S.—The trade of the small island of St. Mary's to the southward of St. Michael's, is exceedingly limited. Its imports are a few articles of colonial produce, introduced by smugglers from Gibraltar and Spain, and supplies of various manufactures received by way of St. Michael's.

"Its annual exports are chiefly about 1600 quarters of corn, value £2500; and 20,000 cart loads of clay for brown pottery, value £350. There is but little probability of this trade increasing, as the population of the island does not exceed 5000 souls, of whom nearly all are dependent on a small number of absentee proprietors.

"St. Mary's has no foreign trade. Her clay, pottery, and minor productions are brought to St. Michael's, and her corn and oranges are shipped for the other islands and Portugal.

"TERCEIRA.—The population of the island does not exceed 40,000 souls, and they are known not to be wealthy. The proprietors of the land are, for the most, absent or poor, and the peasantry are wholly dependent on agricultural labour at wages barely sufficient to support them. The import trade is of less amount in relation to the population, and the quality and variety of the articles imported are inferior to those at St. Michael's.

"It has also its full share of the smuggling trade. The imports of Terceira, in common with the other islands, come chiefly from Portugal and Great Britain. The cultivation of oranges is extending yearly in Terceira; from which also a considerable quantity of corn is exported to Portugal.

"The island of Terceira, measured trigonometrically, comprises an area of 156 square miles, or 99,840 acres; of which about 38,400 acres are under cultivation, (which is confirmed by its known production of about 65,000 quarters of corn,) leaving 61,440 acres uncultivated. Of this latter quantity, as the geological formation of Terceira is of great antiquity, its elevation not above the productive degrees, there is probably very little which would not yield agricultural produce; and it ought to yield 200,000 quarters of corn.

YEARS.	IMPORTATIONS FROM					EXPORTATIONS TO

"This table shows the average of exportation to be greater than that importation by £13,000; but as the profits of trade cannot be less than ten per cent on the mean amount of imports and exports, the real deficit cannot be less than £1600. A part of this enters in smuggled goods, part in coin, and about £6000, spent in Portugal by absentee proprietors.

"The exports are about 20,000 boxes of oranges and lemons to Great Britain, and 25,000 quarters of corn to Portugal."

FAYAL AND PICO.

FAYAL comprises an area of 43 square miles, or 27,520 British acres.

PICO, according to the same mode of admeasurement, contains one hundred and four square miles of surface; making 66,560 British statute acres.

It is estimated that Fayal has 10,020 acres under cultivation, and 17,500 acres uncultivated; Pico, 11,800 acres cultivated, and 54,700 acres uncultivated. The uncultivated is not, however, unproductive; a great portion serving for grazing-land, and a still larger portion for the supply of firewood.

The population of Pico is, by the census taken in 1840, 28,650 souls; that of Fayal, 25,900; neither increasing: the natural increase being kept down by a regular annual emigration to the Brazils. For such a population, the production of little more than 26,000 quarters of bread-corn, affords no surplus to export. Any failure in their ordinary harvest, throws them, in a state of dependance, on supplies from the other islands. Yet a small quantity of corn has been occasionally shipped from Fayal to Portugal; although, probably, never without adding to the privations of the almost pauper population; who suffer great occasional distress, when bad weather prevents communication between their island and the others.

The available products for exportation are oranges and wine: of which the whole of the former may be shipped, and more than two-thirds of the latter. The oranges are sent to the English market: the wine, a small quantity to America and the north of Europe, and the remainder to St. Michael's.

EXPORTS of the produce of Fayal and Pico during the five years ending with 1840.

Average	7,414	3,967	4,457	16,124

The exports to Great Britain are sometimes increased by the transhipment of wrecked cargoes; as in 1837, when a quantity of cedar wood and colonials was so transhipped. The exports to "other countries" are chiefly what are deposited by whalers in transit for America.

The export trade of Fayal has, since 1840, been injured by the appearance in the island of an insect of the coccus kind; which, spreading in great numbers over every part of the orange-trees, weakens the trees and renders the fruit itself unfit for packing and shipment. No remedy has yet been discovered for preventing the injury effected by these insects; which threaten the orange-gardens of Fayal with entire annihilation. They have recently made their appearance at St. Michael's.

The importations of Fayal and Pico through the only port of the former island, consist of manufactures, cotton twist, and flax, principally from England; colonial produce from Brazils and Portugal; tea, tobacco, and soap from Portugal; fish from Newfoundland.

STATEMENT of the Value of Importations for five Years, ending with 1840.

YEARS.	Great Britain	Other Countries.	Portugal.	TOTAL.
	£	£	£	£
1836	5109	4167	2909	11,934
1837	5850	2,000	2,450	10,300
1838	4,200	3,050	3,781	12,231
1839	7,242	4088	2951	14,280
1840	6614	3,170	2,189	9,172
Average	5795	3795	2456	12,545

The decrease of imports from Great Britain is attributed to the increasing duties laid on various manufactures which form the principal commodities of trade with that country.

Of the total average values, the following may be taken as an approximate partition.

Silk manufactures, principally from Great Britain, 50*l.*; woollen ditto, ditto, 500*l.*; cotton ditto, ditto, 2000*l.*; linen ditto, ditto, 300*l.*; flax and hemp, 140*l.*; hardware, 500*l.*; colonial produce, principally from Brazils and Portugal, 1830*l.*; tea, wholly from Portugal, 1000*l.*; wood, from the United States, 500*l.*; fish, principally from British America, 800*l.*; tobacco and soap, wholly from Portugal, 400*l.*; other commodities, 1525*l.* Total, 12,545*l.*

The importation of the whole district of Fayal and Pico, taken as to its proportion to the quantity of cultivated land is about 11*s.* 6*d.* per acre; its exportation nearly 15*s.*; its production 3 guineas; and its population two souls and a half per acre. In its coasting trade Fayal and Pico are more prosperous than Terceira; the excessive production of wine enabling them to supply the other islands with an universal article of consumption, and

raising the amount of their general exportation to more than 30*s.* for every acre of its uncultivated land.

This state of prosperity does not however appear to extend to the labouring population, many of whom annually leave their islands to repair in search of employment to St. Michael's, the general recipient of all surplus produce from the neighbouring districts, or to the Brazils, where even higher inducements are offered to them. There are two reasons given for the existence of this excess of poverty over wealth, in a district where the general characteristic should be the latter; one is, the great prevalence of entailed properties, held with the national blindness to real interest, and indifference to the improvement of the lower classes; and the other, the too common mode of letting land to the tenant on the principle of an equal division of the produce; the last reason is sufficient of itself to account for the poverty of the labouring population, most of them are holders of land in greater or less proportions (the majority of very small tenements), and after paying for seed and a scanty dressing of seaweed as manure, there is but little left from their half of the produce to contribute to their support. Where ground is let at a money rent there is little gained by the tenant, the rate of rent being regulated by the profits to the proprietor of the other mode of letting the land. As in this temperate climate the ground will always yield one or two green crops, and one corn crop, the labouring tenant calculates on paying his rent with the former, and covering his outlay of money, as well as providing food for his family out of the latter; but the rigid accuracy with which the proprietor apportions the profits of the land in the yearly tenure, effectually prevents his tenant from deriving much profit from a favourable crop; while the same tenant bears all the pressure of a bad harvest.

"At St. Michael's this system is slowly but gradually reforming its faults, as here and there may be seen a few in the state of yeoman farmers.

"The calling of the Royal Mail Company's steam-packets at Fayal, will create a greater circulation of money there, in the benefits of which Pico will participate, and the district in general find new means for the improvement of its condition.

"Fayal is the best harbour in the Azores, and greater facilities offered to distressed ships by affording refuge or supplies. American whalers also occasionally deposit large quantities of oil to be transhipped to other ports.

"Graciosa and St. George's.—These islands have no regular foreign trade, but contribute occasionally to the foreign imports of the other islands by the greater facilities which they offer to smugglers. The former island produces large quantities of wine, which is taken off by St. Michael's, while St. George's supplies cattle and agricultural produce to Fayal, Terceira, and St. Michael's. The population of the two islands is estimated at about twenty thousand souls, and their exports amount in value to about 10,000*l.* annually; for which they import the articles they require from the other islands.

"According to the government authorities, six tenths of the land in these islands is under vineyards, one-fourth under corn, and the rest in pasture. In 1840 the exports from Graciosa were valued: wine, 3000*l.*; brandy, 1000*l.*; other produce, 200*l.*

"Flores and Corvo have no regular foreign trade. Flores is the occasional resort of homeward-bound ships for refreshment and provisions.

"Their imports which are from the other islands, and amounted in 1840 to the value of 1150*l.* in foreign manufactured articles; wine and other liquors, 500*l.*; colonial produce, 300*l.*; other articles, 100*l.* Total, about 2060*l.* Their exports in 1840 were, 1050 quarters of corn, principally wheat, value 2050*l.* to Lisbon; 1500 quarters of potatoes and onions, value 545*l.*, furnished to shipping; beef, pork, and hides, tallow and other produce of animals, value 800*l.*, to different parts of Portugal; whale oil, 220*l.*, to other parts of the Azores; linens and woollens of rural manufacture, 220*l.*; wood of the island, 165*l.*; and other articles, 175*l.*, to other Azores. The total value, about 4100*l.*

"There is a large excess of exports over the imports on account of absentees; and on the same account there is a considerable excess of exports over imports in the trade of all the islands.

"The profits of individual traders at St. Michael's are not on the average less than 10 per cent on their exports."

Trade at the principal Ports of the Azores during the Year 1841.

In addition to this direct and real trade and interchange, there is a considerable amount of transit business transacted at Fayal, where about 170 American whalers touch every year, and land the oil of such fish as they have caught on their outward voyage. This oil is forwarded from Fayal to the American market, and amounts in value to between 10,000*l.* and 30,000*l* sterling.

ISLAND OF MADEIRA.

The fertile, yet rugged island of Madeira, is about 45½ miles in length, and from 5 to 16 miles in breadth. Its superficies about 304 square miles. Its capital, Funchal, is in latitude 32 deg. 37 min. north, and longitude 16 deg. 55 min. west. Its features are irregularly abrupt, valleys diversified by ravines, rocks, mountains, and small streams, above which rise vineyards on artificial and successive terraces to the heighth of 2290 feet above the level of the sea.

The highest point or cone of the island is Pico Ruivo, which is said to be 5450 feet above the ocean's level; it is generally fertile to near the utmost point.

The streams or torrents serve to vegetate a great part of the island, by means of artificial drains, directed into separate rills and sluices.

The climate of Madeira is stated to be less variable than that of most countries. Where not interrupted by rocks, the whole island is remarkably fertile; the hills are clothed with luxuriant crops of indigenous and exotic flowers; from their rise to their summits. Tropical crops grow in perfection at elevations below 1200 to 1400 feet, perpendicular height. The roads are rugged and steep, but infinitely superior to those of Portugal. The administration is vested in an absolute lieutenant-governor, and there is but little security for personal liberty.

The population of Madeira and of Porto Santo, is stated, according to a recent census, at 112,500 inhabitants, consisting of a mixed race of Portuguese, Moors, &c. Negro slaves are still numerous. The English have a place of worship at Funchal, and the British consul levies a low duty on wines exported to the United Kingdom to form a fund for this and other charitable purposes.

FUNCHAL is situated on the shore of a bay on the south-east side. Its streets are narrow, crooked, and dirty, and the aspect of the town mean.

PORTO SANTO, 35 miles north-west, is the only inhabited island of several small ones belonging to the group. Its population is about 1400. It produces inferior wine, some barley and fruits. No building-wood grows on it; its appearance is sterile and naked; and it has but one well, or spring of water.

Nearly all the trees and other products of the temperate zones grow in Madeira.

Pasturage is, however, limited, and the dairy in consequence furnishes but little. Live stock, mules, asses, goats and swine excepted, are scarce. The two latter are almost in a wild state. Rabbits, poultry, and bees are also numerous. Fish abounds along the coast.

The culture is limited nearly altogether to the growing of vines. The lands are entailed, and let in farms of from 50 acres, on the *métayer* system. The crops of grain, wheat, &c., are said to be scarcely equal to one-third of the consumption. Some maize, beans, and sweet potatoes are also grown. Coffee has for some time been cultivated with care. Fruits, wild or cultivated, thrive in almost the utmost perfection. The grape, which is not indigenous, has long been the primary culture. Madeira was settled by the Portuguese in 1421. The Ferol vines are said to have been transplanted from Crete; and several other varieties of grape were afterwards carried from various parts, and planted in the volcanic soil of this island.

The steep declivities of the hills are generally formed into terraces, in the manner practised on the abrupt banks of the Rhine: and the vines planted on these successive platforms, which are supported by stone walls. The vines are trained and spread on small poles, in order to expose the grapes to the sun. The vine beds are irrigated, or thoroughly wetted to the vine roots, three times in dry summers. This operation gives an abundant crop; but the wine made of the vines is inferior to that made from those grown on ground which has not been watered. As in all other vine-growing countries, the best vineyards are exposed to southern aspects. The finest Malvosia is the produce of the vines grown on the volcanic rocky terraces, with full southerly exposures. The grapes for Malvosia are left hanging till they are quite ripe.

The process of making the wine in Madeira, is simply by plucking the grapes from the stalk, and putting them into a vat, in which they are pressed first by men or women with their feet, and afterwards by a heavy wooden lever. The tax-collector and the owner of the vineyards attend the pressing; the collector takes away a tenth of the whole *most* or *must*, and the remainder is then equally divided between the landlord and the *métayer*, or tenant. The *most* is then carried off to cellars, by men who are employed for the purpose, either in casks, or borrachas made of goat skins. The cellars, or rather wine-sheds are at Funchal, where the merchants, chiefly English, have yards, with large vats, into which the *most* is poured, and it is then subjected to fermentation, mixing, and other preparations. In order to secure the delivery of the *most*, money is usually advanced to the vine-growers, to defray the expenses of culture.

Though naturally strong, some brandy is added to the wine when it is racked from the vats into casks, and some more before the wine is exported.

TRADE OF MADEIRA.

England has long enjoyed a great share of the trade of Madeira, especially of the wine trade. In 1737, a new Portuguese tariff was extended to Madeira, imposing duties on almost all kinds of manufactured goods by weight, and not by value; thus rendering the valuing of goods unnecessary for collecting the duties; and the custom-house authorities having discontinued to estimate them. The value of imports and exports, those for 1837 and 1838, cannot be correctly ascertained.

Vessels touching for refreshments pay no tonnage dues.

In 1839, the custom-house authorities resumed, by direction of the Lisbon government, the system of valuing, as well as averaging, all the commodities imported into Madeira, showing their total amount from foreign countries, as well as the names of the countries from which they were brought, and the amount imported from each country respectively.

Other alterations have been made; and in consequence of the great poverty of the inhabitants, and the diminished demands for their wines, a decree was issued in May, 1843, reducing the duties on foreign goods to one half the duties levied in Portugal: brandy, wine, and corn, excepted. To encourage foreigners to visit and spend their money on the island, they are by the same decree allowed to import furniture, duty free, on giving security, either to re-export the same within 18 months, or pay duty for the same. Coal is admitted free into Madeira and the Azores.

Of the 124 British vessels which arrived in 1843, there were—from Great Britain, in ballast 59, with merchandize 18, Indian corn and merchandize 4, Indian corn 4, coals 12, dry goods 1, wheat 1, coals and butter 1, coals and merchandize 3; Canaries, in ballast 2, with Indian corn 1; Gibraltar, with Indian corn 2, in ballast 3; Demerara, in ballast 1; Cape Coast Castle, with Indian corn 3; Lisbon, in ballast 1; Hamburg, in ballast 1; Antwerp, in ballast 1; Trassedeni, in ballast 1; St. Petersburg, with flax 1; St. John's, with cod-fish 3; Malaga, in ballast 1.

Of the 122 British vessels which departed in 1843, there were—for Great Britain, with wine and orchella 8, wine 8, wine and argol 1, in ballast 4; Barbadoes, with wine 5, wine and onions 1; Jamaica, with wine 11, in ballast 1; Cadiz, in ballast 2; Sydney, with wine 1, in ballast 1; St. Kitt's, with wine 2; New York, in ballast 1; Rio de Janeiro, in ballast 3; Nassau, with wine 1; Demerara, with wine 6, wine and onions 3; St. Vincent, with wine 3; Trinidad, with wine 1, wine and onions 1; St. Petersburg, with wine 5; Cape Coast Castle, with wine 1; Antigua, with wine 1; Gibraltar, in ballast 1, with wine 3; Grenada, with wine 4; Madras and Calcutta, with wine 2; Calcutta, with wine 2, in ballast 1; Dominica, in ballast 1; Singapore, in ballast 1; Buenos Ayres, in ballast 2; Rotterdam, with wine 1; Van Dieman's Land, in ballast 1; Cape of Good Hope, in ballast 2; Honduras, in ballast 1; Quebec, in ballast 2; Coast of Africa, in ballast 1, with wine 1; Ceylon, with wine 2; Newfoundland, in ballast 1; Canaries, in ballast 2; Bombay, with wine 1; Cape and Madras, with wine 1; Mauritius, wine 1; Seville, in ballast 1; Faro, in ballast 1; St. Helena, with wine 1; Charleston, with wine 1; Cape de Verds, in ballast 2; St. John, with wine and orchella 1; St. Michael's, in ballast 1; Valparaiso, in ballast 1; Tobago, with wine and onions 1; 8 vessels arrived for refreshments, but did not anchor.

CAPE DE VERD ISLANDS.

THIS group compose eight islands and several islets. Their general aspect is mountainous, rocky, of volcanic formation, and scantily watered. In Fogo there is an active volcano. The climate is very much varied by extreme heats and droughts, from November to July, and by thunder-storms and fogs during the remaining months. The climate is consequently unhealthy. During some periods rain does not fall for three or four years. The soil consists either of

volcanic, or calcareous or sandy matter, generally dry, and in many parts barren and rocky. Though vegetation is unequal in many parts, maize, bananas, oranges, melons, pomegranates, and other fruits, and even rice, grow luxuriantly. Maize and rice is the chief food of the people. The cotton and indigo plant are indigenous. The oranges, lemons, melons, figs, and guavas, grow in perfection: sweet potatoes, and some other vegetables, are also grown. The sugar-cane and the vine are also cultivated. It is prohibited to make wine.

Orchella weed has been monopolized by the government. The palm, tamarind tree, and adansonia, are the principal trees. The domestic animals are asses, goats, and poultry. Salt is made of sea-water evaporated in the sun.

SITUATION and Population, &c., of the Province of Cape de Verd, in 1834.

GOA, the capital of the Portuguese East India possessions, has dwindled away to but little commercial consequence. It was at one period a place of immense trade.

MACAO, the Portuguese factory in China, has lately acquired some importance.—See China.

The trade of TIMOR, of which the northern extremity belongs to Portugal, consists, as to imports, of cotton goods, sugar, coffee, tobacco, chinaware, olive and palm oil, wine, bacon, inferior woollens, tea, hats, nankins, hardware, copper utensils, &c. The exports are chiefly sandal-wood and biche de mer. The residence of the provincial authorities is at Dhelly, on the south side of the island called Cambi. The regulations with regard to other foreign possessions of Portugal, apply to this establishment.

CHAPTER V.

WINES OF PORTUGAL AND MADEIRA.

WINE is the staple export produce of the kingdom, and of the island of Madeira. The principal port wine district is in the Upper Douro, about fifty miles from Oporto. The inferior quality is called *vinho do ramo*, and it is generally either drank or distilled in the country. The wine made for exportation, *vinho do Feitoria*, or factory wine, is that usually drank, often after adulteration, in England. The complaints of the adulteration of the wines of the Douro, led not to a privation of the abuse by competition, but by transferring the whole wine district to the monopoly of a despotically-authorized

joint-stock company. The agents of this company were empowered to class the wines made, and to fix the maximum price; thus, in practice, securing to the company the power of becoming the buyers of all the Douro wines.

Oporto Wine Company.—The old monopoly was some time ago abolished. Since then another monopoly, called the Agricultural Wine Company, has been instituted; and it is stated that the whole system of tasting and classifying the wines has ever been, and will continue, one of bribery, favour, and every sort of chicanery.

It is urged against the new monopoly, "that it is empowered to restrict the export to England in wine of the first quality only; thus depriving the merchant of the power of buying the wines best suited to his customers, and declaring that every class of people in England shall drink only port wine of the first quality and at the highest prices. That the company's privileges and powers have a direct tendency to interfere in the most arbitrary manner with the merchant in his commercial transactions, as well as to diminish the consumption of port wine in England. A liberal and cheap supply of port wine of the first quality, is to be allowed to all the world, to the entire exclusion of England from this benefit, as well as enabling all other countries to have all the cheaper classes of port wine in profusion.

"The list of shipments from Oporto, in 1837, will show that England took 21,000 pipes, and the united world besides, only 4600 pipes. Thus the company, interfering in every way at Oporto, without freedom of commerce, raising the price of the article we trade in by every possible means, is enabled to compete with and undersell us in our own native and legitimate markets, where Portuguese merchants and this very company can invest their capital in any way they please, without the slightest restriction or interference. The gross injustice of such a system, and the entire absence of all reciprocity, must be obvious.

"That it possesses the monopoly of brandy, which it is to sell to the merchants at 20 per cent profit, not on the actual cost price, but on a price to be fixed by the company itself in conjunction with the government. That the wine merchant has to take two alumedes of brandy (or a tenth part) to every pipe of wine he exports to England, whilst to other countries he may export his wine with only a twentieth part of brandy.

"That, the classification of wines of the Upper Douro, by the tasters (provadores), is generally erroneous; a considerable portion of those ranked in the first class being only fit for home consumption or distillation, and wines of the best kind being often found in the second and third classes, and sometimes even in the refuse (refugo). What reliance should be placed on the decision of the tasters, may be judged from the fact that, out of 77,894 pipes of the notoriously bad vintage of 1841, they have reported 58,083 pipes to be wine of the *first* quality.

"The British merchants buy the best wine wherever they find it; and that ranked in the lower classes is brought down the Douro, with papers (which are often purchased at a high rate) granted for wines approved for exportation by the tasters, but rejected by the exporters. With such papers, great quantities of *Baissada wine* are also brought from places a few miles above Oporto, and placed in the lodges of exporters in Villa Nova.

"It is contended that it is of great importance to the British merchants that the reputation of the wines of the Upper Douro should be maintained in England. They are therefore anxious that Baissada wine should not be sent there; but as the regulations for preventing its introduction into Villa Nova de Gaza are ineffectual, they themselves are obliged to export it, in order to compete with the dealers in low-priced wines. It is said that more than one-eighth of the wine exported to England is of this kind.

"Before the government decides upon the report of the tasters, the exporters cannot safely buy new wines, nor can their correspondents in England settle their plans for conducting their business during the year; and frequently the decision of the government is not made until after the new wines are fit for the market.

"British merchants export nearly three-fourths of the wine sent to England, and hold probably not less than seven-eighths of the capital employed in the trade. The parties who benefit by these regulations are the tasters and other officers employed, those who purchase approvals, and the smugglers."

By recent accounts it appears that the Agricultural Wine Company is practically bankrupt, and its managers have applied to the government for a decree to prorogue the payment of its debts, until the Cortes should legislate upon the subject. They have had an annual grant of money from the government, and the monopoly of the export of port wine. We are informed by an undoubted authority, that the wines of Portugal have been, and continue to be, prepared for the purpose of the brandy being admitted at the wine duty in England: the quantity of brandy, mixed with the wine exported, is 4 alumedes, or 22 gallons per pipe. The quantity of wine thus strengthened with brandy may, it is stated, be greatly increased, after it has paid the duty in England, by adding water or inferior wines, and often other cheap liquids.

A statement was published in 1825, showing that Portugal had exported in twenty-four years 897,250 pipes of wine, estimated at 230,880,000 crusados, or about 40,000,000*l.* sterling; salt, to the amount of 31,814,000 crusados; and the dry cod-fish imported at 7,520,000 quintals, valued at 78,047,500 crusados.

CHAPTER VI.

BRITISH TRADE WITH PORTUGAL.

The commercial interchange between England and Portugal has been of long standing; and, taking the population of the latter into calculation, of considerable importance. But if we, as we justly may, attribute chiefly to the Methuen Treaty our greatly diminished trade with France, the importance of the value of the British trade with Portugal vanishes, so far as the difference between the power of France to consume British manufactures, compared with that of Portugal, can form a basis of calculation.

ACCOUNT of the Official Value of the Trade between Great Britain and Portugal, including Azores, Madeira, and Cape de Verd Islands, in the following Years; distinguishing the periods of War and Peace

YEARS.	Years of War or Peace.	Imports from Portugal.	Exports to Portugal.	YEARS	Years of Peace or War.	Imports from Portugal.	Exports to Portugal.

" Rome	6	1,350
" Vienna	6	1,350
" Berlin	6	1,350
" Rio de Janeiro	7	1,575
Resident minister at Washington	3	675

	contos.	£
Charge d'Affairs at Brussels	1	225
" the Hague	1	225
" Copenhagen	2 contos and	
" Stockholm	900 milreis	900
" Petersburg	each.	
Under the head Junta of public credit are included		
Interest on the domestic debt, consolidated	1133	254,925
Charges of foreign debt	1844	414,900
Under the head Extraordinary Expenditure are included:		
Claims for payment of the labours of the mixed commission in London	111	24,975
Amount of loans for payment of claims of English officers of Peninsular War service	43	9,675
In the estimates of the preceding year, under this head the sum of 341 contos, 11 [illegible],667 sterling, is set down in the expenditure as the amount of English claims finally extinguished		

The Bank of Lisbon, founded in 1822, had a capital in 1833 of about £691,100, divided into £100 shares. The bank discounts bills, not having more than three months to run, at 5 per cent, and it enjoys the singular but valuable privilege of having its claims on all estates paid in full, provided the estates amount to so much, other creditors being obliged to content themselves with a division of the residue, if there be any.

ORCHELLA WEED.

By a recent law "it shall be free to all persons to pluck and collect orchella in the kingdom of Portugal and Algarve, and in the province of the islands of Madeira and the Azores, with reservation of the rights of private property to the owners of the lands on which it is produced. The exportation of orchella from the territory treated of in the preceding article, shall henceforth be permitted on payment at the respective custom-houses of a duty of 30 reis per lb. Palace of Cintra, 13th July, 1841.

"THE QUEEN."

PORTUGUESE FISHING COMPANY.

The original capital of this notable company was about £120,000. Heavy duties were imposed on foreign fish to encourage this national monopoly, which was held out as one which would be of the greatest benefit to Portugal, and of unlimited profit to the shareholder.

By an official pamphlet, lately published at Lisbon, it appears that no dividends have ever been paid, and that the present total value of the assets of the company amounts only to £34,366; a great part of the articles composing this valuation consisting of perishable materials: thus showing a loss, exclusive of interest, of £85,631, besides the deterioration in the value of the articles composing the Company's stock.
